And, so far as I am concerned, I should almost rather believe all the fables in the Talmud and the Alkoran than accept the pretension of the Republican leaders of this House that they favor or advocate a reduction of the tariff.

But, Mr. Chairman, my time is exhausted. I say without fear of contradiction (for the history which I have recalled will demonstrate it), as was said by Hampton, who has just passed away (God rest his soul in peace!), and by Vance, by VEST, by Colquitt, and all other Democratic Senators in 1890, when the McKinley bill was before Congress and this same kind of reciprocity was under discussion—I say it is a sham; it is a fraud upon the American people and upon the Democratic party. I propose to invoke the spirits of those worthy champions of Democratic doctrine in support of my action here. I propose to follow the beacon lights that they have placed to guide our steps over this dreary waste of Republican tariff legislation to the sure and safe ground of honest and equal taxation. On this question of tariff I propose to put my faith in the teachings of those Democratic leaders who fought this same proposition in the McKinley bill.

I propose to put my feet in the ancient ways of the fathers and walk straight on, not allowing the Republican music furnished by my friend from New York [Mr. PAYNE] or my friend from Pennsylvania to allure me from the straightforward path that leads onward and forward to a united fight, if that can be had, against a Republican tariff, which has built its walls around this country and now proposes to carry them across the Gulf of Mexico, that separates Cuba from our country, and to build them still higher there against the world, and this on the pretense that the producers of American manufactured products will be benefited, thus increasing our trade to a large extent with Cuba. My people desire to extend their trade, but they are unwilling to oppress Cuba by imposing upon her the iniquitous Dingley law and build the tariff wall still higher and higher, simply that the American protected manufacturer may continue to grow richer under the operation of this oppressive tariff, and thereby rob the helpless Cubans as they plunder our own people. [Loud applause.]

[Here the hammer fell.]

Oleomargarine Bill.

Here is an attempt directly and for the first time in the history of the American people to take the specific food of the poor man and the rich man and tax it, and it is to be done by an act of Congress and by the approval of the President of the United States. Think you, Mr. Speaker, that the people of the United States will forget this outrage?

It was well said once in England:

"Woe to that government which makes it harder for the poor man to feed his wife and children; the people will punish the government that taxes bread."

It is an attack upon the cost of food, and a governmental instrumentality is brought to bear to enhance to an unreasonable degree the cost of an article of food held by a monopoly to the great detriment of the common people of the United States.

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 23, 1902.

The House having under consideration the conference report on the oleomargarine bill (H. R. 9206) and to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine—

Mr. GROSVENOR said:

Mr. SPEAKER: I believe I may well claim to be as earnest a supporter, defender, and promoter of the interests of the agriculturists of the United States as any member of this House. I was raised on a farm, and my father before me devoted his life to the improvement of a farm in the early days of the settlement of the section of Ohio where I now live. I have grown up amid the interests of the farmer. I have been identified in personal interests with farming enterprises, and I have uniformly and always stood by, with unfaltering earnestness, what I believed to be the real interest of the farming community.

I supported, defended, and voted for the original oleomargarine bill in this House of Representatives. That was a bill to protect the producer of butter from the danger that another article not made from milk and cream alone might be sold in fraud of the farmer's interest. I voted for the most extreme measure of protection and defended it as well as I might. I voted for and reported to this House the filled-cheese bill, which was another measure of protection to the farmer, and handled the bill in this House to passage and approval by the President. I have supported every measure to protect the farm products of this country from adulteration and fraud. I have voted strenuously and earnestly for a protective tariff on farm products, and it was due to my personal fight, and I say it without hesitation, and I say it in the hearing of the men who were present and know all about it, that the tariff on XX Ohio wool was put at 11 and 12 cents as against 8 and 9 cents that would have been its fate, and there has never been a question in which the interest of the Ohio farmer was involved that I have not stood by it and protected it.

I can not vote for this bill, and I can give no stronger or better reasons than I gave in a single paragraph of the speech I made on the 4th of February, 1902, which is as follows:

> I believe that at the root of this bill and this proposition lies a menace to the liberties of this country and an assault upon personal rights and freedom. It is a proposition to introduce into the forum of Congress a measure to permit the taxing power of the United States Government (when there is no necessity for raising funds) to be used for the purpose of destroying a great industry, and by consequence building up another industry. It is a simple attempt of the strong to crush the weak. It is a misdirection of Government power and purpose that may be used in the coming years for the overthrow of any other industry of this country. There is not an industrial right enjoyed by a citizen of the United States that may not be in this way assailed and overthrown by a merciless, corrupt, and wicked purpose.

I will put in a summary, very brief and terse, the reasons for my position:

First. I believe the law to be unconstitutional.

Second. I believe that the enforcement of the law would be an outrage and a crime against the people of my country, who desire to purchase oleomargarine and who have a right to do so.

Third. It is a bill in the interest of a great unconscionable trust known as the "Creamery trust."

Fourth. Because the passage of this bill will in no wise benefit the farmer; its influence will never reach him, but will simply benefit the owner of the creamery and the constituent elements of the great trust.

Fifth. In the long run, in my judgment, it will result in agitation and the conflicting of interests between masses and classes of the people and lead to discontent among the laboring people, complaining of the oppression of the Government upon them.

Sixth. It is an attack upon the cost of food, and a governmental instrumentality is brought to bear to enhance to an unreasonable

degree the cost of an article of food held by a monopoly to the great detriment of the common people of the United States.

Seventh. It is a cheat to ask the farmer who produces milk to aid the monopolists under the specious cry that the farmer is to be benefited.

Eighth. It is placing the heavy hand of the Government upon the food of the common people and putting 10 cents a pound of tax upon every laboring man in the United States who buys a pound of butter.

It was well said once in England, "Woe to that government which makes it harder for the poor man to feed his wife and children; the people will punish the government that taxes bread." Here is an attempt directly and for the first time in the history of the American people to take the specific food of the poor man and the rich man and tax it, and it is to be done by an act of Congress and by the approval of the President of the United States. Think you, Mr. Speaker, that the people of the United States will forget this outrage? Think you that the men who have done this will be forgotten during this generation of men? This is introducing into American legislation a feature never before touched, and which will be resented from California to Maine, and it will not be answered by the clamor of a few creameries. Let us see whether the farmer is to be benefited. Here, within a few days, we have this statement from New York:

Elgin butter prices for the week ending April 14, 1902; also the prices of previous years.

[From the Elgin Dairy Report.]

	Cents.
April 14, 1902	31
April 15, 1901	21
April 16, 1900	18

This shows the unconscionable character of this whole performance. Butter 18 cents a pound on the 16th of April one year, 21 cents the next year, and 31 cents the next year.

Now, comes a worse statement. Here follows a statement showing that on the 16th of April, 1900, when butter was 18 cents a pound, milk was bought at 2½ cents a quart, and when they nearly doubled the price of butter on the 14th of April, 1902, they made the price of milk 2¾ cents a quart. Here is the statement:

Is (?) there a butter combine?

ELGIN BUTTER PRICES. [From the Elgin Dairy Report.]	Cents per pound.	NEW YORK WHOLESALE MILK PRICES. [From the Milk Reporter.]	Cents per quart.
April 14, 1902	31	April 14, 1902	2¾
April 15, 1901	21	April 15, 1901	2½
April 16, 1900	18	April 16, 1900	2¼

Comparison.—Milk, one-fourth cent per quart higher; butter, 13 cents per pound higher.

Here is a letter from a dealer in butter, eggs, etc., in Kansas, which puts the case in fine form. It is dated Chanute, Kans., April 22, 1902:

CHANUTE PRODUCE COMPANY,
BUTTER, EGGS, AND DRESSED POULTRY,
Chanute, Kans., April 22, 1902.

Hon. C. H. GROSVENOR,
Washington, D. C.

MY DEAR SIR: Your favor of the 19th instant received. Accept thanks. This is a degenerate age when such vicious legislation as building up of one industry by striking down another can be accomplished by men sent to represent the good of all.

The Harris amendment is the latest and most flagrant of all. It strikes at an industry so old that the time of its birth can not be recalled. Its only beneficiary visible is the creamery industry, which is as yet in its infancy.

It starts in its campaign of destruction with a bald falsehood, that process butter is adulterated, a statement which is wholly and totally false. On the contrary, purity and cleanliness are one of the essentials of success.

If enforced, it reaches out and strikes disastrously every woman in the United States who makes a roll of butter and offers it to the country merchant in exchange for groceries and clothing.

It is an undisputed fact that the researches of science in developing our knowledge of the constituents of milk and the intelligence of the processor in rehandling country butter on the laws laid down by science and nature has succeeded in reclaiming store butter from a condition unfit for table use to a quality dangerously near the creamery quality (that fact explains their activity), or, in other words, the creamery influence begins to regard them as rivals.

Of necessity a successful processor must shun adulteration as he would poison, as adulteration and quality are never present in the same tub.

With other reasons, the demands of the processor for what we call country butter has caused its advance in value of more than 150 per cent during the past three years.

I beg to remain, very truly, yours, JOHN F. BANKLEY.

Here is a letter from one of the clearest-headed men in the State of Ohio, engaged in an enormous business of mining coal. He deals with his men upon liberal principles and has the good will of the 2,000 miners who are employed by him. I refer to Mr. Thomas Johnson, who is known to all the business men of Ohio. It will be seen why I, as the Representative of that district, ought to have some feeling on this subject:

THE NEW PITTSBURG COAL COMPANY,
Columbus, Ohio, April 22, 1902.

Hon. CHAS. H. GROSVENOR,
House of Representatives, Washington, D. C.

DEAR MR. GROSVENOR: Regarding the oleomargarine bill, which is now before the House, I wish to call your attention to the fact that we have been using the butterine manufactured by the Capital City Dairy Company, of Columbus, Ohio, for quite a number of years; in fact, our miners and all of our employees about our mines have become so favorably accustomed to using it that they prefer it to country butter. If we were not using it, it would be practically out of the question for us to get sufficient wholesome butter to supply our miners, as the bulk of the butter we have been getting in recent years has been almost wholly unfit for use. While on the other hand, we know from investigation the butterine used is perfectly wholesome, and that our miners, some 2,000 in number, would be very much injured by the passage of the present bill, if it becomes a law; and before giving it your support I hope you will consider the matter well, as I believe it is your duty to the miners of Athens County to do everything you can to defeat the bill. Should there be a tax of 8 cents per pound placed upon it the miner would naturally be the party who would have to pay this tax, and I sincerely hope you will do everything you can to see that the bill is defeated.

In addition to the 2,000 miners which our company employs in the Hocking Valley, I am interested in mines in eastern Ohio—Belmont County—where there are employed over 1,000 men, and I know the general feeling of these employees is that they would regard it as quite a hardship on them if the bill as now presented should become a law.

Trusting you can see your way clear to do everything possible to defeat the bill, I remain,

Sincerely, yours, THOS. JOHNSON.

Here I publish from Jersey City a letter from Ammon & Person, showing the New York price of milk paid to farmers in 1901 and the New York price of milk paid to farmers in 1902, and the price of butter in 1901 and the price of butter in 1902:

THE "BUTTER RING" ON THE RUN.

JERSEY CITY, N. J., *April 22, 1902.*

DEAR SIR: Herewith we hand you a page from the Sussex Independent, a paper representing the largest and most important dairy section (Sussex County) in this State, and Orange County and adjacent dairy counties of New York.

We are informed that the signatures of farmers requesting passage of the oleomargarine-tax bill were obtained by creamery owners under the promise that a better price for milk would follow the passage of the bill.

Below we give you a memorandum of wholesale prices of milk and butter:

New York price of milk per quart paid to farmers.

[Price fixed by the Milk Exchange, controlled by creamery men.]

	Cents.		Cents.
January 1, 1901	3	January 1, 1902	3½
February 1, 1901	2½	January 15, 1902	3½
March 1, 1901	2½	March 6, 1902	3
April 1, 1901	2½	April 16, 1902	2¾

New York wholesale price of butter.

	Cents.
April, 1901, average price	21
April, 1900, average price	20
April 1, 1902	28
April 18, 1902	33
To-day	28

The 5-cent reduction in the price of butter since last Saturday is due to the wide publicity given to the methods of the "butter ring" in the public press; but, as one of them remarked, "We will put the price up again when Congress passes the oleo bill."

Yours, respectfully, AMMON & PERSON.

This is a beautiful spectacle which is presented. On the 1st of January, 1902, they paid 3½ cents per quart for milk, when butter was 21 cents a pound, and on the 18th of April they raised the price of butter to 33 cents a pound and cut down the price of milk to 2¾ cents per quart. That shows pretty well what the real situation is.

I publish here a leter from Bartram Brothers, New York, showing exactly how this thing is working:

NEW YORK, *April 7, 1902,*

Hon. CHARLES H. GROSVENOR,
House of Representatives, Washington, D. C.

DEAR SIR: I hand you herewith to-day's prices current on butter. As near as I can recollect, we have had no such prices for low grades of butter since 1872. You will notice the lowest quotation is 20 to 22 cents, while fine butter is 31 cents. April 7, one year ago, fine butter was 22 cents. We are now 9 cents higher than on that date. Canadian butter on Saturday was 21 cents, and Danish on Thursday last was 23½ cents.

Is it possible that the people who are trying to force this bill through realize the awful penalty they are putting upon the American consumer? The day following the passage of the bill in the Senate the market advanced 3 cents per pound. It seems to me beyond belief that, with the American market 8 cents higher than Danish and 10 cents higher than Canadian, these people who are pushing this bill are in earnest. There can be but one result—the public reaction, just as soon as the situation is understood, that will hurt somebody.

When you take into consideration that the public, who have consumed oleomargarine as butter, and upon whom this fraud has been continuous, are not the offenders, but must pay the penalty, while the offender, the oleomargarine man, has nothing but an additional cost made to his product, which the same public must pay.

Why the law was not changed, both civil and criminal, against the offender I can not conceive. There has been now in the neighborhood of 200,000 pounds of butter come from Canada. The Canadians are jubilant over the passage of the bill by the Senate.

Can not you bring some further force to your arguments when this bill comes before the House again? If it is your pleasure, I will come over with what data I have and assist all that I possibly can. I believe that the members of the House, when they realize what they are doing, will stop to think. Excuse me for intruding on your time with this subject.

Awaiting your further favors, I am

Yours, respectfully, J. A. NORTH.

Here I publish the protest of the Board of Trade of Toledo, Ohio, a body deeply in sympathy with the poor men of the State and surroundings:

RESOLUTION PASSED BY TOLEDO (OHIO) BOARD OF TRADE.

Whereas there is now pending in the United States Senate a bill known as "the Grout oleomargarine bill," which if enacted will deprive the public, and especially the poorer classes, of an article of food now in general use because of its merits and cheapness, and will destroy a large amount of cap-

ital invested in the various oleomargarine plants, and will deprive a large number of wage-earners of their means of livelihood and will decrease the revenues of the State and Federal Governments: Now, therefore, be it

Resolved, That we request our representatives in the United States Senate, the Hon. M. A. HANNA and the Hon. J. B. FORAKER, to use their influence and best endeavors to defeat the passage of the aforesaid "Grout oleomargarine bill," on the ground that it is oppressive and unjust legislation and that the passage of said bill would work to the detriment of the general public, and that copies of this resolution be forwarded to the said Hon. M. A. HANNA and the Hon. J. B. FORAKER.

Here I publish the resolution of the Eastern Montana Wool Growers' Association as reflecting upon the view taken by thousands of men in the far Northwest:

The following resolution was unanimously adopted by the Eastern Montana Wool Growers' Association, in convention assembled in Miles City, Mont., April 14, 1902:

Whereas the Senate has just passed the Henry oleomargarine bill, which means a loss to the stock raisers of more than $25,000,000 annually; and

Whereas the live-stock industry has repeatedly protested to the members of Congress against the enactment of this measure; and

Whereas we, the members of the Eastern Montana Wool Growers' Association, look upon the passage of this bill as a direct blow to our interests and as one which will only benefit the creamery manufacturers and not that engaged in dairying; and

Whereas it establishes the vicious principle of destroying one industry for the benefit of another, which, if not checked at once, will lead to most disastrous results in all industries; and

Whereas the live-stock industry of the United States represents a greater capital than any other two of the nation, it should receive just consideration by the Federal Congress; Therefore, be it

Resolved, That while we commend the action of those Senators and Representatives who remembered the rights and interests of their constituents, at the same time we desire to enter an earnest protest against those Senators and Representatives who forgot the rights and interests of their constituents by casting their votes against them; and be it further

Resolved, That we call upon the National Live Stock Association to test the constitutionality of this measure in the higher courts and to secure its repeal in the event it becomes a law.

JOHN M. CALVIN, *Secretary.*

Here is an exposé of the whole scheme of the reduction of the price of butter in order to affect the action of Congress upon this conference report. I publish the letter of the Capital City Dairy Company of Ohio:

THE CAPITAL CITY DAIRY COMPANY,
Columbus, Ohio, April 22, 1902.

Hon. C. H. GROSVENOR,
Washington, D. C.

DEAR SIR: Presuming upon your request to keep you posted on the "oleomargarine-butter" situation, we learned yesterday, upon reliable information, that the exposure, through the newspapers of the United States, of the butter trust in advancing price on creamery butter upon reliable assurance that Congress would pass the oleomargarine bill, caused a decline in the price, officially on the Elgin board, of 3 cents per pound, and in markets like New York and Philadelphia this means a reduction of from 4 cents to 5 cents per pound, while in Chicago and the West of exactly 4 cents per pound. This reduction is made in the face of the report of almost every creamery and dairy journal in the country that butter is still scarce; that there has been no surplus, and that even the commoner grades of butter have been much sought after, having actually advanced in price, which still further proves that the creamery butter prices were fictitious previously, as it does not stand to reason that with the scarcity of butter and spring pastures delayed that there could be a reduction of from 3 cents to 5 cents per pound over the entire market of the United States.

This information, we believe, will admit of the closest scrutiny, and we believe that it bears out our argument that Congress has been misled and that the butter crowd have learned their mistake and are attempting to rectify it by this almost unprecedented drop in butter price during a period of seven days, with a shortage of all first grades reported a week ago.

We beg to remain, yours, very respectfully,

THE CAPITAL CITY DAIRY COMPANY,
Per H. C. PIRRUNG.

Here I publish an editorial from the National Provisioner of April 19, 1902:

BUTTER AT ROBBER'S PROFIT—CONTROLLING INTEREST SENDS THE PRICE SOARING—CREAMERIES PAYING FARMERS LESS FOR MILK, BUT PRICE OF BUTTER JUMPS UPWARD—TWO REDUCTIONS IN PRICE OF MILK IN FIVE WEEKS—BUTTER MAY GO TO 50 CENTS PER POUND.

The butter interests are chafing at their leashes. They await with the utmost impatience the passage of the antioleomargarine bill in Congress. If it passes—if, mind you—millions of dollars will go into their pockets, and it will come from the pockets of the people. Already they have raised the price of butter, now a necessity on the American table, to an enormous price, and that only in anticipation that the bill will become a law.

Unlike the conditions which have caused a rise in the price of meats, the rise in the price of butter is purely and simply speculative. Five weeks ago the creameries paid the farmer 3½ cents per quart for milk. At that time high-grade butter sold at retail for 30 cents per pound. Later the farmers were paid only 3 cents per quart for milk, but the price of butter went up to 35 cents. On Wednesday the price paid for milk was again reduced to 2½ cents, but the price of butter remains at 35 cents.

The cost of the raw product (milk) has been decreased from 3½ to 2½ cents in five weeks' time, but the butter interests, which absolutely control the market, have increased the price of butter from 30 cents to 35 cents. And it will go to 40 or 45 or 50 cents if the antioleomargarine bill becomes a law.

Even at present prices butter is a luxury. It will be forbidden in thousands of homes if it goes higher, and conditions will be aggravated because there will be no oleomargarine to serve as a substitute. The passage of the law will accomplish two things: It will increase the price of butter by a large percentage to those who can stand the pressure. It will take butter and its substitute from the tables of the poor.

The New York Sun reviews the butter situation as follows:

"The rise in the price of butter is said to be chiefly speculative, not as turning upon any attempt to corner the market, but owing to a belief among the dairymen that Congress will pass the proposed law prohibiting the manufacture of oleomargarine. The law, if passed, will not do this in terms. The bill provides for a fractional tax upon uncolored oleomargarine and a tax of 10 cents a pound on the colored product. But people will not buy the uncolored oleomargarine, which looks like lard, and a tax of 10 cents a pound on the colored oleomargarine, it is said, will make the manufacture of the substance unprofitable.

"According to the figures of the so-called 'dairy trust,' there are manufactured in the United States 1,500,000,000 pounds of butter a year. Of this quantity it is said that 800,000,000 pounds are consumed in the neighborhood of manufacture and do not reach the general market, leaving 700,000,000 pounds as the estimated supply through the markets of the large cities.

"The annual sale of oleomargarine is put at 104,000,000 pounds, or about one-seventh of the total butter sales of the general markets. It is declared that the advance in butter prices is due to the belief that the oleomargarine bill will be passed and that therefore there will be this large hole in the supply to be filled with genuine butter of whatever quality.

"Yesterday's market reports showed that 'renovated butter,' which is said to be sold practically in every grocery store and to be 'renovated' by processes sometimes harmless and sometimes directly poisonous, was selling at 29 and 30 cents, as against the choicest creamery butter at 31 cents; this in the wholesale markets."

That the butter interests are creating a "corner" in anticipation of the passage of the bill is evident. On this phase of the situation the New York Journal says:

"The better quality of creamery butter is selling at 31 cents wholesale. There has been an increase in price of 2 cents in two days. At this season last year the price wholesale was about 18 to 20 cents a pound, with the demand well supplied.

"Where the creamery product is stored is a mystery. The dealers have called upon the creamery men to explain, and they have answered that their production was disposed of through the usual channels and that nothing had come to their attention that indicated that butter was being accumulated in order to effect a corner.

"Lately, however, the scarcity of butter has been so evident that both dealers and creamery men have concluded that the product for some time past had been bought up with the all too apparent intention and result of raising the price by creating a scarcity.

"The price is expected to go to 50 cents a pound there unless the supply available is increased."

To support my statement that no benefit is to come to the farmer from this legislation I publish an editorial from the Chanute Times, published in Neosho County, Kans. This publication, made in the midst of a great body of farmers, shows that the men in that country are not being misled by the cry that this is favorable legislation for the farmer. It is favorable legislation for a soulless monopoly and the farmer is to be the sufferer:

THE OLEOMARGARINE BILL.

For years one of the most absorbing questions that has come before Congress and State legislatures has been the manufacture of oleomargarine and kindred articles. The product has been cussed and discussed, praised and abused, investigated and reinvestigated, till it would seem there could be no phase of the manufacture or use of the product that is not perfectly familiar to the people, and especially to the lawmakers.

Each year finds a big lobby in Congress behind some kind of a bill for the regulation and sale of the product. At first the stuff was pronounced by its enemies as an article unclean and deleterious to health, but investigation and chemical analysis have proven it to be a pure and wholesome article of diet, unobjectionable in any way except to those who may be directly interested in the production of other articles of food, the use of which may be somewhat restricted by an increased consumption of the new commodity.

We have no sympathy whatever with those parties who would try to deceive the people as to the commodity they are selling them, and believe very severe and stringent laws should be enacted to protect the consumer against all efforts of the unscrupulous dealer who would sell one commodity and deliver another.

It being established and accepted that the oleo products are wholesome and palatable and desirable food products, then any legislation that seeks to cripple or destroy their manufacture, simply because they compete with some other industry, is vicious in the extreme and should not be tolerated. All the safeguards that can legitimately be thrown around the product to protect the consumer from being deceived in what he is buying is fair and proper, but any effort to tax the product out of existence or prevent its being manufactured or put up in an attractive shape, is simply arbitrary and injurious legislation against one legitimate industry in the interest of another.

If a customer has a taste for butterine and wants it, should the law say, No, you must buy creamery butter? If the customer demands that his butterine be colored yellow, blue, or green, should the law say, No, you can only have it white? Would it not be just as sensible to say that the creameries shall not use any coloring matter? That the internal arrangements of the cow alone should determine the color of the creamery product?

We have become somewhat wearied with this, which seems to us an unjust fight of the creamery combine against a legitimate industry employing thousands of people and representing an investment of millions. If oleo is such a desirable food product and can be put on the market at a price that competes with the creamery product, it is surely a benefit to the people at large instead of a detriment, and should be protected and not legislated out of use. Right now many families in Chanute are using butterine at 18 cents per pound. Good country butter can not be secured in sufficient quantities to supply the trade, and many prefer the 18-cent oleo to the 30-cent creamery for economy's sake. Many a poor man finds his grocery bill a dollar or so smaller at the end of each month these days than though he were compelled to buy the 30-cent creamery product, and the creamery does not suffer because of this, as there is always a greater demand among those who can afford it than the creamery can supply.

But later comes Senator HARRIS of Kansas, and under the blind of pure-food pretense offers an amendment to the bill which seems to have for its object the destruction of the industry of renovating and improving the lower grades of country butter by reworking, etc. The bill provides a tax of $600 per year on all such industries, and $48 per year on any merchant that sells the improved butter. Should this amendment become a law it would greatly reduce the price of country butter, because it would drive from the market the principal customer. Now a very large per cent of this butter goes into the hands of these process men, where it is thoroughly washed, reworked, and colored, and greatly increased in value. Take away from the country butter maker this market and you must necessarily greatly reduce the price of the product. Much of the country butter that comes to town, on account of the poor facilities for handling and in some cases absolute indifference about the matter, is not a palatable article until it has passed through the hands of the skillful renovator.

It seems that the great creamery combine of this country is at the bottom of this whole onslaught and is determined to crush these other industries if enough of our wise legislators can be influenced to lend a helping hand.

We do not believe in food adulterations, nor do we believe in imitations being sold as the genuine article, but we do believe in every enterprise stand-

ing or falling on its own merits. We do not believe in destroying one legitimate enterprise that another may reap excessive gains.

TO THE FARMERS OF KANSAS.

The bill introduced by Senator HARRIS, of Kansas, as an amendment to the oleo bill strikes at every housewife in this State, or any other, who makes butter and exchanges it at the store for groceries or clothing. Ostensibly it is aimed at the ladlers and processors on the false assumption that their goods are adulterated. Nothing could be further from the truth. The effort to improve butter is always with us. It is active in the housewife when she makes it. It is present in the merchant when he buys it. It is very much present in the processor when he buys it and endeavors to improve it so as to get a profit out of it. All of these efforts heretofore have been lauded.

Now Mr. HARRIS comes along with his bill and says it is criminal.

Why? I confess I can not see.

Is it dictated by ignorance? Mr. HARRIS is a very intelligent man.

Is it an additional slap at the oleo bill put in for fun? I can not tell.

Is it by design? There again I am at sea.

But that the creamery interest is powerful in the halls of legislation, and growing more powerful as the years go by, is a well-known fact.

Can it be that sinister motives underlie the effort? I pass it over to you, farmers and your wives, for a solution. If it becomes a law your interest is assailed, and your revenue from the article of butter will be cut in half, for the very plain reason that if an unjust law drives your best customer out of the industry your goods at once lose value, and you will return to the old condition of things existing ten, twenty, or thirty years ago.

What matron of 40 years in this vast Western country can not remember when her roll of butter, carefully made and wrapped, was taken to town and exchanged for groceries, and the best offer she could get was 6 cents per pound for it? And why? Because the country storekeeper had but three customers for it: A few pounds of the best for table use, more pounds of the next choice for bakers' use, and the balance (more than 50 per cent of it) went down to grease. All is now changed. The processor is daily on the market picking up this butter, and the processors are so numerous and the competition among them so active that the settled value of butter for the past three years has averaged 12 to 14 cents per pound, and unless unjust legislation arrest its course, the price will rule still higher in the future.

I append the defining paragraph of the law. Read it carefully, digest it, and then write your representatives in both branches of Congress and protest against its passage:

"That 'process butter' or 'renovated butter' shall be understood to mean a grade of butter produced by mixing, reworking, rechurning in milk or cream, refining, or in any way producing a uniform, purified, or improved product from different lots or parcels of melted or unmelted butter, and in which no acid, alkali, nor chemical, nor any substance whatever, has been used for the purpose or intent of deodorizing or removing rancidity therefrom, and to which no substance or substances foreign to pure butter has been added with intent or effect of cheapening cost or increasing weight of same."

FAIR PLAY.

Here is a finely condensed and powerful statement of the situation:

	Cents.
Butter	35
Should be	26
Who gets the extra	9

THE ROBBERY OF THE FARMER AND LABORER.

A month ago the farmer was paid 3½ cents per quart for his milk. Best butter retailed at 30 cents.

Recently the price of milk to the farmer was reduced to 3 cents and butter went up to 35 cents. Yesterday, April 16, the price of milk was again reduced to 2½ cents and the price of butter is still 35 cents. It would have been 40 cents but for the wide publicity given to the methods of the "butter ring" through the daily papers.

The price of farmers' milk is fixed by the "milk exchange," controlled by the creamery owners, and the "fat" (or excess profit of 9 cents) is "contributed" by the farmer and by you.

The farmer nowadays sells his milk and the creamery men make the butter. What a nice position for the creamery man, who, while he howls for a 10-cent tax on butterine (oleomargarine), lowers the price of milk to the farmer and raises the price of butter to the retailer and his customers.

Read the following extract from the July (1895) report of the Hon. George W. Roosevelt, United States consul to Brussels, Belgium:

"Some time since, France sent a delegation to Holland for the purpose of studying the methods employed there for the suppression of frauds in butter making; and also to ascertain if the manufacture of margarine (oleomargarine, butterine) had been favorable to agricultural interests. The report contains the attestation of seven mayors of communes in southern Holland, showing that since the introduction of the margarine industry in that country not only has the price of milk increased, but also the number of cattle, which plainly shows that the industry in question has become a source of profit to the farmers."

(Any one desiring the full report of Consul Roosevelt can get it upon application by mail to the Secretary of State, Washington, D. C.)

The 10 cent oleomargarine tax bill is intended to wipe out oleomargarine (butterine) for the benefit of the creamery men, who intend having the field entirely to themselves, as by taxing competitors out of existence they will name their own price for butter.

The oleo tax bill is now pending in the House of Representatives. Write to your member of Congress, write to President Roosevelt, protesting against a law which means that you must contribute to the now overflowing purse of the creamery man.

AMMON & PERSON,
Wholesale Dealers in Oleomargarine,
138-140 Ninth street, Jersey City, N. J.

I print here an editorial from the Chicago Tribune of April 8, 1902, which puts this matter in strong colors.

This evil class of legislation is to be inaugurated if the President will consent. The outrage, if it is perpetrated, will lie at his door. For all coming time, as the people look backward to see where this legislation came from or this strife was inaugurated, where this assault upon the food of the people began, where it was made possible for the mailed hand of taxation to go directly into the house of the poor and the rich and put a price upon their food, and take that price and put it into the pockets of other people, where it came from, who began it, history will show that the innovation upon all American legislation was begun in 1902 by the passage of this oleomargarine bill and the approval of the President:

A GREAT STRETCH OF POWER.

The oleomargarine bill is the latest and most odious and offensive example of the practice of using the national taxing power to prohibit a domestic industry. The taxing power has long been used to prevent the importation of the products of foreign industries in order to give protection to the American manufacturers or growers of similar products. Its use to "regulate" out of existence one domestic industry for the benefit of another industry or for the alleged protection of public health or morals is of later origin.

There is a tax of 10 per cent on the circulation of State banks. That tax was not imposed as a revenue measure, but to destroy State bank notes and leave a free field for the national-bank issues. That tax seemed an essential part of the system which gave the country a safe bank-note currency. But the practical illustration of the axiom that "the power to tax is the power to destroy" has served as a precedent for a similar use of the taxing power where its expediency may be questioned.

The war-revenue act of 1898 contained a provision for the taxation of bucket shops which aimed at their extinction. A brief controversy between the House and Senate as to whether that provission shall be repealed with the war taxes or left in force has been determined in favor of repeal. The tax on bucket shops is to go with the other war taxes. The bucket-shop business is objectionable from many points of view. It should be regulated, controlled, or prohibited. The bucket shop itself is objectionable from the point of view of the moralist, who sees in tolerated gambling an intolerable evil. But it is open to question whether it properly comes within the purview of the national authority to control bucket shops, policy shops, or any other kind of shops which are subject to the police powers of the several States. On the whole, The Tribune would like to see the bucket-shop tax retained, but it can not help seeing in this and all similar legislation a dangerous abuse of the true functions of the National Government.

A few years ago the practice sprang up of mixing wheat flour with corn flour and selling the product as wheat flour. The millers took exception to it. They appealed to Congress to use the taxing power for their protection against a new industry which they said injured trade in many ways. Congress granted the prayer. A special tax was imposed on the manufacturers of mixed flour and a tax was put on their product. These taxes produced $6,000 during the last fiscal year. The taxing power has about destroyed the mixed-flour industry, whose product was not an unhealthful one. Should the power to tax in order to destroy be used in any such case?

Sixteen years ago a small tax was levied on oleomargarine at the instance of the dairymen. The ostensible object was to "regulate" the business and obtain revenue. The hope of the dairymen was that the business would be destroyed. The hope was frustrated. Therefore they have asked Congress for and are on the eve of obtaining legislation which will practically put an end to the manufacture of a food product which is not injurious to health, which a great many Americans have been buying because it was cheap, and enjoying because it was an acceptable substitute for butter.

The practice of using the taxing power at the instance of one domestic industry to destroy another domestic industry is dangerous. It has been carried too far. If it is to become a settled rule of action that an industry which can command the necessary votes in Congress may use the taxing power to crush out home rivals the abuse of power may in time become intolerable. It is time to put a limit to this perversion of the functions of the National Government.

I publish a telegram received by me from constituents of mine who are shocked beyond measure by the injustice which they see coming:

CHARLES H. GROSVENOR, M. C.:

To preserve the heart throbs of our country's Constitution—equal rights to all, special privileges to none—we attract your attention to the increase of 8 cents per pound tax on colored oleomargarine, which is a dribble from out wage-earners' pocketbook, whose humble homestead must be built from the economy of his diet, we beseech your intervention for him, the life of our workshops. The manufacturer does not pay the tax.

I protest in the name of law and justice against this legislation.

Chinese-Exclusion Bill.

SPEECH
OF
HON. WILLIAM H. RYAN,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Monday, April 7, 1902,

On the bill (H. R. 13031) to prohibit the coming into and to regulate the residence within the United States, its Territories, and all territories under its jurisdiction, and the District of Columbia, of Chinese and persons of Chinese descent.

Mr. RYAN said:

Mr. SPEAKER: This bill, known as the Chinese-exclusion law, provides for a permanent policy of excluding from the United States Chinese laborers. I am in favor of the bill with the addition of the amendments which are recommended by the minority and have the indorsement of the representatives of labor of the United States and the people of the Pacific coast. In order to fully understand this question it is necessary to briefly state our treaty relations with China. In July, 1844, a commission representing the United States, headed by Mr. Caleb Cushing, secured a treaty with China granting to the United States similar concessions to those granted to England in relation to peace and commerce.

In 1858 a new treaty was signed by the United States providing for a representative of the United States in China, protection of American citizens residing in China, and giving the United States benefits of commercial relations, etc.

Although considerable numbers of Chinese were attracted to California after the discovery of gold in 1848, there were only about 35.000 in the United States in 1860, and none of the evils of Chinese labor were felt at this time.

In 1868 Anson Burlingame resigned his position as minister from the United States to China, and headed a delegation of Chinese officials to this country, and as a result of this mission a new treaty was signed. This was the first concession by the United States to Chinese subjects residing in the United States.

This treaty gave to China the right to appoint consuls at ports of the United States, and provided for reciprocal religious freedom of Chinese subjects residing in the United States and our citizens residing in China.

Articles V and VI, however, are the important articles, and I will quote them:

ARTICLE V. The United States of America and the Emperor of China cordially recognize the inherent and inalienable right of man to change his home and allegiance, and also the mutual advantage of the free migration and emigration of their citizens and subjects, respectively, from the one country to the other for purposes of curiosity, of trade, or as permanent residents. The high contracting parties therefore join in reprobating any other than an entirely voluntary emigration for these purposes. They consequently agree to pass laws making it a penal offense for a citizen of the United States or Chinese subjects to take Chinese subjects either to the United States or to any other foreign country, or for a Chinese subject or citizen of the United States to take citizens of the United States to China or to any other foreign country without their free and voluntary consent, respectively.

ARTICLE VI. Citizens of the United States visiting or residing in China shall enjoy the same privileges, immunities, or exemptions in respect to travel or residence as may there be enjoyed by the citizens or subjects of the most favored nation. And reciprocally Chinese subjects visiting or residing in the United States shall enjoy the same privileges, immunities, and exemptions in respect to travel or residence as may there be enjoyed by the citizens or subjects of the most favored nation. But nothing herein contained shall be held to confer naturalization upon citizens of the United States in China, nor upon the subjects of China in the United States.

There seems to be nothing else reserved in that treaty except that the citizens or the subjects of either country shall not be naturalized in the other.

The treaty further provided that citizens of the United States in China and Chinese subjects residing in the United States should enjoy all the privileges of the public institutions of each country, respectively, and should have the right to establish schools, respectively, in the United States and China.

By this treaty we invited immigration from China and guaranteed those immigrants the same protection as we guaranteed the people of other nations coming to the United States. No distinction was made between Chinese laborers and other classes of Chinese. We invited them to come, and they accepted our invitation and came in large numbers and settled principally on our Pacific coast. That they assisted greatly in the development of the West and in the construction of railroads can not be doubted. While they built railroads and to a limited extent worked in the mines, they were principally engaged in menial work which it was difficult to procure others to perform. In 1860 there were but 35,000 Chinese in the United States, and in 1880 there were 105,000.

It was soon discovered, however, that we had made a mistake in the free admission of Chinese into the United States. The Chinese are a wonderful people in many respects. They have great powers of endurance, great industry, great patience, and they can work and live on so much less wages than white men that they become formidable competitors in all lines of work. They continued to come into the Pacific States in such large numbers that our people became alarmed, and the people and officials of the Pacific coast appealed to Congress to save them from what was termed "the yellow invasion." In 1879 Congress passed an act "to restrict the immigration of Chinese to the United States." The means adopted to secure this object was the limitation of the number of Chinese passengers which might be brought to this country by any one vessel to 15. The bill was passed by both Houses and was transmitted to the President for approval. President Hayes vetoed it, stating in his veto message that the bill as amended by the Senate included provisions which aim at and require the abrogation of Articles V and VI of the treaty with China of 1868.

The Chinese immigration became a vital question. With a Chinese population of 400,000,000 people, the yellow man could soon overrun the United States, and public sentiment was greatly aroused, and the Government again took up the question of restricting Chinese immigration.

In 1880 the Chinese in the United States numbered more than 100,000, and a commission was appointed to negotiate a treaty that would give the United States power to regulate Chinese immigration. This commission negotiated two treaties, one relating to commerce and the other relating to the immigration of laborers. These treaties were ratified in the year 1880, and Congress passed an act to suspend for twenty years the immigration of Chinese laborers, but President Arthur, on April 4, 1882, vetoed this bill as being in violation of the terms of the treaty.

Congress then passed the act of May 6, 1882 This act provided that the coming of Chinese laborers into the United States should be suspended for ten years; but provided that this section should not apply to Chinese laborers who were in the United States November 17, 1880, and provides for the identification of such laborers by means of certificates. It also provides that no State court or court of the United States shall admit Chinese to citizenship.

The act of 1882 was soon found to be inadequate. It was found, as it is at present, that it is most difficult to obtain truthful testimony from Chinese laborers seeking to enter or claim a residence in the United States because of the utter disregard or perhaps the inability of Chinese witnesses to understand the obligations of an oath. The act of July 5, 1884, was then passed, which was a stronger act than the one passed immediately after the ratification of the treaty. This act declared that the certificate which the laborer must obtain "shall be the only evidence permissible to establish his right of reentry into the United States."

The act of May 6, 1882, would have expired by its terms in ten years after its passage; but on May 5, 1892, the act now in force, known as the Geary law, was passed and approved. This act provides that all laws in force prohibiting and regulating the coming of Chinese persons into this country are continued in force for ten years from the passage of the act. This act places the burden of proof on the Chinaman when arrested to prove his right to remain in the United States, or it adjudges him guilty until he proves his innocence, which is a reversal of the ordinary rule of procedure. It provides for the removal of Chinese illegally in the United States, and it also provides for the imprisonment of persons adjudged not lawfully to be entitled to remain here, at hard labor, not to exceed one year, and thereafter to be removed. In other words, they are to be put in jail, kept there a year, and then sent home. It provides that no bail shall be allowed pending the disposition of the application of a Chinaman for a writ of habeas corpus.

It provides that all Chinese within the United States at the passage of the act must apply to the collector of internal revenue for a certificate of residence, and that all Chinese laborers found in the United States within one year after the passage of the act without such certificate shall be deemed to be unlawfully in the United States.

This act also gives to the Secretary of the Treasury the right to make all necessary rules and regulations for its execution.

In 1894 a new treaty was negotiated between the United States and China. As stated by the Chinese minister, "to relieve the Executive from embarrassment," China consented to enter into the treaty of March 17, 1894, proclaimed December 8, 1894.

The treaty absolutely prohibits the coming of Chinese laborers into the United States, except under conditions therein specified, for a period of ten years. It provides that this restriction shall not apply to the return to the United States of any registered Chinese laborer who has a lawful wife or a parent in the United States, or property therein to the value of $1,000. The act further provides that this restriction shall not apply to the rights at present enjoyed of Chinese subjects being officials, teachers, students, merchants, or travelers for curiosity, etc., but not laborers, of coming into the United States and residing therein; and that Chinese laborers shall continue to enjoy the privilege of transit across the territory of the United States to or from other countries, subject to regulation by the United States. The treaty also guarantees to Chinese, of whatever class, the same protection as is given by the laws of the United States to citizens of the most favored nation, except the right to become naturalized citizens. The convention is to remain in force for ten years, and if six months before the expiration of said ten years neither Government shall have formally given notice of its termination to the other, it shall remain in force for another like period of ten years.

This is our last treaty with China.

By the acts of July 7, 1898, and April 30, 1900, the immigration of Chinese into the Hawaiian Islands is prohibited; and it is also now prohibited, although not by act of Congress, in the Philippine Islands.

Mr. Chairman, the report of the minority on this bill says:

The question of Chinese exclusion is largely a racial question and largely a labor question.

Because our Pacific coast is the chief place of entrance of Chinese into our country, because a vast majority of Chinese immigrants settle on the Pacific coast, and because American citizens resident on the Pacific coast having had more experience with Chinese than the rest of our people, they understand the Chinese character better and are better fitted to know what legislation is necessary to solve the numerous and difficult problems connected with Chinese immigration.

I am fully in accord with this statement and will favor the legislation asked for by the representatives of the Pacific coast. I believe that the following section that is in the minority report should be again placed in the bill:

And it shall be unlawful for any vessel holding an American register to have or to employ in its crew any Chinese person not entitled to admission

to the United States, or into the portion of the territory of the United States to which such vessel plies; and any violation of this provision shall be punishable by a fine not exceeding $2,000.

The Pacific coast delegation ask for it and the argument that white firemen can not do the work, as is claimed by the other side, is contradicted by the Firemen's and Seamen's Union, as follows:

Whereas during the subsidy debate, and also during the hearings on the Chinese-exclusion bill, it has been stated in Congress that white firemen, for reasons of health, can not be employed in the fire rooms of steamers trading in the Tropics; and

Whereas this statement is being used to deprive us of the protection against Chinese competition: Therefore,

Resolved, That we, the Firemen's Union of Philadelphia, call attention to the fact that we sail in vessels on the Gulf coast to Central and South America and in any vessels anywhere as long as we are wanted and paid; and

Resolved, That in our opinion it is not a friendly act to deprive us of work and give it to the Chinese; and further

Resolved, That it would be more frank and friendly to state the reason why Chinese are carried, it being known of all seafaring men that the wages of Chinese are $9, while we as American firemen insist upon about four times that amount; and further

Resolved, That, being good enough to fight under the flag for its honor, we ought to be good enough to make a living under it.

Approved by regular meeting March 25, 1902.

WILLIAM ROBERTSON, *Chairman.*
HORACE ATKINSON, *Secretary.*

Whereas Senator HANNA and Senator FRYE stated that the heat in the stokeholds of steamers trading to the Orient is such that no white stokers can endure the same; and

Whereas this statement appears to have been the cause of the Senate voting down the anti-Chinese amendment to the ship-subsidy bill; and

Whereas this statement is without any foundation in fact, the truth being that white stokers go in the transports from this coast through the Suez, the Red Sea, and the Indian Ocean to the Philippines, and that white stokers go to the West Indies, Central and South America: Therefore, be it

Resolved, By the Marine Firemen's Union, of New York, in regular meeting assembled, that we repudiate the heat argument and the idea that it had any justification in any humanitarian concern for the health of the stokers or marine firemen; and further

Resolved, That we have been and are now willing to serve as stokers in those vessels, and will gladly do the work now done by the Chinese; and further

Resolved, That we hereby urge upon Congress to give to us, who go to sea, the same protection from Chinese competition that it shall be willing to give to workers on land.

WILLIAM MACQUEEN, *Chairman.*
JAMES W. BIRD, *Secretary.*

MARCH 25, 1902.

I believe American ships should have American crews, and this section should remain in the bill. When we annexed the Hawaiian Islands, we took in over 20,000 Chinese; when we acquired the Philippines, we took title to a large number of Chinese, variously estimated from 200,000 to 1,750,000, and the American workingman demands that this cheap labor be not placed in competition with his.

America is the asylum for the oppressed and liberty-loving people of the world, and the implied condition of their admission to this country is their allegiance to its Government and devotion to its institutions. It is hardly necessary to say that the Chinese are not even bona fide settlers, as the Imperial Chinese consul-general admits.

American labor should not be exposed to the destructive competition of aliens who do not, will not, and can not take up the burdens of American citizenship, whose presence is an economic blight and a patriotic danger. It has been urged that the Chinese are unskilled and that they create wealth in field, mine, and forest, which ultimately redounds to the benefit of the white skilled workingman. The Chinese are skilled, and are capable of almost any skilled employment. They have invaded the cigar, shoe, broom, chemical, clothing, fruit canning, match making, woolen manufacturing industries, and have displaced more than 4,000 white men in these several employments in the city of San Francisco. As common laborers they have throughout California displaced tens of thousands of men.

The United States has now a greater per capita of working energy than any other land. If it is stimulated by a nonassimilative and nonconsuming race, there is grave danger of overproduction and stagnation. The home market should grow with the population; but the Chinese, living on the most meager food, having no families to support, inured to deprivation, and hoarding their wages for use in their native land, whither they invariably return, can not in any sense be regarded as consumers. Their earnings do not circulate, nor are they reinvested, contrary to those economic laws which make the prosperity of nations. For their services they may be said to be paid twice, first, by their employer, and then by the community. If we must have protection, is it not far better for us to protect ourselves against the man than against his trade? Some maintain that the admission of the Chinese would cause an enlargement of our national wealth and a great increase of production. In this age of science and invention the production of wealth can well be left to take care of itself. It is its equitable distribution that must now be the concern of the country.

The enactment of a Chinese-exclusion law is asked for, not only by the people of the Pacific coast, but by the American Federation of Labor and all other labor organizations of the United States. I am in favor of protecting the American workingman and giving him employment at good wages, even if we lose our trade with China.

The Chinese cooly is no benefit to this country, and I for one am not willing to allow him to drag the laborer of this country down to his level.

The American workingman is paid better wages, is more intelligent, more ambitious than his brother in any other country in the world; and we should keep him so; not only should we keep the coolies out, but we should welcome an eight-hour work day to encourage and elevate our workmen. This country has grown great because the best people of all lands have here united to build up the grandest Government on earth, and we should keep advancing and not permit the progress of our country or the happiness of our people to be endangered by the overflow of the Celestial Empire.

Cuban Reciprocity Bill.

SPEECH
OF
HON. WILLIAM T. ZENOR,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Friday, April 18, 1902,

On the bill (H. R. 12765) to provide for reciprocal trade relations with Cuba.

Mr. ZENOR said:

Mr. CHAIRMAN: At this late hour in the debate I confess to some degree of hesitancy in venturing upon a discussion of this bill, and I shall not attempt to do so in detail. But, Mr. Chairman, in view of the very unusual and somewhat extraordinary situation presented by the division and conflict of opinion on both sides of this Chamber touching the wisdom of the passage of this measure, I deem it not only just to myself but due to those whom I have the honor to represent upon this floor to briefly explain, in a general way, why I shall support and vote for the bill. I shall do this by a somewhat general review of the subject under consideration, as applied to present conditions, and contrast as best I can the views and theory of the two dominant parties concerning the expediency of Congress taking some early action in overhauling and revising the present high and burdensome tariff taxation of this country. As to the pending bill, the ground has been so thoroughly covered by the wide range of arguments pro and con already submitted that but little, if anything, of interest remains to be said.

I do not, therefore, assume that any observations I may make touching the merits of this controversy will contribute anything of importance to the general fund of information upon that subject. Mr. Chairman, for the first time since I have had the honor of being a member of this House I have witnessed the remarkable spectacle of the Republican majority divided into factions, bitterly assailing and denouncing each other over a purely Administration measure. It is a somewhat strange and interesting performance. It is rarely the case that Republicans, whatever their convictions, are unable to compromise their differences in private caucus or to coerce the bolting factions into a surrender of their opposing views to the policy of the recognized leaders of their party.

But in this instance it seems the insurgent forces have refused to yield to party discipline and have carried their grievances into this Hall, to be aired and fought out upon this floor. As an evidence of this fact and of the struggle between the contending forces it is only necessary to recall the statement made in the course of his remarks by the distinguished gentleman from Kansas [Mr. LONG]. In the beginning of his address to this House, in referring to the pending measure, he said "that after the Committee on Ways and Means had considered this measure for about two and a half months, and had taken testimony covering 766 pages, it was then considered by the Republican members of the committee for some weeks, and finally a resolution was adopted to submit the question to a Republican caucus or conference; that such a conference was called, and after five successive meetings the conference directed the Committee on Ways and Means to report this bill."

It will thus be seen that this measure has come up through great trial and tribulation. What was the occasion for all this delay? Why procrastinate and parley over a very simple measure of relief to the Cuban people? Certainly no excuse could be found in any uncertainty as to the urgent needs of Cuba, and much less as to the views of the Administration upon the subject. President Roosevelt, in his message to Congress on the 3d day of December, 1901, in speaking upon this subject, said:

In the case of Cuba, however, there are weighty reasons of morality and of national interest why the policy (reciprocity) should be held to have a

peculiar application, and I most earnestly ask your attention to the wisdom, indeed to the vital need, of providing for a substantial reduction in the tariff duties on Cuban imports into the United States. Cuba has in her constitution affirmed what we desired, that she should stand, in international matters, in closer and more friendly relations with us than with any other power, and we are bound by every consideration of honor and expediency to pass commercial measures in the interest of her material well being.

This declaration of a Republican President ought to have been a sufficient warrant to the majority of the Ways and Means Committee to act, and act at once. The President's language was plain, and clearly indicated beyond the peradventure of doubt the Administration's policy of affording relief to Cuba. It was to consist of not merely a reduction, but a substantial reduction, of tariff duties upon all Cuban imports into the United States. If the Committee on Ways and Means did not feel fully justified in accepting the views of the President, or entertained doubts of the wisdom of his judgment as to the manner of granting the needed relief, then the views of the late President McKinley and the honorable Secretary of War, both of whom expressed in equally emphatic terms the same opinion as that of President Roosevelt upon that subject, should have been considered.

Here is what the Secretary of War in his annual report says:

Our present duty to Cuba can be performed by the making of such a reciprocal tariff arrangement with her as President McKinley urged in his last words to his countrymen at Buffalo on the 5th of September. A reasonable reduction in our duties upon Cuban sugar and tobacco, in exchange for fairly compensatory reductions of Cuban duties upon American products, will answer the purpose, and I strongly urge that such an arrangement be promptly made. It would involve no sacrifice, but would be as advantageous to us as it would be to Cuba. The market for American products in a country with such a population, such wealth and purchasing power, as Cuba with prosperity would speedily acquire, made certain by the advantage of preferential duties, would contribute far more to our prosperity than the portion of our present duties which we would be required to concede.

A large part of the $37,000,000 of merchandise which Cuba now imports from countries other than the United States, and of the much greater amount which she would import if prosperous, should come, and with a proper reciprocal arrangement inevitably would come, from the United States. An examination of the tables, Appendex B, shows that last year she bought over $6,000,000 worth of cotton goods, of which we supplied less than $500,000; nearly $700,000 worth of woolen goods, of which we supplied less than $22,000; over $2,000,000 worth of vegetables and vegetable fibers, of which we supplied but $171,000; over $2,700,000 worth of wines, of which we supplied but $829,000; over $526,000 worth of silk goods, of which we supplied but $24,000; nearly $2,598,000 worth of oils, etc., of which we supplied but $713,000; $1,053,000 worth of chemicals, drugs, etc., of which we supplied but $422,000; $8,476,000 worth of animals and animal products, of which we supplied but $1,994,000; $1,638,000 of manufactures of leather, of which we supplied but $405,000; $3,335,000 worth of rice, of which we supplied but $3,000. Substantially the whole of these articles, of which we now furnish so small a part, should come from the fields and factories of the United States. (Annual Report Secretary of War, November 27, 1901, p. 48.)

Notwithstanding these emphatic declarations of two Presidents, reenforced by the urgent recommendations of the governor-general of the island and Secretary of War, all of whom, as is well known, favored not the kind of bill reported by the Ways and Means Committee and now before this House, but a bill providing for a reduction of from 40 to 50 per cent of the existing Dingley rates on Cuban imports. These high officials were of the opinion that, considering the distressed condition of the Cuban people and our relations with that island, we should make a cut of at least one-half of the present high and exorbitant duties upon Cuban imports through reciprocal trade arrangements. Instead, however, of proposing this reasonable and just concession to the Cuban people, for which they offered to render a just equivalent, the majority of the Committee on Ways and Means, composed of Republicans, have seen proper to ignore the recommendations of these high officials and the earnest appeals of the Cuban people for at least a 50 per cent reduction in our tariff rates, and report this compromise measure, advocated by the American sugar trust, of only a 20 per cent reduction.

Evidently this bill, entitled "A bill to provide for reciprocal trade relations with Cuba," does not embody the views of the Republican party, nor does it express the convictions of the Democratic party upon the question of our duty to Cuba. The Cuban people have the right to expect and the American people are demanding that ample and full justice be done the Cubans. The United States has a peculiar interest in this island and its people and in the future welfare and success of its government, soon to be inaugurated. Having sacrificed thousands of lives and millions of treasure to free Cuba from Spanish dominion, in order that another republic might be added to this Western Hemisphere, whose future destiny, honor, and glory must ever be inseparably associated with that of ours; having, as a result of our intervention, destroyed the commercial relations of Cuba with European countries, and imposed upon her conditions restrictive of her power to build up new markets; having required of Cuba concessions of certain important governmental functions incident to her sovereignty, which she readily yielded and incorporated as part of her constitution and fundamental law; having willingly done all that we ask of her, and now that she has formed her constitution, organized her government, and elected her president, and is about ready to take over to herself the control of that government and embark upon her career as an independent and free nation, she appeals to us, not as a mendicant, not for charity, but for fair and honorable trade relations; for a market in which her people can dispose of the fruits of their labor and toil at fair and remunerative prices for freer trade and exchange of commodities.

Cuba does not plead for any advantages that she is not willing to reciprocate. She stands with open arms within 90 miles of our shores, rich in the almost inexhaustible resources of her soil, with a climate unsurpassed and a future pregnant with possibilities. With a commerce aggregating annually the large sum of $130,296,887, even now, under all the paralyzing effects of a most disastrous war, and with normal conditions once restored and her people given the opportunities that a reduction of our high tariff rates would guarantee to them in our markets, Cuba would soon command a commerce of over $200,000,000 a year, all of which she tenders to us if we will but grasp the opportunity. In view of this splendid opportunity to widen and expand our markets and build up and cement friendly and neighborly intercourse with the Cuban people, in view of our admitted duty and obligation involving the honor and good faith of the nation, I can not avoid the conclusion that the committee reporting this bill have failed to measure up to their full duty and meet the just expectations of the country.

Mr. Chairman, it would be a shortsighted and unstatesmanlike view to take of our relations with Cuba if in dealing with her we are controlled solely or in any large part by the narrow and selfish consideration of one or two domestic industries. It must be remembered that Cuba will in the future be a tower of strength in maintaining and upholding the Monroe doctrine. It is Cuba that will furnish to the United States our strongest base for both offensive and defensive operations in the future in all cases of national peril, and will most effectively secure us in the enjoyment of national peace. It is not Porto Rico, the Philippines, Florida, or the storm-swept coasts of the Gulf States that have or will be selected for the American coaling stations, but Cuba, with its sympathetic people, central position, and its deep and secure harbors—Cuba, that has ceded to us extraordinary privileges in harbors and coaling stations. Cuba is as certainly and securely within the armed defenses of the United States as if it were annexed.

This closeness of relationship and mutuality of great interests, this bond which must make us inseparable for purposes of war, should likewise induce us to make such trade concessions as will make us equally inseparable for purposes of peace. Mr. Chairman, I said a few moments ago that Cuba presented a splendid field for American trade and commerce. I now desire briefly to call attention to this phase of the question. For the fiscal year ending June 30, 1901, the total value of imports into Cuba was $66,167,645. Of this sum the United States furnished $28,475,002 worth and the rest of the world furnished $37,692,643 worth.

For this same year Cuba sold $64,127,242 worth of her products. Of this amount she sold to the United States $45,886,568 worth, and to all other countries only $18,342,674 worth. This latter sum was made up almost entirely from sales of cigarettes, cigars, and leaf tobacco. Cuba bought more than $37,600,000 worth from all other countries, or double the value of the products she sold to them, their balance of the trade exceeding $18,000,000. On the other hand, Cuba received in cash from the United States, as her balance of the trade with us, nearly $17,500,000. When Spain had control and governed the island of Cuba, she applied a system of preferential duties in favor of not only all articles produced in Spain and exported to Cuba, but in favor of all articles brought to Cuba in Spanish vessels.

These preferential duties ranged from one-fourth to one-half of the duties paid by foreign countries. This policy and system enabled Spain to command 90 per cent of the Cuban imports, or, in other words, to sell to Cuba 90 per cent of all she bought. The application of the same policy, the same principle, by the United States to Cuba would enable us to control the Cuban trade in the same manner and in like proportion.

A carefully prepared table, which I will incorporate as part of my remarks, embracing certain articles imported into Cuba for the fiscal year ending June 30, 1901, amounting in the aggregate to the sum of $45,322,942, shows the names and classes of articles composing this sum sold by the United States and those by all other countries to Cuba during this period. It may be noted that this table does not include all the articles furnished by the rest of the world, only those in the main in which the rest of the world furnished larger quantities than the United States, nor are all the items furnished by the United States given; in fact, none of those in which the United States outstrips all other countries are included. The United States has how the larger part of the trade in fresh beef, pork, eggs, flour, coal oil, coal, machinery, railroad iron, and a number of other very important articles of importation.

But these are more than offset on the part of other countries by cattle, rice, salt, wines, olive oil, preserved fruits, dried beef, cottons, linens, silks, woolens, shoes, hats and caps, and a

number of other common articles of consumption, all of which the United States produces, and most of which in quantities in excess of domestic consumption. It will also be observed from an examination of this table that of the aggregate total of $45,322,942 of this class of imports into Cuba for this period the United States only secured $10,356,725 worth, or only about 23 per cent. The rest of the world obtained $34,962,101 worth, or more than 77 per cent. The value of the imports for this fiscal year, not included in table, is $20,844,700. Of this sum the United States furnished $18,114,160 worth, consisting of articles sold to Cuba in which the United States has virtually no competition, making our share in this balance of trade 86 per cent.

This demonstrates that in making reciprocal trade arrangements with Cuba if we would apply the correct principle we could secure at least 86 per cent of her entire trade, or $56,904,000 worth of it, which is just double the amount we shared the last year. For the purpose of showing the present and former Spanish rates of duties levied upon Cuban imports, two columns of per centum have been added to the table. The first column represents the present ad valorem duty collected upon the articles enumerated upon their entering Cuba; the second the former Spanish rates.

As to the reduction of duty on tobacco, no one is heard to complain, and the facts do not warrant the belief that any harm will come from any increased competition to our tobacco producers. The consumption of cigars in the United States for the year ending July 1, 1901, was 5,770,954,369. The total production of cigars in Cuba does not exceed 250,000,000 per annum. This includes all cigars sold in Europe, as well as in the United States. The total Cuban production does not exceed 4½ per cent of the present American consumption. The annual consumption of cigars in the United States will naturally increase with the increase of population, while it is conceded that the United States does not and can not produce the same quality of tobacco raised in Cuba. The difference in quality between American and Cuban grown tobacco renders competition between the two harmless to the American tobacco producer. Besides this it is admitted by the best-informed of both American and Cuban tobacco growers that the annual production of Cuban tobacco of the grades valuable enough to pay the cost of export transportation can not be largely or materially increased. Hence any pretended grounds for alarm among American tobacco growers arising out of competition with the exports of tobacco from Cuba to this country would seem to be without any substantial foundation.

Now, Mr. Chairman, what are the conditions with which we find ourselves confronted in Cuba? Cuba is asking our Government for some remedial legislation—some relief. It is urged in behalf of this appeal that we owe Cuba a duty; that we are under a moral if not a legal obligation to relieve her people from financial and business distress; from the effects of prevailing low prices for her sugar product; prices that do not equal the cost of production; prices brought about not by any act of our Government, but conceded to be due to a fall in the price of sugar the world over. It is urged that the Cubans are without money and their credit exhausted; that unless they secure some immediate aid they will not be able to harvest their present crop of cane and

plant their next crop. This claim seems fairly well supported by the testimony given before the committee in their hearings upon this bill. If not in present distress, they will suffer in the near future unless something be done. They do not ask charity; they come with a quid pro quo to offer as a fair equivalent for the favor asked. They seek to secure from us a reciprocal trade arrangement by which they can enter and sell their products in the markets of the United States, and in return for whatever concessions we make in that behalf to grant to us on our products exported to Cuba a like reduction or preferential rates equal thereto.

They ask for a reduction of 50 per cent of the present duties imposed by the Dingley law. It is pretty clearly shown, if not absolutely demonstrated, that any less reduction than this will not materially help them. What are the duties, under the Dingley law, upon articles coming to the United States from Cuba? How do they compare with the rates of duty upon the imports from other countries? Mr. Chairman, while the general average of tariff duties upon all dutiable articles imported into the United States is 51 per cent, the highest general average of any law ever placed upon the statute books, exceeding the general average under the McKinley law of 1890 by nearly 2 per cent. But while this general average of duties does not exceed 51 per cent upon all articles imported into the United States, yet, as applied to Cuba alone, the average rates of duty paid by Cuba upon articles imported by her into our country is about 100 per cent. This happens because of the fact that the two chief products of export by Cuba are sugar and tobacco, upon which are levied the heaviest tariff rates known to the Dingley law.

The maximum rate of duty on unrefined sugar being from $1.68½ to $1.82½ per hundred pounds and on refined anywhere from $1.95 to $2.40 per hundred pounds, according to the methods employed by different experts in making the estimates. The scheme devised in the sugar schedule in the present Dingley law is so complex and complicated that it is conceded that it requires the very best skill of experts to determine the exact per cent of protection they are entitled to under its provisions. These experts, strange to say, differ in their computations and arrive at different results in their manipulation of figures. The law itself is grievously faulty in its construction in that it is so indefinite and uncertain that it permits the sugar trusts and those sharing in its benefits to take this advantage. But, be this as it may, it is a conceded fact that the average of duties paid by Cuba is now about 100 per cent. The duties upon tobacco are about 280 per cent, and this is the next largest article of Cuban export.

Now, Mr. Chairman, how much sugar does Cuba produce for export? For the fiscal year ending June 30, 1901, Cuba produced about 875,000 tons of sugar. Of this amount she exported about 825,000 tons to the United States. The amount of domestic or free sugar produced in the United States, including Porto Rico and Hawaii, was about 850,000 tons.

Secretary Wilson's latest report on the subject places the beet-sugar production for 1901 in the United States at 198,500 tons, from the following sources: California, 80,000 tons; Michigan, 60,000 tons: Colorado, 20,000 tons; Utah, 15,000 tons; Nebraska, 7,000 tons; New York, 7,000 tons; Wisconsin, 3,000 tons; Minnesota, 2,500 tons; Washington, 2,000 tons; Oregon, 2,000 tons. The cane-sugar production is estimated in detail as follows: Southern States, 300,000 tons; Porto Rico, 100,000 tons; Hawaii, 300,000 tons; total, 700,000 tons.

The amount of sugar consumed in the United States during the year ending December 31, 1901, was 2,372,316 tons. This would leave a balance to be imported of 1,522,316. The consumption of sugar in the United States has increased at the average rate of 6.94 per cent per annum for the last twenty years. At this average annual rate of increase the increase in consumption for the present year will be 164,638 tons, making the total amount of sugar consumed in the United States during the year ending December 31, 1902, 2,536,954 tons. To meet this requirement for consumption the maximum supply of free sugar from the crops now under way is estimated to be as follows:

Hawaii (estimated), from	300,000 to	350,000 tons
Porto Rico (estimated), from	100,000 to	150,000 tons
Louisiana and Texas (estimated), from	300,000 to	350,000 tons
Domestic beets (estimated), from	150,000 to	150,000 tons
Total (estimated)	850,000 to	1,000,000 tons

This leaves from 1,536,954 to 1,686,954 tons as a margin between home production and consumption, which must be supplied from foreign sources. This amount of foreign sugar must enter the United States subject to the high rates of duty under the Dingley tariff. This margin of foreign importation constitutes an actual protection afforded our American sugar producers. Until this margin of foreign importation is exhausted the American industry is fully protected. The sugar crop of Cuba has never exceeded 1,100,000 tons in its most prosperous years.

The following table will show the annual production of sugar in Cuba for the past twelve years:

	Tons.		Tons.
1890-91	819,760	1896-97	219,500
1891-92	976,789	1897-98	314,000
1892-93	841,000	1898-99	345,260
1893-94	1,087,000	1899-1900	308,453
1894-95	1,040,000	1900-1901	635,856
1895-96	240,000	1901-2 (estimated)	875,000

With this large excess of consumption over production, can any reasonable mind find any occasion to grow hysterical over the threatened invasion of our sugar market by Cuban sugar? Can any gentleman upon this floor or elsewhere justify his refusal to consent to the small and insignificant reduction of 20 per cent proposed in this bill in the interest of Cuba, in the interest of larger and freer trade, in the interest of what is still more important than either, of a possible reduction of the price of sugar to the great mass of consumers of this country? I take it that he can not. I do not hesitate to say that the great majority of the people of this country will refuse to excuse, if they do not condemn, any Representative here who has the opportunity and fails to record his vote in favor of cutting down these duties, in favor of removing a part of the high-protective wall that has been thrown around an article of such prime importance and general use to the whole people.

There is now, and has been for several years, a strong and growing sentiment against the manifest injustice of maintaining the present high, exorbitant, and useless rates of the Dingley tariff upon many of the articles included in its various schedules. The people have had an object lesson in the practical operation of this law that has challenged their attention, and they are wondering why it is that they must continue to be taxed for the benefit of the protected industries which have long since outgrown the necessities of protection, whose output is far in excess of the home market, far in excess of domestic use and consumption, and who, on account of this selfish and monopolistic policy, are enabled to shut out all competition at home and charge our own people much higher prices for what they need and must have than they do the people of foreign countries. They are beginning to study and understand something of their own interest and of the operation of these Republican laws and policies, and the more they study and understand and the more they investigate and inquire into the producing causes of trusts, combinations, and monopoly of markets and control of prices the more thoroughly persuaded they become that the chief of all these evils is the policy of an exorbitant and excessively high tariff.

Mr. Chairman, while I know the power and influence of partisan appeals, the tyranny of partisan prejudice, and the courage required to break away from a lifetime association with the political party of our choice, yet, notwithstanding all these cherished ties, we owe a still higher duty, a more sacred obligation, to ourselves and the country. When the policies and course of that party no longer serve the best interest of the people; when it has ceased to express and carry out the popular will and has entered upon a career of colonial exploitation abroad and a still more destructive system of spoliation at home; when the designs, purposes, and policies of such party manifest an utter disregard of the demands of the people in matters of the highest concern and vital importance to their well-being, it is well to pause and consider the wisdom of our political action. And this, Mr. Chairman, is what the people of this country are doing today, and unless some radical change takes place in the policies of this Administration, unless some legislative relief is given the country and the great army of consumers from existing conditions of tariff taxation, an aroused public opinion will certainly and justly sweep from place and power those who have thus betrayed the confidence of the country.

Believing that the pending bill is framed along these lines, and, to the extent of the proposed 20 per cent reduction in our tariff to all the products coming from Cuba, is in strict accord with Democratic principles and the demands of the country, I see no reason why I, as a Democrat, should not support and vote for it. While I can see no good reason why Democrats can not consistently support this bill, yet it must not be understood that I regard the bill as a Democratic measure. Such a thing as a Democratic bill involving questions of Democratic tariff reform being reported favorably to this House by the present Ways and Means Committee would be entirely too much to expect, and no Democrat, I am sure, would either expect or hope for such a thing. If it was a Democratic bill, it would not stop at a 20 per cent reduction on Cuban sugar. It would go much farther in its measure of tariff relief to Cuba, not only on sugar, but on all other articles coming from Cuba.

It would have provided for a reduction of at least 40 or 50 per cent, as the Cuban people ask and as was suggested by General Wood and other American officials in charge of the military government of that island. If it had been reported by a Democratic

committee it would have included a provision for the abolition of the entire differential duty and all sugar coming into the United States from foreign countries, and thereby given the American people some relief as against the American Sugar Refining Company and all other sugar trusts in this country. If this bill had been a Democratic measure, even though coming from a leading Republican committee of this House, it would have proposed to place on the free list all articles manufactured, whether by a trust or otherwise, and sold abroad at prices below what they are sold for at home.

If it bore the similitude of a Democratic measure, it would have carried a provision for relegating to the free list all articles of steel, iron, and other metals and manufactures thereof embraced in the metal schedule of the Dingley law, and all wood pulp used in the manufacture of paper, and all other articles included in what is known as the Babcock bill, introduced by Mr. BABCOCK, of Wisconsin, at the present session of Congress. Such a bill, Mr. Chairman, would, if enacted into law, afford some material relief to the country and prove of immense value and benefit to the farmers and agriculture. Such a bill would be responsive to the universal sentiment of the country and be welcomed as a real benefaction by those who are the helpless victims of this vicious, trust-breeding, and monopoly-creating policy of the Republican party. It would be gladly hailed by the great body of the people as a harbinger of emancipation from the remorseless grasp of greed and avarice.

But, Mr. Chairman, unfortunately the bill reported by the Republican Ways and Means Committee, and now before this House for our consideration, is not such a bill as that. It is neither a Republican nor Democratic measure. It is hardly a respectable compromise of the two, although it has been severely denounced by many Republicans upon that side of the Chamber in the course of this debate as so highly tinctured with Democratic ideas and tendencies that they will not, as they say, stultify themselves or compromise the honor and faith of their party by supporting it; while upon this side of the Chamber are found Democrats just as emphatic in their denunciation of the measure as a wicked contrivance of the Republicans to shirk the responsibility of a grave and important national duty, diluted with only 20 per cent of Democracy to commend it to their support. The insurgent Republican contingent on that side of the Chamber insist that they will not surrender one farthing of the protective duties on sugar even to relieve the distress of Cuba.

The Democrats, always more conservative, always more considerate, while not accepting the provisions of the bill as satisfactory; while hoping to be able to secure amendments to it before it is put upon its passage that will not only render it much more effective in the accomplishment of the purpose contemplated, but will, in addition, afford a large measure of much-needed relief to the people of our own country as well as to those of Cuba, yet, failing in this, will, as a party, support the bill. I much prefer, Mr. Chairman, that before I am compelled to cast my vote, the bill be amended. I think it should be amended. I believe there should be a greater reduction in the per cent of tariff duties than 20 per cent. I believe this is necessary to meet the situation in Cuba and afford the people there proper relief. I believe this should be done for the further reason that the lower we fix the tariff duties on Cuban imports the greater will be the preferential duties granted us under the provisions of this bill.

It is virtually admitted upon both sides of this controversy that the freer the trade is made between Cuba and the United States the more certainly we will command the trade of that island. No reduction in tariff rates between Cuba and this country will, in my judgment, injure or cripple a single industry in the United States; but, on the other hand, would benefit our people in giving us the Cuban market for the products of both the farm and factory, and may result in securing to our consumers a lower price for sugar. The opposition made to this proposition by the friends of the beet-sugar industries is, in my judgment, wholly without foundation. As long as our people consume over 1,500,000 tons of sugar more than we raise, as long as we are importers of sugar and not exporters, our sugar factories and industries can not be affected by tariff duties upon what sugar comes from Cuba. If there is any doubt about this in the minds of those who feel apprehensive upon this subject, it seems to me that the whole matter should be put at rest by the statement of the two great magnates of the beet-sugar industries.

Messrs. Henry T. Oxnard and W. Bayard Cutting are the two great leaders and managing heads of the American beet-sugar business. Mr. Oxnard, in a trade circular issued in January, 1899, said:

Perhaps it may be well to draw attention to one or two features of the industry:

(1) Its product is a staple of universal consumption and of the readiest sale.

(2) The product is a finished article, the sugar being turned out refined and granulated, the manufacturer not being dependent upon the refiners' trust for his market.

(3) Competition by home production is so remote as to be scarcely worth consideration. The United States is now compelled to import three-quarters of its consumption, and it would take at least 300 factories of a daily capacity of 500 tons of beets to produce present importation.

Regarding the future development and permanency of the beet-sugar industry in the United States there can be absolutely no doubt, for the following reasons:

(1) Of the tropical countries which it is proposed to annex to the United States, Porto Rico is too small to cut any figure, and the Philippine Islands have not the necessary elements for the expansion of the sugar business sufficiently rapid to give any concern to those interested in the production of sugar from beets in this country for the next twenty-five years to come.

(2) The island of Cuba is so situated that its sugar industry can rapidly recover the ground lost during the insurrection, provided that the labor question there can be satisfactorily settled. There is, however, no fear that Cuban production, even under an annexation to the United States, can in our day expand to the point where the United States would become exporters of sugar instead of importers, and hence that protection would no longer protect.

(3) Greater than all the above assurances of the permanence of the sugar industry in this country is the fact that sugar can be produced cheaper here than it can be in Europe. The sugar industry is, after all, merely an agricultural one. We can undersell Europe in the production of all other crops, and sugar is no exception. The sugar consumed in the civilized world consists of 3,000,000 tons of cane sugar grown in the Tropics and 5,000,000 tons of beet sugar grown on the Continent of Europe. Therefore, in considering any given sugar enterprise, if it can meet and overcome the competition of sugar on the Continent of Europe, it is perfectly safe to say that it has a permanent future.

Now, it is claimed that Mr. Oxnard was mistaken when he made this statement, because he predicated his calculation upon an erroneous basis. Mr. Oxnard himself has since attempted to explain away this deliberate declaration made by him upon the theory that he had assumed certain data that failed to materialize; but the inherent weakness of this denial is manifest when you consider that that statement was made after an experience and practical knowledge in the beet-sugar business of nine years and after there had been produced and marketed of beet sugar in the United States about 300,000 tons. So that here we have, as against the arguments made by the advocates of the beet-sugar interests and those who are now opposing this bill upon the ground that the proposed reduction of duty on sugar will cripple and destroy this industry, the testimony of the most prominent and, I assume, the best-informed beet-sugar man in this country to the effect that beet sugar needs no protection whatever. Add to this the further testimony of the facts and figures evidenced by the late census bulletin upon this subject, and it will be made to appear that Mr. Oxnard was not only not mistaken in his first statement, but was, as he himself declares, very conservative.

According to this United States census bulletin the average price paid for a ton of 2,000 pounds of beets in the United States is $4.39. The average per cent of sucrose carried by the beet is 14.5 per cent. But suppose this per cent is somewhat high, and to be entirely safe and conservative we assume only 12 per cent, or 240 pounds of refined sugar to a ton of beets. One hundred ton of beets at $4.39 per ton equals $439. Manufacturing, at $3 per ton—figure estimated by beet-sugar interests—equals $300. A 12 per cent yield of sugar would make cost of 24,000 pounds of refined sugar $739, or a little less than 3 cents and 1 mill per pound. The average price of granulated sugar during the last year was 5.05 cents per pound. Figuring on this basis, and I submit that it is entirely fair to the beet-sugar producers, they have a profit of 2 cents a pound, or $40 a ton. In view of this enormous profit can it be said that Mr. Oxnard was not right when he said that beet sugar needed no protection? But this is not the question. It is not proposed to deprive beet sugar of protection. All that this bill proposes is a reduction of existing duties 20 per cent. What, destroy the protection on sugar, when after this cut is made it will still enjoy a higher rate of protective duty than almost any other article on the dutiable list?

If this is what our Republican friends call a destruction of the protective tariff system—great God, save us the mark! Mr. Chairman, I have just said that a motion will be made by this side of the House at the proper time to amend this bill by abolishing the existing trust differential tax on sugar. This, Mr. Chairman, will furnish an opportunity to all members of this House to demonstrate their sincerity and make good their professions of opposition to the sugar trust. The American Sugar Refining Company has throughout this debate been bitterly assailed and made the excuse, in a very large measure, by both advocates and opponents of this bill for their position—a very peculiar and anomalous condition of things. To one having listened to the arguments advanced for and against this bill, it would seem that the sugar trust was of all organized agencies, human or inhuman, the most friendless, the most hated and despised in this Hall—upon this floor.

But it remains to be seen, to be tried, and tested whether the votes will accord with the professions, with the declarations made, when the final moment arrives. If there be an amendment ingrafted upon this bill and passed removing the differential duty, eliminating the Dutch standard in color, ingeniously contrived and purposely designed solely for the benefit of the sugar

trust and for the trusts exclusively, a great service will be rendered to the American people. Let him who falters or fails in the performance of this duty, who forfeits his words upon this floor, be pilloried and punished for his duplicity by an honest and fearless constituency, as I have no doubt he will be. This proposed amendment will distinctly present the plain and simple issue between the sugar trust upon one hand and the American consumer and taxpayer upon the other, and the vote to be recorded upon it will unequivocally disclose the names of those who stand with the trusts and those who stand with the American people—the American consumer and taxpayer. This differential duty is of two kinds, one known as the specific and the other the hidden. To illustrate, I quote from a recognized writer upon this question the following:

The word "differential" has been currently accepted as indicating the 12½ cents added specific duty. As it is desired to gradually bring about a change of terms, in this article both are indicated.

The 12½ cents is the specific added duty to protect refiners, over and above the maximum duty ($1.825 per 100 pounds) levied to protect domestic producers.

The total differential which protects the American refineries is of a double nature:

(*a*) The specific added duty of 12½ cents.

(*b*) The actual difference between the duty paid on any grade of imported sugar and the maximum duty levied on unrefined sugars.

(*a*) Is the apparent specific added duty currently termed the differential; and (*b*) is the hidden differential.

The maximum duty on refined sugar is $1.95.

The maximum duty on unrefined is $1.825.

The difference is the specific duty accorded to protect refined sugar, and where the duty on unrefined sugars is taken off there should be only the specific duty on refined remaining.

Were the duty on unrefined sugars taken off there should only remain the specific duty on refined. This would do away with any differential and only the specific duty remain, therefore the $0.12½ is not the differential but the added specific duty for refined sugars.

Now, Mr. Chairman, a few words in regard to one other amendment already referred to. This amendment will be the same as the Babcock bill, which we are told by members of the Ways and Means Committee was offered by the Democratic members of that committee as an amendment to this bill while before that committee, and was voted down by the Republican majority. This motion will be renewed at the proper time in this House as an amendment to the pending bill. We are further informed by members of that committee that Mr. BABCOCK, himself a Republican member of this committee, voted against incorporating the same in the pending bill as an amendment thereto. So it appears that Mr. BABCOCK has refused to take advantage of the only opportunity he will ever have of securing consideration of his much-famed measure for placing steel and various other articles upon the free list.

How Mr. BABCOCK will be able to explain to his Wisconsin constituents and the country at large that he was honest and sincere in introducing this bill, in the face of his refusal to vote for its favorable report from the committee, of which he is a prominent member, is a matter that surpasses the comprehension of the uninitiated. His friends and the friends of his measure must necessarily feel a sense of mortification, if not sore disappointment, at the early and willing surrender of his convictions, if any he had, at the first beck and call of his party. There is likely to arise in the public mind a dark and shadowy suspicion that there was and is some strange and mysterious connection between his unfriendly behavior toward his own reform measure and the dominating influences of his party, especially that potential element of his party to whom he and his colleagues upon the Republican National Congressional Committee have to appeal for succor and aid in campaign stress. Be that as it may, certain it is, however, that he abandoned a sentiment and demand of his party that is bold and courageous enough to find open and explicit expression all over the country, and in no State more so than that of the gentleman's own State—Wisconsin. In the gentleman's own Congressional district, as reported in the special correspondence to the Washington Post, and published in the issue of that paper of the 18th instant, it appears that his own party, at conventions held for the purpose of renominating our distinguished friend as the Republican candidate to succeed himself in this House, have boldly and fearlessly spoken out upon this subject, and in strong and unequivocal terms approved the bill with which his name until very recently had been so honorably associated. This is the dispatch:

[Special to the Washington Post.]

FOR BABCOCK AND FREE STEEL—TWO COUNTIES IN HIS DISTRICT INDORSE HIS ATTITUDE IN CONGRESS.

BARABOO, WIS., *April 17.*

The Sauk County Republicans held a convention here to-day and elected a solid delegation for the renomination of Congressman BABCOCK and adopted a resolution in favor of the bill introduced by Mr. BABCOCK reducing the tariff on steel products. The resolution is as follows:

"The Republicans of Sauk County in convention assembled reaffirm their allegiance to the doctrines of the Republican party, believing that the prosperity of the American people depends upon its continuation in power; they declare unequivocally in favor of the bill introduced by their present Representative, the Hon. J. W. BABCOCK, reducing excessive and unnecessary tariff on steel products, and while favoring the fullest protection to every American industry requiring protection, they are heartily in favor of revising all excessive tariff schedules, keeping in view the interests of the American farmer and the laboring man.

"*Resolved*, That the delegates to the Congressional convention be instructed to cast their ballots for our present Representative, Hon. J. W. BABCOCK."

DODGEVILLE, WIS., *April 17.*

The Republicans of Iowa County elected delegates and instructed for BABCOCK. Resolutions were passed indorsing his position in regulating the tariff on steel products.

This Babcock bill is drawn upon Democratic lines and fairly expresses Democratic views upon the subject of tariff reform. It may not go quite so far in some respects as it would have gone if prepared by a Democrat and covered a wider field.

But its authorship has not deterred Democrats from indorsing it, nor will it bar any Democrat, in my judgment, upon this floor from supporting and voting for it as an amendment to this bill, if not ruled out of order by the chairman of this committee. This bill, if made a part of the pending measure by amendment, will not only receive the cordial support of the Democratic side of this House, but will furnish an additional and persuasive reason for a more earnest and enthusiastic support. If enacted into law, it will strike the most fatal and effective blow at the steel and other allied trusts of this country that has ever been administered, and afford a larger measure of substantial relief to the American farmer and American taxpayer, as well as many independent manufactories, than any act every passed under a Republican administration.

But, Mr. Chairman, these are the reasons, I fear, that will or may defeat this most meritorious proposition in a Republican House. I am led to suspect that the same motives, the same influences, the same combination, if you please, of political and partisan considerations that induced the author of this proposition to betray and abandon it will operate no less effectively upon the Republican membership of this House. That the influence of organized trusts, wealth, and power are more potent in the American House of Representatives than the sovereign people. It seems an indefensible position to assume before an intelligent and patriotic people that when an industry or industries have reached a point in their development under the fostering care of the Government, when their output is largely in excess of home consumption, when their products can no longer be absorbed by our people, when it is conceded by all parties and admitted by even the protected interests themselves that in order to keep their manufactories running and their workmen employed they must have wider markets—foreign markets—in which to dispose of their surplus. I say that with these facts conceded it seems indefensible to contend that these high and, in many instances, prohibitory rates of duty should still be maintained. Our people are made to pay constant tribute upon almost every article they buy by way of an enhanced price much in excess of that paid by foreigners for the same article; and this exaction, this unjust tribute, is enforced by the policy and system inaugurated and maintained by the Dingley tariff law.

Mr. Chairman, if I believed in the policy of protection as a wise and just principle of government and regarded a tariff schedule as a holy and sacred thing not to be desecrated by the profane hand of revision, as many of our Republican friends profess to believe, I might find myself standing with the cane-sugar growers of Louisiana and the beet-sugar industries of the Northwest and oppose the pending measure. But as a Democrat, not believing in the theory of protection for protection's sake and not willing to blindly worship the fetich of tariff schedules, I shall stand with the great majority of my party and Democratic friends, who are encouraged to believe that they can see in the factional divisions on the other side of this Chamber a hopeful indication of approaching dissolution of this most iniquitous system. How any American farmer or any other taxpayer who has regard for his interest or concern for his prosperity can reconcile the consistency of further encouraging or upholding a system which, if not designed, does in its practical working operate to increase the costs of living to the masses and give to the manufacturers the exclusive control of our home market and power to hold up and fleece our home consumers with enormous trust profits and turn those profits over to the foreigner is a puzzle that confounds the wits of ordinary minds.

Now, Mr. Chairman, to demonstrate the truth of the charge made that our manufacturers sell their products at higher prices at home than they do abroad I desire to refer to some reliable and authentic data. Attention was first called to this extraordinary condition of things in 1890, when a committee of the Tariff Reform Club published a pamphlet entitled "Protection's Home Market." In this pamphlet we find quoted the domestic and export prices of numerous agricultural implements and tools, of kitchen utensils and household goods, carpenters' tools, hardware, etc. The domestic prices usually exceeded the foreign prices from 10 to 25 per cent, but the difference reached 100 per cent in many

instances. A few of the articles and prices are found in the following table:

Articles.	Domestic price.	Foreign price.
Cultivators	$11.00	$8.40
Plows	14.00	12.60
Axes ..... per dozen	8.25	7.20
Kettles	1.40	.85
Wire nails ..... per 100 pounds	2.25	1.35
Table knives ..... per gross	15.00	12.00
Horse nails ..... per pound	.17	.14
Barbed wire ..... per 100 pounds	3.00	2.00
Rivets ..... do	10.00	5.55
Typewriters	100.00	60.00
Sewing machines:		
Fine	27.50	20.75
Medium	22.00	17.50
Cheap	18.00	12.00

Upon this same same subject the New York Press of October 22, 1889, said:

It is sometimes looked upon as wise to ship goods out of the country at cost rather than break the regular price for which such articles sell in the country in which they are produced.

The American Machinist of September 26, 1889, said:

Just why American manufacturers will sell machinery and other goods from 10 to 30 per cent cheaper in Europe than they will sell them to be used at home is rather puzzling; but anyone curious in the matter can easily enough find out that many of them do that. It may be necessary to cut prices in order to secure trade from abroad, but it is likely to strike the American purchaser as being a little rough on him.

The Engineering and Mining Journal of March 15, 1890, said:

As soon as an industry has obtained a position where it can more than supply our home market and has to send its goods abroad, where they compete with those of foreign manufacturers, it is evident that they are either giving the foreigners the benefit of lower rates than they do our own people or that they are able to get along at home without any protection from foreign manufacturers. It is not fair that our own people should be made to pay more than foreigners for the products of our own land.

In answer to a claim made by the Australasian and South American (an export journal), that the lower prices quoted foreigners were for the wholesale trade only, the New York World published the following letter from the Engineering and Mining Journal of New York:

ENGINEERING AND MINING JOURNAL,
New York, August 26, 1890.

DEAR SIR: I am obliged to you for the letter of August 25, respecting proceedings taken in the Senate regarding our "prices current."

Prices quoted by us are, as you will notice, at the head of the first column, "for export only," and the prices therein given are the prices at which every foreign subscriber can buy in this market. It stands to reason that orders for farm implements are frequently given for one only. If to buy one machine is retail trade, then these foreign prices are retail prices.

Our domestic subscribers are debarred from the prices quoted in these columns. These special discounts are "for export only," and in more than one instance we have lost our advertiser through publishing these prices.

I inclose an invoice from S. Allen & Co., which you will see is for one of the machines quoted by us, and you will notice that it conforms exactly with our prices as reprinted by you in the World, and that the net price on the bill is exactly as stated by you in the World.

Your statement that the foreigner can buy at retail in this market cheaper than the domestic consumer is as indisputable as the daily revolution of the earth. We can enumerate any number of instances where houses have written us: "Prices furnished are for export only, and it would be most injurious to us if these figures were circulated in the home market."

In going through our letters this morning we counted no less than fifty-eight received during the month of July, thanking us for publishing the "prices current," as it enabled our subscribers to keep a check on the prices charged them on their indents.

Yours, very truly,

ENGINEERING AND MINING JOURNAL.

Mr. A. B. Farquhar, the head of the great Pennsylvania Agricultural Works, in a letter in answer to certain questions of the Farmer's Call, of Quincy, Ill., may be quoted here:

JULY 30, 1890.

The fact is that our protective laws are a monstrous swindle upon the agricultural community. As a manufacturer I was inclined to say nothing on the subject, for the reason that it was natural to suppose if anybody was benefited it was the manufacturing class, to which I belong. But, as I have explained, the farmer is being destroyed. We are killing the goose for the golden egg. And I honestly believe now that it is to the interest of the manufacturers themselves to eliminate the protective feature from our tariff laws.

Certainly, as our manufactures are sold much lower abroad, we could only need protection to get better prices from our customers at home. We do manufacture and sell in Canada, South America, and Europe many agricultural implements and machines, and could we have free raw material and the commercial advantages which free trade would give us, America would become the great manufacturing emporium of the world, and the farmer, of course, would share the prosperity, since he would have less to pay for everything and get better prices for all he sold. Go on with your good work. When the farmer begins to think and rise up against this swindle it is doomed.

Again, in May, 1901, less than a year ago, Mr. Charles M. Schwab, the president of the steel trust, testifying before the Industrial Commission, startled the country by declaring that all kinds of American goods were usually sold much lower for export than in the home market. Here are some extracts from Mr. Schwab's testimony:

It is quite true that export prices are made at a very much lower rate than those here. * * * I think you can safely say this, that where large export business is done—for example, in the line of iron and steel—nearly all the people from whom supplies are bought for that purpose give you a good price for the materials that go into export; railroads will, in most instances, carry them a little cheaper for you, and so on all down the line. But labor, within my knowledge at least, has never been asked to work for a lower price for export material, so that labor benefits more by it than almost any other interest. * * *

Q. Is it a fact generally true of all exporters in this country that they do sell at lower prices in foreign markets than they do in the home market?

A. That is true; perfectly true. * * *

Also, Mr. Byron W. Holt, of the tariff-reform committee of the New York Reform Club, testified at length on the subject of tariffs and trusts before this same Commission. The following are extracts from Mr. Holt's testimony in regard to export prices:

The concealment of export prices is probably responsible for considerable of the difference between the values of our exports and of our imports, and, therefore, for numerous editorials on our "favorable balance of trade."

Ten years ago it was comparatively easy to get the export prices of various protected articles, even though they were then often from 10 to 30 per cent below the home-market prices. To-day, when great trusts control the prices on most of our exports, it is extremely difficult to obtain export prices. The editors of trade papers will no longer talk on this subject, and, as a rule, will not keep on file foreign exchanges which quote prices of certain American goods in foreign countries. It is only now and then that an employee of a trust or of some export house can be found who is willing to risk betrayal and almost certain decapitation if he talks on this subject.

Nearly all of the information on this point which I have obtained during the last few years has been strictly confidential. In this way I learned a few days ago that tin plate is being extensively offered and in some instances has been sold to manufacturers of cans and packages, to be filled with products for export, at about $1 per box below the price to other manufacturers and consumers. I am not permitted to mention any names. I also learned last week from an entirely reliable source that steel rails were sold some three months ago to foreigners at less than $21 per ton. I could specify the exact price, names of both seller and buyer, in an important recent transaction, but am not permitted to do so. These rails were sold with the provision that they were not to be used in the United States. That steel rails are sold for export at whatever the manufacturer can get above $20, and perhaps for considerably less if the time of delivery is remote enough, I do not doubt. The manufacturers' pool or selling agreement, under which rails are now sold for $28, is not effective on rails sold to foreigners or for export. The newspapers of a month or so ago contained the details of a sale of steel rails to an English firm for $15 per ton (allowing for freight) less than the price to Americans. The New York World of April 9, 1901, thus states the case:

"Mr. Charles Thulin, a Pennsylvania contractor, recently secured a contract to supply rails for Russia's great Siberian railway. He asked the leading steel trust companies here for bids. They all asked him about $35 per ton, with freight to be added. Mr. Thulin went over to England, sublet his contract to an English firm, and one of the same companies that had asked him $35, plus freight here, sold the rails at $24 a ton delivered in England to the English contractor." * * *

After having investigated this subject for more than ten years, I have reached the conclusion that practically all of our manufactured products are sold to foreigners for less than to Americans. The minimum difference is about 10 per cent. The average difference in price is probably 20 per cent, and on our really protected products above 25 per cent. Often we who pay the tariff taxes devoted to nourishing these "infant industries" must pay 50 per cent and sometimes 100 per cent more for the products of the coddled industries than is paid by foreigners who do not pay our nursing taxes.

Mr. Chairman, here are but a few of the many publications and statements that could be produced, testifying upon this subject, and all to the effect that our manufacturers and protected industries are selling their products abroad at much lower prices than to our own people; but I forbear further comment, and will content myself by supplementing what I have said by adding, as an appendix to my remarks, a short article published in the American Machinist and certain quotations and extracts from letters of a number of various manufacturing and business establishments from different sections of the country expressing their views upon the need of tariff revision and the business demand for a reduction and removal of the present high and excessive rates of duty under the Dingley tariff law.

APPENDIX.

RECIPROCITY AND FOREIGN TRADE IN AMERICAN MACHINERY.

To the Editor:

Within are printed 58 letters written by the most prominent manufacturers of machine tools in America, employing in their establishments an aggregate of 21,636 men and a capital of $35,320,000. These letters were sent in reply to a circular letter of inquiry from the American Machinist, as follows:

"*To the manufacturers of machinery in America:*

"We have received a number of letters giving the views of manufacturers on our foreign machinery trade, reciprocity, the tariff, etc., and it has occurred to us that it would serve a useful purpose if there could be a general interchange of opinion on these subjects. We ask you, therefore, to give us an expression of your views.

"Whatever these views may be, we will print them.

"We would particularly like to have an expression of opinion from you regarding the following words spoken by the late President McKinley in his last public address at Buffalo:

"'We must not repose in fancied security that we can forever sell everything and buy little or nothing. If such a thing were possible, it would not be best for us or for those with whom we deal. * * * The period of exclusiveness is past. The expansion of our trade and commerce is the pressing problem. Commercial wars are unprofitable.'

"If you agree with this view of the case, we would like to know what you think is the best way of doing something about it. If you do not agree, we shall be equally pleased to have your views and to know what, in your opinion, ought to be done.

"Do you need a protective tariff in your own particular trade?

"Do you think the present high tariff has a tendency to retard foreign trade?

"Would free raw materials allow you to produce your product cheaper?

"Do you think that free raw materials would tend to keep the prices of such materials more uniform?

"Do you know of any country where workmen in any line do more for a dollar in pay than they do in the United States?

"Questions such as these are certain to be prominent in the near future. It is important to the machinery interests of the country that their welfare and their rights should be considered.

"A general expression of opinion such as we ask will, we hope, help in this important work.

"AMERICAN MACHINIST."

In this issue we complete the publication of a series of letters that we have received from manufacturers of machinery (mainly machine tools) written in reply to a circular letter of inquiry designed to bring out the views of these manufacturers respecting reciprocity, the effect of the present tariff upon their domestic and foreign trade, etc. We chose builders of machine tools because they are the American manufacturers who, above all others, have developed their foreign trade within the past eight years, and have produced the most profound effect and attracted by far the most general attention in foreign manufacturing and commercial circles. Nearly all of them have spent a good deal of time in Europe studying the situation and the conditions to be met there, so that we feel safe in saying that no other class of manufacturers are so generally well informed regarding trade in foreign countries and what is necessary to get and keep it. The very great importance of their foreign trade has actually compelled these men to think about it in all its relations, and their wide acquaintance with buyers, users, and producers of machinery in other countries has brought them knowledge of what other peoples think about these things, what their attitude is toward them, what does and will offend and restrict, and what will attract and develop trade.

It is quite certain that in no other line of manufacturing has nearly so large a proportion of total products gone abroad during the past eight years as has been the case in the line of machine tools, and the men who have written the letters which we have printed speak as experts and as business men discussing a business proposition without any regard whatever to politics—party or factional.

Not all, but the great majority, of these men have been and still are protectionists, but stubborn facts which have confronted them constantly during the past few years have led to their seeing some things from an entirely new standpoint, and a very striking feature of the situation is their general change of attitude toward foreign trade and their radically different conception of its nature, as compared with their attitude a few years ago. It is noticeable that, almost without exception, those who have been most abroad and have given most attention to their foreign business are generally most outspoken and most confident that something needs to be done.

It is probable also that a very large proportion of the 22,000 men employed by these machinery builders have not seen the machinery produced by their labor constantly going abroad and there successfully meeting the competition of foreign builders without acquiring new and more liberal ideas regarding foreign trade and about the importance of a prohibitive import tariff upon the class of machinery made by them.

While some of these expressions of opinion are not direct and must be deduced, yet all are, we believe, fully warranted and the letters themselves—printed substantially just as we received them—will bear evidence of our fidelity in interpreting them. The capital invested in the enterprises represented by the writers of these letters is, by the statements of the proprietors or their representatives, $35,326,000, and they employ 21,636 men. The figures representing capitalization are, we believe, conservative, and we feel quite certain that the businesses named could not be purchased for the amount given.

These expressions, therefore, are those of responsible men—men who have much at stake and who for the most part have built up and developed their enterprises from small beginnings. They are conservative in business matters; apt to consider well what they say before saying it—especially when it is to be printed as coming from them; and, considering all the circumstances, we consider this the most remarkable series of letters ever written by a group of business men respecting a matter of public policy. The Congressman or official of any kind that thinks he can afford to disregard the spirit that is behind these letters and that has inspired them is sadly mistaken. These letters do not represent campaign froth, but the deliberately and firmly fixed convictions of men of ideas and of great influence in the communities in which they live, and whom not to heed in a matter of this kind is to disregard the plainly spoken sentiments of the best informed business men in this country.

EDITOR AMERICAN MACHINIST.

NEW YORK.

Capt. E. P. Reichhelm, replying for the American Gas Furnace Company, New York, large manufacturers of gas furnaces for industrial purposes, says:

"I also thoroughly agree with you that it will 'serve a useful purpose' to induce a general expression of opinion on these subjects, not from statesmen, lawyers, and politicians, but from your clientage of practical men, who, as a class, must be credited by their fellow-citizens with the possession of a well-developed common sense and the ability to use it effectively in solving questions vitally affecting their own interests.

"The underlying principles of national and business economy differ in magnitude, but not in kind. It seems to me that the sentence from President McKinley's address which you quote forms a complete platform upon which we can all stand with both feet, and in connection with it I take the liberty to quote another martyred President, James A. Garfield, who in a speech delivered in the House of Representatives, while he was chairman of the Committee on Ways and Means, and during a debate on the tariff then pending, said: 'I am for that kind of protection which leads ultimately to free trade,' and this has been for over twenty years my own position with reference to the protective tariff.

"But any industry developed to a point where it successfully competes with the whole world while paying American wages to American workmen, should at once be declared master of the art and its product placed on the free list. If this is not done, protection becomes a fraud upon the whole people, a false pretense, and a means of making the people pay arbitrary prices, regardless of intrinsic value, which are imposed by the makers of goods who combine and fix prices anywhere up to the limit where foreign competition can pay duty and still compete. This we know, as a matter of fact, to be the case at the present time in many industries, and their claim to protection now has become an evil, which in the common interest should be removed.

"We are confronted with a surplus. I do not object to surpluses—at least, not in my own pocket; but when the surplus accumulates in Uncle Sam's strong box, much as I love him, I object to it. There the surplus becomes useless. To it each one of us must contribute, whether he knows it or not, by paying taxes. The money is withdrawn from circulation and becomes dead and useless, while it should stimulate the industries of the country by its circulation.

"A surplus derived from taxation I consider nothing else than a national scandal. Therefore taxes should be reduced. First of all, the internal-revenue taxes imposed for defraying the expenses of the late war. Then take down the tariff wall on steel and iron, because this 'infant industry' has grown to full manhood, and is in fact a monster and a prodigy. If some branches of this industry are still in need of soothing sirup or any other artificial stimulus, let them prove their needs before a tariff commission, and give them whatever protection they still may need if they make an honest statement of the facts, and do not ask it merely to enable them to form trusts and combinations with the power of taxing the whole people, in place of having the taxing done by the Government.

"A tariff commission is my idea. It should have the 'power to send for persons and papers,' to sit as judges do, sworn to render a verdict in every case brought before them according to ascertained facts and with reference to this simple question, 'Do you need protection?' and 'On what ground of public good do you claim it?'

"Bearing in mind that the greatest good to the greatest number is the sole object of the Government, it stands to reason that no individual can be rightly enriched at the expense of the whole people. Protection is right when the national welfare is increased by it, its industries diversified, and the country made more and more independent of other nations in what our advancing civilization needs. It is wrong when it enriches a few at the expense of the many, and has the virtual effect of transferring the taxing power of the Government to private individuals or corporations.

"Answering your several other questions concisely, I would say in the first place that the American Gas Furnace Company needs no protection, except what it may be entitled to under our patent laws, and even this is of doubtful value and not absolutely necessary for its prosperity.

"The present tariff retards foreign trade.

"Free raw materials would enable us to produce cheaper and sell more.

"That in no country under the sun does a mechanic do more or better work for a dollar than in ours has been demonstrated too often to need further proofs, and permit me to add that in no country is he under the direction of a harder-worked set of employers."

Baker Brothers, manufacturers of improved ironworking and woodworking machinery, Toledo, Ohio, say:

"We agree fully with the sentiments expressed by the late President McKinley in his Buffalo speech in reference to reciprocity. While we believe in ample protection to American industries, we believe the time has arrived where some concessions will have to be made to foreign countries to retain the trade we have with them, and we believe this can be done without injury to the American industries. We, like other manufacturers, have been more or less handicapped by import duties of other countries; and this is more especially true in reference to Canada, where the duty is almost prohibitive."

The B. F. Barnes Company, manufacturers of machine tools, upright drills and lathes, Rockford, Ill., say:

"We believe that the industrial development of the United States has reached a point where a tariff as high as the one now in force is not only unnecessary, but that it is a hindrance to the extension of our foreign trade. Taking up your specific questions, we would state:

"First. In our own particular trade (machine tools) we do not need a protective tariff.

"Second. We think the present high tariff has a tendency to retard foreign trade, in that it tends to create a feeling of hostility in other countries and provokes retaliatory action, the natural result being to restrict business relations between this and other countries and to thereby diminish the volume of our export trade.

"Third. We think free raw materials might to a certain extent allow us to produce our product cheaper.

"Fourth. We are of the opinion that free raw materials would tend to keep the prices of such materials more uniform.

"Fifth. We do not know of any country where workmen in any line do more for a dollar in pay than they do in the United States. In other words, we believe the workmen of the United States have a higher degree of efficiency than those of any other country.

"The industrial development of this country has reached that point where our manufactured products can not be wholly absorbed by our own people, consequently we must find foreign markets for a portion of our output if our manufacturing industries are to run at their full capacity. It is therefore necessary that we should cultivate friendly business relations with other countries, particularly with those whose purchasing ability is the greatest and whose wants are the most diversified. Our national legislation should not seek to erect barriers against our dealings with other countries, but to lower existing barriers as much as possible. To this end we think the reciprocity treaties now pending should be made effective, and we are of the opinion that our present tariff could wisely be trimmed down (particularly in those cases where the existing rates of duty practically prohibit importations), thereby making it possible for great industrial and financial combines to control prices.

"The continued activity and healthy condition of the home market will be promoted by the extension of our foreign trade, and the United States is giving constant evidence of its ability to meet the competition of other countries.

"All trade, however, presupposes mutual advantage, and, as President McKinley said, 'We must not repose in fancied security that we can forever sell everything and buy little or nothing.' If it is profitable for men in Illinois to trade with men in Massachusetts or California, there is no reason why it should not be equally advantageous for men in Illinois to trade with men in England, France, or any other part of the world."

The Betts Machine Company, makers of metal-working machine tools, Wilmington, Del., say:

"In our line of manufacture we do not need the protective tariff, and to have it removed would probably result in an increased trade for us in foreign markets, most especially with those nations whose goods being now kept out of this country by the duty cause their people to have feelings of resentment against us.

The Binsse Machine Company, Newark, N. J., manufacturers of horizontal boring machines, say:

"The subject will be clear once we pierce the fog with which it has been enveloped. To drive away this obscurity, let us begin by the use of correct words in stating the case. We must understand clearly that ours is not a protective tariff at all. Germany, France, and the continental nations of Europe all have protective tariffs. Ours is a prohibitive tariff, imposing duties with the intention of shutting off our market to all outside nations; and there is no nation in the world with a set of customs duties equal to ours.

"It is acknowledged that our land is by far the richest in natural resources and that we have besides in superabundance energy, skill, and money. Then, why this swollen tariff?

"The cause is very simple, but also of such character that I firmly believe nothing else but the danger of widespread financial disaster will nerve our people to throw off this oppression. Before me I have prices on some sizes of steel, ranging from 3½ to 4 cents per pound. To my certain knowledge this material can be produced and sold at good profit for 1 cent per pound. Hence come Carnegie and the numberless minor Carnegies. That is to say, the Dingley bill was designed, not to protect American manufactures in general, but, by the suppression of outside competition, it was intended to protect extortion; to enable a few great interests to overcharge our nation, and to amass enormous wealth in a very short time. For example, there is a little article which enters into almost every detail of the household. In England it sells for a price which I shall designate by 3, and at that price pays an enormous profit. The English companies making this article pay about 40

per cent dividends yearly. In our land, where is grown the raw material for this manufacture, it sells at a relative price of 5—that is, every household in this country is taxed to enrich the lucky producers of this little article. I am suppressing names to avoid personalities.

"This is the truth about the tariff. It is an instrument of oppression and extortion, not of protection. We are prosperous not by it, but in spite of it; and our prosperity, were the tariff reduced, would be such as the world has never seen before. A protective tariff, like that of Germany, would increase the workingman's wages not less than 50 per cent—that is, with his present wages he could buy 50 per cent more, at least, than he does to-day."

Hugo Bilgram, manufacturer of gear wheels and machinery, Philadelphia, Pa., says:

"In studying the tariff question I have arrived at convictions which in many respects are at variance with the generally accepted views.

"Commerce being an essential factor in the specialization of industries an obstruction to commerce, such as tariff, is in a sense equivalent to a resistance to the introduction of labor-saving devices or to a condemnation of inventive efforts. Why should we fear competition? Foreign labor is admittedly cheaper than domestic labor because, and only in the measure in which, it is less productive.

"Our desire to export more than we import can be traced to our desire to make other countries our debtors and to obtain from them a tribute in the form of interest on bonds, dividends on stock, or profits on invested capital. The country in which a low rate of interest prevails will always export to the country of high interest rates. For this reason low-interest countries will desire reciprocity and even free trade, while high-interest countries will favor high tariff to stay the inevitable importation of foreign products and the subsequent investment of the purchasing price. Tariff can accordingly protect only investors of capital. Labor can not profit by it, for it tends to increase wages only in the measure in which it tends to increase prices. The wages, expressed in dollars and cents, may be increased by tariff, but the purchasing power of this increased sum will not be greater than that of the smaller sum. The only advantage of tariff is its tendency to prevent money from leaving the country and to keep competitive capital out, unless that capital is imported in the form of gold coin or bullion. Tariff is a relic of the mercantile theory of economics, which places more importance on money than on wealth consisting of labor's products. Indeed, by our indifference we have permitted the perpetuation of some very objectionable currency and banking laws which have the tendency to even now give supremacy to money. And by tracing the deplorable effects upon our industries of this supremacy to wrong causes the most absurd notions on economic topics, including the tariff question, are apparently confirmed."

The Billings & Spencer Company, manufacturers of machinists' tools and drop forgings, Hartford, Conn., say:

"We believe in reciprocity. We think it would be advantageous to the manufacturers of this country if we had free raw material, and also in our own business it would allow us to produce our goods much cheaper. We think it would keep the price more uniform. We do not know of any country where workmen produce more for the pay they receive than they do in the United States, and we quite agree with our lamented President McKinley in his last address at Buffalo, as set forth in your circular."

Brown & Sharpe Manufacturing Company, Providence, R. I., manufacturers of machine tools, small tools, gauges, calipers, steel rules, etc., say:

"We fear it is unfortunately true that the success of our manufacturers abroad during the past few years has not taught us to have a perspective of the real state of affairs. We firmly believe that the success of our machinery exports has been primarily due to the superiority of American designs, aided, no doubt, by an abnormal demand and the consequent crowding of the foreign shops. But of late the foreigners have learned a good deal from us, and are in a good position to offer designs approaching the American, which fact we must reckon with in the future.

"Owing to a growing hostility to American competition, we will do well to preserve all the advantages which we have earned, even at the expense of some of our cherished ideas as to a 'protection' which at the best is doubtful. It is better, we feel, to forestall any possible action of European nations by removing duties here and there which will not unwarrantably provoke our neighbors, as is surely the case in the present state of our tariff. For this reason we feel that President McKinley, when he spoke the words at Buffalo which are so well known, spoke only too truly, that 'the period of exclusiveness is past;' and if we refuse to recognize the force of these words perhaps we shall be affected in the machinery trade as soon as in any other.

"As for the effects on the machinery business of the protective tariff, free raw materials, and the matter of wages, we have too much confidence in the ingenuity of American designers and the competence of their workmen to feel that they cut much of a figure."

Buffalo Forge Company, Buffalo, N. Y., manufacturers of forges, blowers, exhaust, steam, and ventilating fans and systems, say:

"We heartily indorse the words spoken by our late President, William McKinley. We favor and encourage reciprocity.

"Our business has grown and been perfected to such an extent that we no longer need protective tariff. We not only compete favorably in domestic markets, but successfully in foreign markets as well.

"The skill of the American workmen enables them to do more work for a dollar in pay than workmen of any other country."

E. P. Bullard, president of the Bullard Machine Tool Company, Bridgeport, Conn., manufacturers of boring and turning mills, lathes, and other machine tools, says:

"I am in full accord with the sentiments of the late President McKinley as expressed in his last public utterance, from which you quote.

"It is evident that the trade expansion of the past five years has been effective in converting him from an extreme protectionist to a man of liberal and comprehensive views. He realized what so few seem to, that international trade is but barter on a large scale; a simple matter of 'so much for so much;' that with trade, as with the ocean, the tide must ebb as well as flow. It is to be hoped that the logic of events will soon have a like convincing effect upon our manufacturers, and through them upon our lawmakers.

"You ask if we need a protective tariff in our business, to which I answer most emphatically, no. Our present high tariff is, in my judgment, a serious barrier to larger trade relations with peoples whose friendship we could cultivate to mutual advantage. 'The period of exclusiveness is past.' The times are ripe for pressing this great truth to the front so impressively that men's minds shall grasp its full force and meaning. If this is done intelligently and persistently, the results must be a loosening of the bonds that now restrain our industrial activities.

"With a free hand in the matter of raw materials of all kinds we should have no fear as to the results of open competition with all the world; but the present policy of exclusion from our markets will soon result in a like exclusion of ourselves from the world's markets—as witness, the tariff agitation in Germany and the retaliatory measures actually being enforced by Russia.

"It was my pleasure to attend the recent so-called reciprocity convention held in the city of Washington. All discussion of free trade was rigidly suppressed; but the most extreme protection theories and facts (?) were vociferously applauded. I soon reached the conclusion that a mistake had been made in the call, which should have been for a national antireciprocity convention. At all events, that, as we all know, was the net result.

"I should be pleased to have a convention called avowedly in the interests of freer trade relations, but in which the fullest discussion of all views could be had.

"To-day 'protection' may have value for a few, but in the main it is obstruction for the many."

Emmert Manufacturing Company, manufacturers of Emmert's universal vises, Waynesboro, Pa., say:

"Our lamented President struck the keynote in his last public address at Buffalo. Since we are compelled to mourn our untimely loss, we rejoice that he was permitted to live long enough to find the proper level on the question of tariff. In our business the present tariffs practically exclude us from the world's markets. Reciprocity in tariffs and reciprocity in commerce work upon the same lines, only that the one repels and the other attracts. A tariff sufficient to cover the difference between the cost of a foreign product laid down at our wharves and the cost of producing the same thing in this country is all the protection that any tariff can yield. All in excess is class legislation in favor of the mighty who do not need it and at the expense of the consumer, and is the parent of those octopuses upon the body politic, called trusts or combines, which are robbing our people of their individuality now, and will continually rob them of their substance and manhood."

F. A. Errington, manufacturer of and dealer in metal-working specialties, 39 and 41 Cortlandt street, New York, says:

"Commercial reciprocity is free trade. Trade should be freer, as is now admitted even by the high protectionists when they pay homage to the principle of free trade by proposing reciprocity. There should be the least possible margin for arbitrary interference with commerce, the great exchange of man power. Let us have a few fundamental laws to rely upon and not to hide behind. Simplicity is the essential for durability of any law or machine, and any medium that simplifies and renders more accessible the effect of the tariff will tend to bring it down to a better working basis. Publicity is the remedy for our tariff, as for our trusts.

"Appoint a secretary of commerce, and let him be the focus for all tariff queries and dissatisfaction, and let it be his duty to throw light on all present tariff laws and their exact effect on any particular article inquired about. Then our manufacturers would know definitely the obstacles to contend with, and not see a huge mass through a fog of brokers and interested agents. If a manufacturer could get a concise statement as to just how to pack and mark his goods to secure the lowest possible rate of duty, and be informed just what that duty is in dollars and cents, we would soon have an intelligent public opinion brought to bear on tariff questions that would insure just and simple legislation. Get the manufacturer in a position to tell the middleman what to do to sell his goods, instead of the middleman trying to tell the manufacturer of indefinite difficulties that clog the channel through which he must move."

The Gleason Tool Company, manufacturers of gear planers and gears, Rochester, N. Y., say:

"We are in favor of a reduction in the tariff machinery to 10 or 15 per cent. The reason is that, though we have been able to sell a great many of our special machines in Europe during the last eight years without hurting our scale of wages, we have been able to buy but a very few because of our prohibitory tariff.

"There are several valuable machines we want that are made in Europe, but that are not on the market in this country, and some of them are made by the very firms who have bought our machines. It does not seem square to them that we can not give them our orders, to say nothing of the loss to our business through the lack of these valuable tools. If the other side improve on the quantity and quality of their output per man faster than we do, it will be as easy to put the protective tariff on again as it is to take it off."

John J. Grant, writing for the Grant Tool Company, manufacturers of machine tools, steel balls, etc., Franklin, Pa., says:

"We do not believe we need a protective tariff in the manufacture of machine tools. The writer's long experience over there in selling tools abroad leads him to believe we can and do undersell a fairly made machine tool that is made in any foreign country. Certainly there are very few machine tools made across the water which we would care to use in this business on this side. Understand me, there are many good tools made over there, but I believe we have paid more attention to our machine tool design and construction than they have, and we certainly ourselves would not care a rap if the tariff was taken off at once.

"In regard to the material used in the manufacture of our tools, would say that it might help us some if the tariff were removed, as it would cause a little competition and reduce the prices of raw material, although we are not so sure about that."

The Late Representative J. William Stokes, of South Carolina.

SPEECH

OF

HON. SAMUEL W. McCALL,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 26, 1902.

The House having under consideration the following resolutions:

"*Resolved*, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. J. WILLIAM STOKES, late a member of the House of Representatives from the State of South Carolina.

"*Resolved*, That as a particular mark of respect to the memory of the deceased, and in recognition of his eminent abilities as a distinguished public servant, the House, at the conclusion of these memorial proceedings, shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk be instructed to send a copy of these resolutions to the family of the deceased"—

Mr. McCALL said:

Mr. SPEAKER: I avail myself of the leave granted by the House to put upon its records a few words attempting to express, although most inadequately, my appreciation of the character of the Hon. J. WILLIAM STOKES, late a member of Congress from the State of South Carolina.

I did not know Mr. STOKES prior to his election to this House,

but I became acquainted with him soon after he took his seat in the Fifty-fourth Congress. It happened that his election to that Congress was contested and that the contest was referred to a committee of which I was a member. I had an opportunity to observe him under trying circumstances.

I was struck with his placid dignity, his serenity, his patience, and his quiet courage. His was a fine and gracious presence, and yet he was a man likely to get credit for less ability than he really possessed. There was nothing spectacular or showy about him. He was not given to self-exploitation, but those who knew him best had no difficulty in discerning the excellent capacity which had given him so large a measure of success and which seemed to justify the hope of his friends of even higher success in the future, if his life had been spared. What most impressed me about him was the happy temper which, after he had done his utmost, led him to accept apparently without complaint or without elation whatever the result might be, as if he clearly saw that the real greatness lay in the nobility of the struggle and in the uncomplaining acceptance of what came after his own responsibility had ended. He would have modestly filled a higher place with the ability equal to it, just as he would have accepted a more obscure lot without repining. He seemed to me to have lived according to the philosophy in the noble words of Wordsworth:

If thou indeed derive thy light from heaven,
Shine poet, in thy place and be content;
The star that from the zenith darts its beams,
Visible though it be to half the earth,
Though half a sphere be conscious of its brightness,
Is yet of no diviner origin,
No purer essence, than the one that burns,
Like an untended watch fire, on the ridge
Of some dark mountain, or than those which seem
Humbly to hang, like twinkling winter lamps,
Among the branches of the leafless trees.

The Shipping Bill.

SPEECH

OF

HON. STEPHEN B. ELKINS,

OF WEST VIRGINIA,

IN THE SENATE OF THE UNITED STATES,

Saturday, March 15, 1902.

The Senate having under consideration the bill (S. 1348) to provide for ocean mail service between the United States and foreign ports, and the common defense; to promote commerce, and to encourage the deep-sea fisheries—

Mr. ELKINS said:

Mr. PRESIDENT: All agree that the present condition of our carrying trade is deplorable. While we have made marvelous progress in every department of industry on land, we have gone behind in our interests on the sea. Since the formation of our Government, as a people we have shown intelligence, inventive genius, courage and wisdom in large undertakings, broad statesmanship in adopting policies that have built up our industries beyond our greatest expectations; but it seems all this stopped when we reached the sea, where we have been impotent and unable to deal broadly and successfully with questions affecting our shipping interests and the building up of our merchant marine.

We are now paying $600,000 every day to foreign shipowners, or more than $200,000,000 annually for carrying what we buy and sell, our exports and imports. American ships carry only 8 per cent of our foreign commerce, when they once carried 90 per cent. This humiliating decrease in our carrying trade has gone on for nearly forty years. In many of the large ports of the world the American flag is never seen and is entirely unknown; in the port of Buenos Ayres where more than 500 ships entered in 1895 not one was American, and in our home ports, especially New York City, the flags of other nations are oftener seen floating from foreign vessels than our own. This condition should not longer continue. It demands the prompt and serious consideration at the hands of Congress.

A remedy should be speedily found and our shipping interests built up as our industrial interests have been on land. For my part I do not believe that a subsidy policy is the best remedy, but it is the one that has been agreed upon by the Committee on Commerce and a majority of my Republican colleagues. I adhere to the policy laid down in the Republican platform of 1896, that of discriminating duties, adopted in the beginning by the fathers of the Government as the wisest and best policy of building up our merchant marine, and under which our shipping prospered for forty years, as it has never prospered since. This policy would take nothing from the Treasury, and surely give us back the carrying trade which we once had.

The argument and claim that treaties with other nations stand in the way of adopting this policy is a mistake. These treaties are merely commercial conventions, and by their terms can be terminated on one year's notice. If we had put this policy into proper legislation in 1897, as we pledged the country we would do in the Republican platform, we would now be, without one dollar's cost to the Government, far on the way toward restoring our merchant marine. But, Mr. President, so vital and so important is the question of building up our merchant marine that I am willing to do anything, join in any plan or method, looking to this end; and for this reason I give my support to the bill now under consideration, yielding my individual judgment to the will of the majority.

FREE SHIPS.

The minority in Congress is opposed to protection of our shipping interests in any form as they are opposed to protection to our industries on land, and especially to the payment of subsidies by the Government for this purpose. Their contention is now, and has been for more than thirty years, that the free ship policy is the best method of encouraging and building up our carrying trade.

In the debate during the consideration of the pending bill free ships have been put forward as the best policy that should be adopted. The free-ship policy means that because foreign steamships can do the carrying business cheaper than American ships they should be allowed to do so. It means also the granting of the right by Congress to American citizens to purchase ships wherever they can in any part of the world, to be used without restriction in our foreign carrying trade. Free ships is an attractive phrase and sounds well, but the principle is fundamentally wrong and as much against American interests as free trade.

If we had followed free trade, bought steel, iron, cotton goods, and other manufactured products wherever they could be had cheapest in the markets of the world, we would not to-day be enjoying the greatest prosperity known to any nation in history and leading the world in manufacturing. Instead of adhering to free trade and permitting our people to do as the Democratic party has urged, and buying goods wherever we could get them cheapest, we have uniformly adhered to the policy of protection, and through protection built up the largest and most successful manufacturing establishments in the world. If we could protect our shipping interests to the extent we have protected our industries on land, our carrying trade to-day would be equally prosperous.

In case the free-ship policy could be adopted and our people should go abroad and purchase ships instead of building them at home, the United States would not only lose the money sent abroad to pay for the ships, permanently taking it out of the country, but the industry of shipbuilding in the United States would become paralyzed, with no hope of encouragement in the future, and the production of all materials, such as steel, iron, wood, zinc, copper, brass, paint, etc., that enter into the building of ships would stop, our people would be deprived of the labor necessary to this production, as well as the business of shipbuilding. In addition to all this, we would give up the business of shipbuilding, and in this regard become a dependent nation, and if we adhered to this policy of buying ships abroad we could never become great on the sea. We would surrender the hope of taking a commanding part in the carrying trade of the world and give up to foreigners the control of an industry that should, when properly developed, employ, first and last, a thousand millions of capital and make us as prosperous and independent on the sea as we are on land.

The best answer now, however, to the free-ship policy is that, although the Democratic party has advocated it for forty years, yet when in control of all the branches of the Government from 1892 to 1896 the party failed to pass the free-ship bill or even to make any attempt in that direction. If the Democratic party, when it could do so, refused to adopt and put in force the free-ship policy, why should Republicans do so now?

CONDITIONS MUST BE EQUALIZED.

Great Britain has nearly 60 per cent of the carrying trade of the world, and has been the leading nation in this industry for fifty years. She is strongly intrenched, enjoying those advantages that come only from being long established in business.

Other nations in a smaller degree have advantages over the United States. If we are to win back the carrying trade, build up our shipping industries, engaging in the fiercest competition to bring this about, we must equalize conditions, we must allow the United States to start in the race of competition on an equal footing with other nations. The purpose of this bill is simply to provide such help as will have the effect of equalizing conditions in our efforts to gain our just share of the carrying trade of the world. With our geographical position, our 10,000 miles of seacoast, our splendid harbors, our unlimited powers of production, the United States should be, under any wise policy of encouragement, the leading maritime nation of the world. This is our sure destiny if, as a nation, we are only true to ourselves. And why should we delay this splendid result? With everything in our

favor, is it not strange that we are not now a great power on the sea? The business of shipping is profitable. Besides no nation can be truly great without being great on the sea.

I do not think, Mr. President, that as to the North Atlantic, where we are to come into competition with Great Britain in the great fight that is before us, the aid afforded by this bill is sufficient. I think as an encouragement to build up our carrying trade on the Pacific Ocean and with South America it will be sufficient; but when we come to meet England on the North Atlantic I fear it will not be sufficient. It must be borne in mind that shipping is now the greatest interest Great Britain has, and she will never give up even a part of it without a great struggle. It is less, as I have figured it out, than the aid given by the bill which was under consideration last year.

Mr. MALLORY. Will the Senator state why he thinks it may be sufficient in one instance and not sufficient in another?

Mr. ELKINS. I think that the competition will be fiercer, the fight will be greater, on the North Atlantic with Great Britain than on the Pacific, where we have some advantages.

Mr. SPOONER. Will the Senator allow me to ask him a question?

Mr. ELKINS. Certainly.

Mr. SPOONER. If it is not enough, is it not too much?

Mr. ELKINS. Well, Mr. President, I listened with a good deal of interest to the question when it was propounded to the Senator from Iowa [Mr. ALLISON] by the Senator from Wisconsin. This is my objection to the bill under the present policy. I have doubts whether we can wrest from England much of her carrying trade by this subsidy. Why? Because it is inadequate. England gives equally as much. Great Britain is already in possession. She has the largest part of the carrying trade of the world, and how we can drive her out of possession, how we can beat her in this great contest on merely equal lines only, is a serious problem to me. Besides, on the North Atlantic we must also meet and contend with Germany and France, also in possession of a large share of the business. However, I think we ought to make some effort.

In my judgment if we adopt the subsidy plan, as we seem willing to do, I believe the amount of the subsidy on the North Atlantic should be increased in this bill. It does not seem to me to be sufficient. I know this will not be well received. I understand what is in the mind of the Senator. Why throw away money if we do not give a sufficient sum to insure success? Why not appropriate a sufficient amount to begin with and give our people something like a fair chance in an unequal contest? But, Mr. President, I am willing the effort be made, even though I do not think the amount sufficient. Others believe that it is sufficient, are willing to make the attempt, and I am willing to join them.

Mr. MALLORY. Will the Senator permit me to interrupt him before he leaves that point?

Mr. ELKINS. Certainly.

Mr. MALLORY. The Senator thinks there is no comparison in competition between American and British vessels plying between this country and South America and vessels plying between this country and Europe. Is it not a fact that the British tramp steamer does just as much business between the United States and South America, proportionately, as the British tramp steamer does between North Atlantic ports and Great Britain?

Mr. ELKINS. The conditions are different as to the South American ports. I think we have a better chance on account of our nearness to the South American coast. I do not think Great Britain will fight as hard, contend as strongly, for the retention of her South American carrying trade as she will for the trade between Europe and the United States on the North Atlantic.

COST OF CONSTRUCTION AND MAINTENANCE OF SHIPS GREATER IN THE UNITED STATES.

Reliable statistics bear out the fact that the difference in cost of building a ship in the United States and abroad is about 25 per cent.

There is no doubt about this. It can not be denied successfully.

In England the cost is $76 per ton, while in the United States it is $102 per ton. This is a fact, no matter what causes it or how it comes about. There may be a few instances in which this is not the case, but they are only exceptions to the rule. If we can build ships as cheaply as Great Britain or Germany, why do not our shipyards get most of the orders at home and some of the orders from other countries? We get scarcely any. We have built a Russian war ship and the Kaiser's yacht—not, however, because we could build cheaper. There are many reasons why we can not build ships cheaper. One is that wages of all kinds in the United States are 25 to 50 per cent higher than abroad. Ninety per cent of the cost of a ship is labor.

If a ship costs $1,000,000, $900,000 of this is in labor. If labor is higher in the United States than in Great Britain, which it is, the cost of building ships must be greater. Even with this disadvantage in wages, if our shipyards could have constant employment for a number of years I believe, owing to the fact of the superiority of skill and efficiency of our labor, we could reduce the cost of building to nearly what it is abroad. Therefore, in the interest of reducing the cost of building ships, and for other reasons, we should aid our shipbuilding interests. Then the cost of operating an American ship is about 30 per cent greater than the cost of operating foreign ships. This, too, is on account of higher wages paid on American ships and better food provided for the crews.

Another element that enters into the cost of operating American ships is that the State taxes in the United States are heavy and must be paid yearly. Every ship has its home, a stated port or place where it is owned, and the State in which that is located imposes a tax. Other countries have no taxes upon ships corresponding to our State taxes; they escape this altogether. It is a considerable item in the cost of maintenance and operation. For instance, a steamship valued at two millions must pay from 1½ to 2 per cent on this value, or thirty-five to forty thousand per annum. I think the State of Maine exempts ship property from taxation.

These are the conditions against us, and we can not equalize them directly. Therefore we must do it indirectly and by help of some kind. American ships must be put on an equal footing with foreign ships to compete in the fierce fight for the carrying trade of the world. We have never hesitated to protect our industries on land, with the most beneficial results, and why should we hesitate to protect them on the sea, when they are so important and so necessary to our success as a nation?

WHAT OTHER COUNTRIES ARE DOING TO AID SHIPPING.

One reason for the neglect of American shipping is that our people have been so employed and occupied in our industries on land and they have been so remunerative that we have neglected our interests on the sea. Although other countries have the start of the United States and great advantages in shipping and the carrying trade, and are actually doing the carrying business of the world, yet all of them encourage shipping by subsidies, bounties, or mail contracts. For instance, the mail subsidies, bounties, etc., paid last year by other nations to encourage shipping amounted to nearly $30,000,000.

They have the business; they are intrenched; they are in possession. For instance:

France paid	$8,643,423
Germany paid	1,825,651
Italy paid	2,819,451
Japan paid	2,942,296
Great Britain paid	5,536,612
Russia paid	1,595,701
Spain paid	1,629,000

I will not name the smaller countries.

The total amount in form of subsidies paid by other nations in 1901 was $19,904,778; bounties, etc., $7,765,382; total, $27,670,160.

This enormous sum is massed against the United States on the sea and is the aid and encouragement that foreign nations render annually toward building up and maintaining their shipping interests—although strongly intrenched and in possession of the carrying trade of the world. The problem is, what can Americans do? In order to get part of this trade the United States must meet this vast expenditure in some way. We can not meet it by simply doing nothing, having no policy, making no effort, simply urging free ships; we must meet $27,000,000 given in the way of aid annually by other nations with some sort of substantial encouragement.

If we fail to do so, it will simply be impossible for the United States to hope to gain its fair share of the carrying trade. The bill under consideration is an effort to give this encouragement. If we had American ships sufficient to carry what we buy and sell, we would not only save to our people annually the payment of $200,000,000, now paid to foreign shipowners, but we would build new shipyards and stimulate the production and home consumption of all the materials that enter into shipbuilding. We would produce more iron, steel, lumber, coal, coke, lead, copper, zinc, and paint, finding a market at home for the same.

England's greatest interest is on the sea. She can not afford to give it up, and will never do so without a fierce struggle.

A subsidy equal only to the aid she gives will not avail. She is already in possession of the carrying trade, and I doubt whether we can take it from her, no matter what subsidy we give. The subsidy part of this bill is a doubtful experiment. If we had adopted the policy of discriminating duties, there could be no doubt as to the results.

AMOUNT WE PAY FOREIGN SHIPOWNERS.

The amount paid in 1901 to the owners of foreign ships by the American people for carrying our imports and exports was $50,000,000 more than all the taxes collected under the Dingley bill, and within ten millions of the amount collected under the internal-revenue war tax. In the ten years from 1891 to 1901 we paid to foreign shipowners more than $2,000,000,000 and in the

last twenty years more than $4,000,000,000. These figures are appalling. They exceed our national debt following our great war.

There is loud complaint by the Democratic party against taxes, and especially the iniquitous tariff taxes under the Dingley bill, but they do not murmur at paying more than the Dingley bill taxes to foreign steamship companies for doing the business Americans should do, when by a wise and liberal policy this might be avoided. If we were to build and own the ships that carry the products for which we pay $200,000,000 annually to foreign shipowners, this would cause the immediate expenditure of at least $100,000,000 in present shipyards and new ones that would be built, and as time goes on constantly increase. Besides it would stimulate the production of all materials that enter into the construction of ships; it would also give employment to thousands of our people at good wages.

The policy of one nation allowing another to control its carrying trade and transporting what it buys and sells is radically wrong. In time of war the commerce of a nation without ships would be entirely destroyed. What would be thought of two great business establishments, department stores if you please, situated near each other, one of which allowed the other to do the business of transporting the goods it sells to customers. This never would be permitted by individuals for one moment; it would be disastrous, and so it is in the case of nations. Correct business principles are the same everywhere, and apply with equal force to nations and individuals.

AMERICAN SHIPYARDS NOT FULL OF ORDERS.

It has been claimed in this debate that American shipyards are full of orders, and this great interest needs no encouragement. This is not the case. According to reliable information gathered from American shipyards, they are almost without orders for the coming year. It is true last year our shipbuilders received a great many orders, because it was believed that the bill of last year to encourage shipping would become a law, but it failed, and the orders were reduced, and unless this bill becomes a law, or some relief be given, orders for our shipyards will continue to grow less each year. Our shipyards will close and our flag be rarely seen on the ocean.

TO ESTABLISH A MERCHANT MARINE A NATION MUST OWN AND BUILD SHIPS.

To take a commanding part in the carrying trade of the world a nation must build and own its ships. No nation was ever great on the sea or ever had a merchant marine that did not build and own its ships.

Another great advantage in encouraging our carrying trade and building up our shipping interests is that it affords the best means of expanding our commerce and of finding new markets. Trade follows the flag. American ships going to foreign countries with American goods are more likely to find a market than if the same goods are carried in foreign ships. We can best extend our commerce and find new markets by establishing new lines of steamships to the various countries of the world, especially to those on the Pacific ocean and South American ports.

THE TRADE OF THE ORIENT.

The trade and commerce of the Orient, by reason of its geographical position and nearness to our Pacific coast, with its 600,000,000 people, who are learning the methods of Western civilization and becoming consumers of American products, belongs naturally to the United States. If we only take advantage of what belongs to us physically and naturally, very soon the United States must control this vast and growing trade.

But this can not be done now for want of ships, and until Americans can have American-built ships they will not be able to compete for this trade. It is a fact well known that because we have not enough ships for the Pacific trade two German steamship companies are now arranging to put on lines from San Francisco to the Orient in connection with railroads having their termini at large cities on the Pacific coast.

If this bill fails, connections between our transcontinental railroads and foreign steamship companies will be established from our Pacific coast ports to all points in the Orient. Our products going to the Philippines, now our territory, will be carried in foreign bottoms.

Possibilities of the trade with the Orient can not be overestimated. It must grow in importance until it will be greater than the trade with Europe and the rest of the world. We should not throw away such opportunities. They should be improved. Great cities and great ports will grow up on the Pacific coast if we only render aid to our shipping interests. The products of the Pacific coast States and the Middle States will find a new and ready market in the Orient if we only provide ways and means to send them there in American ships.

Hawaii and the Philippines belong to us. They furnish great bases of operations from which to maintain our trade relations and build up our commerce in the Far East. By reason of our nearness to the countries of the Orient and the islands of the Pacific, we have to only reach out and this trade is ours.

SOUTH AMERICAN TRADE.

The trade of South America is at our doors and has been waiting for us to take it for the last half century, but we have had no ships, no lines of steamers. All efforts to establish steamship lines to South America have been signal failures. A passenger from the United States must go by way of Europe to South American ports. American goods must be taken by way of England to expeditiously reach these ports. This is a solecism in the economic and commercial world. It is a wrong against American interests, and should be corrected. If we hope to extend our markets in South American countries, we must have American ships. We have waited for these markets to come to us without ships, and the result is that they remain with our competitors. Europe, farther away than we, holds the trade of South America.

BENEFICIAL RESULTS THAT MAY BE EXPECTED FROM THE BILL.

Under the postal subsidy provisions of the bill, according to the report of the committee and other testimony, it is believed the United States will have established within a reasonable time the following lines carrying the United States mails on the Pacific coast:

Weekly mail service to Hawaii, the Philippines, Japan, China, and Hongkong.

Semimonthly service to Pago-Pago, New Zealand, and Australia.

The vessels which will perform this service, both in speed and tonnage, will be superior to those by which our rivals now maintain mail connections with Asia and Australia at an annual cost of $4,700,000. The maximum cost to the United States, under the bill, will be $2,335,000.

On the Atlantic side we will have, under the bill, a semiweekly mail service to Jamaica, Habana, and Europe.

A weekly service to Venezuela.

A fortnightly service to Brazil, at a maximum cost of $2,365,000.

This will be a splendid mail service, equal to any in the world. The establishment and maintenance of these lines—something heretofore unknown in our history—would be the forerunner, the handmaid and helper in seeking markets in the countries reached by these lines.

Under the general subsidy clause the bill will promote the building at once of new vessels with large tonnage, and gives special facilities to our steamships for the Pacific trade.

The payment of the subsidies provided for in this clause of the bill is upon certain conditions. The subsidy is not naked and direct, but conditional. The conditions set forth in the report of the committee are these:

First. The employment and training of a certain percentage, the minimum being 25 per cent, of seamen under allegiance to the United States.

Second. The transportation of ocean mails of the United States, when required, free of charge.

Third. The training of American boys in seamanship.

Fourth. The use of the vessel for the national defense or for any public purpose, at any time, at a value to be fixed by arbitration.

Fifth. The perpetual incorporation of the vessel in the American merchant fleet.

The committee in its report further states:

"The ocean steamer in foreign trade stands in a different relation to the American purchaser from any other manufactured product. It is wholly separated from the operation of the tariff laws. If the American purchaser does not like the price of an American-built steamer for the foreign trade, he is entirely at liberty to purchase a foreign-built steamer for the same trade, and employ her for that purpose with the same freedom as if built in the United States. This bill does not change that condition in any respect."

These are the five conditions, and they are to some extent onerous ones, upon which the subsidy can be paid. They mean something, and if performed as they must be will greatly benefit and help build up our merchant marine.

THE COST TO THE GOVERNMENT UNDER THE BILL.

Under the postal-subsidy provisions the Government gets a consideration just and adequate for all the money it pays out, both directly and indirectly. It not only gets the mails carried expeditiously by us over new lines of communication, but puts American manufacturers and farmers in direct connection with the markets reached by these vessels.

The cost of the service by American mail steamers will be $4,700,000 per annum, the same as the cost of the British colonial mail service. It is estimated that the receipts from postage will be about $3,000,000, leaving a deficit of about $2,000,000; but as mail communication becomes established and business increases, the postage receipts must constantly increase and this deficit decrease.

The expenditure of this sum will not only secure the advantages just stated by way of mail communications and opening up markets, but there will be added 42 auxiliary cruisers which could be used in time of war. The cost under the general subsidy provision is important and should also be approximately known. As near as can be estimated, taking data furnished by the actual navigations of American vessels in 1900, the subsidies would amount to about $1,072,000. Of this there would be paid to steam vessels, excluding mail ships, $559,000; to sailing vessels, $513,000.

If all the provisions of the bill were carried out, the expenditures at the beginning would be from $800,000 to $900,000 a year; on the completion of 200,000 tons of steam vessels for the foreign trade in one year, the cost would be $1,300,000 in subsidies under this general clause. This would place the United States in advance of Germany as a shipbuilding nation.

Now, Mr. President, if we can win back our shipping by subsidies and by the expenditure of this amount in the face of European nations spending now $27,000,000 annually we ought to make the effort promptly and cheerfully. If these promising results shall be realized, it will be the best and wisest expenditure the Government ever made in the interests of the people and will yield the largest and best returns.

The results are so promising that it does seem to me we are justified in making this expenditure.

The great State of West Virginia, though inland, is deeply concerned in building up American shipping. Her mountain tops overlook the waters of the Great Lakes on the north and Atlantic tide water on the east. For purposes of trade and commerce she is in effect a seaboard State. She depends now, and will more largely in the future, on the sea and the Great Lakes for an outlet for her products, especially coal, coke, oil, timber, and manufactured goods. Already these products are seeking the markets of the world, and are only hindered from reaching them for the want of suitable and economical transportation on land and sea.

No State in the Union equals West Virginia in substantial wealth and natural resources, which are abiding and give promise of lasting indefinitely.

Our position on the map of the United States makes our products nearest to the markets, both East and West. No State offers more advantages to investors seeking a fair and certain return on capital, to the wage-earner seeking employment at fair wages, and the man looking for a home to rear and educate his family in one of the healthiest climates of the world.

West Virginia has more coal than Pennsylvania, is the first oil-producing State in the Union, stands second in the production of coke, and third in the production of coal, with vast forests of timber of all kinds still untouched. Besides having coal, coke, and oil to send over the sea to foreign markets, she produces nearly all the materials which enter into the building of ships and can furnish the same at the lowest cost to shipyards on the Great Lakes and on the Atlantic seaboard.

No State in the Union is more interested in the building up of our merchant marine on tle lakes and the sea than West Virginia. Her coal and coke in the future will not only go to South America and the West Indies, but to the great cities and centers of population of Europe. This can he hastened and facilitated by restoring our merchant marine. With the completion of the isthmian canal—which now seems assured—West Virginia coal and coke, owing to its superiority, will reach the Gulf of Mexico by way of the Mississippi River, and find a market not only on the Pacific coast, but in Hawaii, the Philippines, and the Orient.

It requires no stretch of the imagination to believe in the near future the mountains of West Virginia will be giving up their hidden wealth to both the Orient and Europe. These hopes for the glorious future in store for West Virginia may seem visionary now, but they will surely be realized.

Mr. President, I feel justly proud of my State. Her borders are filled with untold wealth. Her products, though in great demand, can not reach home and foreign markets for want of transportation facilities. There are not enough railroads within the State to haul its products. More are needed. Every trunk line of importance must some day enter West Virginia. She holds within her hills and mountains the wealth that must bring them there.

Omnibus Public Building Bill.

SPEECH

OF

HON. ARIOSTO A. WILEY,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 29, 1902,

On the bill (H. R. 14018) to increase the limit of cost of certain public buildings, to authorize the purchase of sites for public buildings, to authorize the erection and completion of public buildings, and for other purposes.

Mr. WILEY said:

Mr. CHAIRMAN: This bill carries an appropriation of $65,000 to improve and enlarge the Government building in the city of Montgomery in order to meet the exigencies of the public business. I had the honor at an early day of the present session to introduce a bill upon this subject, and I am very glad it has received such favorable consideration.

We live in the greatest and grandest country under the cycles of the sun. An enormous volume of business is transacted every year in all the departments of Government. It is marvelous to contemplate. It staggers the human mind to comprehend its magnitude. Legislation in all the protean shapes and forms which public needs may assume or the public weal may require is enacted by Congress under the common defense and general welfare clause of the Federal Constitution.

Under the existing rules of the House, made necessary, it is claimed, for the dispatch of this vast amount of public business, we are all constrained to admit the self-evident fact that Congressional legislation means legislation by committees; that is to say, that the efforts of the individual Representative in seeking measures of relief for his constituency must be directed to the standing committee having that particular matter under consideration rather than to this honorable body sitting as a Committee of the Whole House. Every member, therefore, whether his experience be of short or long duration, readily recognizes and appreciates the almost insurmountable obstacles which obstruct his pathway whenever he seeks to obtain an appropriation with which to erect a public building or to beautify some public ground. In view of these difficulties I desire thus publicly to thank the members of the Committee on Public Buildings and Grounds, and particularly my colleague [Mr. BANKHEAD], the ranking minority member thereon, for the kindness and courtesy shown through me to my constituents in granting the full amount recommended by the Supervising Architect in the Treasury Department.

This appropriation contemplates an enlargement of the Federal building at Montgomery for the purpose I have just stated, either by extending the structure south in the direction of Washington street or erecting a wing on the west side thereof, at a cost of $65,000. When this annex is completed, it is estimated that it will require an additional sum of about $25,000 to make all necessary changes, so as to connect together and properly harmonize the architectural designs of the two edifices. I am also grateful to the committee for the assurances so generously given to me that at the proper time whatever additional appropriation is needed to this end will be cheerfully recommended by the committee.

Representatives on this floor have spoken with commendable pride and in glowing terms of communities in which they live. You have heard a good deal, no doubt, of our glorious Southland; but permit me to invite your attention to the fact that Montgomery, the beautiful city in which I live and in which this appropriation is to be expended, is peculiarly typical of the old South—one of the few ideal Southern cities left unchanged by the radical chisel of a new aggressive and progressive American civilization. If you want to see the South in all her pristine perfection—the old-fashioned, chivalric, provincial, family-loving, home-building, traditional, self-respecting South, the land of the "cotton and the hoe"—then I bid you come with me to cities like Charleston, Savannah, Montgomery, Mobile, Memphis, or New Orleans, where the old romance yet lingers, where the loveliest women God ever created still abide, and where brave and loyal men prize the legacy of a good name more than they value silver and gold.

Ah, Mr. Chairman, if you knew the old South as I do, and loved the memories and traditions interwoven with her history as fondly as I, you would pardon me, I am sure, for using extravagant language in describing the district I have the honor to represent in this Chamber, because I come here from a land "way down South in Dixie," whose climate is delightful, whose soil is productive, and whose laughing waters are as pure and abundant as ever gushed out of the rocks; whose golden summers are filled with clustering vines, ripening fruits, and singing birds; whose soft and beauteous skies are tinted with the blended colors of the blue and the gray; whose silvery moon—wandering "a pale-faced Cynthia"—guides the weary traveler his way with rays of the brightest, sweetest, and gentlest light that ever was shed on any spot in all the wide earth; a land whose broad plantations of rich prairies and fertile valleys become every year white with fleeces of downy cotton, green with tasseling corn, and yellow with flowering wheat; a land of the happy darky and patient mule; where the watermelon and the pomegranate, the apple and the peach grow in luxuriant profusion; where the wild flowers bloom amid the "soft dews" of the evening; where the jasmine and the honeysuckle expend their perfumes, and the "rose speaks of love and of light;" a land where the mocking bird will sing you to sleep every night, while some amorous whippoorwill from a neighboring tree top pours out the while a dolorous plaint to a pensive mate; a land of the magnolia and japonica, the myrtle and the bay, the ivy and the red-fruited woodbine; a wondrous land, indeed, whose sweetness, beauty, and glory it has never been given to the tongue of man to picture or describe, though touched, it may be, with the heavenly fire of matchless eloquence.

Montgomery, the capital of our State, is an historic city. She sits enthroned a queen at the headwaters of navigation of the

Alabama River. Nine different railroads concenter there, being the focal point of trade for an immense territory. Her estimated population, within police jurisdiction, is about 40,000. The distance to the nearest coal fields is not over 60 miles. She has about 600 manufacturing and industrial enterprises and the amount of capital invested in these important interests is more than $3,000,000. The value of manufactured products for a given year is $4,000,000, while the volume of business done in the same period of time is about $40,000,000.

The various railroads run from a common center in all directions like the spokes of a wheel, and the city reaches by water and rail transportation six great Gulf and Atlantic ports. Montgomery is the place of residence of the State officials and many Federal officeholders. Being a place of unique historical interest, we are visited every year by many thousands of travelers, tourists, and sight-seers. We have an abundant supply of the purest water. Our citizens are peaceable, law abiding, patriotic, and hospitable. The community is a most desirable one to live, in so far as topography, climate, health, water, and transportation facilities are concerned, and in consequence our population is rapidly increasing. Statistics demonstrate Montgomery to be one of the healthiest cities to her size in the world.

It is no marvel, then, that she has grown beyond the narrow limits of the present Government building erected there several years ago.

This appropriation will supply a long-felt need. The expenditure will prove a wise, judicious, and economical investment for the Government; and I rejoice to know that this improvement, when made, will meet the necessities of the public business.

Cuban Reciprocity Bill.

SPEECH

OF

HON. SAMUEL M. ROBERTSON,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 14, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 12765) to provide for reciprocal trade relations with Cuba—

Mr. ROBERTSON of Louisiana said:

Mr. CHAIRMAN: The matter now under consideration by this House has been fully presented by the advocates of this bill, and I believe they have exhausted all their arguments in support of the proposition. Much has been said about the extension of trade to Cuba. Much has been said about the duty of the United States to Cuba at this time. Much has been said concerning the distress in Cuba, and the necessity for the passage of this bill.

It is well known, Mr. Chairman, that before the Committee on Ways and Means, in the consideration of this question, the case of Cuba was ably presented. It is well known that the opponents of the measure routed and completely annihilated every proposition made by the exporters of New York and the sugar refiners of this country in their attempt to make it appear that it was necessary at this time to come to the relief of the Cuban people. And it seemed to me that all the testimony on this question brought the case at last to the desire of these New York importers and the sugar trust to reap from the existing conditions the benefit to themselves which will result from the passage of this bill.

The principle of reciprocity in later years has been distorted by the Republican party. Those of us who have paid attention to the question know that all reciprocity agreements entered into under section 3 of the McKinley law were granted almost entirely at the expense of the sugar industry of the United States. Every commercial agreement made with the South American Republics, Germany, and Spain, was made at the sacrifice of our agricultural industries and in the interest of the manufacturers, who were able without reciprocity to sell their wares in these countries at a price much less than that charged our own people at home. Every agreement which fell when the Wilson bill passed this House fell because the principles of the Democratic party could not sustain the position of the Republican party upon that principle.

I remember well, Mr. Chairman, that in the consideration and discussion of the Wilson bill before this House the gentleman from West Virginia, Mr. Wilson, the embodiment of tariff reform and the able expounder of Democratic principles in this country at that time, arose himself on the floor of this House and by an amendment to his own bill, which he feared did not carry a repeal of the reciprocity clause of the McKinley Act, swept out of existence section 3 of that act. In my views embodied in my report against this bill when it was brought into the House I said:

It seems to me that this kind of reciprocity is absolutely impossible under a Democratic idea of a tariff. Should the tariff ever be revised on the line and plane of the principles of the Democratic party reciprocity would be entirely unnecessary and impossible, as the rates would not be prohibitive, and the extension of our trade would, as a natural consequence, flow from the imposition of such tariff rates without the necessity of reciprocity.

The Democrats, in their national platform in 1892, said:

"We declare it to be a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties except for the purpose of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered."

The imposition of a tariff which can be raised or lowered for the purposes of reciprocity is in direct antagonism to this declaration, which states that tariffs are levied for revenue purposes and are not levied for the purpose of anything else, either for protection or for reciprocity. In speaking particularly of the question of reciprocity, this platform, section 4, is expressive of the doctrine of the party on this question. But while this expression in this platform upon the question of the tariff would exclude the reciprocity carried in this bill, yet the expressions in section 4 condemn it as entirely un-Democratic.

"SEC. 4. Trade interchange on the basis of reciprocal advantages to the countries participating is a time-honored doctrine of the Democratic faith, but we denounce the sham reciprocity which juggles with the people's desire for enlarged foreign markets and freer exchange by pretending to establish closer trade relations for a country whose articles of export are almost exclusively agricultural products with other countries that are also agricultural, while erecting a custom-house barrier of prohibitive tariff taxes against the richest, and the countries of the world that stand ready to take our entire surplus of products, and to exchange therefor commodities which are necessaries and comforts of life among our own people."

This platform was adopted subsequent to the enactment of the McKinley bill, and under this declaration, in the consideration of the Wilson bill by a Democratic Congress, section 3 of the McKinley law, which provided for this kind of reciprocity, was subsequently repealed by an amendment offered by that noble and great Democratic leader, the then chairman of the Ways and Means Committee, the Hon. W. L. Wilson, of West Virginia. This was a definite, well-defined, and effective method of expressing the will of the Democratic party on the question of such reciprocity as that contained in the bill under consideration.

I would not refer to this at the present time, Mr. Chairman, had it not been that the gentleman from New York [Mr. MCCLELLAN], a member of the Committee on Ways and Means, accused the Republican party of stealing the thunder of the Democratic party upon this question. The further discussion of this topic would only establish more firmly the fallacy of the contention that this measure is in the least the embodiment of true Democratic doctrine. I desire to go at once to the discussion of our trade relations with Cuba at the present time. I hope I may be able to show, and I believe I can, that we control now all of the trade of Cuba—all of the export trade and our proper share of the import trade.

I have carefully gone over the report of the Secretary of War—the Monthly Summary of the Commerce of the Island of Cuba for June, 1901. Selecting this publication because it gives two complete years of commerce with that island, and having scanned each and every schedule in it, it is evident to me that we have reached, without reciprocity, a maximum of trade with Cuba in the matter of imports.

The total commerce of Cuba, according to these statistics, including the exports and imports of gold and silver, for the years 1900 and 1901, is as follows:

Imports in 1900, $76,869,813; exports, $49,481,552. In 1901, total imports were $66,264,767; exports, $64,245,801.

It is very interesting indeed to look at the articles imported into Cuba from all countries. This examination will show beyond a question of a doubt that the United States now has all the trade which natural conditions will bring about. The character and habits of the people, of course, lead them to consume articles which their natural tastes and inclinations impel them to use, and which must be, through the necessity of things, imported from countries producing these peculiar goods.

By a careful review of the report of the War Department on the export and import trade with Cuba these facts clearly appear.

Let us take the imports for the years 1900 and 1901, ending in the month of June for each year, the years which show the greatest trade in any one article of import. In 1900 the total value of agricultural implements imported into Cuba was $441,794. The imports from the United States of these implements were valued at $297,158, being nearly three-fourths of the total. It is well known to the country that we are able to sell in foreign countries these agricultural implements very much cheaper than we sell like articles in the United States. In fact, Mr. Chairman, in the discussion of all the bills touching the tariff in this House it has been claimed and shown that we can put in the South American Republics, and therefore into Cuba, agricultural implements cheaper than any other nation on the face of this earth. If we do not control the market in this respect, the fault is not in the tariff.

There was imported into Cuba last year from all countries horses valued at $332,271. Of this the United States furnished $195,871 in 1900, and in 1901, $208,193 out of a total import of $430,000. The country competing with us in this line was Mexico. And why? The natural conditions would direct that trade, because the animals imported into Cuba must be imported from a

tropical country, so that they may be able to stand the climate, and they must be horses that are accustomed to the conditions which surround a tropical country.

Can we increase that trade, Mr. Chairman, by the passage of this bill? Take mules. We almost control this market, but Mexico still competes with us on this line. It is not necessary to give the figures; they are accessible to every member of this House. Now, let us take the hog trade. Let our friends of the West, who are the great producers of hogs in this country, know that we have monopolized that trade completely and fully, and that the total value of this trade was $350,000 in 1900, and that the value of hogs imported into Cuba in 1901 was $200,000, of which we supplied $196,000. Now, take the sheep. Let our farmers of the West understand this—that we furnish Cuba with all of the sheep. How can reciprocity increase this trade?

Of text-books we furnish Cuba $17,000 out of a total of $30,000 worth; but, Mr. Chairman, it must be remembered right here that Spanish is spoken in Cuba, and French also to a very great extent. It is impossible for us at any time to extend our trade in this direction. It depends upon the peculiar characteristics of the people. Let us take brass and brass manufacture. Out of a total importation of $71,000 we furnish $26,000; France furnishes $14,000, and Spain $14,000. It must be remembered, Mr. Chairman, in all these calculations that Cuba was a colony of Spain. Germany has furnished Cuba with all of her barley. I do not believe we can compete with Germany in this line. The value of bran and fodder imported into Cuba in 1900 was $116,000, and of this amount the United States furnished $102,000.

Out of 1,438,197 bushels of corn imported in 1900 the United States furnished 1,433,000 bushels, within 5,000 of the total consumption in Cuba. The trade of Cuba increased in 1901, but we practically, notwithstanding that fact, furnished all of the corn. Let our friends from the West who produce this take that into consideration. Will this bill increase this trade? I deny it, Mr. Chairman. There is no room for increase except in increased consumption. In 1900 and 1901 we furnished all the corn meal imported into Cuba. In 1901 we furnished practically all of the oats imported into Cuba, amounting to 340,000 bushels in 1900 and in 1901 to 400,000 bushels. We furnished more than one-half of the macaroni and vermicelli and all the rye; all the wheat and all the flour, the value of the flour alone amounting in 1901 to $2,206,000. We furnished all the bricks, glazed and unglazed, with the exception of $11,000, the total being $116,836 in 1900.

The candle trade seems to be a very important one, amounting in 1901 to $323,173, of which Spain furnished $296,426 worth, practically controlling this trade. The reason that we did not furnish this is explained by the fact that the Cuban people are Catholics, and that very many of these candles were imported for use in religious worship from their mother country, and it will be impossible for us to obtain this trade under this so-called reciprocity until we are able to touch them in the matter of supplies for the many fêtes and ritualistic services to which they have been so long accustomed. Will reciprocity change this? The United States furnished all the cars and all the carriages and all other vehicles for steam railways and for other railways in the island of Cuba. We furnished all the bicycles, with the exception of a small number imported from the mother country. Can we gain anything in this line, Mr. Chairman, by this reciprocity?

Out of $154;330 worth of carriages and vehicles not used upon railroads, the United States furnished $133,000 worth. She practically monopolizes this trade. England beats us in crockery ware, but the importations are of little importance. I ask gentlemen please to pay attention to these figures: Out of $208,000 worth of anthracite coal the United States furnished $204,633 in 1901. Of bituminous coal, she furnished the entire supply. Of coke, she monopolizes the market. Of clocks and watches, the United States has a monopoly. Of coffee, out of $2,082,960 imported into Cuba in 1901 the United States furnished $1,977,000, being practically the whole amount.

We furnished one-half of the copper, England being our rival. If we compete with her, we must do so by the strenuous efforts of our own merchants. That trade can not, in my opinion, be affected by the 20 per cent preferential rate which this bill carries. But when we come to the manufactures of copper, out of $178,177, which Cuba imported in 1901, we furnished $135,535.

Now, as to cotton goods. Upon that point I desire to call the attention of the members of this House to the condition which surrounds that trade. We by no means control this market. The reason for this was brought out by the testimony before the Committee on Ways and Means, which showed us that we made no attempt to control this article. The Cubans are furnished with a peculiar kind of cotton cloth, which they use for the most part.

The United States does not produce cotton cloth of this character, and it was not, therefore, a matter of price so much as it was the character of the goods which were offered by us. As soon as our cotton manufacturers can bring themselves to the necessity of manufacturing the class of goods the Cubans desire, there will be no doubt that we will control this market. It has no connection whatever with the matter of reciprocal trade relations, but is a peculiar situation brought about by the climatic conditions and customs of the people.

We furnished in 1900 nearly all the eggs in Cuba, valued at nearly half a million of dollars. We furnished all the fertilizers imported into Cuba last year, except those which Peru supplied and with which we can not hope to compete.

I hope the House will excuse me when I go into these details, but my purpose is to show that nothing can result from this bill now pending in this House by any reduction of 20 per cent upon the commodities which go from this country to Cuba, which can extend our trade. Out of $15,500 worth of vegetable fiber, fine straw, etc., imported into Cuba last year, the United States furnished $11,565 worth.

As for the iron and steel schedule and manufactures of iron and steel, our greatest rival is England. The question of the tariff upon those schedules in the United States and the desire that the tariff should be reduced, is evidence that we can easily compete with England, should we use our strenuous efforts in the direction of accomplishing the control of this trade here.

It will take something more, Mr. Chairman, than a preferential rate of 20 per cent to bring this trade to us. In saws, tools, wire, wire cables, structural steel and iron, and steel rails for railroads, the most important articles for the development of Cuba in the future, we control and are apt to continue to control the trade in this direction. The effect of this bill, therefore, will be to no very great extent in the development of this particular trade on the lines of steel, iron, and products and manufactures of those metals.

In salt meats—now I desire to call attention to this—the total importations into Cuba last year were nearly $3,000,000, or, to be exact, $2,998,519. We furnished $1,431,216 of these important articles. Our great rival was Uruguay, in South America, which furnished $1,275,000 of jerked beef. Of course this is not an article of manufacture and commerce in the United States, and, therefore, we will never take the control of this trade. It is one of those peculiar food products which the people of Cuba are accustomed to use. We do not produce it—we will not produce it; hence this $3,000,000 of trade, one-half of which is controlled by us, will all be controlled by us only when the people of Cuba begin to learn that it is better to use other articles of food of like character than the jerked beef which they now consume. As to hams, bacon, pickled pork, and shoulders, we control the market. Out of $2,000,000 worth of lard imported in 1901, we furnished the entire amount.

In poultry and game we control almost the entire market, as we do also in the matter of condensed milk. Now we do not control the rice market in Cuba. The value of rice imported into Cuba is nearly $3,000,000 per annum. The reason of this is that we have scarcely reached a point in this country where this trade is eagerly sought. We are importers now, rather than exporters of rice, but even if we desired this trade, after careful investigation, I do not hesitate to say that we could not compete with Hongkong, China, and the East in this matter. Rice comes to Cuba from the East, for the greater part through the United Kingdom and Germany. It is the German rice which now competes with Louisiana in our own market; and the brewers inform me that they have not used our rice to any great extent yet because they could import rice fit for brewing into this country at lower cost than Louisiana planters can afford to sell it. If they can afford to compete with us in our own market and pay the high tariff under the rates fixed in our present law, they can certainly compete with us successfully and exclude us from the market of Cuba for some time to come.

Very much has been said about securing this rice trade for the United States, and very much weight has been attached to it in a specious argument used to influence the actions of the Representatives from Louisiana in their vote upon this bill. I am convinced that we can not control this market under the provisions of the pending bill. The quality of the rice used is of the very lowest grade, a grade not produced in Louisiana in any great quantities. What may be done in the future is a question which our people are able to work out. I am sure they do not desire to embark upon a policy clouded with such extreme doubt, when the return will be so little when compared with sacrifices made by other industries in the State.

By review, therefore, of the figures which I have given, it appears that we control practically the trade of Cuba in the great staple products, including flour, corn, corn meal, pork, hams, salted meats, and all kinds of pickled pork, oats and hay, coal and coke—in fact, all of the most important articles of commerce.

Spain controls the wine market almost exclusively, and it is natural she should do so. You might as well try to substitute American wines for Le Petit Bleu, used by the French peasantry,

accustomed to its peculiar flavor, however mean it may be, from infancy. They cling to it as against all others. The same characteristic exists in Cuba. They have been accustomed to the grades of wine imported from Spain. This is another one of the peculiar conditions which must be overcome, and will be overcome in time, but can not to any appreciable extent be affected by the passage of this bill.

The trade in boots and shoes and sandals is monopolized by Spain. It appears that the amount of this trade is $3,000,000 per year. In the testimony it was shown that $2,000,000 of this amount was the value of sandals, a peculiar shoe which is made in Spain and used by the Cubans to the exclusion of all shoes imported from other countries. Spain, in many of the important articles of commerce which is not controlled by us, is our rival. The principles upon which the Cubans have conducted their business heretofore have been very different from those pursued by our merchants in matters of credit. It appeared in the testimony before the committee that the merchants of Cuba bought their goods on a twelve months' credit, while the extent of credit allowed by our merchants is ninety days. On account of this fact much trade will, for some time to come, be controlled by Spain under these conditions, and can not come to us through reciprocal arrangements. They are circumstances which can only be overcome in time and by the assiduous efforts of our merchants, whose task it is to overcome the prejudices of the people and the customs of long-established business habits.

Now, let us review the export trade. Articles of export from Cuba are almost entirely purely agricultural. They consist of sugar, tobacco, and cigars. It will appear from the table which I here submit that out of the $64,000,000 of the export trade of Cuba the United States takes from her $54,000,000. We are the great market for Cuban products. The adoption of this bill will not change this condition.

Exports to United States.

Sugar, 1901	$27,058,648
Leaf tobacco, out of $9,720,266, exported to United States	8,395,370
Wrapper tobacco, 1901, out of $15,739,364	10,659,825
Cigars (greatest other exporter in United Kingdom)	2,564,601
Molasses	1,142,855
All other articles, estimated	5,000,000
Total exported to United States	54,821,299
Total exports, 1901	64,245,801
Total to United States	54,821,299
Balance to other countries, almost exclusively tobacco and cigars	9,424,502

This review, partial as it has been, of the commercial relations between Cuba and the United States demonstrates, it seems to me, that the matter of our trade relation does not rest so much upon the question of tariff rates as it does upon the possibility of overcoming the natural conditions brought about by the habits of the people and the peculiarities which remain from the impress of hundreds of years of control of a Latin nation, the characteristics of which have engrafted themselves upon this generation to such an extent that it alone can solve the problem and bring to us greater returns in matters of trade.

I can not see that the reciprocity carried in the bill under consideration can justify anyone in favor of the extension of our trade to make the sacrifices which must come to our own people in the solution of so doubtful a problem. The matter, then, must resolve itself primarily into an effort on the part of those interested to secure a better price for their sugar. I doubt that anyone would put the question upon a higher plane. It is necessary, therefore, for us to review carefully and considerately this phase of the question. It is well known that the depressed price of sugar at this time results from two causes: First, an overproduction of sugar in the world; second, the institution by countries producing beet sugar of bounties to producers of sugar in these countries, consisting in export taxes, excise taxes, import taxes, and what are known, I believe, in Germany as "surtaxes."

It so happens that by the formation of the great trust in Germany called the "cartel," which handles the entire output of the sugar in the country, and by the cooperation of the German Government the producers of sugar there obtain a tremendous benefit which affords an opportunity to the exporters of sugar to sell it at a price far below the cost of production. I speak now of raw and unrefined sugar, the sugars which come in competition with the sugars of Louisiana and the sugars produced in the United States from beets, and also the sugars produced in Cuba.

It is therefore a matter entirely of low prices which are brought about by overproduction that affect the sugar industry in Cuba, which to-day is not in good condition, but they are conditions which the people of the United States should not be called upon to stand for. The sacrifices which are intended to be made by this bill should not be borne by the American agriculturists alone, embarking, Mr. Chairman, as they are now upon a great industry which will furnish to this country, beyond question of doubt, within the next ten or twelve years all of the sugar which it consumes.

Mr. Chairman, I want to call the attention of this House to the financial condition existing in Cuba. It appears that the banking business of Cuba is done almost wholly by Spanish citizens, and most of the mercantile business is transacted by these same people. It appears that the loans upon sugar estates to the people of Cuba were made at highly usurious rates. In fact, it was stated before the Committee on Ways and Means by respectable citizens that the interest charge on the indebtedness ranged from 12 to 20 per cent per annum. Now, if it is to pay these men this usurious interest that the people of the United States are called upon to make the sacrifice which the bill carries, I must humbly and emphatically enter my protest. I do not believe it is just and proper to sacrifice the avocation of 500,000 people in Louisiana and one hundred millions of property there invested in the sugar industry in order to pay this usurious interest.

If the provisions of the pending bill are to expire in 1903, the effect of its passage will mean that we will donate from our Treasury eight to twelve million dollars, which must go to enrich these same bankers and merchants and primarily the sugar trust and sugar-refining interests of the United States.

Mr. Chairman, Cuba has about finished the harvesting of her crop. I have heard it said by many gentlemen on this floor, particularly the gentleman from New York [Mr. PAYNE] and the gentleman from New York [Mr. MCCLELLAN] and the gentleman from Kansas [Mr. LONG], in their efforts to show that the sugar trust will not be benefited by the passage of this act, that the sugar trust had only bought about 3,000 bags of sugar; that the sugar trust would not control and is not now buying any Cuban sugar which is stocked up in the warehouses there. My contention is that, whether the sugar is sold to-day or whether it is sold six months from to-day, its price will be controlled absolutely by the only consumer of raw sugar in the United States to which it must go inevitably—the sugar trust.

Who will gainsay that proposition? I do not, Mr. Chairman, intend that they shall get away from it. Now, as to the price which we have paid for sugar, it is in evidence and can not be denied on either side of this House, whether they favor the passage of this bill or not, that the price of sugar is fixed at Hamburg, Germany. The price of sugar in New York is the price of sugar in Hamburg plus the freight to New York, plus the freight and insurance and tariff rates charged upon it by the operations of our law. If sugar is high in Hamburg, the Cubans will reap the benefit of that price. They must sell their sugar in New York to the sugar refiners there, in competition with the sugars from Hamburg, as the trust is the only buyer of raw sugar; and as it controls entirely the output in refined sugars, it has such absolute and complete dominion over the market that they will themselves give whatever they may feel is just and proper when they come to the consideration of the profits they desire to make.

The price, therefore, is not dependent, in so far as Cuban sugar is concerned, upon the price which might be fixed in a competitive market, but it is fixed entirely by such estimation as the trust may make upon its value at the port of New York.

I for one can never believe that this powerful corporation would yield one single cent or one-hundredth of a cent to the people in this country as against the profits which must accrue to them by the conditions which present themselves in the market in New York, over which they have full control.

The gentleman from New York [Mr. PAYNE] stated in his speech that the reduction in this bill would not affect the price of sugar; that sugar would be the same price as that fixed by the conditions of the German market. If this be true, where does the American citizen profit by it? Where is the consumer relieved? I ask some of my brethren on this side of the House if this be true how can they afford to vote for this bill under the pretext that it lowers the tariff taxes, and therefore the price to the consumer? I want some of them to answer this question. I want some of them to tell their constituents how it can be done. I want some of them to throw off the dark shadow of ignorance upon the question which now obscures from them the light of the facts and go forth to their constituents and tell them that this bill lied upon its face when it said that it reduced the tariff, and therefore reduced the price of one article universally consumed by them.

I want gentlemen also who hide behind this same cloud which obscures their minds in the consideration and investigation of this question and causes them to say that they will support this bill because they do not desire to go to their constituents and explain its provisions—I want to say to such gentlemen, it has been my experience that if you do not explain it, some other fellow will do it for you. When you tell me that you can claim before your constituents that the price of sugar will be reduced and that the reciprocity involved in this bill will relieve the people of this country, I am almost ready, Mr. Chairman, to exclain that it is a

species of cowardice which can not remain in the breast of any Democrat who attempts to represent an honest constituency on this floor.

I charge, and I believe I can prove it, that the trust will be the beneficiaries of this legislation. I have stated before that the sugar refineries of this country were the only producers and the only consumers of sugar. They were the only consumers of raw sugar, the only producers of refined. If anybody doubts this proposition, I have ample proof before me to establish it. I presume that no one will deny it.

In a calculation made by one of the witnesses who appeared before the Committee on Ways and Means it was shown that in making up the price of sugar in Hamburg not only were the charges of freight, insurance, and handling made, together with the ordinary tariff upon sugar, but also there was taken into consideration 26 cents which was exacted by this country against countries which paid a bounty upon sugar. It appears also from this statement, and this statement is in figures and easily accessible to any gentleman upon this floor, that on January 21, I believe, there was shown that through the manipulation of the sugar trust that the Cubans received at the port of New York 31 cents less for their sugar than that paid for Hamburg sugars landed in New York on that day. The gentleman from New York [Mr. McCLELLAN], in answer to the gentleman from Texas [Mr. COOPER], denied most emphatically and without explanation that the Cubans got the benefit of this countervailing duty.

I desire to turn to the gentleman now and ask him why they do not get it. They were entitled to it because they paid no bounty. They were entitled to the benefit of this charge of 26 cents per hundred pounds. It should have made the price of their sugar equal to that of the sugar from Germany, with its bounty and countervailing duty. But the facts are that on that date, and I believe and know that these figures are true for every other date, the Cubans were receiving 31 cents per hundred pounds less than they were entitled to. I desire here to read the items which go to establish the price of sugar at the port of New York, given in the testimony of a most reliable witness before the Committee on Ways and Means, and which has not been denied or controverted, and which will bear out my contention fully and completely.

Price of sugar, export duty New York (f. o. b.), per 100 pounds	$1.58
To which add, for insurance and credit	.02
To which add duty (94.5° polariscope test)	1.63
To which add countervailing duty	.27
To which add difference between 88° analysis beet and 96° polariscope test cane sugar	.19
Total	3.69
To-day's price New York, costs, freight, and duty paid, of 96° centrifugal cane sugar	3.375
Difference	.315

I agree with the gentleman that Cuban sugar does not receive the benefit of this 26 cents per 100 pounds, which results from the laws of this country by the countervailing duty upon bounty-fed sugar.

And I desire to go further, and to ask him whether they are not entitled to it? Why they do not get it? Why is it they do not receive these benefits? And then I will answer that question for the gentleman from New York, and I will tell him because the price is controlled by the sugar trust. The gentleman has stated in his speech that there are a number of independent sugar refineries in this country—sugar refineries not in the trust. Are these known as the National Sugar Refining Company? I beg to state to the gentleman that the testimony of Mr. Havemeyer shows—that testimony delivered before the Industrial Commission, which I will quote right here if anybody denies it—was to the effect that the sugar trust, of which Mr. Havemeyer is president, refined 90 per cent of the sugars which went into consumption in the United States. Will the gentleman deny that?

We had testimony by the gentleman, who, I believe, was the president of the National Refining Company, Mr. Post, before the Committee on Ways and Means. The gentleman stated that he sold his sugar for 1 cent less per 100 pounds than the American Sugar Refinery. When, how, and under what circumstances this was done we are not able to obtain from Mr. Post, but an article which was published a few days since, dated April 5, coming from New York, said that—

> By an agreement or contract which has just been ratified, all refiners throughout the country will sell sugar on uniform terms.

This statement was published by the New York Journal of Commerce, one of the most reliable papers published in the country, one whose reliability will be vouched for by the gentleman from New York.

The statement goes on and states further:

> That in the future the price of 5 cents for granulated will mean the same whether quoted by the American Company, the National Company, or the Arbuckles, and it will not be complicated by any special or extra discounts.

So that it is clearly shown from these extracts that whether there was independent bidding by the several sugar-refining companies or corporations of the United States in the past the agreement which I quote fixes beyond cavil that the price will in the future be controlled under this agreement. Clearly, then, when the Cuban crop is sold its price will be controlled, as I have repeatedly said, by the sugar refineries of the country.

If they have and do control the price of Cuban sugar, and if they have, as shown, filched from the cane-sugar producers this 26 cents per hundred pounds, what will prevent them from filching further the 20 per cent reduction made in this bill from the sugar producers of Cuba?

The gentleman from New York [Mr. PAYNE] a few days ago stated that the sugar industry in Cuba was an industry in which the small farmers of Cuba were engaged, and led us to believe that they were upon a par with the cotton planter in the South or the tobacco planter throughout the country. My friends, I have investigated that question, and if you will examine the report of the Bureau of Statistics, published a short time ago, you will find that the colonas are the small plantations, and the colonos, those who cultivate these small farms, are in an absolute condition of servitude and that these small farms comprise less than one-sixth of the total area in sugar cane in the island; that the great industry of Cuba is in the hands of a few powerful men or corporations who have invested their money there, and consists of tremendous estates, amounting to twenty-five or thirty thousand acres in some plantations.

The following statement of facts was published in the Louisiana Planter and Sugar Manufacturer for April 12, 1902. The source from which the statements contained in this article was obtained seems to have been entirely unbiased and free from the influence of political consideration. The testimony is good and reliable and goes to establish the fact that the small farmer in Cuba is destined to survive an exceedingly short time longer. The condition is almost a system of peonage and is controlled to great advantage by the larger sugar estates, and the small farmers are as entirely dependent upon them as a barnacle is upon a ship:

> Some useful and reliable information regarding the true state of affairs among the sugar and tobacco planters is furnished to the American Economist by a well-known financier of New York City as the result of an eight weeks' tour of inspection throughout the island west of and including Santa Clara. This trip was made without any reference whatever to the question of tariff concessions. It was a tour of inspection having neither sentiment nor politics for its motive. For the past twelve or fifteen years this gentleman has represented a number of English and American companies engaged in lending money upon real-estate security in the United States, and was very familiar with the business in this country These companies contemplated engaging in the same business in Cuba, and the object of his trip was to ascertain the conditions there and the possibility of a safe and desirable business on these lines.
>
> In the sugar district around Matanzas, Cardenas, Santa Clara, Cienfuegos, Habana, and other important points he found that probably five-sixths of the cultivated land was owned by big grinding mills, called centrals, and that the remainder was owned or occupied by small farmers, sometimes renters, called colonos.
>
> The lands of the colonos were almost invariably mortgaged, and likewise for so large a sum that but little, if any, margin was left. This gentleman's clients always preferred small loans on small farms in the United States and desired an investment of that kind in Cuba. These colonos are generally quite ignorant people, of extremely small means, and invariably in debt to the big centrals.
>
> He found that almost without exception the sugar crop was mortgaged by the colonos to the centrals, or to the sugar brokers in the larger cities, at the very commencement of the cultivating season, and that the lenders "supplied" the colonos during the season, much the same as is done in the Southern States with the small cotton planter. The sugar crop of the colono is required by the lender to be delivered to him as soon as it is ready to cut, which is about the 1st of December. This is required not only as a matter of safety, but that the lender may get the return of his funds as soon as possible. And he found the fact to be that with very rare exceptions the colono delivered his cane early in December, had a settlement of account with the lender, and very often found very little or nothing to his credit, but received whatever balance, if any there was.
>
> This left the colono without means to produce his next crop, and often without sufficient means to carry him on even to the time of cultivation, so that from the time cultivation began—in March or April, if not before—he had executed a new mortgage upon his forthcoming crop for like purposes.
>
> It is the practice of the centrals or big sugar mills to deliver either the sugar or the price of the sugar at that time to the colono. Invariably the colono takes the price rather than the sugar, which he has no means of handling. The cane raised upon the lands of the big centrals is ground later.

I stated in my minority report against this bill that the laboring man in Cuba was in a better condition than he was anywhere else in the world; that he was to-day commanding better prices for labor performed than our own people in this country for like labor. I am opposed, Mr. Chairman, to any development of that industry by the importation of foreign labor to such an extent as to place competition in the island of Cuba in the matter of labor between such labor and its own citizens. They are now earning their bread. Let me tell you another thing. The industry of Cuba has been developed over 300 per cent in less than three years. Is not that a good showing? In 1894 they produced 1,000,100 tons of sugar, and they produced that 1,000,100 tons of sugar when Spain had dominion over the island.

Every one of them received a profit upon the sugar which they produced. All of the sugar planters there made money. If they did not, they were not provident enough to conduct their business

on business lines. Why is it now that this cry comes? Gentlemen say because they are deeply in debt. My friend from Massachusetts [Mr. McCALL] says they are terribly in need of money. It seems to me that when the laboring people of a country are receiving all they can expect—high wages and continuous labor—that that country is in a pretty good state. I shall protest, Mr. Chairman, against the development of that country through the stimulation of legislation which we may pass, which may increase it beyond its natural condition under the status of to-day.

Why are we called upon, Mr. Chairman, to put Cuba in a position where she can raise 5,000,000 of tons of sugar at this time? Let her work out her own salvation. The young of the eagle is the most helpless of all birds, but when he has matured he is the monarch of the air. Let these people work out this destiny. Let them alone; let them learn how to be strong; let them meet the conditions as they present themselves and solve their problems as Louisiana has. We from Louisiana do not come here to-day as mendicants asking you to give us anything except that to which we are justly entitled under the principles of any party in this country.

We have solved too many problems, Mr. Chairman, to cry to-day or to plead the baby act. I can remember, sir, when I heard first the news of the surrender of Lee at Appomattox. I was a child, but I remember the impress it made upon me at that time. It carried with it so much for the South, so much for Louisiana, that the impression it made will never be effaced. It brought about a social condition, the solution of which would have checked almost any people in their progress on the face of this earth. We solved that problem, however. Then came the dark days of reconstruction, which spread over our glorious and beautiful State like a bird of ill omen carrying corruption in its beak and shaking contagion from its wings. I remember how we solved all of these questions.

They were given to us for solution, and we have solved them. When the terrible disasters which came from the floods of the Mississippi River, sweeping away the embankments which we had builded at onerous taxation, flooding the beautiful land of that glorious and great State, a problem was presented which we have solved. When it came to meeting the great terrors which flow from the epidemics which have threatened us, we have solved that question, and in such a way and by such a system that the world has adopted it to-day. When it comes to the solution of this terrible blow which Louisiana must receive at the hands of this House in coming in competition with the island of Cuba, I tell you that we can solve that; but, Mr. Chairman, I can not understand why these problems should be continually submitted to the State of Louisiana. I want to tell you one thing, that out of this condition has grown a sturdy citizenship, whose courage is equal to any crisis which may overtake their State.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BREAZEALE. Mr. Chairman, I ask unanimous consent that the time of my colleague be extended, so that he may be able to conclude his remarks.

The CHAIRMAN. The gentleman from Louisiana asks that the time of his colleague may be extended to conclude his remarks. Is there objection? [After a pause.] The Chair hears none.

Mr. ROBERTSON of Louisiana. I think, Mr. Chairman, I have about concluded my remarks. This matter is a great one and has in it many things which must be solved by the members of this House in determining how they shall vote on this question. We have heard much concerning the doctrine of reciprocity and its necessity in dealing with Cuba. Now it has been invoked by the Republicans to entice the votes of members of that party. Ah, Mr. Chairman, it seems to me that no Democrat can insist that this bill is in the line of Democratic principles on this point. It is useless to argue this, because no Democrat will maintain it, unless he has so forgotten his duty to his party in his effort to maintain the sugar trust that he is willing to submit to anything which might be done, even to the destruction of the industries of our country, that undue benefits may result from the passage of this bill to this powerful corporation.

Will gentlemen on the other side of this House, and gentlemen on this side, who talk about reciprocity and the extension of our trade, examine the conditions of Cuba and examine its imports and exports? If they will do so, I will defy any one of them to show that by this bill we will increase our trade relations with this island.

I remember well in the history of Louisiana—away back yonder, when we were purchased from France—that the characteristics of the people in that territory were such as to cause much concern to our country. They held on to their habits. They worshipped them as they did their fireside gods, to such an extent that frequently our Government was disturbed on account of these peculiarities.

My friends, Cuba has been in the hands of Spain for hundreds of years. The characteristics of these people are so impressed upon the Cubans that the matter of the articles of trade must come in time and can not come by the passage of this bill.

I am sick and disgusted to hear about our debt to Cuba. Does any Cuban or any Representative on this floor forget that we gave her the priceless boon of independent government and free citizenship? Who can estimate the price and value of such a donation? And it was given, my friends, at the sacrifice of the blood of our own youth and millions of dollars of treasure.

Who stands here and pleads that we owe more to Cuba? I say that neither the President of the United States nor General Wood nor anybody else can tell us that we owe more to Cuba than we have already done. That we have brought her forth in her swaddling clothes is true. That we have put her on her feet and she can walk is true. Shall we continue to nurse her at the breast until she is full grown? Where shall we stop in this matter, Mr. Chairman? When shall we pay Cuba what we owe her if we still owe her anything? Shall we do it at the sacrifice of the industries of this country? Will that not come as a natural result should this bill pass? Let us go on with our trade with Cuba which we control now both as to exports and to imports. Let us go on with that trade and let her build herself up after she has gone through the fire of contention. Let her arise an independent and glorious nation.

But, Mr. Chairman, I could say to my friend from Nevada [Mr. NEWLANDS] when he advocated the annexation of Cuba—"Paul, almost thou persuadest me to be a Christian." We were told of the terrors which must come from Cuba, now a young republic, filled by a race that so often has forgotten the boon of republican institutions. All of us who are familiar with the history of the world know how little those institutions are appreciated by the South and Central American Republics. Will Cuba do better than they in this respect?

Mr. Chairman, they will not be able to do better than that. They will in the next two or three years be bound hand and foot by the power of American corporations that will go over to that little congress which meets in a few days from now. I will not say what I intended to say, what my thoughts prompted. I was going to say they would go over there and buy franchises. I will not say that, but they will influence the granting of franchises. What will be the result? When the resolution is passed through this House in the future to admit Cuba as a State of the American Union, every franchise which is granted in Cuba must be recognized. It will come to us as a heritage of woe and ill from the government of Cuba—the independent state of Cuba.

Already, now, Mr. Chairman, millions of dollars are being expended by corporations in Cuba. She will in that time become the most trust and corporation ridden God-forsaken country on the face of this earth; and when she comes to us, will any man upon this floor state that he is willing to accept the conditions which come with that? Therefore my remark to the gentleman from Nevada. I want to ask any Democrat how he can vote for this bill. Upon what basis can he stand in real Democratic principle?

When you take the tariff tax to Cuba and require her to arrange her tariff; when we say, Give us the preferential reduction of 20 per cent, you require her to get down to the condition of establishing a protective tariff. How are you going to get away from that? Where can you get away from it? Let some gentleman get up and explain that, in view of the statement I have made here in the discussion of this question. It is understood well that the revenues in Cuba now under the present tariff scarcely pay the expenses of that island, and when you raise the tariff so that it excludes goods and make a protective tariff, you absolutely and completely annihilate the revenue of the island of Cuba. Where is she going to get it? Gentlemen may say, upon the enhanced value of real estate and personal property. I state to you, "No." I have had experience of the force and effect of the control of corporations in a State.

I have seen the time when we were dominated by the force and power of such corporations, which no State on earth except Louisiana could have resisted and destroyed. I tell you that when it comes down to the question of taxing real property owned by corporations and the franchises given to them by the Cuban Congress, they will say to the tax collector: "Here, put my property at such and such a value." You will not get the benefit even of that from the remote standpoint of an enhanced value of Cuban property by the stimulus to be given under this bill.

The sugar farmer in Louisiana produces raw sugar. He is completely in the hands of the sugar trust, who is the only purchaser of his sugar. It must be understood that, instead of paying him the New York price for sugar, they pay him three-sixteenths of a cent less than the New York price, and they state that the reason for it is, that they must deduct the freight rate from New Orleans to New York.

Now, my friends, what does that mean? It means that this

trust not only buys the sugar in New Orleans, but they refine it there. If they would carry it to New York, they would add three-sixteenths to carry it to New York, and say three-sixteenths to bring it back to New Orleans to put it upon the market, so that really we lose six-sixteenths of a cent—nearly one-half a cent a pound in Louisiana. Reduce this tariff, and what will it mean? The sugar of Cuba comes to the port of New York and the sugar of Hamburg comes to the port of New York. The sugar of Louisiana is not shipped.

The buyers of sugar, the sugar trust, go to the Cuban and state to him we will give you now the New York price, provided you divide with us that which may result from the concessions in the tariff paid to you. Suppose they do not take it. They come back to Louisiana and say we will not only give you three-sixteenths of a cent a pound less for your sugar, for we can buy Cuban sugars for 10 or 20 per cent less than the price of Hamburg sugar in New York, but you must stand this loss also. My friends, you must understand that the sugar that we produce and the sugar imported into this country is raw material, and that it can only be used by the refiners of sugar; and it must also be understood that the sugar refiners are the only sellers of refined sugar. Mr. Chairman, it seems to me that they will not under any circumstances give to Louisiana any advantage in the sugar market, and they will not give it to Cuba.

Now, Mr. Chairman, in conclusion I will state that I have never yet been able to see the reasons for the passage of this measure. It is clear that the only article which is to be affected by the bill is sugar. It is shown by the testimony of the advocates of this bill themselves that the reduction of the tariff carried in it will not reduce the price of sugar to the consumer. It is also shown by evidence, cumulative and overwhelming, that the people of Cuba are not in distress; that the laborers receive from twenty-two to twenty-four dollars a month, and that every laborer in Cuba is employed. It seems to me that it should be as clear as the noonday sun to every member of this House that as the sugar trust is the only purchaser of raw sugar, it will beyond any question of doubt control the price of sugar without any regard to the matter of tariff reduction. It has also been shown, it seems to me, that our increased trade with Cuba is dependent upon the efforts which our people may make to adapt themselves to the conditions which confront them in the island, which are fundamentally inherent in the people.

Mr. Chairman, the people in the United States engaged in the sugar industry have cried out against this bill; they have sought a respectful hearing and have won the case in the estimation of those who have given close thought to the matter. The sugar industry of this country is forging forward with unprecedented vigor, and will, if undisturbed, in the next ten or twelve years furnish our people at a reasonable price all the sugar they can consume. Why, Mr. Chairman, should all this be sacrificed when it is shown from every point of view in which the case has been considered that the results from the enactment of this legislation would not only be injurious to the American people and deprive them of a profitable vocation and the capital invested in this industry, but would not in the least particular afford relief to the Cuban people. The whole measure from beginning to end is a sham and a fraud and should be stamped with the condemnation of the Representatives of the people by their votes against the bill. [Loud applause on the Democratic side.]

Trade Relations with Cuba.

SPEECH
OF
HON. HENRY H. APLIN,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,
Friday, April 18, 1902,

On the bill (H. R. 12765) to provide for reciprocal trade relations with Cuba.

Mr. APLIN said:

Mr. CHAIRMAN: The bill under consideration confers upon the President of the United States, as soon as an independent government is established in Cuba, under certain restrictions, authority to enter into a treaty with that government providing for the importation of articles from this country into Cuba at a rate of duty which shall be 20 per cent less than the rate accorded other nations, and in consideration of such concessions by the Cuban government, providing that until the 1st day of December, 1903, the duties now imposed by law on articles imported from Cuba into the United States shall be suspended, and in lieu thereof there shall be levied and collected 80 per cent of the rate of duty now levied upon like articles imported from foreign countries.

The conditions imposed by the bill are that such treaty shall not be entered into until the government of Cuba shall enact immigration and exclusion laws as fully restrictive of immigration as the laws of the United States, and that whenever the President of the United States is satisfied that such immigration or exclusion laws are not being fully executed by the government of Cuba he shall notify such government, and thereafter there shall be levied, collected, and paid upon all articles imported from Cuba the full rate of duty now provided by law.

The effect of this legislation would be to admit the sugar and tobacco produced in the island of Cuba into the United States with the present duty thereon reduced 20 per cent.

I am opposed to the sugar feature of this bill. I have always been in favor of the all-round principle of protection. The Republican platform of 1896, upon which we won a signal victory, declared as follows:

We condemn the present [Democratic] Administration for not keeping faith with the sugar producers of this country. The Republican party favors such protection as will lead to the production on American soil of all the sugar which the American people use and for which they pay other countries more than $100,000,000 annually.

The Republican national platform of 1900 declared:

We renew our faith in the policy of protection to American labor. In that policy our industries have been established, diversified, and maintained. By protecting the home market, competition has been stimulated and production cheapened.

In the Republican Campaign Text-Book for 1900, issued by the Republican national committee and used by its stump speakers throughout the land, several pages are devoted to the beet-sugar industry. What did the national committee say?

1. No subject interests the farmer of the United States more than that of the possibility of their being able to supply the $100,000,000 of sugar which our people consume annually, and some facts which have recently been presented showing the rapid growth in the percentage which beets are now supplying of the world's sugar shows that they are fully justified in their ambition.

2. The farmers of the country have been encouraged by the Republican party in their ambition to produce the sugar of this country. The experience of other nations and of other parts of the Temperate Zone has shown that sugar can be produced from beets in great quantities and at very small cost, and can successfully compete with cane sugar under the most favorable circumstances.

3. Under the stimulus given to the beet-suger production by Republican legislation beet-sugar factories sprang up all over the United States, and the production of beet sugar has already reached large proportions and is increasing with wonderful rapidity.

4. The first thought which came to the minds of the farmers when the events following the war for the liberation of Cuba brought under our control certain tropical areas was whether or not the possession or control of tropical territory by the United States would injure or perhaps destroy the opportunities which they believed they had almost within their grasp for supplying the $100,000,000 of sugar which the people of the United States annually consume. This fear—if it reached the stage in which it might be called by that name—was answered in the negative by the Republican party when it passed the Porto Rican bill. The Democratic party fought with all its power to prevent the enactment of that measure, which placed a duty on articles coming into the United States from Porto Rico. That duty was small, and it was an explicit declaration by the Republican party that it proposed to retain the power to fix such tariff as it might deem judicious against the products of cheap tropical labor wherever located and under whatever conditions.

In other words, here was a distinct promise to the farmer that he need not fear that the Republican party would permit the cheap labor and cheap sugar of any tropical territory to be brought in in a manner which would destroy the infant industry of beet-sugar production, which the farmers of the United States have, under the fostering care of the Republican party, been building up during the last few years.

Congressman PAYNE, on March 25, 1897, said:

Mr. Chairman, I would tell the House how we propose to reduce revenue when it becomes necessary to do so, but I can only hint at it now, as my remaining time is so limited. We propose to take off five or six millions a year of duty on the linen that we import by producing it in this country and not having to pay any duty upon it, because it will not be imported. [Applause on the Republican side.] We propose to raise beet sugar and cane sugar enough in this country to supply all our 73,000,000 people, who must have the best in the world, and in that way we will take off $50,000,000 in the course of a few years.

On July 19, 1897, Mr. PAYNE said:

What shall be done with the sugar trust? Well, I will tell you what, in my opinion, is the best way of dealing with it. Establish a beet-sugar factory in every Congressional district in the United States. [Applause on the Republican side.] Give competition, lots of it, everywhere. Put the farmers over against the trust by passing this bill, and reduce the price of sugar so that German raw sugar can not be brought in to be refined here. Gentlemen on the other side, come over here and help us while we help the farmers out. [Laughter and applause.] You grangers over there, come and help us. You Populists that go up and down the streets day after day proclaiming your devotion to the interests of the farmers, help us out now when we are trying to help the farmers in this industry that we can establish so successfully. In this way you will do something toward demolishing the trust. You will accomplish more in this way that by mere invective—by running windmills and all that. [Laughter and applause.]

Why should we not produce all of our sugar in this country? Why, it costs us, Mr. Speaker, about $100,000,000. We were looking around for proper subjects for taxation. We knew that sugar would produce an enormous revenue; and besides all that, we knew that an adequate protective tariff would build up the industry in this country, and as it was gradually built up the revenue from that source will be reduced. By and by the revenue will come in more largely from other sources, and when this industry is fully established and revenue from sugar ceases the reduction will keep pace with

the increase. This thing will regulate itself; we will not disturb our tariff in the next quarter of a century.

Another distinguished member of the Ways and Means Committee, Mr. STEELE, of Indiana, said on March 25, 1897:

With regard to sugar, I predict that if the tariff fixed by this bill is unchanged for a period of ten years we will at the end of that time be producing not only enough for our own consumption, but as much as we care to export, and at very little additional cost to the consumer.

We also have the record of another distinguished member of the Ways and Means Committee from the great State of Ohio, and here is what he said on March 24, 1897:

There is not a principle involved in its formation, not a condition suggested in its ramifications, not a rate or duty, not a principle of tariff taxation, that has not been protested against by the sugar trust and fought to the bitter end before the Committee on Ways and Means.

Again, on the same day, RECORD, page 240, Mr. GROSVENOR said:

We propose that instead of sending $125,000,000 a year to the foreign countries of the world, most of which goes to pay labor in the production of sugar, we will make it possible for every pound of sugar that we want to be produced in the United States of America. [Applause.] The Republican party comes and offers to the agriculturalists of this country this magnificent boon. We will protect the industries of the country in all directions from further demoralization, and we ask you to turn aside hundreds of thousands of acres of the splendid lands of all these States from the production of corn, oats, wheat, potatoes, and cotton, to be put into an already overstocked market, to the production of sugar, and give to the farmers upon the farming land of the country a better market, with less competition than they now have

The Hon. Nelson Dingley, chairman of the Ways and Means Committee of this House, on July 19, 1897, page 2708 of the RECORD, said:

It should be borne in mind that the general increase of duty on sugar made in the proposed tariff has been made not only to increase the revenue, but also to further encourage the production of beet sugar in this country and furnish a new crop for our farmers, who are being sorely pressed as to our large wheat surplus by Russian and South American competition. I believe that the time has come when the production of our own sugar from the beet ought to be and can be successfully entered upon, and save to us the $75,000,000—soon to be $100,000,000—sent abroad for the purchase of our sugar, ultimately distributed here to our farmers. Already, indeed, it has been demonstrated that we can successfully produce beet sugar here, and the proposed duty placed on that article will gradually bring this about, while for the time being affording increased revenue.

Certainly nothing can be done to so successfully clip the wings of the sugar trust as to develop our beet-sugar industry. Sugar-beet factories turn out their product in a refined form, and thus become the efficient competitors of other refiners. The successful establishment of the sugar-beet industry in even half of the 26 States which can and will successully grow sugar beets under the proposed tariff would speedily end any sugar trust, and would at the same time confer immense benefit on our farmers and all of our people.

If the amendments which are now proposed to the sugar schedule by the distinguished leader of this House [Mr. PAYNE] had come from the Democratic side of the House I should have felt no particular surprise thereat, but I am at a loss to comprehend how any member who stood upon the Republican platform of 1896 or who adopted the principles laid down by the Republican national committee with respect to the tariff on sugar can possibly favor it. Next to the money question the main plank in that platform was protection to American industries and the placing of such a duty upon sugar coming from foreign countries to the United States as would encourage the American sugar producers to extend their operations so that they might produce all the sugar on American soil that the American people would consume.

I maintain that it was our duty to protect sugar the same as we protected glass, iron, steel, and pottery, and, indeed, all of the industries of my own and other districts. Upon this principle I stand squarely where the Republican party has stood for forty years, and has won some of the greatest political triumphs of all history; and whenever we, as a party, allow invidious distinctions like the ones we are now considering to be made between the sugar industry and other industries, we make a rent in our garment of protection that we can not mend in many years.

The Ways and Means Committee, presided over by Chairman Dingley in 1897, framed the present tariff on sugar imported from foreign countries. In my opinion there has been no change since that time in the sugar situation which requires any interference from this Congress with the sugar schedule of the Dingley law.

Under the present tariff the beet-sugar production of the United States has been stimulated in a remarkable degree. In my own State of Michigan at the time of the passage of the Dingley law not a sugar factory was in existence. Within four years from the date of the passage of that bill over $9,000,000 had been invested in beet-sugar factories, and there were engaged in beet culture in Michigan alone during the past year over 30,000 laborers, and some 15,000 Michigan farms were producing sugar beets. The Michigan sugar factories for the coming year will have an annual capacity of 100,000 tons of beet sugar, or 35,000,000 pounds more than the entire sugar consumption of the State of Michigan.

At the price paid for granulated sugar this past year very little profit was made by the Michigan factories, and any member who has carefully examined the evidence before the Ways and Means Committee upon this question will readily concede that any legislation which would reduce the present price of granulated sugar would prevent any further development of the sugar industry in my State.

What is the excuse for this legislation? It does not seem possible to me that any member of Congress can seriously contend that it will largely increase the sale of other American products to the island of Cuba by opening our markets to their sugar production at a less rate of duty. If that were so it would be discrimination pure and simple in favor of the producers of steel, plate glass, and other articles of American manufacture at the expense of the beet-sugar interests of the United States.

In considering tariff legislation and what industries needed protection, they have been classified in the following manner: First, those articles of which our resources and facilities enable us to produce a full domestic supply and a surplus for exportation; second, those articles of which we can only partially supply the home demand; third, those articles which can not be produced at home.

It would seem to me that if there was to be any reduction of the tariff upon any articles it should be upon those articles named in the first class, and that no duty whatever should be levied upon the articles named in the third class except such as might be necessary to provide for the running expenses of the Government; but to the second class should be extended the full measure of the principle of Republican protection.

It must be apparent to all that a tariff for protection should be upon such articles as the home production is insufficient to supply the home demand, coupled with the condition that these articles can be produced in this country to such an extent as to supply the home demand, provided this production does not have to meet a foreign competition where the article is produced by slave or cheap labor and under conditions where the American producer would meet an unfair competition.

Every principle of a protective tariff will apply to the American sugar industry. It must be apparent to all that with proper protection the American sugar producers can supply the American market; but in order to do this it is necessary that a fixed and stable policy be adopted by this Government and that the tariff schedules be not continually tampered with or changed.

If this Congress should reduce the tariff on sugar 20 per cent, what assurance has the American sugar producer that the next Congress will not reduce the tariff 20 or 30 per cent more? It requires an enormous outlay of money to engage in the beet-sugar business. A factory of a thousand tons daily capacity costs for the construction of the factory alone over $1,000,000. It will be impossible to get capital to invest in a business of this kind if Congress is to be continually changing the duty on sugar. The history of the industry has shown that tariff tinkering in the past has absolutely arrested its development.

Under the McKinley Act of 1890 the American sugar producers were paid 2 cents per pound bounty on all sugar produced. Under the Wilson Act of 1894 this bounty provision of the McKinley Act was repealed, and in place of the bounty a duty of 40 per cent ad valorem was imposed on all imported sugar.

What was the result of this legislation?

If is a well-known fact that not a beet-sugar factory was erected in the United States between the date of the passage of this act and the passage of the Dingley bill. This Democratic Wilson tariff act had the effect of throttling the beet-sugar industry.

It is the opinion of those engaged in the sugar business of this country that a 20 per cent reduction from the duty imposed by the Dingley bill will certainly put a stop to the further development of the industry. The beet-sugar industry of Germany, Austria, France, Russia, Belgium, and Holland was stimulated by tariff legislation imposing duties much higher than the present tariff on sugar coming into this country. All of these countries, under the protection imposed by their acts, are now exporters of sugar. It has been the policy of those Governments to so protect the industry that all of the sugar consumed by their people should be produced within their own borders.

That our American beet-sugar industry should be protected was the distinct pledge made by the Republican party in their platform of 1896.

All we ask is that this pledge to the people be redeemed; that the men who have invested their money in the American sugar industry under this pledge shall not have their business ruined and their capital destroyed through any tariff tinkering by the present Congress.

A great public clamor has been raised that something should be done for the poor, suffering, starved people of Cuba. Any member of this Congress who has carefully examined the testimony taken before the Ways and Means Committee with respect to this very bill knows that there is no basis for the claim that Cuba is suffering. It was made to appear before the committee

that more than 60,000 laborers had been imported into Cuba from South America and the Canary Islands since American occupation of the island; that every man on the island of Cuba who wanted work and was willing to work could get work at good wages; that the wages paid to laborers were 75 per cent higher now than during the war; that the only sufferers in Cuba on account of our present tariff were the American investors in Cuban lands and the large Spanish and Cuban planters who could make more profits by opening up our markets for their sugar at a less duty than the present rate established by the Dingley bill.

I know of no reason why I should cast my vote to give money out of the people's treasury to an American who invests his money in a foreign land for the purpose of producing commodities there with cheap labor to be sold in this country in competition with articles produced by the labor of our own citizens.

On what ground of public policy should the United States protect these American investors? Protective tariff legislation should be for the purpose of encouraging capital to invest in the development of industries in the United States, and not to encourage capital to invest in foreign countries for the purpose of bringing the products of those countries into competition with our domestic products. If these American capitalist want protection or special privileges in the sugar market they should invest their capital in the sugar business of this country and employ American laborers therein, and pay American wages. When American investors go to a foreign country for the purpose of building up an industry in that country they loose all claim to protection or encouragement from the United States Government.

It is claimed that we are under moral obligations to assist in the establishment of a stable and independent government in the island of Cuba. If this claim be conceded, still it affords no reason why the Republican party should violate its solemn pledge to the men who have invested their money in the sugar business of this country. So far as I am concerned, I am for the 2,400,000 people who live in the State of Michigan and for protecting their interests and discharging the direct pledge and promise made to them by the Republican party, and in doing this I shall not fail in discharging any moral obligation we may be under to the 1,500,000 inhabitants of the island of Cuba. I am not in favor of destroying the $12,000,000 capital of Michigan investors in the beet-sugar industry for the benefit of American investors in Cuban sugar lands or of the Spanish and Cuban grandees who own large sugar plantations in Cuba.

I am an American, and I am first, last, and all the time for the American people as against the people of the whole world.

If there is any moral obligation resting upon the people of the United States to see to it that a stable and independent government be established upon the island of Cuba, then let us have that obligation discharged by all the people of the United States together, so that each one will contribute his just share. I am not in favor of establishing a stable government upon the island of Cuba at the expense of the sugar and tobacco producers of America. The clamor for Cuban relief and the loud assertions of the moral obligations that we are under to the people of Cuba comes primarily from a class of people who have an absolute certainty that the present measure for Cuban relief will not cost them a fraction of a penny.

They are indulging their sentimental notions with respect to our moral duty at the expense of the sugar industry of this country, and with a full knowledge that not one cent will be contributed to Cuban relief by themselves. It is an entirely different proposition with the people who are asked to stand the whole of the burdens and pay the entire expense of discharging this moral obligation. There is, I know, a considerable clamor for a reduction in the duty on sugar coming from the island of Cuba. This clamor has been created, as I believe, through a literary bureau established and paid for by the American sugar trust. It is charged that very many of the articles which have been printed in newspapers advocating reduction of sugar duties have been paid for at so much a line by the sugar trust. Is it expected that Congress can be stampeded by such methods?

I sincerely trust that a sufficient number of Republicans may remain true to their principles to defeat the purpose of this bill. Thus they will prove to the sugar producers of this country—to the men who, upon the faith of the pledges contained in the platform of 1896, with confidence in the statements of the Republican party through its campaign committee of 1900, invested their money in the beet-sugar business—that their faith was well founded, that their investments under a Republican Administration shall not be destroyed, and that this splendid American industry shall continue to be fostered and sustained. Thus will the investment of American capital in America be encouraged, the demand for American labor will be greatly enlarged, and all classes of our people will reap the benefits of continuing and increasing prosperity.

Post-Office Appropriation Bill.

SPEECH
OF
HON. JOHN J. FEELY,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 13, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 11354) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1903—

Mr. FEELY said:

Mr. CHAIRMAN: From the remarks of the gentleman from South Carolina one might be led to believe that there was a general effort on the part of the members of this House to enter into the wholesale movement to raise the salaries of Government clerks. Every one here knows that there has been agitation on the part of the post-office clerks to increase their salaries and better their condition. Doubtless the excess of agitation provoked the recent Executive order that has been referred to this afternoon against officials or clerks coming here and working in the interest of such legislation. But the very fact that the Department has sent to one of our large cities a commission to investigate carefully the conditions in that office and recommended changes which in their opinion would ameliorate those conditions and the fact that this commission has recommended changes which would largely coincide with many of the recommendations of the representatives of those clerks, is sufficient evidence to warrant a belief that there was a great deal of fire where there was so much smoke.

The Department is to be congratulated on the efforts it has made to better the conditions of the city of Chicago and its post-office. I talked with the postmaster of that city within the last week, and I am sure that the efforts now being made for a reclassification and for a betterment of the conditions generally among the clerks will result in better service to the Government—will result in better feeling among the employees of the Government. After all, there is little need for losing so much temper on account of a desire of some men to be properly paid for their services. Members need not be swept off their feet by indiscriminate criticisms of clerks or any class of Government employees. Members of this House are supposed to have stability and cool judgment, and not to be swerved by unjust criticism, and I doubt that anyone will be swerved. But the fact remains that whenever anyone raises his voice here against the system of underpaying and overworking any branch of the Government service, somebody gets excited; somebody comes to the fore with remarks about increasing the salaries and a fear lest the people, the farmers—always in the first class—the mechanics, and the business men, and the laborers will be mulcted out of an excess of taxation in order to pay for this service.

The gentleman from Indiana [Mr. LANDIS] made a remark here during the discussion of the rural free-delivery service, I believe, that there was nothing good in this world that you did not have to pay for, and I think that if this Government is to get good service, to get the use of brain and brawn that is necessary in the make-up of good Government clerks, we will have to begin to pay more than $60 a month for it, It is all very well for members to say that $60, or $70, or $75 is enough for a clerk in certain localities. In certain localities that sum may be sufficient for the sustenance of life, but in the great cosmopolitan cities of this country a clerk of this Government can not live, can not rear his family as an American family should be reared, can not see anything but despair in front of him, when he becomes superannuated on the salaries now paid. It is very well to say that a sustenance can be gotten upon it. There are members in this House who can be heard to decry an increase of salary who do not seem to be so careful about economy in other lines.

During the discussion of the rural free-delivery bill we heard very little about high salaries from some quarters from which we heard it to-day. Let us not become excited. Let us look at this question squarely, as the Department has looked upon it, and let us endeavor to aid the Department in bringing out a proper classification of the service and a proper salary. [Applause.]

Now, what says the Department, familiar with every particular of the question? The various reports for the last decade are replete with recommendations in harmony with the views of us who now favor reform in the classification of this service, the adjustment of the salaries of the employees in it, in such a way that the compensation can be reasonably regarded as adequate to the

service rendered. It is a generally conceded fact that the operation of the civil-service laws in this branch of the service is, to say the least, not all that it was intended to be by the framers of the law or what it is believed to be by its enthusiastic friends at present.

The necessity for a reclassification which will give the employee a fixed status in the service is apparent to all. It is proven by the constantly recurring appeals to the Commission from the decisions of the Department. The clerks have no well-defined and legal status under the law. It is all very well for members to say that classification would cause numberless drones to be kept in the service. Employees who are unfit to earn the salary paid them should be dismissed without ceremony. The Government must be free to take care of this class of drones without interference or hindrance, regardless of the injury to discipline, which favoritism, jealousy, and a constant appeal to influence to aid promotion and transfers. Now, it seems to us that in economical administration the Government should first pay respectable and fair salaries to those whom it employs, and after having arranged for this, they should lay a violent arm on the unfit and undesirable employee and remove him from the service. It will not do to say to reasonable men that the Department has not the power under the civil-service laws to effectuate this. It has the power, and it has demonstrated many times that it has the power, and it is only recrimination to say it is necessary to allow the existence of drones in the service.

The existence of this state of affairs is more demoralizing to the service than all the pernicious activity, so called, that has ever been indulged in by any organization of Government employees while endeavoring to better the service of the Government and ameliorate their own lamentable condition. In testimony of this we have but to refer to the report of the First Assistant Postmaster-General for the fiscal year ending June, 1900, where, on page 9, he says: "In this connection I desire to submit the proposed classification of post-office clerks in the first and second-class post-offices, based on the present number, to be effective July 1, 1901:"

> The present classification act of Congress of March 2, 1899, does not properly or satisfactorily classify, embodying many confusing and synonymous designations, and does not provide for regular advancement.

In the report of the Post-Office Department for the year 1901, on page 92, the First Assistant Postmaster-General says:

> I desire again to urge upon Congress the necessity for a reclassification of the post-office clerks in the first and second class post-offices.

This shows that the Department has ever been watchful in the interests of legislation that will put it on a better basis and make it possible to render to the country the service which ought to be and is expected of it by the people. Continuing,—"still harping on my daughter"—the First Assistant Postmaster-General says:

> The classification act of March 2, 1899, does not meet the present needs of the service and offers no incentive or inducement for the bright and energetic young man to remain in the Government employ.

Who is best able to judge of the requirements of the Department—the officials of the Government selected for their demonstrated ability and great personal worth, placed in the lime light by Presidential appointment and confirmed by the Senate, having every advantage of a clear and penetrating knowledge of every detail of the Department, or members of the House? I submit that upon matters of this kind the members of the House ought to take the judgment of the Department, or at least it ought to accept without challenge the fact so patent which the Department sets forth. On the contrary, we have received recriminations and complaints against various individual employees of the Government.

We are charged with overzealousness on behalf of the employee of the Government whenever we point out the simple recommendation of the Department and urge the enactment of legislation which will make it possible for the Department to put into practice the reformatory measures in which it believes. But the number of those in this House who have studied this question or who are moved by reason alone in the determination of this question, who neither fear, either individually or collectively, the employee of the Government nor are extravagantly moved by false cries of economy or bitter complaints of cruel personal experience with organizations of employees, is constantly growing, and will ultimately, in my opinion, force the solution of this question, and that solution will come in the nature of the passage by Congress of a bill providing for the regular classification of this service, together with definite and fair salary for the employees.

Continuing further, the First Assistant Postmaster-General says:

> The bill submitted with our last annual report has been very carefully considered, and provides for an annual increase in clerical salaries until the maximum salary for the designation is reached only where satisfactory evidence of the clerk's efficiency has been shown.

This is not all which could in reason be asked by those who are firm believers in the true civil-service reform, by those who believe in the application of merit, and the removing of all possibility of favoritism in the Government service; but still it is a step which they will hail with delight even if the adjustment of salaries still lies with the Department as is proposed by the bill recommended.

It may seem satisfactory to those behind the scenes, but to the observer who is not moved by the influence of Department politics it would seem that if a Government clerk after the probationary years of service required of him before he reached the maximum salary is not able and efficient he should not be retained in the service, but should be dismissed. The Department further says:

> Notwithstanding the failure of these hard worked and underpaid clerks to secure the enactment of a law for the reclassification of their salaries, the promotions accorded them through the generous action of the Fifty-fifth and Fifty-sixth Congresses has bettered their conditions more perhaps than any other class of Government employees. In the year 1899 the average annual pay of post-office clerks was $788.
>
> | | |
> |---|---|
> | 1900, average annual pay of post-office clerks | $790 |
> | 1901, average annual pay of post-office clerks | 818 |
> | 1901, average annual pay of railway postal clerks | 1,055 |
> | 1901, average annual pay of letter carriers | 903 |
>
> In New York, Chicago, and many of the more important post-offices not only are the clerks greatly overworked, but the mails are seriously delayed as well. In order to avoid serious congestion it has been frequently found necessary to improvise pouch racks and distributing cases in railway depots and require railway postal clerks to perform extra duty, when supposedly off duty, between trips. The recent ruling of this Department, however, respecting second-class publications will ultimately relieve this strain, but the clerical force at the post-offices referred to needs a material strengthening in order to handle the growing mails properly and expeditiously.

The Post-Office Department is charged with the conduct of the postal system. Its officials are supposed to be and admittedly are capable of ascertaining its needs on this subject. They can not be charged with inattention of duty. They have ascertained facts concerning the undesirable conditions existing in the postal service in all of the large cities of the country, and they have laid before this House the result of their investigations and the suggestion of remedies, which they very strongly recommend as efficacious in ameliorating the lamentable condition there existing. Can it be contended, therefore, that this House is performing its full and complete duty when it fails to take up and seriously consider their various recommendations, and relying upon the intelligence and genius of its members to formulate a system of classification that will be most beneficial to the service?

We can not, as representatives of the sovereign people stultify ourselves in the belief that there is but one plan and one bill and that that plan and bill must emanate from certain organizations or from some members. We must follow the experience of other pioneers in lines of legislation. We must endeavor to separate the chaff from the wheat. With an eye single to the interests of the people we serve and the Government whose conduct we are in a sense responsible for, we must endeavor to consider every feature of every plan seriously proposed for our consideration, and from our considerations should come a bill that will meet the present unsatisfactory conditions, make possible the highest standard of administration in large cities, and provide for a fixed and certain status of the employee and provide for him a salary commensurate with the duties required of him and one that will be as respectable as the employment he is in and as the service which is required of him.

I know, Mr. Chairman, that this service has sometimes been the subject of sharp and acrimonious debates on this floor, and I know that there have been occasions in the discussion of this question which have been productive of some bitterness and of some unnecessary ill feeling, but it seems to me that the time for reason is at hand—the time for a generous recognition of the ability and excellent judgment in most matters of the men who have particular charge of this class of legislation.

And it is also, Mr. Chairman, a time for recognition on their part of fallibility of judgment, which is only human, and for a wider and more reasonable view of the situation on their part.

Let us hope, Mr. Chairman, that during the present Congress this question, which is vexatious in some of its aspects, will receive the deliberate and conservative consideration of the committee in charge and of the whole House, and that out of this deliberation will come a settlement which will relieve the conditions of the Government employee in this service, which will redound to the great credit and to the statesmanship of the gentlemen specially charged with this legislation, and which will give to the people the best possible service for the expenditures which they so generously make in contributing to the support of this Department. [Applause.]

Cuba.

The Liberty, Peace, and Safety of Cuba Lie in Her Becoming a State in the American Union—The Acquisition of Cuba by Peaceful Means Has Always Been the Policy of the Democratic Party.

SPEECH

OF

HON. T. J. SELBY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 17, 1902,

On the bill (H. R. 12765) to provide for reciprocal trade relations with Cuba

Mr. SELBY said:

Mr. CHAIRMAN: I have always taken an interest in Cuba and Cuba's history. I have always felt that it is Cuba's destiny to become a part of the United States. This was the desire of the father of the Democracy, and at one time the expressed hope of the Democratic party and I believe is the present wish of a majority of that party.

The iron hand of Spanish tyranny and oppression has been lifted from the prostrate form of Cuba, and she now stands before the American Congress pleading for a little help, a very little help, from her generous deliverer.

Nature has favored this beautiful island more bounteously than any other island in the West India seas. Man alone has been unkind to her. "Man dressed in a little brief authority" has played such fantastic tricks in the name of government upon this island, such cruel tricks, that her crushed and fallen people cried aloud to this Republic to save them from an oppression that had become an open grave to all Cuba. This generous Republic heard the cries of Cuba's people and stretched forth its liberty-loving hand and saved them from the death embrace of a cruel master. The oppressor was driven from Cuba. American arms accomplished in a few weeks what Cuba had failed to do in a century and what Cuba never could have done in a century to come.

A country or people once stricken with the Spanish blight is slow to recover from its baneful effects. It has proven almost a pestilence to the Spanish-settled colonies of the New World. While the desire for liberty and self-government has been strong, the hands of the people have been weak in all Spanish colonies until the corruption of the rulers weakened the arm of the Government to such an extent that it was powerless to cope with revolution.

An ignorant people may have the desire and not the capacity for self-government. Freedom promotes education and increases the intelligence of the people. Any nation competent to maintain a republican form of government must have the intelligence to know and understand the God-given rights of men and to respect them. I believe the American people are the only people on earth who understand and practice the principles of free government. The true republic belongs to America.

The Latin race, particularly if mixed with the Indian, has never been able to grasp the idea of self-government. With that race of people the corrective principle of government is not the ballot, but revolution. The resort to force is their remedy for all government abuses. Their governments are of the volcanic sort. Perhaps there have been local reasons for this condition, for even republics may become oppressors of the poor.

Now, Cuba wants her independence and a republican form of government, modeled after that of this country. If left alone, will she be capable of forming a republic based on the equal rights of men? Can she maintain in peace a government based on the doctrine that governments derive their just powers from the consent of the governed, or will the jealousies and rivalries of political leaders in time cause her to welcome the authority of the most successful ruler so long as he can sustain himself by the power of an army, following in the footsteps of her sister republics in South and Central America?

The people of Cuba, I imagine, are largely different from the mixed Latin races of Central and South America, where revolutions occur with every change of the moon. Our nearness to Cuba has had a beneficial influence over her people, and they have in some way absorbed the ideas peculiar to free self-government from contact with us. They are not a cruel people; they are not a bad people; and from observing a hundred years of our history, development, and progress, and from their knowledge of our free institutions and the importance of maintaining friendly relations with us, commercially and otherwise, I believe the Cubans competent to exercise the rights and duties of citizenship under our system of government. Security of life, individual freedom of action in business and politics, and equal opportunity to acquire property and to enjoy the fruits of their own labor, economy in matters of state and of home affairs, special privileges to none, and the burdens of taxation light and a free commerce with the United States are the needs of Cuba.

To secure these principles governments are instituted among men, and if established and guaranteed and respected the people will progress; if denied, they will decay and all the evils of bad government will gather about them, forcing them into the vortex of sin and intellectual nothingness. If the American Congress in its wisdom shall conceive that Cuba is not yet fitted for statehood in our system, then let her become the territory of the United States under a territorial form of government. But I would prefer to see Cuba enter the American Union as a State, for, until this is done, she will not have that free system of government to which I think her present importance entitles her. I do not believe it will be wise to leave Cuba alone to work out her own destiny as an independent nation if it can be avoided. Such restrictions are now placed upon her by this country, and others that will be placed upon her by the terms of the bill now before the House, that Cuba will be after all little better than a mere dependency. Her failure at any time to comply with the terms of the Platt amendment will lead to intervention or such interference by the United States that a resort to force to compel obedience will be sure to follow, and that will mean "forcible annexation," which is not desirable. Therefore, believing as I do that Cuba is destined to become a part of the United States, the question presents itself, Is it better to acquire Cuba now by peaceful methods or later by force?

Let her people consider the question and pass upon it in wisdom. The inevitable is before them, and the business men and the intelligence of Cuba already recognize it. I do not believe that Cuba can stand alone and successfully fight her political and commercial battles with the rest of the world. It is possible that she will, if alone, become a shining target for foreign intrigue and commercial diplomacy. There may be already many uneasy spirits in Cuba waiting to ride political horses. We know not of their ambitions. A little prosperity may develop the wolves of greed, and these uneasy spirits may join the wolves in a hungry riot for the spoils of office and the plunder of this fair island.

If left alone, I believe her political and financial systems will degenerate, her sanitary conditions will relapse into the cesspool of contagious diseases, because there can be no progress until everything Spanish is wiped off the island. Cuba is yet Spanish in language, customs, and thought, whether her people will admit it or not. If they would prosper along with us, these must give way to the English language, American laws and customs. Her people must become Americanized. To accomplish this the American school-teacher will be needed there, American labor will be needed there. Education must be free for all her people and labor unshackled.

Now, if left to herself, in my opinion, it will mean Cuba's destruction. But, with the help of the United States, she will be safe; as a part of the United States her future will be certain and her course will be onward and upward to a glorious destiny now little dreamed of and, to Cuba, now little understood.

But Cuba now stands in our presence begging for help. The question is, What shall we do with Cuba—what is the right thing to do by her people? The question implies a duty on our part to do something. What does Cuba want of us? This little island, now clothed in the garments of commercial poverty, just freed by our generous help, wants to trade her products for our products—not a free and unrestricted exchange, but half free, half restricted. What is there wrong about this proposition? What influences—what power—is interposed to prevent this request of Cuba, which request is sanctioned and recommended by the Chief Executive of this country, by his Cabinet, his Secretary of War, and by the military governor of the island?

There seems to be a power behind the throne, greater than the throne itself, determined to prevent this half reciprocal trade with Cuba. It is a selfish power—supremely selfish. Its name is Sugar.

But there are two kinds of sugar, one the old-fashioned cane sugar, full of sweetness, and the other beet sugar, a creepy, crawling kind of sugar, not so full of sweetness. These two sugar kings, King Cane and King Beet, are striving for supremacy—exclusive supremacy in the sugar markets of the United States.

They fear not the Cuba of to-day, but the Cuba of to-morrow. Their trade motto is, "Let none live but us;" "Me and my wife, my son John and his wife, us four and no more." King Cane would like to kill King Beet by cutting his throat with a feather, and King Beet wishes to strangle King Cane by blowing out the gas; and so they have it, these great commercial twins of a great commercial century, and Cuba is used as a pretext by these protection-fattened industries for kicking up an oratorical dust to blind the eyes of both legislator and consumer.

The battle has indeed bewildered both Republicans and Democrats until neither knows "where he is at." But somewhere there

must be a question of right, a question of justice, in the measure before the House, and there must be a question of right in Cuba's earnest request for half-reciprocal trade relations with the United States. It is my opinion that freer trade relations between the United States and Cuba should be offered and would be the proper thing, particularly since there seems to be a growing belief that, sooner or later, Cuba will become a part of this Republic. Let us examine that question for a moment.

For more than a hundred years the island of Cuba has been a threatened menace to our peace, a danger to our commerce. For more than a hundred years American statesmen have harbored the fear of undesirable complications with foreign powers concerning Cuba. This country early announced its decision that Spain should not dispose of the island to any foreign nation. We offered Spain millions for Cuba, but all our offers were repulsed. When we offered to purchase the island from Spain we did not consider in the offer the consent of the Cubans. Spain was the sovereign owner, and from her alone we proposed to purchase the island. The consent of Spain was all we asked. There was no expressed intention at any time to ask the Cubans whether they liked our proposal of purchase or not. Jefferson thought that the acquisition of Cuba was not to be thought of independent of the consent of the Cubans, but it was believed that their consent could be easily obtained.

Cuba is naturally a part of United States territory. She is so near our shores and occupies such an important position in the West India seas that her acquisition by us has always been desirable. This superb island should be a State in the American Union. Aside from race characteristics, there is nothing to prevent Cuba becoming one of the grandest of the many grand States of the Union. Our democratic ways and methods of intercourse would soon dissipate race differences and conditions, and the Cubans would soon become good American citizens.

American education and enterprise are what this beautiful island most needs. With us, as a part of us, Cuba will become great in all things—without us, and away from us, she will be a weakling, nonprogressive, a water-soaked remnant of Spanish degeneracy forever.

If Cuba wants the benefits of free government, of republican institutions, powerful, great, and glorious as her skies are beautiful, let her become a State in the American Union of States. Then she need not fear enemies within or foes abroad. Then she will have reached the ideal thing in government. Foreign nations and foreign intrigues and influences will never disturb the even tenor of her republican growth and power.

Cuba will then become the watchful sentinel of the sea, keeping guard over the great commercial currents of trade flowing out from the Mississippi, watchful of our interests in the Gulf of Mexico and the West Indian seas.

To her will be given a post of honor such as no other State can hold and maintain. Her harbors will teem with new commercial life. As a naval and military station for the protection of the United States her position makes her of incalculable value. As an American State her people will have independence, freedom, peace, and safety. In the event that Cuba refuses to become a part of us and insists on becoming an independent sovereign state, I fear such act would prove nothing better than political suicide. I fear that we would see no end of complications and trouble growing out of it. The end of such a course on her part might be the military conquest and possession of the island—"forcible annexation"—at last.

I hope it may not be so, for I hate military conquests; I believe in a conquest by reason and not by force. Let us invite Cuba to cast her future and her fortune with us. To accomplish this let us reason together. The Cubans need not fear us. They can be free and independent—as free and independent as any American in this country, and that is good enough for anybody on earth—by assenting to become the southern star in our constellation of States. A refusal on her part will prove to be the worst blunder in all her history of blunders—a crime.

For more than a century these people have known only a government of force, cruelty, and greed. The common people of Cuba have ideas of something better, no doubt, derived from contact with this country, but that is about as far as their knowledge goes. It is from this Republic that the educated men of Cuba have drawn their ideas of self-government. They could not have drawn it from any other source. But the common people of Cuba have no knowledge, derived from experience, of the real meaning of a republican form of government such as ours. They know only of oppression. They have always felt the goadings of tyranny from the cruel spurs forced into their flanks. These poor people have never had the time to study forms of government. It has always been their lot to toil, suffer, and die. Freedom to them was a wild life in the jungle. Now they come forth and stand in God's sunlight, waiting to be enlightened. They know that Spanish rule has disappeared from their lovely island, and they now need honest, liberal-minded men to lead them to a haven of safety. Let us hope that there and here they will find them.

I am glad that this country now proposes to go out of the "stable government" business and "pacification" business in Cuba.

Cuba hates military rule—so do I—so does every man who loves liberty—and yet there appear to come times in the affairs of men and nations when the iron hand of military rule is a protective necessity. But this military rule at best is a sort of despotism—oftenest a very bad sort of despotism. It breeds discontent among men and brings in its train a long list of evils hostile to the principles of liberty. It has no place in the republic, and a resort to it should be an extreme necessity—the people themselves the judges of the necessity.

The army in all ages has been the iron arm, the mailed fist of tyranny, and has always been used by despots against the people to suppress their longings for liberty.

From the time Columbus discovered the island of Cuba, in 1492, and the first settlement by the Spaniards, in 1512, this island has been cursed with 136 rulers who exercised despotic power over its inhabitants. Although the island was blessed with a superior soil and climate and possessed great natural advantages over all its kindred islands, the people of Cuba never made any progress. The resources of the island, outside of sugar and tobacco, are yet unknown. Three centuries have given Cuba nothing but trouble—both state and church have been her oppressors. Human progress has always been at a standstill there, the same as everywhere when and where the rights of men to life, liberty, and property have been denied them. Among the toilers education was unknown, for oppression, whether civil or ecclesiastical, is the enemy of education. The workers of the soil were taught to raise sugar cane and tobacco—that was enough for them to know! There was wealth in the production of sugar and tobacco for the Spanish rulers and their favorites, and poverty in it and tired backs for the men and women that used the hoe.

Trade and commerce, the most useful and desirable of industries, and yet always the most exacting and overbearing—often cruel and inhuman in their pursuit of advantages and privileges, whether on land or sea—exhausted and impoverished Cuba by their cruel restrictions and prohibitions. It has always been the same in all countries, in all ages. But there comes a time when the burdens imposed upon men become too heavy to bear, and they rise up with maddened energy and cast the yoke from them even in the face of torture and death. It was so with Cuba many times. Her soil has been fertilized by the bones of her dead.

A system of excessive and oppressive taxation has always been Cuba's greatest curse—its bone of insurrection and rebellion. Royal officers of a cruel and corrupt monarchy infested the island for centuries to gather in the substance of Cuba's toil. The poor could not escape them, but the "better class," by resorting to bribery, were more fortunate. Corruption was the rule of official conduct; it was so in all the Spanish colonies. Everything her officials did not steal went to Spain. Debt piled upon debt until it reached the enormous sum of $400,000,000, a per capita rate of $283, or $1,415 to each head of a family.

It is not stange that a race of men grew up in Cuba that longed to rid the island of its oppressors. Conspiracies, insurrections, and rebellions were the legitimate fruits of Spanish absolutism in Cuba. None of these efforts to free Cuba were successful—disaster, exile, death, confiscation followed in the wake of all of them. But during the last hundred years there was one thing more than all else that imbued the Cuban people with the hope for liberty and independence. They looked across the narrow channel that separated this queen of the West India Islands from the United States, and saw a growing Republic, where men are free and permitted to enjoy the blessings of home and the fruits of their own labor. This picture was constantly before them, and gave them new courage and renewed hope; and so the blood of the patriots became the seed of the Republic, and their cause never died—men died, but Cuba's cause could not die.

This country and Cuba are now united by ties that are sacred. The American soldier and the Cuban patriot, standing side by side in the cause of humanity, gave up their lives as a sacrifice to that cause. The great sacrifice was for Cuba—Cuba free. Why should she not be friendly, now that the struggle is over? Why should we not trade with her as freely as one American State trades with another? Can any valid reason be given against it that does not have its foundation in selfishness? None, I imagine. Cuba's trade will be much to us, much more, perhaps, than that of China and the Philippines combined. She wants our breadstuffs, our cotton and manufactures of cotton, hides, beef products, hog products, vegetables, wool and manufactures of wool, rice, agricultural implements, iron and steel and manufactures of iron and steel, cars and carriages, boots and shoes, meat products, dairy products, canned goods, and other products, and will trade with us sugar, molasses, and tobacco and manufactures of tobacco.

Is there any reason why she would not give us all her trade if we will meet her halfway in making trade exchanges? Nothing stands in the way but sugar, sugar, sugar! Well, let us take Cuba into the American Union and then we shall own all her sugar, and New York will become the great sugar market of the world, instead of Hamburg. We will furnish sugar to the world and cease to be an importer for home consumption.

The gentleman from Kansas [Mr. LONG] showed in his remarkable speech the other day the value of Cuba's trade and commerce even now in her crippled condition. I take the liberty to quote the gentleman:

Last year, under the present military tariff, we practically had all of the trade of Cuba in corn, wheat, flour, and other breadstuffs; but Cuba also imported cattle and animals to the amount of $8,476,509, of which only $1,994,218 came from the United States. Cuba imported dairy products to the amount of $1,071,711, of which only $491,318 came from the United States. Cuba imported meats and meat products to the amount of $8,791,689, of which only $666,211 came from the United States. Cuba imported oils, grease, and paraffin to the amount of $2,598,988, of which only $713,737 came from the United States. Cuba imported cotton, and manufactures of, to the amount of $6,068,241, of which only $464,816 came from the United States. Cuba imported iron and steel, and manufactures of, to the amount of $4,799,216, of which only $3,403,907 came from the United States. Cuba imported of boots and shoes $1,638,084, of which only $405,682 came from the United States.

Of the articles that are distinctly those of the farm, the importations of Cuba last year were $24,371,808; of which only $12,137,708 came from the United States.

The total imports of Cuba for the last fiscal year amounted to $65,050,141; of which only $28,078,702 came from the United States.

All the witnesses before the Committee on Ways and Means stated that with prosperity in Cuba, the importations of that island would amount to $150,000,000 to $200,000,000 annually. This is the trade that Cuba offers to the United States in return for concessions on her products.

Is there any good reason why we should not have all of Cuba's trade? It is surely worth securing, and we can secure it now if we will.

What a field for trade will be open to us at our very door if we have the wisdom to accept it. Here is an "open door" right at home. Why go round the world to hunt a pagan "open door" for our products, when a better one, a Christian one, lies within sight of our shores? There may be a sort of statesmanship in it, but there is no sense in it. Therefore, let not this trust-sugar ghost or this beet-sugar ghost frighten men who think they are doing right by Cuba. In my opinion this country never had a better opportunity to do the right thing by a weak neighbor than now. I would not stop at 20 per cent of right, but would give, if I could, 100 per cent. I would give Cuba free trade and an invitation to become a member of our family of States.

Poor Cuba! The oppressed, suppressed, and depressed child of a most cruel and unfortunate monarchy! Was it her "manifest destiny" that she should pass under the yoke—"pass under the rod"—to immerge into the sunshine of American liberty, peace, and safety? Let us gladly and humanely teach her the way in which God has decreed her to walk. Let us be honest with her and make her burden light while she passes through the portals of American freedom to learn the lessons of free government, human progress, industry, peace, commerce, and of the true life. We are not her enemy, but her saviour. Let her cling with us to the same cross of freedom to which we cling. Let her destiny be our destiny. Her cities now are only dreams. We will develop them into human realities. We will show her that there are better places and things for men than the jungle and the machete. We will help her drive the specter of disease from her beautiful shores. The squalor and want that has so long stalked about the island like gaunt wolves will steal away into "outer darkness" as the sunshine of plenty bursts forth over that beautiful land under American protection and influences.

We have sacrificed our best blood and treasure unstinted for Cuba. Could we have done more for any State in this Union? Is not Cuba aware of this? Is she now indifferent to these sacrifices of ours made in her behalf? Will her people now turn upon us with sullen faces, like pouting children, because they can not have their own way in all things that concern them and us? I hope not; I believe not. That would be foolish indeed. Let them rather bow the knee in gratitude and thank their Creator that we were so near to them and they so near to us, that we took up their cause against Spain and fought and won battles for Cuba which Cuba's people never could have fought and won.

Does Cuba wish to experiment in government making? Then let her follow the example of Texas and come to us. Does Cuba fear that her people will not be protected by us—that they will not assimilate with us? Then let her look at California, Arizona, and New Mexico, and, again, at Texas, where sons and descendants of the Spanish race have become American citizens.

But, perhaps, Cuba has not had time to consider the question from an American standpoint. She has just emerged from a bondage worse than slavery. She stands dazed, looking about her. New conditions have been forced upon her so suddenly, so unexpectedly, that she has not been able to grasp her situation in its most important details. Then give her time to pause and consider. The future is just opening to her vision. Let her pause and take the time to look well about her—the vision will widen and brighten.

There are men in Cuba who dream of power and wealth, who have ambitions to gratify. They must lay these aside and become patriots for Cuba's sake. Presidential, senatorial, representative, ambassadorial, and other like ambitions which have come like dreams in the night to Cuba's patriots and statesmen must give way to that one absorbing question, "What is best for Cuba's future?" The political dreams of great men are often delusive. I would not have Cuba a province for the sons and daughters of wealth. I would not have her become "appurtenant territory" of the United States, for in that case she might become the victim of commercial greed, corruption, and partisan deceit.

The hand of plutocracy would lie heavily upon the face of this beautiful island. There would be valuable public franchises there to capture, railroads to build, large plantations to acquire, mines to be opened, great timber privileges to secure, banking projects to establish. Ah, sir, what chances would there be for great commercial schemes such as uneasy and unsatisfied capital loves to capture! What a field would there be for the "captains of industry" to enter and exploit with vulture-like industry!

As a territory she might have, under Republican rule, that undemocratic form of government called colonial. Her people would be under the subjection of colonial officials, backed by a standing army, whose only object would be plunder, and her people would again be forced to the jungle.

Cuba can now realize her long dream of liberty—her dream of a hundred years, if she will. In what manner, by what method? Let her have that freedom that Democracy would give her; that independence that the American colonies once longed for and demanded of Great Britain, and fought for and obtained; that liberty that Jefferson placed in the Declaration of Independence in words of "living light"— words Democracy love and cherish and have always defended—let her have these in their fulness by becoming a State in the American Union of States. Anything else, anything less than this, will mean evil to Cuba. We would better welcome her as a sister State than as a sister republic.

APPENDIX A.

THE ACQUISITION OF CUBA—ITS IMPORTANCE.

It will be objected to our receiving Cuba that no limit can then be drawn to our future acquisitions. Cuba can be defended by us without a navy, and this develops the principle which ought to limit our views. Nothing should ever be accepted which would require a navy to defend it. (Jefferson to Madison, April 27, 1809.)

These islands (Cuba and Porto Rico), from their local position, are natural appendages to the North American continent, and one of them (Cuba), almost in sight of our shores, from a multitude of considerations has become an object of transcendent importance to the commercial and political interests of our Union.

Its commanding position with reference to the Gulf of Mexico and the West Indian seas; the character of the population; its situation midway between our Southern coast and the island of Santo Domingo; its safe and capacious harbor of Habana, fronting a long line of our shores destitute of the same advantage; the nature of its productions and of its wants, furnishing the supplies and needing the returns of a commerce immensely and mutually beneficial, give it an importance in the sum of our national interests with which that of no other foreign territory can be compared and little inferior to that which binds the different members of this Union together.

Such, indeed, are, between the interests of that island and of this country, the geographical, commercial, moral, and political relations formed by nature, gathering in the process of time and even now verging to maturity, that, in looking forward to the probable course of events for the short period of half a century, it is scarcely possible to resist the conviction that the annexation of Cuba to our Federal Republic will be indispensable to the continuance and integrity of the Union itself. (Mr. Adams to Mr. Nelson, April 28, 1823.)

I candidly confess that I have ever looked on Cuba as the most interesting addition which could ever be made to our system of States. The control which, with Florida Point, this island would give us over the Gulf of Mexico and the countries and Isthmus bordering on it, as well as all those whose waters flow into it, would fill up the measure of our political well-being. (Mr. Jefferson to Mr. Monroe, October 24, 1823.)

Its (Cuba's) geographical position, which places it almost in sight of our Southern shores, and, as it were, gives it the command of the Gulf of Mexico and the West Indian seas, its safe and capacious harbors, its rich productions, the exchange of which for our surplus agricultural products and manufactures constitutes one of the most extensive and valuable branches of our foreign trade, render it of the utmost importance to the United States that no change should take place in its condition which might injuriously affect our political and commercial standing in that quarter. (Mr. Van Buren to Mr. Ness, October 2, 1829.)

So long as Cuba remains in the hand of Spain, a friendly power, a power of which we have no dread, it should continue to be, as it has been, the policy of all Administrations ever since I have been connected with the Government to let Cuba remain there; but with the fixed determination, which I hope will never be relinquished, that if Cuba pass from her it shall not be into any other hands but ours. This not from a feeling of ambition, not for the desire for the extension of dominion, but because that island is indispensable to the safety of the United States. (Calhoun.)

The geographical position of the island of Cuba in the Gulf of Mexico, lying at no great distance from the mouth of the Mississippi River, and in the line of the greatest current of the commerce of the United States, would become, in the hands of any powerful European nation, an object of just jealousy and apprehension to the people of this country. A due regard to their own safety and interest must therefore make it a matter of importance to them who shall possess and hold dominion over that island. (Mr. Crittenden to Mr. Sartiges, October 22, 1851.)

The island of Cuba lies at our doors. It commands the approach to the Gulf of Mexico, which washes the shores of five of our States. It bars the entrance of that great river which drains half the American continent and

with its tributaries forms the largest system of internal water communication in the world. It keeps watch at the doorway of our intercourse with California by the Isthmus route. * * *

The opinions of American statesmen at different times and under varying circumstances have differed as to the desirableness of the acquisition of Cuba by the United States. Territorially and commercially it would, in our hands, be an extremely valuable possession. Under certain contingencies it might be almost essential to out safety. (Mr. Everett to Mr. Crampton, December 1, 1852.)

THE OSTEND MANIFESTO.

During Mr. Polk's administration an offer of $100,000,000 was offered for Cuba, but was rejected by Spain.

In August, 1854, President Pierce instructed Mr. Marcy, his Secretary of State, to direct Mr. Buchanan, Mr. Mason, and Mr. Soulé, ministers, respectively, at the courts of London, Paris, and Madrid, to convene in some European city and confer with each other in regard to the matter of gaining Cuba to the United States. They met, accordingly, in October at Ostend. The result of their deliberations were published in a manifesto, October 18, 1857, in which the reasons are set forth for the acquisition of Cuba. The following is the document.

OCTOBER 18, 1857.

SIR: The undersigned, in compliance with the wish expressed by the President in the several confidential dispatches you have addressed to us, respectively, to that effect, have met in conference, first at Ostend, in Belgium, on the 9th, 10th, and 11th instant, and then at Aix-la-Chapelle, in Prussia, on the days next following, up to the date hereof.

There has been a full and unreserved interchange of views and sentiments between us, which, we are most happy to inform you, has resulted in a cordial coincidence of opinion on the grave and important subject submitted to our consideration.

We have arrived at the conclusion and are thoroughly convinced that an immediate and earnest effort ought to be made by the Government of the United States to purchase Cuba from Spain at any price for which it can be obtained, not exceeding the sum of $——.

The proposal should, in our opinion, be made in such a manner as to be presented through the necessary diplomatic forms to the supreme constituent Cortes about to assemble. On this momentous question, in which the people both of Spain and the United States are so deeply interested, all our proceedings ought to be open, frank, and public. They should be of such a character as to challenge the approbation of the world.

We firmly believe that, in the progress of human events, the time has arrived when the vital interests of Spain are as seriously involved in the sale as those of the United States in the purchase of the island and that the transaction would prove equally honorable to both nations.

Under these circumstances we can not anticipate a failure, unless possibly through the malign influence of foreign powers who possess no right whatever to interfere in the matter.

We proceed to state some of the reasons which have brought us to this conclusion and, for the sake of clearness, we shall specify them under two distinct heads:

First. The United States ought, if practicable, to purchase Cuba with as little delay as possible.

Second. The probability is great that the Government and Cortes of Spain will prove willing to sell it, because this would essentially promote the highest and best interests of the Spanish people.

The first, it must be clear to every reflecting mind that, from the peculiarity of its geographical position and the considerations attendant on it, Cuba is as necessary to the North American Republic as any of its present members, and that it belongs naturally to that great family of States of which the Union is the providential nursery. From its locality it commands the mouth of the Mississippi and the immense and annual increasing trade which must seek this avenue to the ocean.

On the numerous navigable streams, measuring an aggregate course of some 30,000 miles, which disembogue themselves through this magnificent river into the Gulf of Mexico, the increase of the population within the last ten years amounts to more than that of the entire Union at the time Louisiana was annexed to it.

The natural and main outlet to the products of this entire population, the highway of their direct intercourse with the Atlantic and Pacific States, can never be secure, but must ever be endangered whilst Cuba is a dependency of a distant power, in whose possession it has proved to be a source of constant annoyance and embarrassment to their interests.

Indeed, the Union can never enjoy repose, nor possess reliable security, as long as Cuba is not embraced within its boundaries.

Its immediate acquisition by our Government is of paramount importance, and we can not doubt but that it is a consummation devoutly wished for by its inhabitants. The intercourse which its proximity to our coasts begets and encourages between them and the citizens of the United States has, in the progress of time, so united their interests and blended their fortunes that they now look upon each other as if they were one people and had but one destiny.

Considerations exist which render delay in the acquisition of this island exceedingly dangerous to the United States. The system of immigration and labor lately organized within its limits, and the tyranny and oppression which characterize its immediate rulers, threaten an insurrection at every moment, which may result in direful consequences to the American people.

Cuba has thus become to us an unceasing danger and a permanent cause of anxiety and alarm.

But we need not enlarge on these topics. It can scarcely be apprehended that foreign powers, in violation of international law, would interpose their influence with Spain to prevent our acquisition of the island. Its inhabitants are now suffering under the worst of all possible governments—that of absolute despotism, delegated by a distant power to irresponsible agents, who are changed at short intervals, and who are tempted to improve the brief opportunity thus afforded to accumulate fortunes by the basest means.

As long as this system shall endure humanity may in vain demand the suppression of the African slave trade in the island. This is rendered impossible while that infamous traffic remains an irresistible temptation and source of immense profit to needy and avaricious officials, who, to attain their ends, scruple not to trample the most sacred principles under foot.

The Spanish Government at home may be well disposed, but experience has proved that it can not control these remote depositaries of its power. Besides, the commercial nations of the world can not fail to perceive and appreciate the great advantages which would result to their people from a dissolution of the forced and unnatural connection between Spain and Cuba and the annexation of the latter to the United States. The trade of England and France with Cuba would, in that event, assume at once an important and profitable character, and rapidly extend with the increasing population and prosperity of the island.

* * * * * * *

Extreme oppression, it is now universally admitted, justifies any people in endeavoring to relieve themselves from the yoke of their oppressors. The sufferings which the corrupt, arbitrary, and unrelenting local administration necessarily entails upon the inhabitants of Cuba can not fail to stimulate and keep alive that spirit of resistance and revolution against Spain which has of late years been so often manifested. In this condition of affairs it is vain to expect that the people of the United States will not be warmly enlisted in favor of their oppressed neighbors.

We know that the President is justly inflexible in his determination to execute the neutrality laws; but should the Cubans themselves rise in revolt against the oppression which they suffer, no human power could prevent citizens of the United States and liberal-minded men from other countries from rushing to their assistance. Besides, the present is an age of adventure, in which restless and daring spirits abound in every portion of the world.

It is not improbable, therefore, that Cuba may be wrested from Spain by a successful revolution; and in that event she will lose both the island and the price which we are now willing to pay for it, a price far beyond what was ever paid by one people to another for any province.

It may also be remembered that the settlement of this vexed question by the cession of Cuba to the United States would forever prevent the dangerous complications between nations to which it might otherwise give birth.

It is certain that, should the Cubans themselves organize an insurrection against the Spanish Government, and should other independent nations come to the aid of Spain in the contest, no human power could, in our opinion, prevent the people and Government of the United States from taking part in such a civil war in support of their neighbor and friend. But, if Spain, dead to the voice of her own interests, and actuated by stubborn pride and a false sense of honor, should refuse to sell Cuba to the United States, then the question will arise, What ought to be the course of the American Government under such circumstance?

Self-preservation is the first law of nature, with States as well as with individuals. All nations have, at different periods, acted upon this maxim. Although it has been made the pretext for committing flagrant injustice, as in the partition of Poland and other similar cases which history records, yet the principle itself, though often abused, has always been recognized. The United States have never acquired a foot of territory except by fair purchase, or, as in the case of Texas, upon the free and voluntary application of the people of that independent State, who desired to blend their destinies with our own.

Even our acquisitions from Mexico are no exception to this rule, because, although we might have claimed them by the right of the conquest in a just war, yet we purchased them for what was considered by both parties a full and ample equivalent.

Our past history forbids that we should acquire the island of Cuba without the consent of Spain unless justified by the great law of self-preservation. We must, in any event, preserve our own conscious rectitude and own self-respect.

Whilst pursuing this course we can afford to disregard the censures of the world, to which we have been so often and so unjustly exposed. After we shall have offered Spain a price for Cuba far beyond its present value, and this shall have been refused, it will then be time to consider the question, Does Cuba, in the possession of Spain, seriously endanger our internal peace and the existence of our cherished Union?

Should this question be answered in the affirmative, then by every law, human and divine, we shall be justified in wresting it from Spain if we possess the power, and this upon the very same principle that would justify an individual in tearing down the burning house of his neighbor if there were no other means of preventing the flames from destroying his own house.

Under such circumstances we ought neither to regard the circumstances or count the odds which Spain might enlist against us. We forbear to enter into the question whether the present condition of the island would justify such a measure. We should, however, be recreant to our duty, be unworthy of our gallant forefathers, and commit base treason against our posterity should we permit Cuba to be Africanized and become a second Santo Domingo, with all its attendant horrors to the white race, and suffer the flames to extend to our own neighboring shores, seriously to endanger or actually to consume the fair fabric of our Union.

We fear that the course and current of events are rapidly tending to such a catastrophe. We, however, hope for the best, though we ought certainly to be prepared for the worst.

We also forbear to investigate the present condition of the questions at issue between the United States and Spain. A long series of injuries to our people has been committed in Cuba by Spanish officials, and are unredressed. But recently a most flagrant outrage on the rights of American citizens and on the flag of the United States was perpetrated in the harbor of Habana, under circumstances which, without immediate redress, would have justified a resort to measures of war in vindication of national honor. That outrage is not only unatoned, but the Spanish Government has deliberately sanctioned the acts of its subordinates and assumed the responsibility attaching to them. Nothing could more impressively teach us the danger to which those peaceful relations it has ever been the policy of the United States to cherish with foreign nations are constantly exposed than the circumstances of that case. Situated as Spain and the United States are, the latter have foreborne to resort to the extreme measures.

But this course can not, with due regard to their own dignity as an independent nation, continue, and our own recommendations, now submitted, are dictated by the firm belief that the cession of Cuba to the United States, with stipulations as beneficial to Spain as those suggested, is the only effective mode of settling all past differences and of securing the two countries against future collision.

We have already witnessed the happy results for both countries which followed a similar arrangement in regard to Florida.

Yours, very respectfully,

JAMES BUCHANAN.
J. Y. MASON.
PIERRE SOULÉ.

Hon. WILLIAM L. MARCY, *Secretary of State.*

Benton, in his "Examination of the Dred Scott Case," appends the following note on page 24, commenting on the word "colony" as used by the Supreme Court of the United States in that case:

"The meaning of it is too well fixed to admit of ambiguous sense, even in a popular harangue, much less in a judicial decision. It always signifies a body of cultivators transplanted by the government to a distant possession and governed and protected there by the mother country, of which it is to be always the dependent, never the equal. The term has never been applied to our territories, and can not be without a total change in their nature. Distance, governmental transplantation, perpetual inferiority, is their inexorable characteristic. As such, the question of colonies is purely and simply a political question for the determination of the political power, and as such was determined some fifty-odd years ago by our Government.

"The determination was that the United States would have no colony which required a navy to guard it and to keep open communication with it. And that determination, by its import and express terms, admitted Cuba as an exception, that island being near enough to our coast to be safely reached without the convoy of a fleet, and strong enough in its natural and artificial

defenses to be protected by land forces. But while this exception of Cuba was made, all designs upon it inconsistent with fair purchase or honorable conquest in just war were sternly repudiated. The doctrine of the old school was that geographically Cuba belonged to the New World, and to the North American part of it, and to the United States as the chief power of North America; and politically to Spain; and that while Spain declined to sell and gave us no just cause of war she was to be undisturbed in the possession of that island—as much so as in the island of Cadiz. But no other power was to be allowed to get it from Spain either by purchase or conquest. If it was to be sold, the United States had the preemption right of the purchase; if to be conquered, we the conqueror; but all this open and aboveboard—no pretexted wars, no false claims, no fictitious quarrels, no annoying, no bullying, no forced sale."

The Democratic party will expect of the next administration that every proper effort be made to insure our ascendency in the Gulf of Mexico and to maintain a permanent protection to the great outlets through which are emptied into its waters the products raised out of the soil and the commodities created by the industry of the people of our Western valleys and the Union at large. (Democratic platform, 1856.)

The island of Cuba, from its geographical position, commands the mouth of the Mississippi and the immense and annually increasing trade, foreign and coastwise, from the valley of that noble river, now embracing half the sovereign States of the Union. With that island under the dominion of a distant foreign power this trade, of vital importance to these States, is exposed to the danger of being destroyed in time of war, and it has hitherto been subjected to perpetual inquiry and annoyance in time of peace.

While the possession of the island would be of vast importance to the United States, its value to Spain is comparatively unimportant. (President Buchanan, second annual message, 1858.)

I need not repeat the argument which I urged in my last annual message in favor of the acquisition of Cuba by fair purchase. My opinions on that measure remain unchanged. I therefore again invite the serious attention of Congress to this important subject. (President Buchanan, third annual message, 1859.)

I reiterate the recommendation contained in my annual message of December, 1858, and repeated in that of December, 1859, in favor of the acquisition of Cuba from Spain by fair purchase. I firmly believe that such an acquisition would contribute essentially to the well-being and prosperity of both countries in all future time. (President Buchanan, fourth annual message, 1860.)

The Democratic party are in favor of the acquisition of the island of Cuba on such terms as shall be honorable to ourselves and just to Spain. (Democratic platform, 1860.)

THE TELLER RESOLUTION.

Joint resolution for the recognition of the independence of the people of Cuba, demanding that the Government of Spain relinquish its authority and government in the island of Cuba, and to withdraw its land and naval forces from Cuba and Cuban waters, and directing the President of the United States to use the land and naval forces of the United States to carry these resolutions into effect.

Whereas the abhorrent conditions which have existed for more than three years in the island of Cuba, so near our own borders, have shocked the moral sense of the people of the United States, have been a disgrace to Christian civilization, culminating, as they have, in the destruction of a United States battle ship, with 266 of its officers and crew, while on a friendly visit in the harbor of Habana, and can not longer be endured, as has been set forth by the President of the United States in his message to Congress of April 11, 1898, upon which the action of Congress was invited: Therefore,

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, First. That the people of the island of Cuba are, and of right ought to be, free and independent.

Second. That it is the duty of the United States to demand, and the Government of the United States does hereby demand, that the Government of Spain at once relinquish its authority and government in the island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters.

Third. That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as may be necessary to carry these resolutions into effect.

Fourth. That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island except for the pacification thereof, and asserts its determination, when that is accomplished, to leave the government and control of the island to its people.

Approved, April 20, 1898.

TREATY OF PARIS, DECEMBER 10, 1898; RATIFIED BY THE SENATE FEBRUARY 6, 1899.

ARTICLE I.

Spain relinquishes all claim of sovereignty over and title to Cuba.

And as the island is, upon its evacuation by Spain, to be occupied by the United States, the United States will, so long as such occupation shall last, assume and discharge the obligations that may under international law result from the fact of its occupation, for the protection of life and property.

ARTICLE VI.

The United States will undertake to obtain the release of all Spanish prisoners in the hands of the insurgents in Cuba.

ARTICLE VIII.

Spain relinquishes in Cuba all the buildings, wharfs, barracks, forts, structures, public highways, and other immovable property which, in conformity with law, belong to the public domain.

ARTICLE IX.

The civil rights and political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by the Congress.

ARTICLE XVI.

It is understood that any obligations assumed in this treaty by the United States with respect to Cuba are limited to the time of its occupancy thereof; but it will, upon the termination of such occupancy, advise any government established in the island to assume the same obligations.

THE PLATT AMENDMENT.

That in fulfillment of the declaration contained in the joint resolution approved April 20, 1898, entitled "For the recognition of the independence of the people of Cuba, demanding that the Government of Spain relinquish its authority and government in the island of Cuba, and to withdraw its land and naval forces from Cuba and Cuban waters, and directing the President of the United States to use the land and naval forces of the United States to carry these resolutions into effect," the President is hereby authorized to "leave the government and control of the island of Cuba to its people" so soon as a government shall have been established in said island under a constitution which, either as a part thereof or in an ordinance appended thereto, shall define the future relations of the United States with Cuba, substantially as follows:

I.

That the government of Cuba shall never enter into any treaty or other compact with any foreign power or powers which will impair or tend to impair the independence of Cuba, nor in any manner authorize or permit any foreign power or powers to obtain by colonization or for military or naval purposes or otherwise lodgment in or control over any portion of said island.

II.

That said government shall not assume or contract any public debt to pay the interest upon which and to make reasonable sinking-fund provision for the ultimate discharge of which the ordinary revenues of the island, after defraying the current expenses of government, shall be inadequate.

III.

That the government of Cuba consents that the United States may exercise the right to intervene for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with respect to Cuba imposed by the treaty of Paris on the United States, now to be assumed and undertaken by the government of Cuba.

IV.

That all acts of the United States in Cuba during its military occupancy thereof are ratified and validated, and all lawful rights acquired thereunder shall be maintained and protected.

V.

That the government of Cuba will execute, and as far as necessary extend, the plans already devised, or other plans to be mutually agreed upon, for the sanitation of the cities of the island, to the end that a recurrence of epidemic and infectious diseases may be prevented, thereby assuring protection to the people and commerce of Cuba, as well as to the commerce of the southern ports of the United States and the people residing therein.

VI.

That the Isle of Pines shall be omitted from the proposed constitutional boundaries of Cuba, the title thereto being left to future adjustment by treaty.

VII.

That to enable the United States to maintain the independence of Cuba, and to protect the people thereof, as well as for its own defense, the government of Cuba will sell or lease to the United States lands necessary for coaling or naval stations at certain specified points, to be agreed upon with the President of the United States.

VIII.

That by way of further assurance the government of Cuba will embody the foregoing provisions in a permanent treaty with the United States.

Chinese-Exclusion Bill.

SPEECH

OF

HON. GEORGE P. FOSTER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 7, 1902,

On the bill (H. R. 13061) to prohibit the coming into and to regulate the residence within the United States, its Territories, and all territory under its jurisdiction, and the District of Columbia, of Chinese and persons of Chinese descent.

Mr. FOSTER of Illinois said:

Mr. CHAIRMAN: The flight of time has all too quickly brought us face to face with the termination of the existing Chinese-exclusion law by limitation. Ten years ago next May the law became operative, and next May it lapses. There is no time to waste if the friends of American labor and American civilization wish to preserve their country and its institutions from the greatest calamity that could befall them. In a few short weeks, unless appropriate restrictive legislation is accomplished meanwhile, our whole country will be open to the free admission of what has been well termed the "yellow devil," and will be shortly overrun by the heathen and vicious hordes of Asia.

Mr. Chairman, to me it seems one of the strangest, most incredible things ever heard of that there should be any considerable division of opinion in this country on this subject. After the experience which we had in our Pacific States previous to the passage of the remedial laws, after learning what we have learned and knowing what we know about the habits and manners of the Chinese, both in China and in the United States and everywhere else, I can not imagine how any American citizen can favor the unrestricted colonization of this country by the Chinese. And yet that is what many citizens are now favoring, influenced by either selfish trade and commercial motives or by some mistaken sentimental notions of philanthropy. It is charitable to believet that they know not what they do. It is hardly supposable that even the most intense desire for making money on the pare of the American Asiatic Association, the Boston Chamber of Commerce, or the cotton manufacturers of New England and the South could induce them to favor unrestricted Chinese immigration if they realized the dire and ruinous results to our country which would surely follow the success of their plans—if they knew that

they were actually sacrificing their country on the altar of their greed.

A brief review of the history of the Chinese in America is all that is necessary in that line at present. The mass of the people know the history by heart, if the small band of Eastern Chinese lovers and apologists do not. This whole hideous story has been burned into the hearts and brains of the community at large. The honorable men and women of the United States will never forget what happened after the Burlingame treaty, in 1868, let down the bars to the Asiatics. Even before then as many as 80,000 Chinese had invaded California, and after 1868, and until the adoption of the restrictive laws, they came pouring in by the thousand in every ship until their yearly immigration exceeded the entire yearly increase of white population from all sources combined, from births, migration from other States, and immigration from Europe.

This would not have mattered if the Chinese had proved desirable immigrants like the Irish, the Scotch, the English, the Germans, Scandinavians, Poles, etc., who have proved such welcome additions to our original stock, and have done such grand service in developing, enriching, and defending our beloved country. All these classes of foreigners have come over here as bona fide immigrants, to make this their permanent home, to become citizens, to put their money and their energy into the various enterprises and interests of the Commonwealth, to become friends and neighbors and coworkers with the native Americans, to live for the Republic, to fight for it, to die for it if necessary, and thousands upon thousands of them have fought for it and died for it in our recent wars. They have brought their wives and families with them, or have intermarried with American families and become perfectly assimilated with American society.

How was it with the Chinese? Did they come over here with their wives and families in a decent, respectable manner, to become citizens, to advance the interests of the various communities where they settled, to develop the country, to fight for it, and to live and die for it? Let the official records of the several investigating committees make answer. To begin with, a large part of what was discovered was unfit for putting into print even for official and judicial perusal. The awful depravity of the Chinese in San Francisco was too bestial to publish, even in confidential, private official reports. Nothing like it had been heard of since the days of Sodom and Gomorrah. There were found at one time to be tens of thousands of Chinese men in San Francisco and only about 1,300 Chinese women, and only about 50 of these were legal wives. Recollect also what was brought to light about their herding together like swine, 20 and 30 in a room, and about their abominable opium dens, and about their perjury in the courts of justice. Then think of the white children of a Christian community growing up with such a sink hole of pollution ever before their eyes. Think of its effect on the community at large.

This is the moral side of the question and there is certainly no need to dwell on it. Financially the effects of the Chinese in America are not less ruinous, and it is upon the economic aspects of the subject that it is now most important to dwell, because those who plead for the admission of the Chinese base their arguments generally upon economic grounds. They say that we must have the Chinese trade for the sake of our own commercial prosperity and that we can not get it unless we remove the restrictions to Chinese immigration. I do not believe this, Mr. Speaker. I believe that the Chinese will trade with us without reference to these restrictions, hereafter as heretofore, if they find it profitable to themselves to do so. But even if not, all the Chinese trade in the world would be far too small a compensation for free Chinese immigration into this country. What would be its result, financially and socially and economically?

A few figures and statistics, from the official reports of the Bureau of Labor statistics, will be in point here. We find that the Chinese in San Francisco and other Pacific cities spend on an average $5 a month for food, $3 a month for rent, and $10 a year for clothing; that they send 75 per cent of their earnings back to China, and that their scale of wages is about like this: Boot and shoe makers, $1.25 a day; miners, $1.75 a day; canners, $1 a day; bag makers, 75 cents a day; slipper makers, 65 cents a day, etc. In the cigar-making trade, working by the piece, they get from $4 to $7 a week. The laundrymen get about $10 a month, with board. All the other rates, just quoted, are without board. What American workingmen can compete with such rates as these, or wish to try to do so? American workingmen do not live on $5 a month for food nor sleep 25 in a room. Of course there is only one word needed to describe this sort of competition—it is ruin to the American workingman.

The opponents of exclusion make a great hue and cry about the "discrimination" which lets in the European and shuts out the Asiatic immigrant. Certainly there is discrimination, but it is not unjust. Doubtless there is a small proportion of European immigrants whom it would be better to keep out, but European immigrants, as a whole, have proved desirable, while Asiatic immigrants have not. As to the right to exclude a race, or such classes of a race as we see fit, we have it not only in law, but in morals. In dealing with this Chinese problem sentimental grounds should not be considered. It is purely a matter of business, and as a straight business proposition we should refuse admission to the scores of millions of Chinese laborers who would rush in if our doors were left unguarded.

We do not want any Asiatic immigrants at all, from China or from any other country of Asia. Asiatics are not of our kind of civilization, their morality is immorality in our eyes, and their scales of finance and wages would utterly subvert our social system and our national prosperity if they should be generally introduced here.

It is urged by the advocates of Chinese admission that the Chinese laborers are needed to work our railroads, our mines, etc. Needed by whom, and why? The covetous millionaire owners and corporations "need" them simply because they want to get cheaper labor and then kick their American laborers out. That is all. To a great extent this has already been done out West wherever the Chinese have become numerous. And even if the Chinese got as much wages as the American they are not wanted. In that case, as in the other, they crowd the American out, and the labor market is glutted, not by a plethora of American citizen workingmen, but by a horde of heathen aliens.

That the American workingmen are alive to the situation is evident. Look at the hundreds of petitions already sent in to this Congress, representing tens and hundreds of thousands of our own American citizens and their wives and children, all praying and beseeching that Congress may not fail to continue to protect them against the danger which now threatens in the coming lapse of the exclusion law of 1892. So far as I have had leisure to examine the files, these petitions have come from nearly every nook and corner of the country. They are from Pennsylvania, Illinois, Iowa, Indiana, West Virginia, New York, Washington, Florida, New Jersey, California, Montana, Connecticut, Wisconsin, Minnesota, North Dakota, South Dakota, Maine, Virginia, Missouri, Nevada, Ohio, Kentucky, Michigan, Colorado, and doubtless from other States that I have overlooked, and the petitioners include printers, typefounders, mine workers, the building trades, painters, carpenters, bricklayers, masons, general mechanics, sheet-metal workers, cigar makers, railroad conductors, other railroad men, team drivers, stereotypers, electrotypers, core makers, glass blowers, etc., besides trades and labor councils innumerable, and very many unions of the American Federation of Labor.

These, and such as these, comprising the bone and sinew of our national citizenship, are grouped together by the pro-Chinese advocates, and in their pamphlet or memorial to Congress are called a "mob." That word eloquently illustrates the attitude of the pro-Chinese forces toward American labor. If they could have their way, they would like to scale down all American labor and laborers to the Chinese standard. The Chinese are bright and quick to learn. They are keen at a bargain and utterly unscrupulous and selfish. If they were to be admitted freely, they would soon drive the Americans out of business in the cigar making, clothing, boot and shoe, and many other industries by cutting under the established rates of wages. There would soon be a much worse system of "sweat-shops" here than ever yet has been known, They would soon monopolize the track work on our railroads. Beginning at the extreme West, this new and formidable industrial invading army would gradually spread east, until the whole country was given over to it. What a spectacle! What a fate for the proud and great Republic of the United States of America!

But this will not be its fate, Mr. Chairman. I am confident that before the expiration of the present law there will have been enacted the needed supplementary legislation and the present grave danger will have been averted. The proposed legislation is certainly just and also generous. It does not interfere with the Chinese laborers who have already acquired a residence here, and who are pursuing their callings in a decent and law-abiding manner. It allows them to remain and to return if they should go abroad. It also gives free entrance to the better classes of Chinese, described as "officials, teachers, students, merchants, and travelers for curiosity or pleasure." It simply says that no more Chinese laborers shall be admitted. It seeks to save California and the rest of the Pacific coast from a repetition of the miseries there undergone in former years, and to save the eastern part of the country from an experience of these miseries.

Never more may it be recorded, as it was recorded a few years ago in California, that the Chinese gradually invaded one industry after another until they took the places of the girls as domestics and cooks, the laundry from the poor white women, and also the places of the men and boys as boot and shoe makers, cigar makers, bag makers, miners, farm laborers, brick makers, tailors, etc., and gained absolute control of the ladies' furnishing line,

displacing hundreds of girls; and that every business they entered was forthwith doomed for the white laborer, as competition was simply impossible. Since Chinese exclusion, as the San Francisco convention of last November reports in the memorial to Congress, "every material interest of the State has advanced and prosperity has been its portion."

Let us vote, Mr. Chairman and gentlemen, to continue this prosperity not only on the Pacific coast but all over the country, by upholding the dignity of American labor and by preserving the purity of American men, women, and children from contamination by contact with the races of fallen Asia.

Fortification Appropriation Bill.

SPEECH

OF

HON. ROBERT W. TAYLER,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 19, 1902.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 13359) making appropriations for fortifications and other works of defense, for the armament thereof, for the procurement of heavy ordnance for trial and service, and for other purposes.

Mr. TAYLER of Ohio said:

Mr. CHAIRMAN: I do not rise to oppose this amendment, nor yet in terms to advocate it. When this bill was up a year ago, I opposed in a very mild way the adoption of that part of the bill which provided for the payment of $100,000 for the Isham shell and thorite. Those two propositions were united in one; and I opposed it for the reason that the Ordnance Department believed that the Isham shell was not an effective implement of war, and because thorite was an explosive, the component parts and proportions of which were well known to the Army and to all experts on that subject.

Undoubtedly, Dr. Tuttle deserves credit for his connection with thorite, and I see no reason why he should not be fairly compensated for the service he has rendered the Government.

I take the floor, however, at this time to make one or two observations and to pay a just and well-merited tribute to the efficiency of the Ordnance Department of the Army, which has been so frequently attacked on this floor as an obsolete and practically useless department of the Government. Time after time for the last fourteen years Congress has appropriated thousands and thousands of dollars, aggregating at least a million and a half, for the purpose of making experiments, of trying projectiles, of testing various inventions, over the protests and objections of the War Department and the Ordnance Department, who declared that they were contrary to the recognized principles of science and the experience of ordnance experts.

But Congress has said that the War Department did not know what was the fact and what was right as to these projected improvements, and has insisted on appropriations of not less than a million and a half dollars. Now, it so happens that recently I have made an investigation of this matter and have discovered that since 1888, back of which I have made no examination, in every instance in which Congress has appropriated money for the purpose of experimenting with certain devices over the protest and against the objection of the Ordnance Department, careful, complete, and impartial tests have in every instance justified the position taken by the War Department and the Ordnance Office.

I want to say just one word in connection with what was said by the gentleman from Colorado [Mr. BELL], whose remarks are fully illustrative of what occurs in Congress at every session. These remarks were of course made by him in good faith, with a just purpose of illuminating this discussion, of instructing the committee, and accomplishing some good. Yet the gentleman is entirely in error as to most of the things that he stated. He is not fully informed either as to the composition of these two bodies to which he refers or, as was indicated by the gentleman from Missouri [Mr. COCHRAN], as to General Crozier's relation to these patents.

Now, anybody who knows anything about military affairs knows that, apart from what may have occurred in the Senate committee recently respecting the nomination of General Crozier as Chief of the Bureau of Ordnance, he is one of the most eminent ordnance officers in the world, known, I suppose, to more Army experts as an ordnance officer than any other individual.

Now, General Crozier, while he was a subordinate officer in the Ordnance Department, being a man of inventive genius, invented, or assisted in the invention of, various devices of which the Government has taken advantage, without one cent of reward to him and without returning to him a dollar of compensation from any source.

And here permit me to interject that I refer to General Crozier specifically only because reference has been made to him by the gentleman from Colorado. I have so high a regard for the Ordnance Bureau as a body and for the individual members of it, all of whom are doing splendid and lasting work in their several spheres of activity, that it is not necessary to single any one for special praise or commendation.

Mr. LIVINGSTON. Mr. Chairman, I would like to suggest to the gentleman that we are not trying either of these boards or General Crozier. These matters are not before the House at all.

Mr. TAYLER of Ohio. I am only referring to what a member of your committee has just said, and it would not be right——

Mr. BELL. You misunderstand me entirely if you think I intimated that he got a cent.

Mr. TAYLER of Ohio. I understand.

Mr. BELL. What I said and all I said was that my understanding was the reason why the second board was organized was because those bringing their patents complained that the Bureau of Ordnance was not inclined to consider the patentee when he was not in the Army.

Mr. TAYLER of Ohio. I understand that.

Mr. BELL. I did not claim that any of them got a cent.

Mr. TAYLER of Ohio. And I understand the good faith with which the remarks were made, but knowing what I know about these matters it would not have been just to sit here and listen even to those remarks with the inference and imputation that might go along with them without saying as much as I have said. What I said when I spoke upon the first amendment to the effect that every recommendation that the Ordnance Department had made to Congress had been justified by the event and that every time it had disapproved an appropriation by Congress for making some experiments such disapproval had been justified by the event, was answering a little too soon such statements as the gentleman from Colorado has made, and I will be able, by the official documents which will be incorporated in my remarks, to satisfy such persons as may have the curiosity to read them, that what I have said is entirely justified by the facts.

The Bureau of Ordnance is composed of a body of men, alert, honest, and devoted to their duty. They have won their place by merit and not by politics. They have no political influence, and they have no time to cultivate it. Vast interests are in their charge, and these they have administered ably and honestly. No taint of scandal has touched them, and the nature of their work permits no laggards among them. They have stood in the breach between importunate demands on the one hand and the Federal Treasury on the other.

Daily are claims made upon them—sometimes by deserving and honest inventors; sometimes by cranks and adventurers; sometimes by swindlers and petty pilferers, all with plausible stories and ingenious arguments.

To sift out what is deserving from what is worthless and to draw the difficult line which divides them is a serious and a thankless task. Perhaps it has not always been drawn at the right place, but always it has been drawn honestly and fearlessly, and sometimes it has brought upon them denunciation by the disappointed and attack and criticism in Congress.

Frequently appeal has been made from the decision of the Ordnance Department to Congress. Here all men can be heard, and, individually as well as collectively, we are ready to listen to, and easily to be convinced by, the most specious arguments, colored by a little judicious criticism of Army officers supposed to be influenced by a spirit of rivalry, conservatism, or ignorance.

And, being so moved, we have overturned the deliberate judgment of trained ordnance officers who have devoted their lives and their great abilities and attainments to the solution of questions which we airily dispose of in a moment.

It is easy to assert and often as easy to make us believe that injustice has been done by some ancient barnacles at the War Department, and, in defiance of their recommendations, we proceed to appropriate hundreds of thousands of dollars to show that these trained officials are wrong.

And what is the outcome of it? We forget to-morrow what we do to-day, and next week we will appropriate a handsome sum to conduct expensive experiments, having forgotten that last year we did the same thing, the experiments having been conducted under the most impartial conditions, according to the plans and directions and in the presence of the inventor, with the palpable result that our money was wasted and the War Department justified.

Let me call as witnesses every instance within the last fourteen years when Congress, against the recommendation of the War Department, has spent money to satisfy the claims of urgent

inventors, who have convinced credulous members of both Houses that they have not been fairly treated in the War Department.

I shall first present a statement of these facts in tabular form and follow it with a somewhat detailed account of each case.

Memorandum showing all appropriations made since 1888 upon the initiative of Congress for war material, together with action or attitude of the Ordnance Department with reference to such material, with statement of results of trials.

Objects and purposes.	Total appropriation or expense.	Action of the Ordnance Department.	Result of test.
Pneumatic dynamite guns, including machinery, ammunition, and carriages.	$587,500.00	Not favored by the Ordnance Department.	Declared obsolete by the War Department.
12-inch elevating carriage of A. H. Emery's design.	180,000.00	do	Not yet completed.
Second 10-inch pneumatic disappearing-gun carriage.	69,500.00	do	Carriage a failure.
Gatling 8-inch high-power gun.	58,645.00	do	Gun burst upon trial.
Howell 10-inch counterpoise carriage.	55,605.10	do	Carriage not adopted.
Gathmann 18-inch gun	145,550.00	do	The joint board of officers of the Army and Navy reported as a result of the test that there is nothing in the Gathmann system to recommend its adoption for the service of the United States, or to warrant further experiments.

I think it well to add, at this point of my remarks, a detailed statement of the dates and amounts of the several appropriations for the designated purposes. The dates and items of these several appropriations are shown in the following summary:

PNEUMATIC DYNAMITE GUNS.

Amount appropriated by act approved September 22, 1888	$400,000.00
Amount appropriated by act approved March 2, 1889	187,500.00
Total	587,500.00

EMERY 12-INCH ELEVATING CARRIAGE.

Amount appropriated by act approved March 3, 1893 (this amount was reappropriated from amount originally appropriated August 18, 1890)	130,000.00
Amount appropriated by act approved May 25, 1900	40,000.00
Amount appropriated by act approved June 6, 1896, for loading apparatus for the Emery carriage	10,000.00
Total for carriage, including loading apparatus, etc	180,000.00

10-INCH PNEUMATIC DISAPPEARING GUN CARRIAGE.

Amount appropriated by act approved August 1, 1894	50,000.00
Amount allotted April 16, 1895, by the Board of Ordnance and Fortification for platform and for test of this carriage	19,500.00
Total for carriage, test, etc	69,500.00

GATLING 8-INCH GUN.

Amount appropriated by act of June 6, 1896	40,000.00
Amount allotted November 9, 1898, by the Board of Ordnance and Fortification for test of this gun	18,645.00
Total for gun, including test	58,645.00

HOWELL COUNTERPOISE CARRIAGE.

Amount appropriated by act approved June 6, 1896	50,000.00
Amount allotted June 9, 1900, by the Board of Ordnance and Fortification for alterations in this carriage	5,605.10
Total for carriage	55,605.10

In addition to the above, about $500 has been expended in dismounting the carriage, and the Board of Ordnance and Fortification has allotted sufficient funds from its appropriation to cover the expenditure.

GATHMANN GUN.

Amount appropriated by act approved March 3, 1899	75,000.00
Amount appropriated for test of the gun, etc., by act approved March 1, 1901	50,550.00
Total	125,550.00
In addition to the above, there has been expended in connection with the Gathmann system $20,000 from funds allotted by the President under the act of Congress approved March 9, 1898, for the "national defense"	20,000.00
Amount expended by War Department	145,550.00
Amount previously appropriated for tests to be made by Navy Department	50,000.00
Total amount expended	195,000.00

In considering this subject several distinctions should be clearly borne in mind.

The Ordnance Department is a bureau of the War Department, presided over by the Chief of Ordnance. It has certain well-defined duties, prescribed by statute and regulations.

The Ordnance Board is composed of officers of the Ordnance Department detailed for that purpose by the Chief of Ordnance. It is merely a part of the machinery of that department.

The Board of Ordnance and Fortification is a body independent of the Ordnance Department, composed of the Commanding General of the Army, an engineer officer, two artillery officers, an ordnance officer, and a civilian. It was created by law and its members are appointed by the Secretary of War.

Let us now examine the history of these several experiments for which such large sums of money were appropriated.

PNEUMATIC DYNAMITE GUNS.

The Chief of Ordnance, United States Army, in his report for 1887, described the experimental progress made with these guns at that time, and stated:

I would recommend the purchase of one of these guns, say of 15-inch caliber, for exhaustive trials of gun and projectile, with the object of determining the full extent of their capacity and fitness for coast defense.

He also stated that—

a board of officers was appointed January 26, 1886, by the Secretary of War for the purpose of witnessing trials with the dynamite torpedo gun, which for some months had been under experiment at Fort Hamilton under the auspices of the War Department, and to report on its merits and suitability for the military service. But the company interested in this gun failed to make the necessary arrangements for the proposed trials, and the board was ultimately dissolved without making any report.

On April 18, 1888, the Pneumatic Dynamite Gun Company, of New York, through Mr. Edward A. Wickes, in a letter to Mr. Townshend, chairman of the Committee on Military Affairs, House of Representatives, offered to sell to the United States Government 100 dynamite guns, 15-inch caliber, at the price of $40,000 each, delivered at the place of manufacture. This offer was submitted to the Secretary of War on April 19, 1888, for an expression of his views as to the desirability of making an appropriation for the purchase of the ordnance proposed. The matter was referred by the Secretary of War to the Chief of Ordnance and the Chief of Engineers, United States Army, for report. Gen. S. V. Benét, Chief of Ordnance, stated that the views expressed in the Chief of Ordnance's report for 1887, above referred to—

are deemed very liberal, when the fact is considered that not a shot has been fired under the direct inspection and supervision of this Department, and that, with the exception of witnessing the destruction of the wooden vessel by the Ordnance Board, the results of trials have reached the Department second hand. It is hardly to be expected that on such meager practical information a recommendation can be made for the immediate expenditure of $4,000,000. * * *

In view of these considerations, he recommended as follows:

First. That one or more pneumatic dynamite-torpedo guns of different caliber, of the most approved pattern, with appurtenances and mounting complete, and 300 shells, subcaliber or otherwise, and fuses for each gun, with the necessary quantity of high explosive, be procured for exhaustive trial of gun, projectile, and fuse, to enable this Department to decide upon the merits of the weapon as such. This is substantially as recommended in my annual report.

Second. That this paper be referred to the Engineer Department for an expression of its views and for recommendations as respects the employment of this system for coast defense; and

Third. That, as this system is but an auxiliary in coast defense and of secondary importance as compared with high-power steel guns and rifled mortars, there should be no reduction in the sums that may be appropriated for steel guns and mortars in order to procure dynamite guns. The more urgent need for inaugurating the production and supply of steel guns and mortars should stand first and foremost in any appropriations made for armament.

Brig. Gen. J. C. Duane, the Chief of Engineers, concurred in the recommendations of the Chief of Ordnance, and under date of April 25, 1888, reported as follows:

I am not prepared, however, to recommend any extensive purchase of these or any torpedo guns, much less an appropriation of $4,000,000, until their efficiency has been more fully demonstrated.

In reply to the letter of Mr. Townshend, the Secretary of War, in a letter of May 17, 1888, stated:

In reply I have the honor to say that this dynamite gun has been developed to a point of efficiency which entitles it to recognition as a formidable addition to harbor defense.

He refers to his annual report of December 5, 1887, page 31, in which he speaks of this gun and its development, and recommended the purchase of one gun of 15-inch caliber in order to determine the full extent of its fitness for coast defense, and then says:

Since then I have examined with much care the reports and opinions of officers and the evidence bearing upon the question whether the gun is still to be considered merely as an experiment and in the experimental stage, or may be taken as having an established character on which legislation may be safely based. * * *

The Secretary of War refers to the then last annual report of the Secretary of the Navy, to the remarks of the Lieutenant-General of the Army in his last report, and also to the report of the Chief of Ordnance of the Army, General Benét, referred to above, and states:

I am therefore forced, on that evidence, to the conclusion that the gun is no longer to be considered as an experiment, but has well-established qualities and characteristics, upon which it will be safe for Congress to take action; and I accordingly recommend an appropriation which would enable us to

purchase and install a number of these guns, with the necessary operating plants, not exceeding 10 of different calibers. * * *

The Board of Ordnance and Fortification, in its report for 1892, reports as follows with reference to these guns:

By the acts of 1888 and 1889 for the support of the Army, sums aggregating $587,000 were appropriated for pneumatic dynamite guns and for mounting and operating the same. The expenditure of these appropriations was not under the supervision of this board, but inasmuch as it has had charge of the experiments with high explosives it has deemed it proper to call attention to this subject. So far as the board is advised, these guns are not yet constructed, although the period originally limited by contract has long since expired.

In view of the present state of development of the experiment of throwing high explosives with powder guns, as detailed in another part of this report, the board suggests the inadvisability of keeping open this contract.

In the proceedings of the Board of Ordnance and Fortification dated June 5, 1901, the following occurs with reference to these guns:

It is the unanimous opinion of the board that the pneumatic dynamite-gun batteries have become obsolete by more recent developments in the means of defense, and the board does not consider these batteries at the present time of sufficient utility to warrant further expenditures in their construction or the extensive repair of those already installed; and the board is of the opinion that any repairs should be limited to what is necessary to the preservation of the material until final disposition is made of these batteries.

THE EMERY CARRIAGE.

In the ninth report of the Board of Ordnance and Fortification, for the year ending October 31, 1899, page 7, appears the following:

The Emery 12-inch elevating carriage.—This carriage was contracted for under a special act of Congress approved February 18, 1893, appropriating $130,000 for the purpose, and an additional appropriation made June 6, 1896, of $10,000 for a loading apparatus. The original act was passed after this board, having carefully considered the drawings and specifications submitted to it by Mr. Emery, had declined to approve its plan of construction. The amount appropriated by Congress for the same is several times as large as the cost of carriages of the same kind now in the service. A large portion of that amount has already been expended in the construction of innumerable pieces of the carriage. Although the inventor and contractor gives no information whereupon any conjecture or speculation can be made as to the time when the carriage may be completed, yet he has drawn from the Treasury $95,380.16, of which he has expended $12,500 for the purchase of ammunition with which to test it after completion. It now hardly seems probable that this experimental carriage will be finished in time to be used, even if successful, in the adopted plan of our coast defenses.

The Chief of Ordnance had disapproved making this contract and the Board of Ordnance and Fortification also refused to recommend it.

At the hearing on this subject before the subcommittee of the Senate Committee on Appropriations, held April 14, 1900, Senator TELLER said to General Buffington:

I suppose you know, of course, that Congress authorized this carriage without reference to the board; that the Committee on Appropriations and Congress determined themselves to have the experiment tried. You know that, do you not?

The extent to which Congress resolved itself into an expert body to overrule the Board of Ordnance and Fortification and the Ordnance Bureau will abundantly appear from the following extracts from the law appropriating $130,000 for this carriage:

Be it enacted, etc., That the sums of money herein provided for be, and the same are hereby, appropriated out of any moneys in the Treasury not otherwise appropriated, to be available until expended, namely:

* * * * * * *

To enable the Board of Ordnance and Fortification to procure and test one 12-inch elevating carriage of A. H. Emery's design, $130,000; and the Secretary of War is hereby authorized and directed to contract, without advertising, with A. H. Emery for this carriage, and test it, the same to be built, erected, and tested, for a sum not exceeding $130,000, which price shall cover the cost of the carriage erected, and including all the powder and projectiles necessary for its preliminary test by the contractor and the 50 additional rounds for proof, to be fired under the direction of said Board of Ordnance and Fortification, and in the presence of the said Board and the inventor, or his authorized agent, due regard being paid to suggestions offered by him with regard to the making of such test; said price also to cover all such repairs, if any, as may become necessary to have the whole carriage in good working order after the test of fifty rounds for proof. It shall be constructed on the general plans put before the Board by A. H. Emery, and described by him in his letters to the Board under dates of November 16 and December 24, 1892, and January 21, 1893.

For the purpose of facilitating the more ready, satisfactory, and quick construction of this carriage and its foundations, the inventor is at liberty to make any and all changes in the design and specifications for and the construction of this carriage, at any time on or before the completion of the test, which he thinks are desirable for the utility and use of this carriage or repetitions thereof, or which will facilitate the early completion and successful test of this carriage, which changes or alterations shall all be made at his expense; but no such changes shall be made which will render the carriage unable to fulfill all the requirements set forth by the Board as necessary to be observed and maintained for the construction and use of this carriage and its foundations in their letters to the inventor of dates August 17 and November 17, 1892, fixing the engineering conditions, which must be fulfilled and observed in constructing the carriage and its foundations, unless such changes are sanctioned by the Board. Of the price of this contract $110,000 shall be for the carriage and foundations erected, including all changes and repairs, and $20,000 shall be paid the contractor for the preliminary testing of the carriage and the powder and projectiles to be furnished by him for the 50 rounds of proof tests.

Of the $110,000 to be paid for the carriage and its foundations 60 per cent shall be paid in partial payments as the work progresses, in accordance with the proposals submitted by A. H. Emery to the board in his letter of January 21, 1893. Before advancing any part of this 60 per cent, the contractor shall furnish bonds satisfactory to the Secretary of War for the return of this money if the carriage is not accepted. The balance of the $110,000 shall be paid as soon as the test is completed and the work found to be done according to contract. Of the $20,000 to be paid for the testing of the carriage, three-eighths shall be paid the contractor when the preliminary tests are completed, and the other five-eighths shall be paid to him proportionately as the fifty rounds for proof are fired.

Should any damage be done to the carriage during these tests by the bursting or overloading of the gun which is being fired thereon, or by other guns or projectiles being tested, such damage shall be made good to the contractor by the Government.

This carriage shall raise the gun from loading to firing position 14 feet, and shall be able to train the gun for firing at all angles of elevation from minus 5 degrees elevation to 20 degrees elevation, and to have an all-round fire of 360 degrees.

* * * * * * *

That all material purchased under the foregoing provisions of this act shall be of American manufacture, except in cases when, in the judgment of the Secretary of War, it is to the manifest interest of the United States to make purchases in limited quantities abroad, which material shall be admitted free of duty.

Approved February 18, 1893.

On March 17, 1893, a contract was entered into with Mr. Emery to deliver the carriage at Sandy Hook within two years from the date of the contract.

As late as October 18, 1894, nineteen months after the contract was entered into and five months only before the carriage was to be completed and erected ready for testing, Mr. Emery wrote to the Board of Ordnance and Fortification:

The design is now nearly complete and the working drawings rapidly approaching completion, ready to commence work in the shop.

September 19, 1895, he wrote that the design for his gun carriage "was finished last spring," but that he had not yet completed his arrangements for getting it built.

Under the act of February 18, 1893, Mr. Emery was to receive from time to time, as the work progressed, 60 per cent of the contract price, but he was required to furnish a bond for the return of the money if the carriage was not accepted.

Finding that he was unable to proceed with the erection of the carriage, he appealed to Congress in 1896 with such effect that this provision appeared in the act of June 6, 1896:

That in the act making appropriations for fortifications and other works of defense, for the armament thereof, for the procurement of heavy ordnance for trial and service, and for other purposes, approved February 18, 1893, the paragraph beginning with the words: "Of the $110,000" and providing for terms of payment for the 12-inch elevating gun carriage to be contracted for with A. H. Emery under the provisions of said act be, and is hereby, amended to read as follows:

"Of the $110,000 to be paid for the carriage and its foundations, 85 per cent shall be paid in partial payments as the work progresses, in accordance with the proposals submitted by A. H. Emery to the board in his letter of January 21, 1893. And no bond shall be required for the return of this money if the carriage is not accepted, nor shall the said Emery be required to return the money paid, and the carriage shall belong to the United States when the tests are completed. The balance of the $110,000 shall be paid as soon as the said carriage shall have been completed in all respects according to contract and shall also have undergone and endured a test satisfactory to the Board of Ordnance and Fortification. Of the $20,000 to be paid for the testing of the carriage, three-eighths shall be paid the contractor when the preliminary tests are completed, and the other five-eighths shall be paid him proportionally as the 50 rounds for proof are furnished.

"And the Secretary of War is hereby authorized and directed to enter into a supplemental contract with the contractor for this carriage, for the supply by him of a loading apparatus to go with and belong to the carriage, and to be furnished therewith as a part thereof; and the carriage shall be so constructed that a part of the work of recoil can be used for the horizontal traverse of the carriage and the working of the loading apparatus; and the payment for the work so furnished under this supplementary contract shall be $10,000, which sum shall be due and payable when said loading apparatus is completed in all respects according to contract, and shall also have undergone and endured said test hereinbefore mentioned, to make which payment the sum of $10,000 is hereby appropriated."

The following is an extract from the report of the Board of Ordnance and Fortification, dated October 31, 1896, and refers to the above:

The extra amount appropriated was allotted by the board July 2, 1896, as required by the act.

The position taken by the board in regard to amending the act approved February 18, 1893, which made the original appropriation of $130,000 for the construction of the 12-inch Emery elevating carriage, was defined at the March meeting in reply to a letter of the Hon. E. J. Hainer, chairman subcommittee on fortifications, United States House of Representatives, as follows:

"The Board of Ordnance and Fortification does not recommend the enactment of the amendments proposed by Mr. Emery for the following reasons:

"First. With reference to the amendment in regard to the 12-inch elevating carriage. By the act approved February 18, 1893, the Board of Ordnance and Fortification was required to allot out of its funds $130,000 for the construction and proof of a 12-inch carriage of Mr. Emery's design. The plans for this carriage were not completely worked out at the time the appropriation bill was passed and were never approved by the board. In its action of January 25, 1893, the board stated as follows: 'In view of the doubts in the mind of the board as to the successful working of this carriage, as expressed in its action of December 29, 1892, it is of the opinion that if Congress deem it advisable to authorize and direct the construction, the appropriation should be so worded as to make the cost of the carriage and foundations payable only after their successful test and acceptance by the War Department.'

"The board still adheres to the opinion thus expressed. Should the proposed amendment become a law, $93,500 might be paid to Mr. Emery for preliminary work on a carriage the plans for which have never been approved by experts on this class of work and the patents for which are not transferred to the United States, although it should prove of no value after completion.

"Other amendments proposed by Mr. Emery were also discussed at the same time, but as they were not adopted, it is unnecessary to give the action of the board."

By the act of June 6, 1896, the payments to be made on account were increased to 80 per cent, and the inventor was not required to give bond nor to return the money paid if the carriage was not accepted.

The very thing that the board said might happen—viz, that $93,500 might be paid to Mr. Emery and the Government get nothing for it—did happen, for over $95,000 was paid to him, and the carriage was never even completed.

July 27, 1896, the time for the completion of the contract was extended to March 17, 1898, and later was again extended to March 17, 1899.

The following letter is illuminating:

STAMFORD, CONN., *September 29, 1898.*

GENTLEMEN: In reply to your letter of September 24 in regard to progress on my contract for 12-inch elevating gun carriage of date March 17, 1893, which was modified by a provision of the act approved June 6, 1896, in such a manner as to permit the actual construction of this carriage, I would say work in the shop was commenced in the fall of 1896 and has proceeded during the past two years, but not with such rapidity as I had hoped and expected.

The drawings for this carriage had been made prior to this date, but many modifications of these drawings have been and are still being made, many of which were found desirable for the general utility and use of the carriage, and some to meet the exigencies which have arisen as the work progresses.

I spent three months in Washington in the spring and early summer in endeavoring to get contracts for guns which I felt would be of great advantage to our Government if ordered. The time thus spent somewhat delayed this work, but a source of much greater delay has been caused by the great pressure of other Government work being done in the shop upon which I rely for the final finishing of a large part of my carriage.

Another source of great delay is that much of the work is tentative and can not be decided or ordered until much other work is done, so that some of the rough material could not yet properly be ordered, some experiments having yet to be made first.

There are an unusually large number of different parts, each of which must be particularly looked after, some of which have required several shops to produce and finish a single piece.

Notwithstanding all these difficulties there has been put into the different shops material for the metal work of this carriage amounting to more than 420,000 pounds, from which parts have been finished covering over 222,000 pounds of finished weight. The rest of this material is in the various stages of construction, with the exception of the material which could not yet be ordered, for the reasons above given. Besides this there has been finished and delivered for the preliminary and proof tests of the carriage upward of 92,000 pounds of ammunition.

I have a good force at work on the carriage, pushing the work as fast as I can consistently with the great necessity of seeing that all the different parts of an entirely new machine are so made that they will properly fulfill the functions required of them and so that the whole may be successful when done.

I remain, your obedient servant,

A. H. EMERY.

The BOARD OF ORDNANCE AND FORTIFICATION,
War Department, Washington, D. C.

Mr. Emery soon found that his carriage was a stupendous undertaking and that he had not worked it out with sufficient fullness and accuracy to meet even the practical test of construction.

March 10, 1899, he asked for an extension of another year, and supported his claim for the extension in a long letter, dated March 23, 1899, from which I quote a sample paragraph:

SIR: In reply to yours of March 17 asking for detailed reasons why it has been impracticable to complete my gun carriage I have to state that primarily the carriage is not only comprised of many parts, many of which are large and difficult to make, but there are a great many parts different from each other, most of which have required very careful computations to find the strains upon them and determine their best form and size, and in doing this it has frequently and continually happened that after a large number of parts were fully designed designing other parts brought up facts and considerations which made it often desirable and often necessary to redesign many parts previously designed to work in harmony with other parts of the work being designed.

The contracts were thereupon extended to March 28, 1900.

On March 28, 1900, Mr. Emery requested another extension of his contracts, as follows:

1325 M STREET,
Washington, D. C., March 28, 1900.

SIR: I have very diligently pursued the work on my 12-inch disappearing gun carriage during the past year, but still find it far from completion. I have sent into the shops for this work so far, exclusive of the ammunition, something like 440,000 pounds of material, most of which is now finished, but there still remains very much to do, and I am compelled to ask for the extension of my contract for another year, which I hope will be sufficient to complete and erect the carriage, but am unable to say certainly as to the time of completion, owing to the trouble I shall certainly have in getting the springs, of which I require a very large quantity, of such sizes and lengths that I shall be compelled to erect more or less special apparatus, which has yet to be designed, for their production.

Awaiting your reply, I remain, your obedient servant,

A. H. EMERY.

The CHIEF OF ORDNANCE,
War Department, Washington, D. C.

It will be interesting and instructive at this point to quote what Mr. Emery said in his communication of December 24, 1892, respecting the time necessary to build his carriage:

It * * * is thought that this work may be completed and erected ready for test within one year from the date of the contract, and all due diligence will be made on my part to that end, but condemnations of parts for faulty castings or forgings or difficulty of getting these parts may delay the work.

By the act of May 25, 1900, an additional appropriation of $40,000 was made to complete the carriage.

It is still unfinished, and when completed, if that shall ever occur, it will have cost the Government $180,000, or three times what it could possibly be worth.

It is worthy of note that no obstacles have been placed in the way of this inventor by the War Department. He has had most generous, not to say improvident, treatment by Congress. He has already drawn from the Treasury three times as much money as more efficient carriages cost us, and no man can say how much more will be appropriated through the influence of those who have pinned their faith to its success.

PNEUMATIC DISAPPEARING GUN CARRIAGE (SECOND).

The Board of Ordnance and Fortification in its report for 1892 stated as follows with reference to the first carriage purchased on November 15, 1889, by the Chief of Ordnance:

The Board is not prepared to recommend the further purchase of disappearing carriages of this class for the reason that there are objections to any system which involves the use of extraneous power, as the cost of protecting the source of the power and the liability of disarrangement of the working parts of the same is very great. Other disappearing carriages for the same gun, which are represented to be capable of being operated entirely by hand, are now nearly ready for trial, and until they have been tested any purchase of pneumatic carriages would be premature.

The manifest objections to the system are, first, the mechanical difficulty of certainly preventing the leakage of air when under such high pressure; second, the necessity of steam power, involving the expense of protection from the enemy's fire, and the use of a mechanism more or less intricate, requiring the services of skilled labor. * * * It should be noted that these tests were made simply to determine whether the conditions of the contract had been fulfilled in a manner to justify the acceptance of the carriage.

On April 3, 1894, the following letter was sent by Brig. Gen. D. W. Flagler, Chief of Ordnance, to Hon. Wilkinson Call, chairman of the subcommittee on fortifications bill, United States Senate:

In response to a letter of March 30, inclosing a printed copy of the amendment intended to be proposed by Mr. TELLER to the bill (H. R. 4858) making an appropriation for fortifications, etc., which letter requested that I would submit my views to the subcommittee upon the Pneumatic Gun Carriage and Power Company's design for a 10-inch disappearing carriage therein provided for, I have the honor to make the following remarks:

This amendment contains a proposition not to authorize but to direct the Secretary of War to expend a considerable sum of money—$50,000—and leaves him no option in the matter, even though it should be subsequently ascertained, or subsequent facts or information obtained should show that the expenditure is not a judicious one. To make such an expenditure a proper one, it should be shown now, not only probably but with a fair degree of certainty, that the carriage to be built is a better one than any other the United States can purchase. It is not known to this Department that this is the case. This Department, on recommendation of the Board of Ordnance and Fortification, has already purchased from the Pneumatic Gun Carriage and Power Company a 10-inch disappearing gun carriage. The experiments with, and reports on this carriage, indicate that in principle it is inferior to other less expensive carriages which the Department can obtain. The description of the new carriage now proposed has not been submitted to this Department, but if it is to be understood that the principle is materially the same as the one mentioned above, it does not appear that the expenditure proposed would be judicious.

As stated, the description of the carriage has not been furnished to this Department, but I am informed that it has been submitted to the Board of Ordnance and Fortification, and the project reported on adversely by that board.

By act of Congress August 1, 1894, $50,000 was appropriated for the purchase of a second carriage. On August 2, 1901, the artillery committee of the Board of Ordnance and Fortification witnessed the acceptance test of this carriage at the Sandy Hook Proving Ground. The following is quoted from the report of this committee:

With the exception of the time required in traversing by the electric power and pneumatic power, the carriage has failed in all the prescribed acceptance tests, and its acceptance is not recommended.

In letter of August 9, 1901, the Pneumatic Gun Carriage and Power Company, through Mr. C. E. Creecy, the president, proposed to the Board of Ordnance and Fortification the following settlement of the matter:

The Government to take the carriage as it now stands and retain the amount of the final payment and reservation, $12,802, and release our company from all obligations on account of our contract. This settlement would stand us a very considerable financial loss, but we will be glad to finally close the matter and bring to a termination the many expenses and vexations incident to the work. Congress, by its action in similar cases to ours, where purely experimental work is involved, has shown that it is its policy to deal liberally with inventors where the work represents development for the sole benefit of the Government. In the case of the Emery carriage, where no results have been accomplished and the contract time has long since expired, Congress not only has refrained from enforcing penalties, but has appropriated additional funds to carry on the work.

This matter is now before Congress with a view to the passage of an act to relieve the company as requested in the above letter.

GATLING 8-INCH HIGH-POWER GUN, PROCURED UNDER ACT OF CONGRESS DATED JUNE 6, 1896, APPROPRIATING $40,000.

Under date of March 31, 1896, the Chief of Ordnance wrote the following letter to the Secretary of War, which is quoted in full:

I have the honor to return herewith drawing and description of Dr. Gatling's proposed method of gun construction, referred to this office by the Board of Ordnance and Fortification for report, and in reply to state as follows:

Within the past few years Dr. Gatling has made a number of suggestions and taken out patents for supposed improvements in the manufacture of heavy ordnance, which have come in one form or another before this Department, but the particular plans now under consideration are new to the Department.

The inclosed drawing of a combined furnace and rolling mill proposed by Dr. Gatling is so general in character and so lacking in detail that the Department is unable to say whether or not it would perform the work required of it and at the estimated cost. But even with a satisfactory working plant, the Department has little confidence in the method proposed for the manufacture of cannon. Experience shows that the mere mandrelling of the bore surface could have but little effect in working the metal in the middle and outer layers of the walls of the gun. As the casting must be a thick one,

the metal in the middle portions would remain more or less coarsely crystalline in structure. There can be no doubt that the average quality of the metal in such a gun would be far inferior to that in the built-up forged steel gun as now manufactured, and that the desired initial tensions would be much less perfectly attained.

So far as mere cheapness of production is concerned, as cheap and certainly a stronger gun can be produced from a single forging, which, after finishing and treatment of the metal, would be cooled from the interior in order to induce initial strains, and thus place the gun in the most suitable condition for resisting internal pressures.

Dr. Gatling refers to a method of interior cooling as a mode of treatment that might be applied to guns made according to his method.

This proposition is not a new one. It is, in theory, only the same as the Rodman principle of hollow casting, and has been frequently mentioned and applied, to some extent, in the manufacture of guns made from steel forgings. The same may be said of the proposition to lessen the initial strains by annealing, should the strains produced by the interior cooling at any time prove too great.

Both of these propositions are embodied in plans that were originally submitted to this office by Lieutenant—now Captain—Hobbs, of the Ordnance Department, to be applied, however, to a gun consisting of a single forging manufactured with all the care and precautions usual in making forgings for built-up steel guns. The Department has tested an experimental forging treated in the manner proposed by Captain Hobbs, with such favorable results that the question of making a gun on this plan is now under consideration. In this plan no expensive addition of plant for the manufacture of forgings is required. The interior cooling is done, with slight expense, at a certain stage in the usual process of manufacture of the forgings, and any subsequent annealing that may be required is an operation similar to that now in vogue in this manufacture, and would be done in the same furnaces that are now used.

In view of the experimental nature of the propositions made by Dr. Gatling—not only with respect to the operation of the proposed furnace, but also as regards the quality of the gun to be produced—it is not considered advisable for the Government to bear the expense of erecting this plant and producing a gun. If, however, the company represented by Dr. Gatling will produce a complete gun for test, the Department might probably furnish the ammunition for and pay the expense of the test, and also pay for the gun itself, a sum equal to the present cost of a built-up gun, provided the test were successful.

It is understood that Dr. Gatling represents a company organized with a capital of $1,000,000, and it may be expected that the commercial advantages incident to the introduction of his methods of casting and forging in the new form of furnace, if successful, would ultimately fully remunerate the company for other expenses incident to the production of this gun.

It is recommended that this paper be referred to the Board of Ordnance and Fortification.

In compliance with the above-mentioned act of Congress, this cast steel gun was manufactured and was sent to the proving ground on November 1, 1898, for test in accordance with a programme prepared by the Board of Ordnance and Fortification. Firings, were begun December 15, 1898. At the fifteenth round the breech end of the gun burst explosively into numerous fragments, which were scattered in all directions for about 300 feet from the platform on which the gun was mounted. One of the largest of these fragments, containing half of the powder chamber, shows along the ruptured surface three cavities extending from 1 to 4 inches into the body of the metal.

Dr. Gatling's accomplishments in other forms of ordnance are well known and everywhere recognized, but his eminence ought not to be taken as implying perfection in everything he undertakes.

HOWELL 10-INCH COUNTERPOISE CARRIAGE, PURCHASED IN COMPLIANCE WITH THE ACT OF CONGRESS DATED JUNE 6, 1896, APPROPRIATING $50,000.

In a letter dated April 27, 1896, the Chief of Ordnance informed the Secretary of War that an examination of the drawings and model of the Howell disappearing carriage did not show the advantages claimed for the design, and led to the belief that it was inferior to the carriage then adopted for service. He also stated that even if it were equal in efficiency and economy to the adopted type, it was considered disadvantageous to have two entirely different patterns in service. He was therefore unable to recommend the passage of the bill.

The act of Congress approved June 6, 1896, appropriating $50,000 for the purchase of this carriage, provided that it should be subjected to the same test as a Buffington-Crozier 10-inch disappearing carriage with respect to ease of maneuvering and rapidity of fire, of traversing and raising to the firing position. The test of the carriage was begun September 22, 1898, and was continued, with interruptions necessitated by alterations and repairs, until completed January 24, 1899. In all, 26 rounds were fired.

In the report of the test by the Ordnance Board, dated February 11, 1899, the following points are noted:

The eighth round broke several bolts in the counterweight box and started the front part of the traverse circle. Ten additional anchor bolts were put in the front part of the traverse circle and the counterweight box was strengthened by 12 bolts. During the accuracy test one of the front anchor bolts worked loose, and after the test the chain of the elevating shaft counterweight was found broken and was replaced by wire rope. The method of delivery of shot to the gun—i. e., by a crane—is very poor. The traversing mechanism is unsatisfactory, being both slow and uncertain. The retraction mechanism is too slow, requiring about nineteen minutes, as compared with two minutes for the service carriage. The parapet required for this type carriage is in height nearly double that required for the service carriage.

The great merit of the carriage, when considered for service, is the absence of sliding parts. The carriage is well worth a further test if the defects mentioned above can be corrected.

Based on this report, the Board of Ordnance and Fortification recommended the adoption of this carriage as an additional type for service.

The Ordnance Department held that a sufficient number of rounds had not been fired from this carriage upon which a definite recommendation could be based, and further, that the number of rounds that had been fired indicated that the carriage did not meet the specifications of the act in that it had not successfully passed the same test to which the Buffington-Crozier 10-inch disappearing carriage had been subjected, and that, in accordance with the report of the Ordnance Board, a further test should be made to determine whether or not the defects reported by the board could be corrected.

The Secretary of War therefore withheld his approval of the recommendation by the Board of Ordnance and Fortification, and again referred the matter to that board for further consideration and report.

Before making these further tests the Board of Ordnance and Fortification, at the request of the licensee, made an allotment of $5,605.10 to cover the cost of certain changes in the traversing and retracting mechanisms and in the mounting.

The artillery board of the Board of Ordnance and Fortification, in their report of the further tests made, state:

The traversing and retraction mechanisms are crude and unsatisfactory and much inferior to those found in the present service carriage, but it is also the opinion of the committee that neither of these features is an essential part of the Howell disappearing system.

On July 3, 1901, the commanding officer of the Sandy Hook proving ground, in forwarding the firing record of these tests of the 10-inch Howell disappearing carriage, states:

The new retraction device and traversing device have added little to the efficiency, while detracting materially from the structural appearance of the carriage.

It has not been demonstrated that this carriage could not have been made to operate serviceably, and neither has it been demonstrated that the system offers any advantage over that in use in the service, and the example tested had many disadvantages of design and practical elements which were never overcome.

Surely there was no reason for adopting this carriage, whatever its merits might be, if it did not appear to be at least as serviceable a carriage as that which was in successful use.

GATHMANN TORPEDO SHELL AND GUN.

The history of the controversies between the Navy Department and Congress and between the War Department and Congress respecting the Gathmann shell and gun is the most interesting and satisfactory of all the subjects to which I have referred in these remarks.

This is true because—

1. The Gathmann Company clearly defined what the shell and gun would do.

2. The Navy Department and the War Department asserted that the results claimed could not be produced.

3. Congress appropriated ample funds to conduct experiments.

4. Many tests and experiments were conducted, all sustaining the position of the military experts, and the final test was made under conditions absolutely guaranteeing completeness and fairness.

5. The result of this test absolutely demonstrated two facts:

First. That the Gathmann shell and gun are practically valueless as implements of war; and

Second. That the Regular Army 12-inch gun, with the regular armor-piercing projectile charged with the latest Army explosive, is the most powerful and destructive weapon ever devised, to compare which to the Gathmann shell and gun is like comparing a Colt automatic rapid-fire gun to a Springfield rifle.

Generally stated, the claim of Gathmann was that the explosion, that is, detonation, of a large amount of high explosive against the side of a battle ship would destroy the vessel. His plan, therefore, was to fire a large projectile containing, say, 500 or 600 pounds of gun cotton and cause it to explode at the instant of impact against the target. If the target was made as nearly as possible of the strength of the side of a battle ship, it would be destroyed.

His theory was that upon explosion the forces generated would act in the direction of the line of fire.

The theory of the Army and of the Navy is to pierce the armor first and explode afterwards.

From the following correspondence between the inventor and the Chief of the Bureau of Ordnance of the Navy Department the view of that Department clearly appears:

THE RALEIGH,
Washington, D. C., September 29, 1897.

DEAR SIR: Referring to conversation with you, and in furtherance of the experiments to settle the advisability of throwing large quantities of high explosives from powder guns, we desire to submit the following:

We wish to try the effect of detonation of varying quantities of gun cotton upon nickel-steel armor plates, to ascertain the quantity probably required to put a battle ship out of action. Reflection has convinced us that we need not start below a 6-inch plate and, therefore, that the experiments need not be numerous nor prolonged. It would probably take in all not over 1,000 to 1,500 pounds of gun cotton, a good part of which is in hand in connection with these experiments.

We submit herewith drawings of a gun, which we present as an arm for the now unused monitors, capable of throwing a charge of 600 pounds of air-dry gun cotton, with a velocity of 1,500 to 1,600 feet per second, thus cheaply utilizing these now practically useless vessels and making them gigantic engines for coast or harbor defense.

We assume in this that while a few experimental shots have yet to be fired, you do not doubt that the Gathmann safety fuse and system of firing have been so exploited as to render it certain that practically unlimited charges of wet gun cotton can be safely fired and detonated upon impact, the only restriction being the caliber of the gun.

We can also quite appreciate the grave responsibility incurred in changing either the guns or ammunition upon vessels now in commission constructed upon certain rigid lines. We have, therefore, thought that you might favorably entertain the proposal to man these monitors, and possibly other special vessels, such as the *Vesuvius* and *Kathadin*, with guns made after such plans as we submit, leaving the greater question to be settled after more complete experience.

We would call your attention to the fact that the weight of the guns, as per plan, would be less than 22 gross tons, light enough to be substituted for the obsolete guns now on board the monitors.

Very respectfully, yours,

LOUIS GATHMANN.
G. W. McMULLEN.

Capt. CHARLES O'NEIL,
Chief of Bureau of Ordnance,
Navy Department, Washington, D. C.

To this proposition Admiral O'Neil made the following explicit and conclusive response:

DEPARTMENT OF THE NAVY, BUREAU OF ORDNANCE,
Washington, D. C., October 14, 1897.

SIR: The receipt is acknowledged of your communication of the 29th ultimo relative to making experiments by detonating varying quantities of gun cotton upon nickel-steel armor plates to ascertain the quantity probably required to put a battle ship out of action, etc.

The Bureau is of the opinion that the problem can not be solved in the manner you suggest, because it is not practicable to reproduce by means of a projectile fired from a gun against a vessel at ordinary firing range the action due to the detonation of a mass of gun cotton in close contact with a plate at the proving ground. Therefore the Bureau does not believe that any useful purpose would be served by carrying on expensive experiments of such a character.

With reference to paragraph 2 of your letter, presenting drawings of a proposed gun for use in the old monitors, to throw projectiles carrying 810 pounds of gun cotton with a velocity of 1,500 feet per second, and to the succeeding paragraph in your letter, which reads, "We assume in this that while a few experimental shots have yet to be fired, you do not doubt that the Gathmann safety fuse and system of firing have been so exploited as to render it certain that practically unlimited charges of wet gun cotton can be safely fired and detonated upon impact, the only restriction being the caliber of the gun," the Bureau replies that it can not recommend or approve of the system to which you refer for naval use.

Moreover, you are incorrect in assuming that the Bureau does not doubt but that by the Gathmann system it is certain that practically unlimited charges of wet gun cotton can be safely fired and detonated upon impact. The Bureau has not sufficient confidence in it to the extent of being willing to recommend its adoption on any scale for naval purposes.

While it is true that a few shells of comparatively small caliber containing wet gun cotton and fitted with the Gathmann safety fuse have been safely fired from a short gun of old type with moderate velocities, the Bureau is not aware of any case in which the shell charge was detonated on impact, nor is it conclusive evidence that because a few pounds of wet gun cotton have been safely fired an immense projectile, 7 feet 6 inches long by 17.2 inches diameter, to carry 810 pounds of gun cotton, and weighing complete 1,879 pounds, such as is submitted in your drawing, could be fired with safety.

The gun proposed, of 36 feet 9 inches in length and weighing approximately 22 tons, could probably not be mounted in the turret of one of the old monitors, nor is it likely that proper loading arrangements could be effected for so large and heavy a projectile in the limited space available in vessels of the monitor class.

The Bureau has no funds available for further experiments with the system, and can therefore make none, nor is it considered desirable to do so.

In carrying on the experiments with the Gathmann system, the Bureau has endeavored to carry out the views of the inventor to the best of its ability.

Respectfully,

CHARLES O'NEIL,
Chief of Bureau of Ordnance.

Messrs. LOUIS GATHMANN and G. W McMULLEN.

Next we find a joint board of Army and Navy officers giving expression to a well-considered but unmistakable opinion, as follows:

Proceedings of a joint board of Army and Navy officers convened by orders from the War and Navy Departments, upon request of the Chief of the Bureau of Ordnance, Navy Department, a copy of whose letter to the Secretary of the Navy is appended and marked "A."

WASHINGTON, D. C., *July 14, 1898.*

The board met in the office of the Board of Ordnance and Fortification at 10.30 a. m. the 14th instant.

Mr. Louis Gathmann requested permission to appear before the board to present the claims of the Gathmann shell for high explosive charges. Mr. Gathmann presented, in the form of a letter, to the board his claims for his system. A copy of this letter is appended and marked "B."

The board carefully reviewed the experiments made by the War and Navy Departments up to date, and finds that for service guns and service projectiles the subject of the use of a high explosive for shells has made satisfactory progress, and that shell charges of gun cotton in a certain form, and weighing less than 35 pounds, can be projected safely from a high-power gun with maximum pressures and velocities.

Promising experiments have been made in projecting such bursting charges through armor plate and detonating the charge behind the plate, but the experiments have not sufficiently advanced to warrant the statement that it can in all cases be done successfully when the armor plate is materially increased in thickness as compared with the projectiles.

The board is of the opinion that the experiments made with special shell to be used in service guns or in a special type of gun have not been sufficiently successful to warrant the introduction into the services of such a shell or gun.

As the system devised by Mr. Gathmann has been brought before the board by his action, and since it has been experimentally tested at both of the Government proving grounds, and the members of the board are familiar with the experiments, it is considered proper and pertinent to record its opinion that the Gathmann system, even if successful, would have a limited field of action as compared with modern ordnance, and the tests thus far made with this system have not shown results that warrant any further expenditure by the Government in its development.

Very respectfully,

A. R. COUDEN,
Commander, U. S. N., Senior Member.
KARL ROHRER,
Lieutenant-Commander, U. S. N., Member.
FRANK HEATH,
Captain, U. S. A., Member.
GEORGE MONTGOMERY,
Lieutenant, U. S. A., Member.

The SECRETARY OF THE NAVY.

[Indorsement.]

DEPARTMENT OF THE NAVY,
Bureau of Ordnance, August 10, 1898.

Respectfully returned to the Department.

The Bureau concurs in the within opinion that the experiments made with special shell to be used in service guns, or in a special gun, have not been sufficiently successful to warrant the introduction into the Army or Navy of such a shell or gun.

In the Bureau's opinion, the tests thus far made, both at Indian Head and Sandy Hook, clearly show that the system proposed by Mr. Gathmann has not been developed to a point justifying its service use, and even were the merits of the system such as to render its adoption desirable after it has been completely developed, the fact that some $75,000 Government money has already been expended with no better results seems to the Bureau to afford sufficient reason for not proceeding further in this direction, and it is believed that should it ever be found desirable to use shells of large capacity loaded with a high explosive, instead of with gunpowder, it would be better to use shells of ordinary form rather than those of the Gathmann design, even at the expense of a slight reduction in the weight of the explosive carried.

The actual tests made with Mr. Gathmann's projectiles have been failures in almost every case, and it may be fairly said that the only useful result attained by so large an expenditure of money in experiments with the Gathmann shell has been the proof that the destructive effects of very large quantities of gun cotton against structures is vastly less than has been commonly supposed.

CHARLES O'NEIL,
Chief of Bureau of Ordnance.

GATHMANN 18-INCH GUN.

A letter from the Chief of Ordnance, dated December 30, 1898, to the Secretary of War and inclosure therein are quoted herewith in full:

Referring to verbal communications from the representatives of the Gathmann Company, with reference to an allotment of $200,000 for the purchase and manufacture of two guns on the Gathmann system, of 18-inch caliber, I have the honor to report as follows:

On January 25, 1898, the Board of Ordnance and Fortification made an allotment of $2,750 to enable the Chief of Ordnance to make certain tests with Gathmann projectiles and fuses to be fired from 8-inch service guns. This recommendation having been referred to the Chief of Ordnance for remark was returned to the Secretary of War with a report on the subject, a copy of which is inclosed.

The report in general pointed out the fact that extensive experiments and tests had been made by the Navy Department under an appropriation of $50,000 for the Gathmann system; that after test that Department did not consider the projectiles adapted for use with guns fired at a low angle, or even if fired at a high angle under low velocities carrying very large charges of gun cotton. In view of this fact, then, the Chief of Ordnance recommended that the experiment be not carried out.

On March 30 the Secretary of War directed that the Chief of Ordnance make an estimate of from $15,000 to $20,000 to be obtained from the allotment of $50,000,000 appropriated for national defense to test the Gathmann system of high-explosive projectiles. After considering the matter with the representatives of the company an estimate was made for $18,020, which was allotted.

Subsequently the sum of $1,980 was obtained from the same appropriation for these experiments, making the total amount allotted $20,000. With this allotment experiments have been conducted at Sandy Hook to test the system, and on June 30, 1898, the commanding officer of Sandy Hook proving ground made a full report of the experiments up to that time.

At the request of the Secretary of the Navy a joint board of Army and Navy officers was directed to meet in Washington to consider the subject of the Gathmann system, and Mr. Louis Gathmann requested permission to appear before the board and presented to it a letter giving the claims for his system.

This board, consisting of two Navy officers and two Army officers, reported, among other things, as follows:

"As the system devised by Mr. Gathmann has been brought before the board by his action, and since it has been experimentally tested at both of the Government proving grounds, and the members of the board are familiar with the experiments, it is considered proper and pertinent to record its opinion that the Gathmann system even if successful would have a limited field of action as compared with modern ordnance, and the tests thus far made with this system have not shown results that warrant any further expenditure by the Government in its development."

Notwithstanding the report of this board, however, further experiments were made at the Sandy Hook proving ground, the latter being made principally with a view to testing Mr. Gathmann's fuse.

In view of all the facts stated this Department would not recommend the expenditure of any further sums of money for the test of this system on which the Government has already expended about $70,000 without, in the opinion of those who are familiar with the experiments, results of a satisfactory nature.

If, however, it should, in the opinion of superior authority, be determined that further trial should be made, it is recommended that not more than one gun be built originally, and that if it is to be built the material may be procured by the Ordnance Department by advertisement in the usual manner, and that the finishing and assembling of the piece may be made under direction of the Ordnance Department, either at one of the gun-manufacturing establishments (probably the Bethlehem Iron Company) or else at the Army Gun Factory.

The material should be of the best obtainable, and that can be procured best under Government specifications and under the supervision of inspecting officers of the Ordnance Department. In this way it is believed that the total cost of procuring the material and finishing and assembling one of these guns will be much less than the amount indicated by the representatives of the Gathmann Company.

[Inclosure to the foregoing letter, dated February 8, 1898.]

In connection with the recommendation of the Board of Ordnance and Fortification that an allotment of $2,750 be made for the Chief of Ordnance to purchase Gathmann projectiles, etc., returned herewith, I have the honor to submit the following report:

The Gathmann system of high-explosive projectile was tested last year by the Bureau of Ordnance of the Navy Department under an appropriation of $50,000 therefor made by Congress in the act approved July 10, 1896.

The Navy Ordnance Bureau tested the Gathmann projectiles by firing from an 8-inch M. L. R. gun and an experimental 12-inch rifle and by explosions at rest and against armor plates. The design underwent a number of modifications during these tests for its development.

In the first firings from the 12-inch rifle, three out of four of the projectiles broke up in the gun or in flight. The projectile was then strengthened. The projectiles, in these trials, were filled with water instead of gun cotton. One round was fired from the experimental 12-inch gun with the shell charged with 307 pounds of gun cotton and 35 grains of fulminate in the fuse. This projectile exploded in the gun, destroying the gun.

In subsequent firings from the 8-inch gun, and also in the explosions at rest, the fuse not infrequently failed to function properly, no detonation being produced. Only three rounds with shell charged and fused were tried, and in none of these was the gun-cotton charge detonated. The explosion against plates produced no material damage. The pressure in either gun did not exceed 9 tons, the velocity did not exceed 1,700 feet, and generally both pressure and velocity were below those figures. The projectile broke up on striking the butt.

The numerous trials of this projectile and the expenditure of the large sum of money mentioned by the Navy Department did not result in a recommendation of its adoption for service.

In design, the projectile admits, it is claimed, of carrying safely a larger charge of gun cotton for a given weight than other known types, the only limit in this respect being the safe pressure to which gun cotton can be subjected under firing conditions of suddenly applied pressure. Whether this pressure was exceeded in the case of the 12-inch gun, or whether the premature explosion was due to a defective fuse, or breaking up of the projectile in the bore, has been disputed; but it is the opinion of the Navy Department that these projectiles ought not to be subjected to the high pressures employed with full service charges.

As these projectiles break up upon impact, they would have little or no penetration; and the effect of the high explosive charge upon an armor plate would, it is believed, be largely wasted. The Navy Department does not consider this projectile adapted for use with guns fired under a low angle or having a flat trajectory.

These facts are submitted to the Secretary in order that he may determine whether it is worth while to continue the experiments of the Navy Department with this projectile, which would appear to be the direction indicated by the recommendation of the board. In any case this Department would not wish to have the projectile tested in any of the new steel guns, or in any gun, if high pressures are to be employed for propelling the projectile.

On March 1, 1901, Congress made a further appropriation, as follows:

To enable the Secretary of War to make a comparative test of destructive energy between the Gathmann torpedo gun, now at Sandy Hook, and the army 12-inch service rifle, such tests to be made against two similar targets representing the side construction of the latest type of battle ship, each of said structures to be faced with a kruppized armor plate 8 feet by 16, and 12 inches thick, and at least ten shots to be fired from the Army rifle against one structure and one or more Gathmann torpedoes against the other; for the erection of the structures and the purchase of materials, armor plates, ammunition, mount for the torpedo gun, and other necessary expenses of such test, $50,550.

A report of the tests made, dated November 29, 1901, by a joint board of Army and Navy officers, is found in Senate Document No. 53, and is quoted in full. I hope it will all be read by such persons as may be interested in this subject. It is most informing and free from mere technical details.

NEW YORK ARSENAL, N. Y., *November 29, 1901.*

SIR: The act of Congress (Public No. 113) approved March 1, 1901, appropriated $50,550 to enable the Secretary of War to make comparative tests of the destructive energy between the Gathmann torpedo gun, now at Sandy Hook, New Jersey, and the 12-inch Army service rifle, such tests to be made against two similar targets representing the side construction of the latest type of battle ship, each of said structures to be faced with a kruppized armor plate 8 feet by 16 feet and 12 inches thick, and at least 10 shots to be fired from the Army rifle against one structure and one or more from the Gathmann torpedo gun against the other. This test was conducted by a joint board of officers of the Army and Navy appointed by Special Orders, No. 252, dated Headquarters of the Army, Adjutant-General's Office, Washington, October 26, 1900.

The targets were constructed by the Navy Department. The plates were 16 feet long by 7½ feet wide and 11½ inches thick. They each weighed 47,000 pounds.

The target structures were similar in all respects, and each actually represented a section of the side of the latest type of battle ship, but the structures themselves lacked the support of the adjacent armor plates and of the surrounding frames, beams, and decks that make up the whole structure of the ship, it being impracticable to exactly simulate a battle ship on so small a scale. It is considered, however, that the character of these experiments was sufficient from which to make conclusive deductions as to the effect upon a battle ship when similarly attacked.

This test being for the purpose of comparing the destructive effect of two systems of attack, it will lead to a better understanding of the results to briefly describe the object of each system.

By the Gathmann system it was proposed to detonate a large quantity of gun cotton against the side of an armored vessel without any attempt at penetrating the armor. It was claimed by the promotors of the system that the volume of gas produced by the explosion could be made to expend its force against the armor, and on the effect of this force the destructive energy of this system depended. It was claimed that a single shot would destroy a battle ship.

The method used in the 12-inch Army service rifle contemplated, first, penetration of the armor, and then the detonation of a high explosive contained in a thick-walled projectile. Thus there is involved the destruction of the armor, of the structure of the vessel, of the armament and interior mechanism, and of the personnel.

Of necessity the targets were set up on shore. Is was impracticable to place the targets at distances from the guns of more than a few hundred feet, consequently it was necessary to use such firing charges as would give to the projectiles velocities on striking the plates such as they would have had if they had been fired with larger charges and at greater distances from the targets. Thus the firing of both guns was conducted at simulated ranges.

The board accepted the recommendation of the Ordnance Board, United States Army, as to details of projectiles and charges to be fired from the Army rifle, these details being based upon the use of the present type of 12-inch gun, and without consideration of the greater power of the latest adopted type of this caliber.

The board accepted the statements of representatives of the Gathmann Company as to the weight of charge to produce the desired striking velocity. The simulated ranges as given, however, are computed from the actual results obtained from firing in the third round a full charge of powder, as designated by the Gathmann Company. The company protested against firing shots at either target at simulated ranges less than 7,000 yards. But the board overruled this protest, it being considered that such a test would not give conclusive results as to the comparative destructive effect of the two weapons. This action was not considered unfavorable to the claims of the Gathmann system, since in a written communication from the company its president stated that "even should the range of 7,000 yards be deemed extreme, it can not be disputed that a weapon effective at that range would be more so at a shorter one."

Representatives of the Gathmann Company were consulted before each round as to the details of loading and firing, and in each case expressed themselves as being satisfied with the conditions.

THE GATHMANN TEST.

Round 1.—A Gathmann projectile weighing 1,834 pounds, including 497 pounds of wet gun cotton, struck the center of the plate at a velocity of 1,650 feet per second, corresponding to a range of 2,709 yards. The energy of impact due to the mass of the projectile was 34,610 foot-tons. The gun cotton in the shell detonated on striking the plate. The plate was dished in the center 1½ inches on its major axis and one-half inch on its minor axis and was slightly flaked at the point of impact. In other respects the plate was uninjured. The tap bolts securing the top plate of the armor were sheared; the bracket plates of the cellular structure in the rear of the frames were buckled about 4 inches; a 3-inch plate which had rested, unsecured, on wooden sleepers in the sand, in front of the plate, was moved away and the edge next the plate was pushed downward 9 inches into the sand. The backing, the frames behind the armor, and the wooden uprights against which the whole rested were practically uninjured save for the shearing of a few rivets. Had this projectile struck the belt armor of a battle ship, which the target represented, it would not have endangered the vessel.

Round 2.—A Gathmann projectile weighing 1,839 pounds, including 507 pounds of wet gun cotton, struck the right center of the plate with a velocity of 1,650 feet per second, corresponding to a range of 2,709 yards. The energy of impact was 34,700 foot-tons. The gun cotton in the shell detonated on striking the plate. The effect of this impact on the plate and on the structure behind the plate was similar to that of the preceding round. The plate, the backing, the frames behind the armor, and the wooden supports against which the whole structure rested remained practically uninjured. The bracket plates forming the sides of the cofferdam behind the framing were still further buckled, allowing the right-hand edge of the plate to be moved 2 feet 9 inches in the rear. The left-hand edge was sprung back to its original line. The whole structure was moved 13 inches to the right. The plate being practically uninjured, it is obvious that no harm could have come to the personnel, armament, or the interior mechanism of a vessel. It being evident also that neither of these rounds would have so far injured the structure of a ship as to endanger its buoyancy, it was decided to fire a third shot at a maximum velocity and point-blank range in order to determine if it were possible to inflict any damage whatever upon the plate by this system of attack.

Round 3.—A Gathmann projectile weighing 1,840 pounds, including 514 pounds of wet gun cotton, struck the center of the plate with a velocity of 1,970 feet per second, corresponding to point-blank range. The striking energy was 49,500 foot-tons. As a result of this impact there was a vertical through crack 8 feet distant from this point of impact, extending through a row of bolt holes and through the place struck in the preceding round. In other respects the effect on the plate was as in the former rounds.

The backing, the skin plates behind the backing, and the wooden supports against which the structure rested were slightly displaced. The left-hand edge of the plate was thrown backward about 15 inches under the top plate. The bottom left-hand side of the plate was shoved back 4 feet. The whole structure, including the wooden supports against which the section rested, was revolved to the left about 30 degrees. The top layer of deck plating was detached and thrown to the rear on top of the sand butt about 10 feet. The metal structure behind the armor on left-hand side of the target collapsed.

It is evident that had this shot struck the belt armor of a battle ship it would have resulted in no injury to the interior mechanism, the armament, or the personnel of the vessel and would not have seriously menaced its buoyancy. While the target structure was very much damaged by the accumulated effect of the pounding resulting from these three shots striking with a total energy of 119,000 foot-tons, neither shot in itself would have endangered the buoyancy of a battle ship or have wrought serious local damage.

With the idea of determining whether the effect on the target of the impacts of the three preceding rounds was due to the detonation of the gun cotton or to the striking energy of the mass of the projectile, it was suggested by the Gathmann Company that the fourth empty shell be filled with sand and fired at the target. An examination of the target, however, showed that the true effect of the energy of such an impact could not be obtained, owing to the then condition of the target. A just comparison between projectiles, loaded one with gun cotton the other with sand, could only be made by firing each at new and like targets.

12-INCH ARMY SERVICE RIFLE.

Round 1.—An armor-piercing shot weighing 1,001 pounds and 7 ounces, including 19 pounds 7 ounces of Army high explosive, struck the center of the target with a velocity of 1,800 feet per second, corresponding to a range of 4,400 yards. The striking energy was 22,500 foot-tons. This shot penetrated the plate and was detonated just in the rear. The backing, the skin plates, frames, and cofferdam plates were completely demolished in the line of this impact. The crater formed in the sand butt in the rear of the structure measured 15 feet by 6½ feet. Pieces of the plate and projectile passed through the structure, through the butt, and were recovered at distances of 150 to 200 feet in rear of the butt. The rivets in the top plate were sheared, the side plates of the cofferdam were buckled about 3 inches, and the plate was forced back bodily about three-fourths of an inch. It is evident that had this shot struck a battle ship, it would have wrought serious damage to the vessel.

Round 2.—An army 12-inch armor-piercing shot weighing 1,006 pounds, including 23 pounds of Maximite, struck the right center of the plate with a velocity of 1,804 feet per second, corresponding to a range of 4,400 yards. The striking energy was 22,500 foot-tons. The shot detonated in the plate, completely wrecking the right-hand portion and demolishing the frames behind the armor and the plates of the cofferdam. It is evident that had this shot struck a battle ship it would have wrought serious injury to the vessel.

Round 3.—A 12-inch armor-piercing shell weighing 1,045 pounds, including 60 pounds of army high explosive, struck the lower left-hand center of the plate with a velocity of 2,073 feet per second, corresponding to a range of 1,880 yards. The striking energy was 51,100 foot-tons. The shell penetrated and detonated in the plate. As a result of this impact the plate was totally wrecked and the backing, frames, beams, and cofferdam plates of the structure were completely demolished. An opening was made through the plate 4 feet wide by 8 feet long.

The lower left-hand quarter of the armor plate was broken into six large fragments and numerous small ones, the largest being about 4½ feet square, which, with the backing and skin plates, was torn loose from the structure and turned inward, so that the left-hand edge of this fragment was in the plane of the original face of the plate. One large fragment about 2 feet by 2½ feet by 11½ inches, and weighing about 2,500 pounds, was hurled through the target, through the butt, and was recovered 135 feet in the rear of the butt. Numerous fragments of the plate and projectile passed through the target structure, through the butt, and were recovered in the rear. The effect of this shot would have resulted in serious injury to a battle ship.

The act of Congress required that at least ten shot should be fired from the army rifle against one structure, but the annihilation of the structure by the three rounds made it impracticable to comply with this mandate.

The results of these experiments give a fair illustration of the effect that can be produced by each system. The separate effect of each round and the accumulated effect of the three rounds from the Army service rifle was, in each and every instance, superior to that from the Gathmann gun.

After a careful consideration of the effect of the various impacts on the respective targets of the Gathmann gun and the 12-inch Army service rifle, the board finds that none of the impacts from the Gathmann gun would have endangered a modern battle ship; that the Gathmann system is not effective as a means of attacking armored vessels, and that any one of the shots from the 12-inch Army service rifle would have wrought serious injury to a modern battle ship as regards its buoyancy, the interior mechanism, the armament, and the personnel.

It may be said in this connection that the destructive effect of the 12-inch Army service rifle surpasses anything hitherto obtained from any gun, as far as this board has knowledge or as the records show.

In considering the value of the two guns, not only must the destructive energy be taken into account, but their respective merits with reference to range and accuracy. From the experiments just completed it is found that the 18-inch gun which fires the Gathmann projectile has a velocity of less than 2,000 feet per second. The Army 12-inch rifle which was used in the test has a velocity of 2,300 feet per second, and the latest type adopted by the War Department has a muzzle velocity of 2,650 feet per second. Both in initial and sustained velocities the 12-inch Army service rifle of both models is so far superior as to give at all ranges a very much greater probability of hitting, and the remaining velocity at 4 miles is sufficient to perforate the heaviest armor now being put on battle ships.

There is nothing in the Gathmann system to recommend its adoption in the public service of the United States, or to warrant further experiments.

Photographs of the guns and targets and showing the effects of the various rounds, together with the detailed records of firing and of the results of the impacts, are appended to this report.

The CHIEF OF ORDNANCE, U. S. A.,
Washington, D. C.

[First indorsement.]

OFFICE OF CHIEF OF ORDNANCE,
Washington, December 2, 1901.

Respectfully submitted to the honorable the Secretary of War.

As this test has afforded the first occasion for the demonstration to others than the officers of the Ordnance Department, who have been concerned with their development, of the power of the explosives used with the 12-inch army rifle, it appears pertinent to invite attention to the cardinal points of the achievement, namely, the development of explosives:

Sufficiently insensitive to be fired with safety from high-power guns with full charges.

Sufficiently insensitive to withstand the shock of impact against heavy armor plate.

Sufficiently powerful to produce as great shattering effect as is desired.

The development of a detonating fuze which is capable of being fired with safety from high-power guns with full charges; which is sufficiently powerful to cause the realization of the full force of the explosive; which, set in action by the impact of the projectile, produces detonation after sufficient delay to insure penetration and the greatest destructive effect both upon and behind the plate.

WILLIAM CROZIER,
Brigadier-General, Chief of Ordnance.

These formal words of an official report do scant justice to the really dramatic features of this competitive test of the Gathmann gun and shell and the Army service gun and projectile.

The splendid efficiency of the technical arms of the Army and Navy was never so graphically exhibited, and one must examine the various photographic illustrations attached to the report of the officers in charge of the test to appreciate how apparent and overwhelming is the superiority of guns and projectiles now in the Government service.

I ought not to leave the discussion of the Gathmann case without acknowledging the plausibility and attractiveness to the layman of the Gathmann theory. It is not difficult to believe that the detonation of 500 to 1,000 pounds of such a powerful explosive as gun cotton against the side of a war ship would work great damage if not absolute annihilation to the vessel. Our Army and Navy experts said it would not. The Chief of the Bureau of Ordnance of the Navy, in a memorandum prepared for the Senate Committee on Naval Affairs, said:

Persons unfamiliar with the action of the present type of projectiles, charged with unpowder, are apt to underrate their power of destruction, and also to overestimate that of wet gun cotton. It is a fact that wet gun cotton is a more powerful explosive by far than ordinary gunpowder, but, exploded in the air, it is by no means as powerful as generally supposed. If confined, its action is exceedingly violent, and a small quantity exploded in the bore of a gun would ruin it, and a large charge, under such conditions, would probably completely wreck a gun, turret, and possibly fatally injure a vessel herself, whereas an ordinary shell charged with gunpowder may break up and explode in a gun with no injury to it, perhaps, beyond disfiguring the rifling.

It is generally recognized that if it is desirable to throw high explosives at all it should be done on a large, or at least on a moderately large, scale; and herein lies the danger, that if a premature explosion of the shell charge should take place while it was still in the gun the destruction to life and property would be appalling. It is well enough for inventors and persons who have no responsibility in the matter to say that an accident can not occur, but unfortunately accidents with explosives do happen every now and then from most unexpected causes. No amount of vigilance on the part of an inspector might be able to detect a fatal flaw in the metal of which a shell was made and which might cause its destruction in the bore of a gun, nor in the present state of the art of powder making can it be guaranteed that an expected pressure in the chamber of a gun will not be exceeded.

Since the event so fully settled the controversy perhaps it was worth all it cost.

It can not be doubted, and ought not to be, that all of the inventors interested in the several devices above referred to were, and in some instances still are, honestly of the belief that their inventions were novel and of great practical value, and that the Ordnance Department was in error in refusing to adopt them. This is not strange or discreditable. The ordnance officers are not infallible, and the rosy hue which every inventor gives the product of his own mind has, in each instance, led to the conviction that in his case the fallibility of the Ordnance Department is apparent.

Their inventions had in them enough merit to require the most rigid inquiry of trained men and sufficient promise to captivate the judgment of laymen. And so it has come about that we have frequently set up our judgment against those whose judgment, in technical matters, we ought to follow.

THE BROWN SEGMENTAL WIRE TUBE GUN.

As the subject of the Brown segmental tube wire gun has been mentioned in terms such as to indicate that there is ground for dissatisfaction on the part of the representatives of this system of gun construction with the Ordnance Department, it is believed that a brief account of the dealings of these representatives with that Department is pertinent.

In 1894 a gun of this design was presented by the manufacturers and tested by the Ordnance Department at the Sandy Hook proving ground. At the one hundred and ninety-second round the gun failed; the failure consisting of the rupture of the lining tube in two places, the cracks being about 12 inches long and one-fourth of an inch wide, the breaking in two of one of the staves, and the blowing of a hole through the wire envelope. In previous rounds certain high pressures had been attained, as follows: Eleven between 50,000 and 60,000 pounds per square inch, 3 between 60,000 and 70,000, and 1 of 82,500 pounds. These high pressures are no greater than service guns have frequently endured without injury. This gun did not endure them but gave way, as shown by the result, after 192 rounds. A gun of this caliber should have endured five times as many. The testing board reported as follows:

The board is also of the opinion that no information could be obtained by further test of this gun of sufficient importance to justify the expense required to put it in serviceable condition.

The report was signed by Maj. Frank H. Phipps and Capt. Frank Heath, Ordnance Department.

Subsequently and notwithstanding the above-described result of the test of this experimental gun, the Board of Ordnance and Fortifications allotted the sum of $33,000 to procure a 10-inch Brown segmental wire breech-loading rifle. The Secretary of War remarked as follows upon this allotment:

The evident purpose of the House Committee on Appropriations, as appears by its proceedings in connection with the increased appropriation for the Board of Ordnance and Fortifications, was to direct the test of this principle of wire-wound gun construction.

I am therefore constrained to withhold my disapproval of the action of the Board of Ordnance and Fortifications in this matter.

With the foregoing exception the within proceedings are approved.

DANIEL S. LAMONT,
Secretary of War.

This action was taken on December 5, 1896, and a contract for the construction of the gun was entered into by the War Department with the trustees of the Brown segmental tube wire gun. The contract provided that the gun should be completed by June 19, 1886.

In the spring of 1898, before the completion of the 10-inch gun, upon the recommendation of the Major-General Commanding the Army, the Secretary of War directed the Chief of Ordnance to contract with the same parties for 25 5-inch and 25 6-inch wire guns. The Chief of Ordnance counseled against the making of the contract, but was overruled, and in accordance with instructions from the Secretary of War a contract was entered into on May 18, 1898, which stipulated that the first gun and mount

should be delivered in three months from the date of the contract, and 4 guns and mounts should be delivered per month thereafter, these stipulations being in accordance with the proposition of the company. The Chief of Ordnance stated at the time of executing the contract that it was his belief that the trustees were not prepared with either drawings or plant to execute the work in accordance with the contract. The first gun was presented for test in the spring of 1899, and the first round of the test was fired on March 8, 1899, over nine months after the date of the contract.

In constructing the gun the trustees had departed from the design of the original experimental gun by discarding the wedge-shaped staves of which the tube was formed and replacing them by strips of sheet steel, assembled so as to envelop the lining tube and thus to simulate a little more closely than the staves a tube of solid metal. Upon the test of the gun a disagreement arose between its representatives and the Ordnance Department, the latter maintaining that the test was not conclusive, in that certain distortions of the bore had taken place which, in view of the peculiar and untried construction, did not warrant the acceptance of the type represented for adoption in the service without further test. The Chief of Ordnance upon this point remarked as follows:

In view of all the facts, while it may be held that the terms of the contract have been met, yet it is recommended that 100 additional rounds be fired from the type 5-inch gun at the expense of the Department, using pressures conforming more nearly to the pressures that will be incurred in service, in order to fully test the system and to give the manufacturers any further information that may be thereby developed, to enable them to suitably modify the remaining guns to be delivered, such modifications to be made without additional expense to the Department, the acceptance of the guns to remain in abeyance until after this additional test has been made.

These conditions were objected to by the company; the type gun was not presented for further test; no 6-inch guns whatever were completed, and on January 17, 1901, the contract was annulled by direction of the Secretary of War for nonfulfillment.

In the meantime the trustees had, at the instance of the War Department, employed certain experts to make theoretical computations in regard to the strength of the system and the strains which would be brought upon the component parts of the gun. The conclusion of the experts in regard to the most radical feature of the system—the segmental tube—was that it would act in the structure as a solid tube; and they claimed that it would have over a solid tube, such as is used in guns of standard construction, certain economical advantages and the structural advantage of the possibility of its being made of better material than the standard tubes.

The segmental tube forms practically the only special feature of the design, and the claimed superiority of its material is practically the only advantage which it is maintained that this special feature embodies; but in the same paper in which these claims are made the material of the segmental tube of the gun submitted for test, and which is asserted by the trustees to be acceptably representative of their system, is stated to have a tensile strength of only 45,000 pounds per square inch, about that of good boiler iron and far inferior to that of the metal used in guns of standard construction.

The 10-inch gun which has been before referred to, and the contract for which was entered into December 31, 1896, was not delivered at the proving ground for test until some time in the early part of January, 1900, over eighteen months after it was due under the contract. At one of the early rounds the breech of the gun was blown off, the jacket in which the breech mechanism is housed being torn in two transversely. Permission was accorded to remove the gun and repair the damage, and it has not yet been returned to the proving ground.

This history shows that the interested parties presented a gun of radically novel features of construction; that the first gun failed under test, the circumstances being such that the Department held that the failure was absolute, while the promoters maintained that even in its failure the gun scored a triumphant success; that the promoters thereafter procured from the Government for the construction of a 10-inch gun upon the same system $33,000; that after much delay the test of this 10-inch gun was commenced, but was interrupted by the accident of the breech being blown off; that under the stress of the war with Spain a contract was entered into for a number of guns; that in constructing these guns the trustees departed from the system of construction previously used and submitted a gun of a different character of segmental tube; that the result of the test of this new and different construction was not considered by the Ordnance Department to be conclusive, and the offer was made to make such further test as would be conclusive without expense to the contractors; that this offer was not accepted, and that the contract was annulled for nonfulfillment.

THE ADOPTION AND MANUFACTURE OF SMALL ARMS BY THE ORDNANCE DEPARTMENT.

Occasional criticisms have appeared in print in reference to the deliberate attitude of the Ordnance Department in regard to the adoption and manufacture of certain ordnance supplies, particularly small arms. Reports and records since the civil war indicate, however, that the work of this Department has been characterized by determined and persistent efforts on the part of its officers in the development of such arms, and it appears that no sooner has a gun been adopted than new efforts have been made to improve it or, if necessary, to substitute for it another of satisfactory model.

The Springfield rifle, caliber .45, which reflected so much credit upon this Department, was selected in 1873 by a board of officers, of which General Terry was president. In recommending the "Springfield" single-loader this board expressed the opinion that the adoption of a magazine rifle was only a question of time, and that whenever an arm was devised which would be effective as a single-loader and possess a safely and easily manipulated magazine consideration of public policy would require its adoption. The manufacture of the Springfield rifle was hardly commenced before the Ordnance Department began to experiment with magazine rifles, and numerous boards of officers were convened from time to time, on the recommendation of the Chief of Ordnance, with a view to the adoption of a magazine arm for service.

Before 1890 the trials of the various magazine guns presented did not indicate the advisability of the withdrawal of the Springfield rifle, although they were undoubtedly of inestimable value in finally producing a suitable arm for service.

In connection with the determination of a proper magazine arm, attention was given to the subject of reduced caliber simultaneously with a movement in that direction in military circles abroad. The matter was complicated, however, by the lack of a satisfactory powder in this country, the desired velocity being accompanied by too great pressures, and for a time no substantial progress in the matter of a small-caliber rifle was made.

The Ordnance Department proceeded, however, with the manufacture of a .30-caliber rifle, to be ready when a satisfactory powder should be obtained. At this time the Chief of Ordnance stated that all effort to date had been abortive, and American powder makers and chemists had not awakened to the lucrative opportunity presented to them. In this year, 1890, however, the Chief of Ordnance, realizing the importance of substituting an efficient magazine system for the Springfield single loader, recommended that a board of officers be convened to select a suitable arm for the service after a full and free competition.

The change from the caliber .45 to the caliber .30 and the use of a long, narrow cartridge, necessitating the use of smokeless powder to give the proper velocity to the bullet without undue strain upon the barrel and breech, operated to retard the efforts of American inventors in perfecting their guns and delayed the presentation of their arms to the board. To assist inventors, the Department sold caliber .30 barrels and smokeless-powder cartridges at cost price for such experiments as they desired to make.

Probably nothing contributed more to delay the perfection of a magazine arm nor required more effort to overcome than the lack of a suitable smokeless powder in this country. In September, 1892, after an examination of 53 guns presented by American and foreign inventors, the board of officers above referred to recommended for adoption the magazine rifle now in service, which has given universal satisfaction in Cuba and the Philippines.

Preparations for the manufacture of the new arm and ammunition were carried on with dispatch, although for nearly a year after the adoption of the rifle no smokeless powder had been found suitable for service, and when all arrangements had been completed these rifles were manufactured at the rate of 100 per day, up to the date of the declaration of war with Spain, at which time the Army had been supplied with them and there was in storage a surplus of about 50,000 rifles and 14,000 carbines. The fact that the appropriations were hardly sufficient and the facilities at Springfield Armory no more than adequate to enable the Department to accumulate each year hardly enough rifles for 30 regiments can not be laid at the doors of the Ordnance Department. Chiefs of Ordnance had for years been inviting attention to the capacity of the Department for the manufacture of arms and recommending that a surplus be accumulated. General Benét, in one of his reports, says:

Our armories and arsenals fully stocked with war material, our fortifications well armed, and our militia well organized, armed, and equipped to march shoulder to shoulder with our small body of regulars, constitute the best peace offering we can present to the world. In the matter of preparation, economy during peace means extravagance in war. * * *

In 1895 particular attention was invited by the Chief of Ordnance to the desirability of increasing the facilities for manufacturing arms at the rate of 300 per day, but no change was made until funds appropriated at the beginning of the Spanish war permitted.

Another embarrassment at the beginning of the war was caused by the lack of facilities for manufacturing small-arms ammunition, to which the attention of Congress had been repeatedly invited. Had these been adequate it would not have been necessary

to issue "smoky" powder cartridges for the Springfield rifles in the hands of volunteers, since a satisfactory smokeless powder had been adopted previous to the war. When war was declared and increased appropriations became available, it was necessary for the first few months to concentrate all efforts on the manufacture of the .30-caliber ammunition, after which smokeless-powder ammunition, caliber .45, was manufactured and issued. This concentration on caliber .30 ammunition would not have been necessary had funds and facilities previously been provided to enable a considerable reserve of this ammunition to be accumulated.

Before concluding these remarks I desire to append a partial list of material in service in the Army, recommended and adopted by the Ordnance Department, but not invented by ordnance officers. Nothing could more clearly exhibit the just and patriotic spirit of our ordnance officers than this long and interesting list. Surely, the outside inventor has had a fair field if this list signifies anything:

Partial list of material in service recommended and adopted by the Ordnance Department but not invented by ordnance officers.

Present system of built-up gun construction.	Present system of slotted-screw breech mechanism.
Armor-piercing shot and shell.	Caps for armor-piercing projectiles.
8-inch converted rifle on Palliser system.	Parrott guns.
Piper gun.	Krag-Jörgensen rifle.
McKeever cartridge box.	Mills cartridge belt.
Knife bayonet.	Gardiner machine gun.
Gatling machine gun.	Colt automatic gun.
Maxim automatic gun.	Hotchkiss mountain gun.
Hotchkiss revolving cannon.	Scott telescopic sight.
Vickers mountain gun.	Replotting boards and relocators.
Sight for rapid-fire guns.	6-pounder Driggs-Seabury gun and mount.
15-pounder Driggs-Seabury gun and mount.	4.7-inch Armstrong R. F. gun and mount.
6-pounder American Ordnance Co.'s gun and mount.	4-inch Driggs-Schroeder gun and mount.
6-inch Vickers R. F. gun and mount.	Weldon range finder.
Magneto firing box.	Smokeless powder.
Base end and azimuth instruments.	12-inch Easton & Anderson mortar carriage.
Maximite.	5-inch carriage, pillar mounting.
Drift scale on small-arm sight.	McClellan saddle.
Artillery harness.	Cincha for cavalry and artillery.
Subcaliber tubes.	Horse equipment (recommended by mixed board of officers).
Carbine scabbard.	Cavalry forge.
Quadrant.	12-inch casemate carriage.
Meat can (recommended by mixed board of officers).	Electric control of disappearing gun carriages.
Service revolver.	Canister.
Hotchkiss fuse.	Hotchkiss projectile.
Morris tubes.	Copper rotating band on projectiles.
Borman fuse.	Archibald wheel.
Accles & Bruce feed for Gatling guns.	Freyre gas check.
Noble crusher gauge.	

The history of the past fourteen years is substantially but a repetition of the history of the last seventy-five years. It does not show that the work of the Ordnance Bureau is perfect, but it does show a record of unsurpassed devotion to duty and of solid accomplishment.

Some criticism of it has, no doubt, been justly directed at its work, but the suggestion that its members have consumed their energy in seeking to hold themselves in chapels of ease is not only unjust but absurd.

We have no better examples of brains and industry, of conscience and courage, than the Ordnance Bureau has furnished us.

Let us criticise when necessary, but let us not substitute for real intelligence and scientific knowledge our own ill-tempered and ill-advised condemnation.

The ordnance officers both in the Army and the Navy have met courageously and wisely the great technical and industrial questions which our modern development has forced to the front, and we may rest secure in the assurance that the glory of our military achievements, both in war and peace, will, in just proportion, be shared by the Bureaus of Ordnance.

Mr. GAINES of Tennessee. Before the gentleman takes his seat I would like to have him speak on the other branch of the remarks of the gentleman from Colorado.

The CHAIRMAN. I would suggest to the gentleman from Tennessee that there is no amendment before the House.

Mr. GAINES of Tennessee. Then I move to strike out the last word.

Mr. LIVINGSTON. I suggest that the gentleman on the right [Mr. TAYLER of Ohio] has the floor.

Mr. TAYLER of Ohio. Then I yield to the gentleman.

Mr. LIVINGSTON. How can you yield?

Mr. HEMENWAY. Oh, let it go.

Mr. GAINES of Tennessee. I hope the gentleman from Georgia will not prevent me from trying to get some information on this subject. I understood the gentleman from Colorado to state that the reason one of these committees was appointed was because the other committee was composed of a lot of men who had patents and that they unloaded those patents on the Government.

Mr. BELL. No; I never said that.

Mr. TAYLER of Ohio. He said that was a charge that was made.

Mr. GAINES of Tennessee. The gentleman states now that I misunderstood him, and I am glad that I did. I will ask the gentleman from Ohio if he knows of anything going to show the reason why the second ordnance committee or the second bureau was formed; that it was because the first bureau was not doing its duty?

Mr. TAYLER of Ohio. No; my understanding of the——

Mr. GAINES of Tennessee. As a committee composed of patentees who wanted to unload their product on the Government.

Mr. TAYLER of Ohio. Oh, there certainly was no such reason as that assigned by any responsible person, nor did any such ground exist. The Board of Ordnance and Fortification was very properly established by Congress and was composed of various representatives of various arms of the Army, with a civilian member, one member of the board being an officer in the Ordnance Department, not the Chief of the Bureau of Ordnance, however, necessarily. Sometimes it has been the chief, and sometimes the representative of that Department has not been the chief. Now, that Board, composed of representative persons from several arms of the Army, had presented to it the various claims of individuals who, presenting them to the Ordnance Department, might not think that they would get the fairest hearing and who would thus have a variety of counsel, and that Board would order experiments to be made with the devices presented from funds which Congress annually appropriates for the purpose.

Mr. GAINES of Tennessee. Now, did any member of that committee recommend the sale to the Government through that committee of any patent owned by any of them?

Mr. TAYLER of Ohio. Oh, no; not at all; not in any case.

Omnibus Public Building Bill—Post-Office at Springfield, Tenn.

SPEECH

OF

HON. JOHN W. GAINES,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 29, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 14018) to increase the limit of cost of certain public buildings, to authorize the purchase of sites for public buildings, to authorize the erection and completion of public buildings, and for other purposes—

Mr. GAINES of Tennessee said:

Mr. CHAIRMAN: During the last and at the present session of this Congress I introduced a bill to appropriate $20,000 to purchase a site and build a post-office building in the town of Springfield, Robertson County, Tenn.

The people of Springfield thought this amount was a modest request for a post-office building such as they want and need, and would be granted by Congress.

However, the Treasury Department, in reporting approvingly upon the measure, requested that an additional amount be appropriated, that office room, to wit, a second story, might be added to the proposed building for the use of the internal-revenue department at Springfield. The Treasury Department recommend an additional appropriation of $14,600, or a total of $34,600. The estimated cost of the building (with necessary equipments, all fireproof apparatus necessary) is $32,000, as stated in a letter of Secretary Gage to the chairman of the Committee on Public Buildings and Grounds, January 27, 1900.

I believe that a two-story building, one for the post-office and the other for the internal-revenue department, that would be entirely acceptable to the people of Springfield and the Government, can be built for less than $32,000, while, of course, we know that the internal equipments of the post-office can be made to cost much less (or much more) than is estimated by the Department and would be acceptable to all parties.

The amount of internal revenue annually collected "on property taxable and taxed in Robertson County is $202,463.19," as stated in letter to me from the collector of internal revenue at Nashville. This letter I have here and is dated January 4, 1901.

The Internal-Revenue Commissioner, in a letter to the Supervising Architect as of January 25, 1900, says:

The internal revenue collected from taxables in Robertson County "approximates $175,000 per annum," and adds, "I would therefore respectfully modify my statement in the letter referred to, and ask that two rooms, aggregating 800 square feet of floor space, be allowed for the internal-revenue office in the public building at Springfield, Tenn.

Respectfully,

G. W. WILSON, *Commissioner.*

So that while the people of Springfield would be satisfied with a building and site to cost (exclusive of furniture, of course) $20,000, the Internal-Revenue Department, or the Treasury Department, seeing the importance of having an internal-revenue office at Springfield, requests that an additional appropriation be made for that purpose.

In other words, the people of Springfield want a post-office, and the Treasury Department wants an internal-revenue office there. Both are sadly needed.

I have been informed reliably that some time in the last year or so the internal-revenue officer, while in Springfield, not having any headquarters or office in which to keep his stamps, carried them in his pocket and lost them on the street.

In addition to this, the postmistress at Springfield writes, in a letter to me of January 4, 1901, as follows:

I neglected to say that we have no iron proof vaults, burglar-proof safe—in fact nothing to place or deposit our funds, money orders, or stamps. We are forced by these circumstances to carry our funds, stamps, etc., at night after closing to the bank, where, by permission of the cashier, we can place them for the night in his vault.

So unsafe, discreditable and disgraceful I may add, to this great Government, is this miserable post-office building that the merchants and exporters of tobacco and liquors, who have a valuable mail, and the people generally, instead of depositing their mail in the post-office, carry it by hand and in wagons to the six mail trains that pass Springfield every twenty-four hours and deposit it on the trains.

This, of course, makes the gross receipts from the post-office at Springfield much smaller than if the mail was deposited in the post-office.

The gross receipts for the year ending June, 1900, the postmistress states, was "$3,237.18 and the net revenue turned over to the Government annually is $1,440.42." The postmistress states, and the official records show, that "the total cost for rent, light, and fuel per year for this old shack of a post-office is $185.57," yet the Government collects from the people in this county, "from the taxables in this county," annually, and have for the last twenty years, from $174,000 to $200,000 internal revenue.

And yet it seems because the revenues from this post-office are so small—the population of Springfield being only about 1,900 (that is, within the technical limits—with from 3,000 to 4,000 in the technical limits and the suburbs combined)—that no appropriation has been provided for in this bill to erect this building.

I have explained why the gross recipts are so small—the people take their mail to the train—yet here is this great Government of ours, that has been gathering about $200,000 for the last twenty years, or about $4,000,000, from the taxables in this county, and yet because the revenues are small and the population is small this post-office matter must be and is ignored by the committee that reports this bill.

The postmistress thus further describes this building:

It is in a very bad condition. It is an old frame building, undesirable in appearance, badly located, improperly ventilated, and poorly lighted. There is an old cellar under the building, which has been partly filled up, but water still stands in it, thus rendering the room unhealthy. The lobby is entirely too large, ungainly in appearance, poorly lighted, heated, and ventilated. Our cabinet extends only about two-thirds of the way from the floor to the ceiling, and when I or my employees are out of the office we have to lock all the doors, so that when this is done the lock-box renters can not get to their boxes. The lock boxes can only be reached when the doors to the lobby are open.

In addition to this poor excuse for a building, it is the best that can be had at this time (unless a new one is built by the Government or someone), for the reason that a most disastrous fire last year burned down one side of the public square and "there is not any suitable building that can now be rented."

The situation is thus described by one of Springfield's leading citizens who visited Washington a few days ago:

The post-office at Springfield is so insecure that valuable packages are not considered safe in it and have to be taken every night to some safe place and deposited. Frequently people to whom such packages are sent call for them and find they are not in the office, being away in some other place for safety, and have to wait for them until next day. There have been three destructive fires in that vicinity in recent years, and the building is very inflammable. It is not secure as a stronghold and robbers could easily break in.

There is not a suitable building in the town that can be rented.

Robertson County pays more internal-revenue taxes than any other county in Tennessee, and there is no Government place there that is safe. Frequently large quantities of stamps are ordered and there is no place to deposit them until used or called for.

The shabby appearance of the post-office shames an otherwise beautiful town and does no credit to the Government.

Compare this miserable post-office building with the magnificent court-house in Springfield the enterprising and patriotic citizens of Robertson County taxed themselves to build and did build. Sir, it is a splendid monument to themselves and their posterity. I wired there to know what it cost, and am in receipt of the following answer:

SPRINGFIELD, *April 28, 1902.*

Court-house cost $20,000.

JOHN E. GARNER.

The making of this appropriation and the building of this post-office has been indorsed and recommended by the governor of Tennessee, who approved a resolution passed by the legislature of Tennessee indorsing this project. It has been approved by ex-Secretary Gage, when Secretary of the Treasury of the United States; it has been approved by the late Commissioner Wilson, of the Internal-Revenue Department of the Government; it has been approved by the county court of Robertson County, Tenn.; it has been approved by all the merchants, manufacturers, bankers, and tobacconists in Springfield, and I have here from them a long petition addressed to me urging the passage of this measure.

It has been approved at a huge mass meeting of the citizens of Springfield, feeling that their cause is just; that the Government has overlooked them long enough in this matter.

At this meeting a committee was appointed to show the need of this building and to put on paper what Springfield commercially is; and I have in my hand the report of this committee, in the nature of a petition, setting forth clearly, succinctly, and briefly what Springfield is commercially, and you can see from this what her people are socially—a part of the very best people in this or any country.

I can add nothing to this splendid statement of their cause, and I will read it just as this committee has written their report. It is a good speech within itself, and I beg the indulgence of the committee while I read it, as follows:

Hon. JOHN WESLEY GAINES,
Member of Congress from Tennessee.

DEAR SIR: At a mass meeting of the citizens of Springfield, Tenn., held in Stratton's Opera House October 26, 1899, we were appointed a committee to get up statistics showing the necessity for a post-office building at Springfield, Tenn. We have performed that duty and submit the following report:

Springfield, Tenn., furnished two companies of infantry in the war with Spain—Company K, Capt. S. O. Murphey, First Tennessee, saw service in Philippines; Company E, Capt. S. G. Ragsdale, Fourth Tennessee, saw service in Trinidad, Cuba. Springfield and Robertson County have paid on an average of $400,000 yearly for the last twenty years whisky and tobacco revenue taxes.

Volume of railroad business.

Source of revenue.	1898.	Nine months of 1899.
Ticket sales	$12,558.69	$12,030.06
Freight	55,497.85	55,090.12
Excess baggage	365.26	248.77
Southern Express Company	3,127.63	3,527.75

Western Union Telegraph Company, 1899, $800.56. Daily average number of trains: Passenger, 8; freight, 22. Twelve million pounds of tobacco bought and sold here per annum, at an average of 6 cents per pound, $720,000. Amount of tobacco furnished yearly to the "Regie contract" from Springfield and Robertson County, 5,500,000 pounds. Robertson County exports tobacco to all importing countries of the world. Amount of business done annually by the business houses of Springfield is $973,000.

Banking business of Springfield.

We have two banks actively engaged at present.

Capital stock	$110,000
Surplus	28,000
Average on deposit	455,000

Robertson County Banking and Trust Company just started in business; capital stock, $25,000.

Commercial fertilizers sold in Springfield per annum, 1898 and 1899, 15,800,000 pounds.

Robertson County tax aggregate.

Aggregate for the year—	
1898	$49,821.11
1899	54,767.68

Springfield has 80 business houses and 13 public buildings, including churches. It is lighted by electricity. Its population is from 3,700 to 4,000. Taxable property within city limits is $811,000. Thirteen teachers are employed in our city schools.

Volume of telephone business.

Number of instruments—	
January 1, 1898	70
January 1, 1899	112
October 29, 1899	168
Business for the year—	
1898	$2,760
1899 to October 29, 1899	$2,950
Number of miles of wire up in town and county—	
January 1, 1898	423
January 1, 1899	513
October 29, 1899	633
Towns in the county connected with Springfield—	
January 1, 1898	7
January 1, 1899	7
October 29, 1899	16

Springfield's post-office is third class; exchange with five mail trains daily; number of stamps canceled per day, 400 to 500; pounds of mail received per week, 600; pounds of mail sent out per week, 675; post-office per week, $35; average number of registered packages received weekly, 40; average number of registered packages sent out weekly, 45; number of lock boxes rented, 70; number of call boxes rented, 214; street drop boxes, 3; amount of postage stamps, postage-due stamps, special-delivery stamps, stamped envelopes,

newspaper wrappers, and postal cards received from the Department last quarter from July 1 to September 30, 1899, $1,513.15; number of star-route offices supplied from this office daily, 9; number of star-route offices supplied from this office triweekly, 2.

Springfield has: Preachers of the gospel, 9; attorneys at law, 12; dentists, 3; physicians, 9; hotels, 5; boarding houses, 7; blacksmith and woodwork shops, 8; tobacco factories, 7; cigar factories, 1; flouring mills, 2; planing mills, 1; ice factories, 1; carpenter shops, 4; machine shops, 2; tin shops, 2; tanyards, 1; coal dealers, 3; livery stables, 4; churches, 7; public (free) school buildings, 4; cemeteries, 3; 3,398 persons registered at the Commercial Hotel in the year 1898; 3,241 persons registered at the Commercial Hotel first nine months of 1899; 3,002 persons registered at the Dewey Hotel in the year 1898; 1,830 persons registered at the Dewey Hotel first nine months of 1899.

Springfield has 3 newspapers.

Robertson County owns its steam road-building machinery. The Standard Oil Company has a large warehouse and tanks here.

Respectfully,

A. E. GARNER.
H. C. TRUE.
NEEL GLENN.
A. G. WHITE.
CHAS. E. BELL.
W. T. HENRY.
G. E. SMITH.
J. C. GARNER, Jr., *Secretary.*

Mr. Chairman, so far as I am informed the people of Robertson County have never before asked the Federal Government for assistance; in fact I know it is true that there is not a single public building, not a single monument in Robertson County, that would remind that splendid and glorious people that we have a Federal Government, excluding the star-route service.

There is nothing within the limits of that glorious county, amongst that splendid and patriotic people, that would remind them or their children that they are citizens of this great Republic or that this great Government is in actual existence. No; not one. Yet they have paid, as I have shown, for over twenty years, annually, from $175,000 to $200,000 internal-revenue tax.

They have built their churches, they have built their schools, they have built their court-houses, they have built their manufactories, they have their broad acres of tobacco, and sell their tobacco throughout the world. They pay a tax on this product, too—to the Government. They have paid all burdens the Federal Government has exacted of them without a murmur. They have furnished soldiers, and among the first, when the din of war was sounded, when we said "Cuba is and of a right should be free and independent." They have furnished soldiers in all of our wars, including that in the Philippines.

Some of the most distinguished soldiers—officers and privates—of the immortal First Tennessee Regiment came from this county, and yet, because the revenues of this post-office are small, and partly the fault of the Government and because the population within the technical limits is small, they are to be denied this little appropriation to build a post-office that would be a credit to these people and an honor to the Government.

This is not right and it is not fair; it is not just; it is not dealing out equal and exact justice to all, and I regret, and grievously regret, that the committee, as I am informed by the chairman, say they can not make appropriations for post-offices with revenues so small, with populations so small, as this; that if they did the appropriations in similar places would have to be made general throughout the country, and that it would require so much to build such post-offices at such places that it would be practically impossible for the Government to make the appropriation.

Now, I will ask the chairman, the gentleman from Nebraska [Mr. MERCER], if I can get his attention, if I have stated substantially the reasons why his committee failed to make this appropriation for this post-office?

Mr. MERCER. Mr. Chairman, I will state that the gentleman fairly states the situation.

Mr. GAINES of Tennessee. Even under this rule it seems to me that I have shown from fair and undisputable facts that this is a case with so much merit otherwise as to overturn this objection, to override the reason for or reason of this rule. I insist that in all justice and in all fairness that Springfield is an exceptional case, an exceptionally "hard case," and that at least it should be made an exception to this rule, and that this appropriation should have been allowed.

But, Mr. Chairman, Congress has not yet adjourned. I am not yet done in this matter. I shall not surrender here. I shall continue the fight, for I think justice demands it, and I believe this Congress will yet make this appropriation.

Mr. Chairman, without further detaining the honorable committee, and returning thanks to the Chairman, who has extended my time and given this opportunity to explain this case, I now ask unanimous consent that I may be permitted to place in the RECORD the petition touching upon this matter, from which I have read, and two or three official documents relating to this matter.

The CHAIRMAN. The gentleman from Tennessee [Mr. GAINES] asks unanimous consent to print in the RECORD certain documents to which he has referred. Is there objection?

There was no objection.

The documents referred to are as follows:

TREASURY DEPARTMENT,
OFFICE OF THE COMMISSIONER OF INTERNAL REVENUE,
Washington, D. C., January 25, 1900.

The SUPERVISING ARCHITECT.

SIR: On further examination of the subject of your inquiry of the 8th ultimo, in regard to the necessity for a room in the public building about to be erected at Springfield, Tenn., for the internal-revenue force at that point, I have to advise you that the advice contained in office letter of the 9th ultimo was predicated upon the amount of taxes actually received at Springfield, and not upon the amount actually paid in that vicinity.

The records of this office disclose the fact that the internal-revenue receipts paid in that immediate vicinity, including receipts from the three distilleries there, approximate $175,000 per annum. I would therefore respectfully modify my statement in the letter referred to and ask that two rooms, aggregating 800 square feet of floor space, be allowed for the internal-revenue office in the public building at Springfield, Tenn.

Respectfully,

G. W. WILSON, *Commissioner.*

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, January 27, 1900.

The CHAIRMAN COMMITTEE ON PUBLIC BUILDINGS AND GROUNDS,
House of Representatives.

SIR: In compliance with the request contained in your communication of the 17th instant for a report in connection with H. R. 901, providing for the acquisition of a site and the erection thereon of a suitable building, with fireproof vaults therein, for the accommodation of the post-office and other Government offices at Springfield, Tenn., at a cost not to exceed $30,000, I have the honor to advise you that from computations made based upon data which has been collected with a view to ascertaining the requirements of the public service at Springfield it is estimated that a thoroughly fireproof building, with basement and one story, of 2,000 square feet area, with heating apparatus, fireproof vaults, and approaches, affording sufficient accommodations for the post-office, can be constructed for $32,000, exclusive of cost of site. Accommodations for the internal-revenue office can be provided in a mezzanine story.

It is estimated that a site of sufficient size to accommodate a building of the description above indicated, to allow for the 40-foot fire limit provided by the bill in question, and to permit of an extension of 30 feet to the building in the future, can be secured for about $2,600.

Estimated cost of building	$32,000
Estimated cost of site	2,600
Total	$34,600

In this connection, your attention is invited to the fact that the clause "nor shall any site be purchased until estimates for the erection of a building which will have accommodations for the transaction of the public business and which shall not exceed in cost the balance of the sum herein limited after the site shall have been purchased or condemned and paid for, shall have been approved by the Secretary of the Treasury," contained in the bill in question, is in conflict with section 355, United States Revised Statutes, which has been held to forbid any expenditure for improvements on any site or land purchased by the United States until a valid title thereto has been vested in the Government, and it is suggested that the apparent object of this clause may readily be accomplished by providing that the building shall furnish sufficient accommodations for the transaction of the public business, and shall not exceed in cost the balance of the sum herein limited after the site shall have been purchased and paid for.

Your attention is also invited to the fact that the prohibition contained in said bill, that "no money appropriated for this purpose shall be available until a valid title to the site for said building shall be vested in the United States, nor until the State of Tennessee shall have ceded to the United States exclusive jurisdiction over the same," will prevent the payment, until after the acquisition of a site, of the customary preliminary expenses, such as advertising, the traveling and subsistence expenses of the agent of this Department who may be detailed to examine and report upon the suitability of such sites as may be offered, etc. Unless it is intended that such items should not be paid promptly, it is suggested that the provisions of section 355, United States Revised Statutes, hereinbefore referred to, are ample for the purpose of preventing the purchase of a site until the State has ceded to the United States jurisdiction over the same, or the erection thereon of any building until the Attorney-General has passed favorably on the title thereto, and it is respectfully suggested, therefore, that the prohibitory clause referred to be stricken from the bill, or that the ordinary preliminary expenses be excepted from its operations.

Respectfully,

L. J. GAGE, *Secretary.*

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, March 13, 1902.

CHAIRMAN COMMITTEE ON PUBLIC BUILDINGS AND GROUNDS,
House of Representatives.

SIR: Referring further to the request of January 15, 1902, from your committee for a report in connection with H. R. 3164, providing for the erection of a public building at Springfield, Tenn., I have the honor to advise you that it is estimated that a basement and one-story building of 2,800 square feet ground area will be sufficient. A building of the dimensions indicated, of nonfireproof construction, including heating and ventilating apparatus, fireproof vaults, and approaches, will cost $35,000, exclusive of site. It is estimated that a suitable size of sufficient size to accommodate said building, to allow for the 40-foot fire limit, and to permit of a 30-foot extension to the building in the future, can be secured for $3,000.

Estimated cost of building	$35,000
Estimated cost of site	3,000
Total	38,000

In this connection your attention is invited to the fact that the clause "nor shall any site be purchased until estimates for the erection of a building which will have sufficient accommodations for the transaction of the public business, and which shall not exceed in cost the balance of the sum herein limited after the site shall have been purchased or condemned and paid for, shall have been approved by the Secretary of the Treasury," contained in said bill, is in conflict with section 355, Revised Statutes of the United States, which has been held to forbid any expenditure for improvements on any site or land purchased by the United States until a valid title thereto had been vested in the Government; and it is suggested that the apparent object of this clause may readily be accomplished by providing that the building shall

furnish sufficient accommodations for the transaction of the puplic business, and shall not exceed in cost the balance of the sum therein limited after the site shall have been purchased and paid for.

Your attention is also invited to the fact that the prohibition contained in said bill, that "no money appropriated for this purpose shall be available until a valid title to the site for said building shall be vested in the United States, nor until the State of Tennessee shall have ceded to the United States exclusive jurisdiction over the same during the time the United States shall be or remain the owner thereof, for all purposes except the administration of the criminal laws of the said State and the service of civil process therein," will prevent the payment, until after the acquisition of the site, of the customary preliminary expenses, such as advertising, the traveling and subsistence expenses of the agent of the Department who may be detailed to examine and report upon the suitability of such sites as may be offered, etc. Unless it is intended that such items should not be paid promptly, it is suggested that the provisions of section 355, Revised Statutes of the United States, are ample for the purpose of preventing the purchase of a site until the State has ceded to the United States jurisdiction over the same or the erection thereon of any building until the Attorney-General has passed favorably on the title thereto, and it is respectfully suggested, therefore, that the prohibitory clause referred to be stricken from the bill or that the ordinary preliminary expenses be excepted from its operations.

Respectfully,

H. A. TAYLOR, *Assistant Secretary.*

SPRINGFIELD, TENN., *January 4, 1901.*

Hon. J. W. GAINES, M. C.,
Washington, D. C.

DEAR SIR: Yours of the 2d instant to hand and contents carefully noted. I take pleasure in furnishing the data asked for.

First. Rent from July 1, 1899, to July 1, 1900, $150; light from July 1, 1899, to July 1, 1900, $10.05; fuel, $25.52; total, $185.57.

Second. It is in very bad condition.

Third. It is an old frame building, undesirable in appearance, badly located, improperly ventilated, and poorly lighted. There is an old cellar under the building which has been partly filled up, but water still stands in it, thus rendering the room unhealthy. The lobby is entirely too large, ungainly in appearance, poorly lighted, heated, and ventilated.

Fourth. Our cabinet extends only about two-thirds of the way from the floor to ceiling, and when I and my employees are out of office we have to lock all the doors, so that when this is done the lock-box renters can not get to their boxes.

Fifth. The lock boxes can only be reached when the doors to the lobby are open.

Sixth. Gross receipts for the year ending June 30, 1900	$3,237.18
Seventh. Gross receipts, six months ending December 31, 1900	1,507.10
Eighth. Gross receipts, three months ending December 31, 1900	773.39
Ninth. Net revenue to Government twelve months ending June 30, 1900	1,440.42

Summary for one year to June 30, 1900.

Gross receipts	$3,237.18

EXPENDITURES.

Postmistress's salary	$1,400.00
Clerk hire	200.00
Rent	150.00
Fuel	25.52
Light	10.05
Repairing mail pouch	.10
Receipts for special-delivery letters	7.76
Correction report September 30, 1899	3.33
	1,796.76
Amount deposited with Treasury	1,440.42
Total	3,237.18

You thus see that our office pays a net revenue of $1,440.42 per year. I have four clerks, including my husband, and am trying to give patrons good service, and feel satisfied I do, as I hear no complaint.

I hope that you will get us a building here so that we can give a service that will be creditable to our town and Government. I assure you that I will do all in my power to give good service.

Hoping to hear favorable report from you soon, I am, yours, truly,

SUSAN C. CHEATHAM.
Postmistress, Springfield, Tenn.

P. S.—I neglected to say that we have no fireproof vaults, burglar-proof safe—in fact nothing in which to place or deposit our funds, money orders, and stamps. We are forced by these circumstances to carry our funds, stamps, etc., at night after closing to the bank, where, by permission of the cashier, we can place them for the night in his vault.

HOUSE OF REPRESENTATIVES, *Washington, January 2, 1901.*

POSTMISTRESS, *Springfield, Tenn.*

DEAR MADAM: I am hard at work on our Springfield post-office matter, and beg of you to honor me with prompt replies to the following questions, to wit: What does it cost the Government to rent, heat, light, and take care of the post-office building now occupied by you? Second, what is its present condition with reference to health of the Government employees using it? If not good, why? Does or did water accumulate in the building, etc.? In the absence of yourself or assistant is or not the building locked up, thereby excluding the lock boxes from use? In other words, are not the lock boxes used only when the post-office is "open?" What are the gross receipts for the last fiscal year and for the last six calendar months and fiscal quarter? What is the net revenue to the Government?

Give me any other information or data that will assist me in my efforts to get our post-office building bill through Congress. I am hard at work and have this particularly in hand, and the committee is waiting upon me to give them answers to these questions. In a letter of December 30, 1899, Postmaster-General Smith says that the gross receipts from this post-office were $3,158; net revenue, $1,458; allowance for rent, fuel, and light $198; square feet of floor space, 1,300; number postal employees, 2, as of the fiscal year ending June 30, 1899. Bring these items down to the very latest dates you can. Answer me, if you please, at once. Mr. Ewin Burney wrote me some interesting data along these lines, but I have mislaid the letter along with others. I am very anxious about this and hope you can at once comply with my request.

I am, my dear madam, very truly, yours,

JNO. W. GAINES.

The county court of Robertson County, Tenn., composed of the magistrates of said county, being in special session upon other matters, deem it proper to recommend to the Congress of the United States that a public building at Springfield for a post-office, a stamp clerk, and other governmental purposes is not only desirable but necessary, and we recommend the building of the same.

This October 28, 1899.

C. G. Hatman, chairman; E. W. Williams, justice of the peace; G. R. Murphey, justice of the peace; J. M. Food, justice of the peace; F. W. Clayton, justice of the peace; B. Scott, justice of the peace; J. W. Crunk, justice of the peace: F. H. Corder, justice of the peace; V. A. Bradley, justice of the peace; J. J. Bingley, justice of the peace; R. H. Fells, justice of the peace; J. M. Richards, justice of the peace; T. E. Durrett, justice of the peace; E. D. Patterson, justice of the peace; Mat Morris, justice of the peace; C. A. Burr, justice of the peace; T. H. Flouer, justice of the peace; I. E. Empson, justice of the peace; E. W. Corbin, justice of the peace; R. M. Suter, justice of the peace; J. B. Robertson, justice of the peace; A. W. Byrns, justice of the peace; R. S. Draughon, justice of the peace; J. H. Johnston, justice of the peace; J. W. S. Widick, justice of the peace; G. B. Moody, justice of the peace; B. C. Batts, justice of the peace; P. D. West; J. H. Orman; C. W. Crockett; B. L. Murphy; B. A. York; W. H. Swift.

STATE OF TENNESSEE, *Robertson County.*

I, G. E. Smith, clerk of the county court for the State and county aforesaid, do hereby certify that the foregoing resolution was adopted by the county court of Robertson County on October 28, 1899, and the same was signed by the members of said court in their own handwriting.

Witness my hand and seal of court at office in Springfield, Tenn., this November 2, 1899.

[SEAL.] G. E. SMITH, *Clerk.*

Eulogy on the Death of Hon. Rufus K. Polk.

REMARKS
OF
HON. WILLIAM SULZER,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, May 10, 1902,

On the following resolution:

"*Resolved*, That the business of the House be now suspended that opportunity may be given for paying tribute to the memory of Hon. RUFUS K. POLK, late a member of the House of Representatives from the State of Pennsylvania.

"*Resolved*, That as a particular mark of respect to the memory of the deceased and in recognition of his eminent abilities as a distinguished public servant, the House at the conclusion of the memorial proceedings shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk be instructed to send a copy of these resolutions to the family of the deceased."

Mr. SULZER said:

Mr. SPEAKER: As a personal friend and sincere admirer of the late RUFUS K. POLK, I simply désire on this sad memorial occasion to pay my poor tribute to his memory, and place on record my testimony to his sterling worth as a man, his grandeur of character, his ability as a legislator, his genial qualities as a companion, and his devoted patriotism as an American citizen.

His sudden and unexpected death recently in the city of Philadelphia was a great shock to every member of this House, a grievous blow to his innumerable friends, and an irreparable loss to his stricken and beloved family. His death has left a void in this Chamber that can not be filled, and his many acquaintances have lost a kindly, generous, noble-hearted friend, upon whose like we shall not look again.

He endeared himself to all who knew him. He possessed that indefinable quality that attracts, makes enduring friendships and holds them with a grip of steel for life. The better you knew him the more you liked him. He had a frank, open character, a sunshiny disposition, a generous heart, a forgiving spirit, and a sympathetic soul. He was courtly and considerate, broad minded and liberal, as modest as he was brave, and above all he was absolutely honest in all things—in deed and word and thought. He was a loving husband, an affectionate father, a loyal friend, a safe counselor, a brave soldier, an able legislator, a fearless representative, and a shining political light in his adopted State. He had the discernment to see the right and the courage to do his duty.

He was a self-made man in the best sense of the term. He worked out his own career—was the architect of his own fortunes, and his sympathies were always with struggling humanity. He was a true democrat in its broadest significance. He believed in the people—in the destiny of the Republic; gloried in the greatness of the flag and all that it represents, and at the first opportunity went to the front, an intrepid soldier, to defend it with his life. He stood for the rights of man; for the cause that lacked assistance; for the future in the distance, and the good that he could do. He was an optimist and not a pessimist. His enduring faith in the coming of the better day was as immutable as it was sublime. He knew the world was growing greater and grander and more magnanimous. He saw the brotherhood of man encircling the globe, and his buoyant spirit leaped with joy as he

beheld the bright harbinger of the coming morn when man's humanity to man will make the whole world kin.

Born in Tennessee in 1866, of an historic family, he finished his education at the Lehigh University, in Pennsylvania, graduating with high honors in 1887. Then began the activities of practical business life with all its stern realities. He began at the foot of the ladder. By his energy, his industry, his earnestness, and his perseverance he worked himself to the top. He was eminently successful: a splendid type of progressive man, an honor to the community, a useful citizen, and his example an incentive to every hopeful boy and every struggling youth in the land.

Lives of great men all remind us
We can make our lives sublime,
And departing, leave behind us
Footprints on the sands of time.

Mr. Speaker, RUFUS K. POLK died in the prime of life—as he was crossing the meridian—at the noontime of his usefulness, on the threshold of a great career, fruitful with future honors, mourned by all. He had fought the good fight, but his race had not been run—in truth it had only begun. It is always inexpressibly sad when the light of life goes out and darkness comes before our work is done—ere the hill of hope is climbed.

His death was a great loss to the country, and he will be missed here and elsewhere more and more as the days and years come and go. We can not replace him; we can only mourn our loss and tearfully and tenderly lay our wreath of love on his bier and send our sympathy to his sorrowing family—to his grief-stricken and disconsolate widow and his orphaned children. But words can not console a deep and lasting grief like this. How futile they are, after all, in the presence of death! And yet we know that our friend has gone to a better land—a more hospitable clime—and we who are left behind will fondly cherish his memory while life endures, and the thousand and thousand kindly, generous, sympathetic deeds he did will ever and anon arise to praise and call him blessed and be, as they always will be, an abiding monument more lasting than marble or brass, more indestructible than stone or shaft.

What seem to us but sad, funereal tapers
May be heaven's distant lamps.
* * * * *
There is no death! What seems so is transition;
This life of mortal breath
Is but a suburb of the life elysian,
Whose portal we call Death.

The Statehood Bill.

SPEECH
OF
HON. MARCUS A. SMITH,
OF ARIZONA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 12543) to enable the people of Oklahoma, Arizona, and New Mexico to form constitutions and State governments and be admitted into the Union on an equal footing with the original States—

Mr. SMITH of Arizona said:

Mr. CHAIRMAN: My anxiety to obtain an early vote on this bill has kept me thus far silent, and but for the remarkable and misleading statements just made by the gentleman from Ohio [Mr. GROSVENOR] I would not now participate in this discussion, for I feel physically unable to stand long on my feet, and I therefore beg the indulgent attention of the House while I show that not one statement made by the gentleman touching the population or resources of Arizona are justified by the facts. If he had known anything about the question he would have remained silent, or would have made a different and a better speech.

Brooding for many days over the wrongs which my people have suffered at the hands of partisan Congresses, I found myself wondering who could be found at this late day to further oppress us or take the floor to insist on our continued degradation. I felt certain no new member would do it, and I felt equally sure that none of those with whom I served these many years and who had an opportunity to know the real conditions would ever think of doing it, until my friend from Ohio crossed the field of my contemplation. Instantly I knew where to look for an attack, but no man could have imagined the kind of assault that would be made. There was presented such a fine wide field for his fancy—and you know fancy does not have to trouble itself about facts. Probably there was no harm in his statements. Poetic license must be allowed, or the imagination must wither from inaction.

Yes, I knew General GROSVENOR was to speak against this bill. He could not help it without hurting his record. He is consistent above all things. He preserves consistency by being always wrong and an even temper by being always mad. [Laughter.] You will see before I am through that he is wrong, and I make profert of his own words to show you that he is mad. Did he not just tell you, in effect, that Congress was not bound and should not be bound by any mere moral obligation which it was inconvenient to recognize? The point to which a mind saturated with partisan politics can be driven surprises the most thoughtful and observant philosophy. To see men of commanding ability, under the influence of party exigency, willing, yea, anxious to oppress their fellow-men without mercy and without shame if by it they can secure success of their party in an election is to my mind one of the most remarkable signs flashing from the clouds which now surround us, clouds big with danger for our future.

Are you not shocked to hear from men on this floor that treaty promises created no obligation on the part of the Government which it was bound to respect? That there was nothing binding in a mere moral obligation, and if you could not appeal successfully to a mandamus or other legal remedy there you must bear what you can not help, and make the most of it? No writ can be executed legally against sovereignty, and therefore by this new code of moral ethics governments can do rightfully just what they please to do if they do it against those unable to fight. Away with such doctrine. The fact that a promise can not be enforced makes a strict observance of its terms all the more sacred.

The Government is bound by treaty obligations—by the principles of the Declaration of Independence, by the very warp and woof of the Constitution—by that spirit of liberty and equality on which our institutions are built, and our existence depends, to admit Arizona as a State whenever she is qualified and worthy. That such is her condition now I shall attempt to demonstrate.

Mr. Chairman, Arizona is entitled to statehood. Political considerations unworthy of the Congress of the United States have so far retarded her progress. Since my advent to the privileges of this floor I have seen admitted and I have advocated the admission of Washington, Montana, North Dakota, South Dakota, Idaho, Wyoming, and Utah to the Union of States. I have during all this time stood a protesting witness against the injustice done Arizona, which was as well equipped as any, and far better than some of these, for the responsible duties and obligations of statehood. Twice have I passed the bill for the admission of Arizona through the House of Representatives, and once under a suspension of the rules, which required a two-thirds vote to pass it. I stood at the deathbed of its hopes on the Calendar of the Senate. The opposition in that august legislative body came from and the fatal blow was given by Senators from States whose whole area would barely make a good cow lot for Arizona.

Opposition to the admission of the Territories was born of, and has been nursed by, ignorance and selfishness; ignorance of the resources, wealth, and civilization of the West; selfishness in maintaining the power of the East in Federal legislation and the further selfish fear that political advantages may be lost. From such considerations I appeal to your patriotism, your justice, your duty to your fellow-men, your country, and your conscience. The inherent right of self-government under our Republic can not be disputed or questioned. It was guaranteed by the provisions of the treaty under which Arizona and New Mexico became a part of our possessions. And even if that treaty had been silent as to the right of statehood for these newly acquired possessions, the Government would in justice still be bound to admit any Territory into the Union when capable of self-government and possessed of the requisite population. This, from the very beginning, has been the policy of our Government and an essential part of that freedom and equality on which our Union is constructed and through which it has reached its present glory and renown.

In acquiring that country embraced in the Louisiana Purchase, extending from the Gulf of Mexico to the southern line of English possessions on this continent, it was stipulated in the contract entered into between the great Napoleon and our greater Jefferson that the inhabitants of that region should have guaranteed to them all the rights of American citizenship, including the right of admission to the Union of States.

Before the adoption of the Federal Constitution, several of the States had ceded to the United States all of their several claims to that vast region lying northwest of the Ohio River. In order to govern this great territory, and with the purpose of eventually organizing States from it, the celebrated ordinance of 1787 was adopted, which among other things provided (in the thirteenth article thereof) "for the establishment of States and permanent governments therein and for their admission to a share in the Federal councils on an equal footing with the original States at as early a period as may be consistent with the general interests." Article 14 of the same ordinance contains the following guaranty: "It is

hereby ordained and declared by the authority aforesaid that the following articles shall be considered as articles of compact between the original States and the people and the States in said territory, and forever remain unalterable except by common consent, to wit: * * * Whenever any of said States shall have 60,000 inhabitants, such State shall be admitted by its Delegate into the Congress of the United States on an equal footing with the original States in all respects whatever, and shall be at liberty to form a permanent constitution and State government."

By this ordinance the grand old State of Virginia gave to the General Government the mighty States of Ohio, Indiana, Michigan, and Illinois, and I am proud to know that not one of her Representatives on this floor will cast a vote against the spirit of the compact their fathers made, no matter what course may be taken by the Representatives of those States which her generosity gave to the common country and whose rights and privileges she so carefully guarded against the very afflictions with which they now whelm us.

This ordinance was again and again extended after the adoption of the Constitution, and its very essence was repeated in our treaty with Mexico under which was ceded the Territories now appealing for statehood.

But little attention has Congress paid to these solemn guaranties, and we find its action or its quiescense so imbued with politics and political considerations as to silence the voice of justice and consanguinity.

The conduct of Congress toward Arizona has been nothing less than tyranny.

Complaint is made that we have not sufficient population. The same complaint was made against three-fourths of the States on their application for admission. The late census shows that Arizona has in round numbers 130,000 population. In this estimate many Indians are included. That the census is scandalously wrong there can be no doubt. The Department admits that it is unreliable. In fact, there was no census taken. Under the laws fixing the compensation of census enumerators, no real census could be taken. As instances of the accuracy of that alleged census, let me cite you to the city of Phoenix, the capital of the Territory. The census gives that town something over 5,000 people, when the school census and the voting population shows beyond doubt that there are, at the lowest estimate, over 10,000 people in that city. Yes, there are more than that.

Take, again, the case of Bisbee, Ariz., where the census alleges a population of 3,000, when the fact is that the town has at least 7,000 people in it. There are more men at work and with their names on the pay rolls of the mines than the census gives as the population of the town. If the enumerators have done such work as this on the cities, what can you expect of their returns from the distant outlying country precincts? The fact is, no census was ever taken at all. No reliance whatever can be placed on it.

It is enough here for me to say that we have a population of at least 150,000 people, with as much patriotism and more general education than can be found in any other part of the United States. They add to the general wealth of the country more than twice as much per capita as any other subdivision of our country. They give per capita twice as much to education, hospitals, and charities in support of eleemosynary institutions than any political subdivision of the globe. They have spent of their own money more on public buildings, roads, highways, and other public improvements than any other people in this broad land; and yet some of you from States with schoolhouses which we would not use as stables for our horses are assuming airs of superiority over us and daring to assert that we are not fit for political association with you. I assert, measuring my words and knowing whereof I speak, that I represent here a constituency as well educated, as well behaved, and as wholly patriotic as any member of this House, come from what State he may.

No informed man on this floor, whatever reason he may have for his opposition, can be in earnest when he attacks our right on the ground of insufficient population.

Bear with me while we take a hurried view of the history surrounding this question. Of the 25 States admitted to the Union, beginning with Vermont in 1791 and closing with Colorado in 1876, Maine and Kansas alone had as much as 100,000 population. Vermont, Kentucky, Missouri, and California are the only others with as many as 50,000 population. In 1836 and 1837 the previous census giving a representative ratio of 47,700, Arkansas was admitted with 25,000 and Michigan with 31,000. From 1845 to 1848, when the representative ratio had reached 70,600, Florida, Iowa, and Wisconsin were admitted to the Union, Florida with 28,700, Iowa, 43,000, and Wisconsin, 30,900.

Again, in 1858, when the ratio of representation had risen to 93,500, Minnesota was admitted on the previous census showing with only 7,000 inhabitants, and the next year Oregon became a State with only 13,200 population.

In 1867, when the ratio had risen to over 127,000, Nebraska was taken in on a population of 28,800, and in 1876, the ratio having reached 131,500, Colorado came in with only 39,000.

With this history of these great States before you, you pretend to object to a Territory with over 150,000 intelligent people becoming a part of the Union. You can not by such pretense deceive anybody. You can not even deceive yourselves by it.

Have you observed the great impetus given to each State by its mere admission to the Union? In ten years after statehood Kentucky had increased 200 per cent; Tennessee, 195; Ohio, 408; Louisiana, 100; Indiana, 500; Mississippi and Alabama, over 400; Illinois, 350; Missouri, 111; Michigan, 221; Florida, 570; Iowa, 345; Wisconsin, 886; California, 370; Minnesota, 2,370, and all the balance named increased at the surprising average ratio of 275 per cent. The same general history holds good as to all the recently admitted States, and will repeat itself when this bill shall happily become the law.

Mr. Chairman, it is an outrage to longer keep these three Territories or any of them out of the Union. They have suffered and are still suffering grievous wrongs at your hands. The "water cure" is nothing to what you have been giving Arizona for the past fifteen years. You have permitted Indians to "pacify" our settlements by laying them waste, and, by the light of their burning homes, those so lucky as to escape butchery have beheld the last vestige of their property carried away by these marauding "wards of the Government," and not one dollar of damage have you allowed the settler who had the right to expect your protection.

I was instrumental in having a bill passed permitting the injured to sue in the Court of Claims for these damages. The Senate inserted a clause in the bill in effect prohibiting a recovery if the tribe was not at the time in amity with the United States. In other words, no war claims would be allowed. Geronimo and his band laid waste our country. He had with him not one in twenty of his tribe. The whole balance of the Apaches were on their reservation at peace with the Government. The Supreme Court decided that the United States was at war with the Apaches, and therefore no suit could be maintained. If it had been provided that only war claims could be collected the court could just as well have decided—and with much more reason—that the Apaches were at peace—true with a small marauding band at large—and have thus again defeated the just claims of these brave men who carried the lamp of civilization into the gloom of Western savagery and dedicated an empire to the service and wealth of our common country. You owe them not only the money which you permitted your wards to take from them, but a debt of immense and lasting gratitude, with the right to participate in the affairs of the Government on an equal footing with the balance of the States. The passage of this bill will be a slight recognition of your duty to them.

Mr. Chairman, a Territorial form of government is inherently bad. There is no apology for it when the people are capable of maintaining a government of their own. I fear the country does not know the trials, tribulations, yea, horrors to which the people under it are subjected. Following the example of Mr. Toole, of Montana, when pleading for statehood, and using at times his language, I will proceed to a recital of our wrongs:

Congress has given us a system of courts inherently wrong.

It has regulated the number of our judges, which is grossly inadequate and results often in delay and often in denial of justice.

It denies us the authority to call an extra session of the legislature unless the will of the President be first consulted.

It reserves the right to annul any law our legislature may pass, thus destroying the faith and credit of our public acts. It reserves the right to destroy any good obligation we may assume, and has actually validated and made binding on us a lot of illegal, worthless railroad bonds which the Supreme Court of the United States had previously declared void and of no effect.

It has bound us hand and foot by a law prohibiting us from expending our own money on public improvements, no matter how urgent our necessities.

It has stifled industries by prohibiting us from selling mining properties in foreign markets, thus laying on us an embargo not borne by the States.

It has exempted 400 miles of railroad from taxation in Arizona and refuses to survey the enormous land grant of said road so that taxes on the land might be imposed by the Territory.

It has withheld from us our dowry of lands which belong to our school fund and refuses us all control over it until we become a State, and then refuses us statehood.

It gives us no representation in either House of Congress, yet imposes taxes burdensome to be borne.

It has imposed every burden of citizenship and withheld its benefits by denying us the right to participate in Federal legislation and a voice in the enactment of laws by which we are to be bound.

It has even refused to appropriate the salaries provided by law for the hungry officials it has sent us.

It has deprived the frontier settlements of proper postal facilities, proceeding upon the unjust and impracticable basis that every post-office should be self-sustaining.

It has persistently refused to pass laws by which timber lands could be sold or leased and has hedged the limited right to take timber for any purpose with odious and impractical rules, harassing the people with expensive suits, based on the ex parte statements of an obsequious special agent, who has found that his term of office depends on his activity in stirring up strife.

It has invited settlement in the Territories on the promise that property should be protected against Indian depredations. Millions of dollars of just claims, mildewed by age and still unpaid, are piled up in the departments, while the heroes of those troublesome times, grown weary of your injustice and the burden of years, have passed to where "beyond these voices there is peace."

And last, but not least, it has fastened upon us an odious system of carpetbag rule.

The Administrations have been bound by party platforms to relieve this unholy and unnecessary system, but all have failed. Do not you remember that "sending hither a swarm of officials" was one of the indictments against the Crown in our Declaration of Independence, and was one of the causes of the war of our fathers against Great Britain? From that day until this hour the name and the occupation of the carpetbagger was and is odious to a free, self-respecting people. The insolence of office consequent on these alien appointments is almost unbearable. The imported officeholder owes nothing to the people whom he attempts to rule, and having no interest in common with them cares little except for the emoluments, which he and his henchmen can squeeze from the unwilling subjects of his wrongful power.

Mr. Chairman, I will no longer ask the House to listen to the melancholy story of our wrongs, but will ask its indulgence while I attempt to show the character of people on whom these indignities are so uselessly and causelessly heaped.

Who settled the West? What character of people and whence came they? Were the pioneers in Arizona alien outcasts from foreign lands and the good society of our own States? No, sir; those were the young men from honest families of all the States, with an ambition to make a name for themselves and homes for those who loved them. With hearts that knew no fear and with spirits undaunted, they left their kindred and friends and home-endearing ties and set their faces to the wilderness. Impassable mountains seemed only an obstacle in their path, and the endless desert was invaded without fear. With untiring energy they removed all obstacles, with hopeful hearts surmounted all difficulties, until at last the desert was conquered; the mountains surrendered their treasure, and the home of youth's bright hope became a reality; villages, towns, and cities sprang into active existence, schoolhouses everywhere dot the plains, and church spires point to heaven from every hamlet.

This has all been done without your aid and while you were sleeping. Many of these brave, true men are enjoying in the peaceful sunset of life the full fruition of its morning hopes. May they long be spared to us! From that first settlement until now the sons of these pioneers and men of like mold have spread over every county of the Territory.

Every State in the Union, every corner of our Republic, is represented there by its young, intelligent, courageous, self-reliant, and progressive manhood. They knew every lesson of citizenship before they came to Arizona, and not one has been forgotten.

They are blood of your blood and bone of your bone, and are inspired by every sentiment that exalts or ennobles you. Why should you attempt to keep such a people from the enjoyment of every blessing, of equal citizenship with you? In their names, I protest against every vote cast against this bill. Those who support it will be enshrined in the hearts of a grateful people, and conspicuous in her hall of records shall be hung a roll of honor bearing the name of every member of this House who by his vote aided their struggle to be free. Below this list of glorified names will be the inscription: "There were some who voted against their country's duty. They knew not what they did. Accord to such the charity of the world's silence."

Nothing but miserable politics of the lowest order can actuate resistance to the appeal of these Territories. I care not what the politics of any new State may be. I had rather live in a Republican State than a Democratic Territory. The people have the right to select their own officers and declare their own policy. It is no business of yours or mine. Party bias is a fragile reed to rely upon when principles are at stake. No man can say to what political party new States will adhere, but all who know the West are assured that lofty and abiding patriotism will guide its course.

The new State may disagree with you on questions of political ethics, and may combat your academic doctrines, but when taxes are to be paid, when soldiers must fight, when sacrifices must be made for the public welfare, you will draw your money, your heroes, your martyrs largely from the people whose rights you now ignore. In our late war with Spain the first company responding to its country's call was found in Arizona, and the first blood poured on Cuban soil flowed from the wound of one of her fallen heroes. [Applause.]

Far to the front on San Juan Hill the Arizona boys bore our banner, and the reckless courage of Capt. "Buckie" O'Neil gave to our cause the life of the first commissioned officer who fell on that sanguinary field. And now we find many of you who stayed at home and dodged your taxes voting against the right of such men as these to have a voice in Federal affairs. Oh, yes; you are glad that we may fight our country's battles, may pay our taxes, subdue the wilderness and conquer the desert, delve the mountains, build the highways of commerce, and open avenues for your successful trade, but when we come to the evening repast, tired and hungry, you tell us to get away from the table; that we need nothing to eat; that we are doing well enough as it is. "The husks which the swine do eat" are good enough for you. The prodigal son of old was met by parental joy and the savory meat of the fatted calf. The other son who never wandered justly found some fault. If that old man had possessed the spirit and heart of the opponents of this bill, he would not only have driven the prodigal away from the door, but would have lain in the fence corner and as the faithful boy returned from his day of toil knocked him in the head with a brickbat. [Laughter.]

Shame on the man and on the party who would permit political considerations to blind him to the rights of his fellow-man. The straightest road to a brave and honest heart is along the line of exact justice. This is as true of parties as of individual men. The way to win the West is first to be fair and just, and the way to keep it is to remain fair and just. Is either party on this floor so fearful of its policy as to shun that test? I hope not.

Mr. Chairman, far be it from me to follow the example of certain men on this floor by claiming superiority for my people over the balance of our countrymen; but I make no boast in asserting that we are your equals in every respect of manhood and citizenship. As was said by Sunset Cox (that versatile and sparkling genius whose service here gave glory to this House), when speaking of the admission of the Territories under the omnibus bill of the Fiftieth Congress:

"The emigration from the Eastern States constitutes the nerve, the sinew, the muscle, and the mind which penetrates the wilderness and builds up our Commonwealth. It is the unaided energy which has made a million of men stand in intelligent masses and ask of the Federal Government participation in its blessings and its glories. The pioneer recks not of the past; he works in the living present. All the energies of his nature are aroused by the splendid prospects and the glowing inspiration of budding Commonwealths. No figure of speech, no flights of the imagination can picture or compass the achievement of this State-creating and man-ennobling advancement. Like the eagle to which our country is often compared, he seeks a wider ether for his wing, and the fire within his heart seeks the source of all illumination—the sun itself.

"How much nobler and wiser is the effort to install and institute such States in our own land rather than chase the ignis fatuus of island annexation. There will be time for that when our Territories put off their rudimentary and don their stately stoles of independence."

For nearly forty years Arizona has been a Territory and governed locally by laws of its own making—laws second to none in this broad land and executed with a fidelity and promptness equal to that of any State in the Union. They demonstrate by this their capacity for self-government.

The day of blood has passed away. Good order is kept—better than in most of the States. Titles are no longer defended by Winchester rifles. The courts settle all questions of disputed rights to property. Peace and quiet are everywhere supreme. The cattle are herded on the plains; the miner prospects the mountains for its hidden treasure; the farmer pursues his daily avocation with no deadly arms at his side and with no fear in his heart. Arizona's prosperous future is assured. Law is supreme. Her population, by every rule of virtue, education, property, patriotism, and industry, fills to the fullest measure every requirement of enlightened citizenship.

Its resources are as boundless as its mighty area, which is greater in extent than Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, and Delaware combined, with enough left to make one more State the size of Delaware and two more Rhode Islands. We have an untouched body of forest trees larger in area than the State of Vermont, while the timber belt of northern Arizona covers more land than

is contained in Massachusetts, Connecticut, Rhode Island, and Delaware put together. Our timber alone would make all New England rich, while if the Copper Queen mine and Senator CLARK'S United Verde were in the Green Mountains their output would change the thrifty character of the people and turn them into spendthrifts. And if on any hillside or accidental valley of a New England State our orange groves could thrive, with the golden fruit bending the boughs to touch the lips of man, my gold-standard friend from Connecticut would begin to know something about the primal temptation of our race.

Arizona raises now the finest lemons and oranges in the world. Side by side in every market the Arizona orange brings a higher price by far than the product of Florida, Mexico, or California, and the possibility of the production is unlimited.

That great new State is destined soon to be the choicest orchard in the world. South of the thirty-fourth parallel the date, olive, fig, grape, lime, lemon, and orange grows under proper husbandry in prodigal profusion. Ascending from the lower valleys, every fruit of the Temperate Zone is produced in perfection. In the foothills of our mountains peaches are produced superior to those of the famous Delaware orchards, while the melon and cantaloupe make the Georgia product taste like pumpkins and cucumbers. We have no competitors in the market, as our crop is disposed of be fore others ripen.

From the best obtainable information I am assured that Arizona has now 880 miles of irrigating canals in operation, and by proper conservation of flood waters the cultivated area under them can easily be doubled.

The governor's report shows that in 1900 we produced 125,000,000 pounds of copper, against 48,000,000 in 1895. Large new producers are developed, so that it is safe to say that in the next fiscal year Arizona will produce 150,000,000 pounds. At 10 cents a pound this amounts to $15,000,000, while the gold and silver product reached last year about $10,000,000. There are 1,558 miles of railroad now in successful operation in the Territory, and with others in course of construction will open every part of the Territory to easy access from all parts of the world.

The public buildings of the Territory comprise the capital, situated at Phoenix, recently erected at a cost of $130,000; the university at Tucson, Territoral prison at Yuma, the asylum for the insane at Phoenix, the splendid normal-school buildings at Tempe and Flagstaff, and a reform school for young offenders is now in course of erection at Benson, in Cochise County. Besides these, nearly every county has a splendid modern court-house, jail, and fireproof vaults for public records, and every town and village has public schoolhouses that would do honor to any school district of the older States. Many of these schoolhouses are large, expensive, and architecturally beautiful.

The bill for the admission of Arizona and New Mexico demands four sections in each township for common-school purposes instead of the two heretofore given to other States. New Mexico has received the two sections and is now asking two more. Arizona has received none and is asking for four sections. This the committee thinks should be allowed. There is no better purpose to which the public lands could be applied than to the education of the people. The committee estimates that this increased donation will not exceed in value the lands given to other States for similar purposes, as much of the land is of a desert character that can never be reclaimed; much of it in volcanic mountains, which can never be of value to the schools. Arizona has the most liberal school system in the country, and has borne without complaint a heavier tax for school purposes than any other known to your committee, paying at many times and in many places as much as $5 per month for each child in the schools. Attendance is compulsory.

Arizona, by act of Congress, 1892, was made a customs district. The chief port is Nogales, a railroad town on the International Line.

The foregoing is merely a summary of the many facts presented to the committee from which it concluded that no valid objection to Arizona's admission to statehood now exists. Many of the greatest States of the Union have been admitted with much less population and half the resources that Arizona possesses.

The summary reveals that Arizona can support a State on its forests alone for many years to come.

It can support itself on its mines alone for ages. It can carry on a prosperous State government from its fruit possibilities, to say nothing of its enormous and prosperous live-stock interests.

Adding them all, who with sense can doubt our right to statehood, and who but a selfish politician would question or oppose?

We have never defaulted in any obligation, but have, in addition to our own burdens, paid enormous revenues into the Federal Treasury, and have had returned less than 10 per cent of our advances.

If this plain recital does not convince you, if the simple facts themselves do not pursuade, then my work is vain, for "though I had the gift of tongues," ye would not.

Had I, however, the power to cast out devils, as was given the good men of old, this bill would pass unanimously. It should so pass this House. The opposition to it is wrong, coming as it does from men who gave their voice and vote to Montana, Idaho, Wyoming, and Utah. Is Congress growing narrower every day and yearly beautifully less? It seems so, looking from this back to the Fiftieth.

In contrast with the statements of the gentleman from Ohio [Mr. GROSVENOR], and showing in a striking manner the different planes on which they stood as they viewed the question now before us, I would beg you to listen to what Sunset Cox said in speaking on the question of statehood in that Congress:

"This energetic and hopeful population have in their veins the vigorous blood of many races. They have inherited the material, intellectual, and moral triumphs of the Old and New Worlds, and their civilizations. They settle upon soil which has no rival in richness and no peer in production. Their faith in their future is buoyant. No perplexity about their fortune; no weariness in their work; no despondency in their hope—exulting ever in their strength, these millions move on to fill up our territory from sea to sea, from Canada to the Gulf, and from north to south. Restless, active, and yet steady, like the movements of the heavenly bodies, shining as they move in orbits of their own, and yet to the casual eye, fixed in our heavens as the stars.

"There is a chapter in the book of Professor Bryce, whose spirit, outvying the careful analysis of De Tocqueville, is of the very essence of democratic-republicanism. It deals with the temper of the West.

"Western America to this author is the most interesting subject of study which the modern world has seen. Its Territories, resources, and climate, its variety of production, such as mountains of minerals, forests of trees of fabulous height, appliances of modern science, and other phenomena, make Western America, to the eye of this observer, without precedent in history. He says that it may not recur elsewhere, because our planet contains no such other favored tract of country. He lays most stress upon the character and temper of the men of this region. The West is to him the most American part of America. Here those features which distinguish America from Europe come out in the strongest relief. He exclaims:

"What Europe is to Asia, what England is to the rest of Europe, what America is to Europe and England, that the Western States and Territories are to the Atlantic States. The heat and pressure and hurry of life, always growing, is that following the path of the sun.

"In the West all is bustle, motion, and struggle, more so, of course, among the native Americans. Yet even the alien from the secluded valleys of Bohemia or the shores of some Norwegian fiord learns the ways almost as readily as the tongue of the country and is soon swept into the whirlpool of its energies. This is the frontier spirit with its passionate eagerness and strenuous effort. It would extract the greatest amount of values from mining hills, territories, and fields, and with a passion so absorbing as to be unselfish. It takes from its very vastness a tinge of ideality. It makes routes for exchangeable commodities with a rapidity which seeks a market with one hand and throttles a monopoly with the other.

"He sees this remarkable people intoxicated with the majestic scale of nature in which their lot is cast. Their imagination revels in every sight. They gild their own struggles with the belief that they are the missionaries of civilization and the instruments of Providence in the greatest work the world has ever seen. They live in the future rather than in the present; not that they fail to work while it is called to-day, but they see the country not merely as it is, but as it will be twenty, fifty, or one hundred years hence, when the seedlings shall have grown to forest trees."

We claim statehood as a matter of right, and can find no more persuasive language in which to express the sentiment pervading our people than that found in the appeal made by California when she sent her representatives to this body:

"This people request admission to the Union as a State. They understand and estimate the advantages which will accrue to them from such a connection, while they trust they do not too highly compute those that will be conferred upon their brethren.

"They do not present themselves as suppliants, nor do they bear themselves with arrogance or presumption. They come as free American citizens, by treaty, by adoption, and by birth, and ask that they may be permitted to reap the common benefits, share the common ills, and promote the common welfare as one of the United States of America." [Long-continued applause.]

Friday, May 9, 1902.

Mr. KNOX. I move that the House resolve itself into Committee of the Whole on the state of the Union for the further consideration of the bill (H. R. 12543) to enable the people of Oklahoma, Arizona, and New Mexico to form constitutions and State governments and be admitted into the Union on an equal footing with the original States.

The motion was agreed to.

The House accordingly resolved itself into Committee of the Whole (Mr. HEMENWAY in the chair) and resumed consideration of House bill 12543.

The CHAIRMAN. The pending question is upon an amendment offered yesterday by the gentleman from Indiana (Mr. OVERSTREET).

Mr. OVERSTREET. I ask that the amendment which I proposed just before the committee rose last evening be now read.

The Clerk read as follows:

"Strike out section 19 and insert in lieu thereof the following:

"'SEC. 19. The inhabitants of all that part of the area of the United States now constituting the Territories of New Mexico and Arizona as at present described may become a State under the name of Montezuma, or such name as may be finally determined by the convention to be elected under this act.'"

After argument by Mr. OVERSTREET and Mr. LACEY in favor of the amendment, Mr. SMITH of Arizona was recognized.

Mr. SMITH of Arizona said:

Mr. CHAIRMAN: Will somebody please tell me where the gentleman from Iowa [Mr. LACEY] dug up all this beautiful assortment of misinformation with which he has regaled the House? From a hasty trip on a Pullman sleeper in his berth at night, asleep, clear through Arizona, he dreamed more dreams and learned more ignorance of that country than he could under less favored conditions ever have hoped to obtain. He discovered at last the origin and meaning of the word "Arizona." We who for years have been vainly seeking this information take this occasion to publicly acknowledge our great indebtedness and express our gratitude to his erudition.

He is the only man now on earth that knows "Arizona" means "an arid zone." I wonder if he had taken a like trip through my native State if he would not have discovered that "horticulture" meant "raising horses" or the culture of tall horses. It were just as reasonable and just as probable and just as true. He belabored that arid zone with bad prose, and then, feeling that justice had not been done his theme, like Mr. Wegg, "he dropped into poetry" and gave us a "solar plexus" by likening our land to—

"Some proud king in old time slain
An ugly skeleton it gleamed
In burning sands."

It was also—

"Burnt and black and seamed
With thunder strokes and strewn with cinders."

It is no wonder Bret Harte died when my friend LACEY thus quoted him.

I did not much mind what the gentleman from Ohio [Mr. GROSVENOR] said yesterday, for I felt that mere misstatements could be successfully disposed of, but I protest it was unfair for my friend Mr. LACEY to do us this way. We all know a dead proud old king has no right to be a state or anything else, and we all know, too, that anything that had been "hit by thunder" ought to go out of business and quit pestering sentimental folks. I can not answer that "burnt and black and seamed" argument in dull common prose. Saddle Pegasus and let me meet this doughty knight-errant:

"I love that man who knows it all,
From East to West, from North to South;
Who knows all things, both great and small,
And tells it with his tireless mouth;
Who keeps the wondering world in awe,
The while he works his iron jaw."

[Laughter.]

Mr. Chairman, these two Territories are much too large for one State. They have nothing in common more than mere geographic location. They have been separated about forty years. They have different governments, different codes, different laws, and different histories. The mountain divides them. New Mexico's watershed empties into the Gulf of Mexico; Arizona's into the Gulf of California. Each Territory has different debts that under one government would be difficult of equitable adjustment, if, in fact, they could ever be adjusted at all. Each has its own capitol; Arizona's costing her people a vast sum of money. Arizona will never consent to become a part of New Mexico. As much as her people hate Territorial dependence, they will bear even that for years and years to come before consenting to such a proposition as this amendment contains.

New Mexico, doubtless, feels the same way. Arizona would never hold a convention, nor adopt a constitution, or take any part in either if this amendment carries. The proponent [Mr. OVERSTREET] knows it. The gentleman from Iowa [Mr. LACEY] knows it equally well. The whole and only purpose of the amendment is to defeat this bill, and my purpose in taking the floor was to make this fact apparent to the House. I am thankful to the gentleman from Iowa for the compliment he pays me personally, and the applause which greeted it was particularly gratifying to me, but above the kindly words of friendship and the affection of my fellows here I hold the sacred duty I owe those whose confidence has kept me so long amongst you, and to whose interest I have conscientiously given the best years of my life.

The Committee on Territories is composed of as good men as this House carries on its rolls. They have given this question consideration far in excess of any other members of this body, and that committee has unanimously presented here separate States for your vote. Their judgment is entitled to your most respectful consideration. Every friend of the Territories will vote against this amendment. Every person desiring to defeat all the Territories will vote for it. This is the test vote. This is the last ditch of the opposition. Defeat this amendment and this bill will pass without a division of the House on the final vote. This is an insiduous, underhand attack on the bill. Under the thin guise of friendship to our best interest I see the assassin's dirk. Your side and this side of the House are bound by party platforms against this amendment. It therefore can not carry. Mr. Chairman, let us have a vote.

NOTE.—The amendment was defeated by 106 to 28.

Three New States.

SPEECH

OF

HON. DENNIS T. FLYNN,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 12543) to enable the people of Oklahoma, Arizona, and New Mexico to form constitutions and State governments and be admitted into the Union on an equal footing with the original States—

Mr. FLYNN said:

Mr. CHAIRMAN: It may not be out of place, in the first place, to state that the bill under consideration is a bill which met with the unanimous approval of all the Democratic and all the Republican members of the Committee on the Territories.

I have heard criticisms of the chairman of that great committee for having consented to report this bill to Congress. Who is the censor of the opinions of members of this House and chairmen of committees? I have been asked, "How does it happen that Oklahoma was not reported alone?" I will frankly state it was not reported alone because the committee was unanimous in the opinion that it was right that all three of the Territories should be admitted; and it was their judgment to report this bill in the manner in which they did to the House.

A great deal has been said with reference to the rights of the Territories to statehood. Members of my own party say, as was said by the gentleman from Ohio [Mr. GROSVENOR] this morning, "I am willing to vote for Oklahoma." Yes. Vote for Oklahoma; vote for one proposition, and then have the opposition vote against Oklahoma and use that as a means to beat the entire bill. [Applause.] There has never been any rule laid down which would specify what shall be prescribed as the requisites for the admission of a Territory. The nearest to that was in the ordinance of 1787, when it was provided that Territories having a population of 60,000 should be admitted into the Union as States, and that was so far changed that even under it they could not have admitted the great State of Ohio itself, as it only had about 45,000 when admitted. The ordinance was not enforced as against it.

There are to-day in the Territory of Oklahoma one-third as many people from the State of Ohio as there was population in the entire Territory of Ohio when it was admitted as a State. [Applause.] What are the requisites for the admission of a Territory into the Union? We have been told this morning that it was political. Who lives to-day that can prophesy what the great and undeveloped West will be with reference to political affiliations in the future. Do you believe—I talk now to my Republican friends—do you believe that the way to make Republican States is to vote to keep them as Territories, and give the credit for their admission to the members of the opposition?

It has now come to this, that in the consideration of this bill, in the language of old, "Just and due consideration of the rights of the people should be the paramount question considered." There are more people in every one of these Territories now applying for admission than were in many of the States now represented upon this floor.

Mr. Chairman, there has never been a Territory that applied for admission into the Union since the organization of our Government that had within one hundred or two hundred thousand as many inhabitants as the Territory of Oklahoma now has. Is geographical area to be considered? If it is, then are we disqualified? But, if you disqualify us, you must disqualify Ohio, Indiana, Kentucky, South Carolina, and about one-third of the States

now in the Union. So that geographical area can not be considered. The exact area comprises 39,000 square miles more than the States of Vermont, New Hampshire, Rhode Island, New Jersey, and Delaware, being practically the size of Ohio, and larger than Indiana, and the size of Kentucky.

The census in 1900 gave us, in round numbers, 400,000 people. There are a dozen States now enjoying the rights, advantages, and immunities of full citizenship which have a smaller number of people within their boundaries than the Territory of Oklahoma. The States having the largest population when admitted were South Dakota and Washington, and even then, by the census taken a year after they were admitted, they lacked from 150,000 to 175,000 of having as large a population as Oklahoma now has. There has been no rule upon which you can gauge the admission of Territories. Some gentlemen argue, for the purpose of having my associates on this side vote against this bill, that they should consider the political complexion of these Territories. I will refer to that subject in a moment.

Ordinarily in the admission of new States it was argued that they should have population enough to entitle them to at least one Representative in Congress under the census. The bill under consideration bases our population on the last census and gives Oklahoma two members in the lower House. With the enormous influx of people into Oklahoma since the last census, our population has increased to over the half-million mark. Even under the large apportionment fixed for the Fifty-eighth Congress Oklahoma to-day has a population which would entitle her to three Representatives on the floor of this House, the only Territory, if we receive our just deserts, ever admitted into the Union with three Representatives in the lower House. When Illinois was admitted into the Union it did not have the requisite population to entitle it to even one. Neither did Florida, Kansas, Nebraska, Colorado, or Oregon, and the latter State lacked 45,000 of having enough. The people of the Territory must be pardoned if they temporarily cast their lot with the political party that is broad enough and fair enough to break the shackles of territorial bondage, and assist them in their upward march in building up a self-reliant commonwealth. [Applause.]

I say this to my Republican friends. I am as good a Republican as any member ever elected by that party on this floor. I come here with 13,000 more votes cast for myself individually as a Republican candidate than were cast for the gentleman from Ohio [Mr. GROSVENOR]. [Applause.] I come from a district with 33,000 and odd more votes cast in it than were cast in the entire district represented by him. I come with about 30,000 more votes cast in my district than were cast for any of the so-called leaders on the floor of this House who think that this bill should be throttled. [Applause.] But I am one of those Republicans who has been led to believe that when the party met in solemn convention and enunciated its doctrines that it was honest. I believe they meant it then, and I believe so now, no matter how the vote may be on this question. [Renewed applause.]

Mr. Chairman, I have been one of those who have looked forward to the bright sunlight and have stood as a humble follower revering the memory of the martyred Lincoln, looking forward with sorrow, but pleased at the record of the lamented Garfield, one of those humble followers who to-day stands looking to the bright side of the grand triumvirate of Lincoln, of Garfield, and of the sainted McKinley, and looking to them and not to the opponents of just legislation on the floor of this House.

I have heard the statement made to-day that the Republican platform and all platforms, for that matter, were merely made for a purpose, and that the people did not know what they were, and consequently they went for naught. I deny the statement that the saintly McKinley was ever nominated on such a hypocritical platform. [Applause.] The platform on which he was nominated in 1896 provided: "We favor the admission of the remaining Territories at the earliest practicable date."

That was the declaration of this great party which was followed by four years of the greatest prosperity that not only this country but any other country that the sun ever shone on enjoyed.

Again, in Philadelphia, four years later, when the party was enunciating another platform upon which that great hero was again placed in nomination, they said—now listen to the more recent declaration, the most modern article of Republican faith that has been enunciated, and I deny that either my Democratic or my Populist friends would willingly cast a slur upon anything connected with the name of McKinley—

> We favor home rule for, and the early admission to statehood of, the Territories of New Mexico, Arizona, and Oklahoma.

But our friends on the other side, evidently having trained with the gentleman from Ohio [Mr. GROSVENOR], met a little later on in their convention; and I am here now to ask my Republican friends, when I read them this declaration, whether or not they are willing to stand by and say that the Democratic platform and the utterances of the gentleman from Ohio are correct? The Democratic platform last adopted says:

> We denounce the failure of the Republican party to carry out its pledges to grant statehood to the Territories of Arizona, New Mexico, and Oklahoma.

What right had they to "denounce the Republican party," unless they had been told in advance by some one like the gentleman from Ohio that the Republican platform did not amount to anything and that nobody believed in it anyhow. [Applause.]

But, Mr. Chairman, I have some more Republican documents on the statehood problem. I do not believe that any man here will question the standing of the late Benjamin Harrison—his loyalty or his fealty to his party. Mr. Harrison, in Senate Report No. 15, first session Forty-ninth Congress, when making a report on the subject of Territorial admission, said:

> Territorial governments were always regarded as formative and temporary, to be superseded by State governments as soon as the necessary conditions existed.

Is not that good doctrine, coming from Benjamin Harrison, as good a Republican as ever lived? But I will not stop there. You may tell me that all I have read is from the tomb. Yes, and the hallowed tomb, revered and reverenced by all mankind. Senator PLATT of Connecticut, the best friend that the Territory of Oklahoma has ever had in the Senate of the United States—Senator PLATT of Connecticut, in the first session of the Fifty-first Congress, when reporting the bill for the admission of Wyoming into the Union, used this language, to which I call the attention of the House:

> The Territorial system was adopted only as a matter of necessity in order that there might be some government in an undeveloped and sparsely settled region. Wherever settlement and development make it possible for the people to sustain a State government according to the principles of the Federal Constitution, the Territorial government should be abandoned and the privileges of State citizenship conferred upon its people.

Will anybody say that we are not capable of self-government?

I deny, Mr. Chairman, that there is a pool or a trust on the Republican doctrines of this nation. McKinley, Lincoln, and Garfield were honest in enunciating the doctrines of their party. That party is broad enough to include not only the wealthy man, but the poor man. All alike are welcome and are members of that party. It might as well now be said, if the statements of the gentleman from Ohio are correct, that the platform upon which Theodore Roosevelt will be nominated will only be read, and that the people of the country will not pay any attention to it. Oh, yes; he doubtless will also be charged with belonging to the trusts. You know and I know that under his able management there will not be either a political or a commercial trust in this country. This we can confidently assume by the way he set out to look after the interests of the people.

But enough on the political phases of the question. I heard the statement volunteered by the gentleman from Ohio that Oklahoma is sure to be a Democratic State. Why, sir, that declaration will be heralded throughout the district which I represent by the Democratic party, and they will quote the gentleman from Ohio as very good authority. I have no objection if they want to use him as such; but I deny his right to speak on that proposition for me and the party of which I claim to be a member.

Further, we are told "you are bound to be Democratic." As a matter of fact, suppose that to be so, have not the people of Oklahoma a right to align themselves with whatever party they deem proper? I hope their judgment, however, will not indicate that the gentleman from Ohio is correct. But whether that should be so or not, they are entitled to admission; they ought to have admission.

I believe the gentleman is correct when he says we have no right to demand anything. We have not; that is true. The delegates are accorded a voice on this floor by virtue of an act of the American Congress. That is true. But when I say to you that there are now States represented on this floor and States having votes in the Senate—not one State, but more—whose population, men, women, and children all told, is not equal to the population of the district schools of Oklahoma Territory, I say that no man has a right to deny us admission into the Union.

When the great Territory of Dakota applied for admission it had no greater population and greater resources than Oklahoma has now, but Congress in its wisdom divided the Territory into the States of North and South Dakota. Who now doubts the wisdom of that division? Who would advocate the merging of the two sovereignties into one? As divided, each of the two States were giants in population and in resources, but neither of them had the population or the resources that Oklahoma now possesses.

Ohio and Indiana are both about the same size as Oklahoma. Where is the man who would to-day be so foolish as to say that each of them is too small geographically and that they should be combined into one great State? Such a man would be swept from his feet by a storm of ridicule. Oklahoma's area is nearly 3,000 square miles greater than that of Indiana and only a little

over 2,000 square miles less than that of Ohio. If geographical area is the test, then Oklahoma meets every requirement and at once should be clothed with all the habiliments of statehood.

The reports of the last census show that there are in Oklahoma 13,000 more boys and girls of school age than there are people in two States which are represented in the halls of Congress by six men who not only have the right to talk, but the right to vote.

At the last general election in the Territory (1900) over 73,000 votes were cast for Delegate to Congress. This number was far in excess of the total vote in each of the following States: Delaware, Florida, Idaho, Louisiana, Mississippi, Montana, Nevada, North Dakota, Rhode Island, South Carolina, Vermont, and Wyoming. Nevertheless two of these States are represented on the floor of this House by 7 members each, while one of the others has 6. Of the half million people in Oklahoma 88 per cent of them were born in the States and have had the privilege, as well as the responsibility, of voting for their own officers and for the chief magistrate of the nation.

The pride and the glory of Oklahoma is its public-school system, and the public-school system forms the bulwark of any State or nation. The strength of our country rests upon its public schools. It is in the public school that the American patriot is reared, and it is the public school that will see that the unity of the flag is preserved and the glory of the nation maintained. As a result of the public-school system of Oklahoma the last census reports show that only 5.9 per cent are unable to read and write. Excepting the States of Illinois, Indiana, Michigan, and Wisconsin, this is a smaller percentage of illiteracy than can be shown by any State east of the Mississippi. There are only 17 States in the Union that have as small a percentage of illiteracy. Having in thirteen years built up a school system which shows higher results than those of two-thirds of the States, is there any wonder that the Territory of Oklahoma feels proud of its achievements in an educational way and boasts of its common schools?

In 1891 there were 9,395 pupils enrolled in the public schools of Oklahoma; in 1900 there were 114,797. In 1891 the estimated value of school property was $12,000; in 1900 it was $760,972. In 1891 there were 109 schoolhouses; in 1900 there were 1,930. In 1891 there were 358 school districts sustaining schools; in 1900 there were 2,096 schoolhouses. In 1891 the amount received for school purposes was $44,000; in 1900 it amounted to $774,176. This shows the increase up to 1900.

The increase during 1901 was equally as great. There are to-day in the Territory 2,500 district schoolhouses that you people in the South and in New England and in the West are familiar with. They are not all log houses. Some of them are, but a majority of them are reproductions of the little white schoolhouses that have turned out the brains of our Government. There are to-day, as I say, 2,500 district schoolhouses, located in all parts of the Territory, sustained by our people, most of which were built without the issuing of any form of indebtedness. We have in every large city creditable brick and stone school buildings, which are furnished in the most modern manner.

In addition to these we have a Territorial university, which is the boast of the Territory; an agricultural college, and several normal schools, together with various denominational schools, colleges, and academies. This shows that the Oklahoma boys and girls are all keeping in the front rank of intelligence and progress, commensurate with the onward march of their brothers in the older sections of the Union. During the last year we had enrolled in our university about 400 students, and when a boy or a girl secures a diploma from that university, he or she is as proud of it as if it were issued by Harvard or Yale.

Congress has always been kind to Oklahoma, and I have had the honor to represent the Territory when it was under the control of first one and then the other of the great political parties. We have never appealed to Congress in vain and I do not expect to do so this time.

In view of the rapid settlement and development of Oklahoma, it was recognized very early that if any land was to be reserved for the future State it would have to be reserved as various sections of Indian land was opened to settlement; otherwise it would be too late, when the Territory was admitted, for Congress to make grants for school purposes, as was done in most other cases when new States were admitted. We have had lands reserved at different times, and with the consent of Congress have leased them for the benefit of the various educational institutions. In 1900 the amount received from such leases was, in round numbers, $75,000, and in 1901 it was $213,000. For the present fiscal year it is estimated at fully $300,000. We have received since 1891, as the net proceeds from leasing said lands, $1,046,857.

With such a commendable educational record for the past, with such an imposing statement of facts for the present, and with such brilliant prospects for the future education of the youth of Oklahoma, why should Congress hesitate to intrust to our hands that priceless boon of citizenship, about which our children study and for which our parents sigh, but which they can not enjoy, although they are intellectually and educationally equal to their brothers and sisters in the States? Is it strange that in behalf of this class of men and women we ask of you the right to control our own affairs? Is it wrong that they should insist upon the privilege—that great and high privilege—of casting ballots for the Chief Executive of this nation and of electing their own executive and judicial officials? Moreover, is it right for States having less people than we have school children to be entitled to three votes in the Congress of the nation while we can have no voice in the enactment of the laws which govern us?

Aside from the character of its schools, probably there is no better gauge of the intelligence of a people than the number and the standard of its newspapers. Among the first tents erected on the town site of Guthrie on the day of the original opening was one that covered a fully equipped newspaper plant, which, while the people generally were struggling for a chance to file on their claims, printed the first issue of a daily newspaper which has never missed an issue from that day to this. That first newspaper now has over 200 competitors within the boundaries of the Territory. There is an even score of papers published daily in the larger towns, while there are 170 weekly and numerous monthly and semimonthly papers and periodicals issued in various parts of the Territory. This is a record which can not be equaled by any community with the same population in the United States, and it is proof positive that our people hold a place in the intellectual sphere that is equaled by few and excelled by none.

Another test of the intellectual advancement of a community is found in the number and the size of its post-offices and in the character of the postal facilities demanded by its people. There are to-day in Oklahoma 35 Presidential offices and 725 fourth-class offices.

The last report of the Auditor for the Post-Office Department shows that for the fiscal year ending June 30 last the gross receipts of the Presidential post-offices in Oklahoma aggregated over $200,500, which is nearly as large as the total gross receipts from all of the Presidential offices in three of our Western States. The report also shows that during the same year there were nearly a score of States in which the gross receipts from the issuance of domestic money orders were less than those derived from that source in Oklahoma. Over two and a half million dollars were paid into the offices of Oklahoma for domestic money orders. These figures are very interesting and pertinent, in that they show that the Oklahoman not only keeps in touch with his friends in the States, but that in his industrial and financial transactions with the outside world he is more active than his brethren in over one-third of the States.

Again, socially and religiously our people are not a whit behind their neighbors in the States. All fraternal societies are liberally represented, there being between six and seven hundred such organizations in the various towns of the Territory. All of the principal religious denominations have large and commodious church edifices in every town, while there is hardly a community that does not boast of several literary societies. The general social condition is not as complex as in older communities, the line of eligibility not being so closely drawn. This can be accounted for by the fact that there has never been a settlement in any country of as many different people from so many different sections. There sectionalism and State pride disappear.

The old Union soldier and the ex-Confederate live in peace and friendship on adjoining claims. Northern push and energy meet and mingle with Southern hospitality, and they soon transform the prairie into farms, vineyards, and orchards, with homes that rival in the comforts of life those in the older communities. We have no millionaires; we have no paupers. Our people belong to the middle class. This admixture of the various elements of American civilization, this blending of the brain and the brawn, the customs and the training of different sections, this commingling of the representatives of all of the best elements of the North and the South, of the East and the West, has furnished a prosperous and intelligent people, has resulted in a cosmopolitan and broad-minded community, proud of its own record, but which would not detract from that of another. In a word, it has produced a typical and ideal American Commonwealth, where happy homes and well-tilled farms surround the hustling and thriving cities and towns. It is this industrious and high-minded class of people which has made the prairie blossom like a rose and which has within a little more than a decade erected a Commonwealth whose size and population surpasses that of many of the States and whose intellectual standing is unquestioned. In their name I ask, Is it justice that, because they have seen fit to cross an imaginary State line, they be deprived of the full rights and benefits of American citizenship?

With elementary and higher educational institutions that would be an honor to any State; with a public-school fund supplying a yearly income of $300,000; with school property now worth

nearly $1,000,000; with a percentage of literacy equaled only by one-third of the States in the Union; with daily and weekly newspapers in practically every home; with religious, charitable, and fraternal organizations within easy access of every family, and with a composite citizenship typical of the best in every section of the nation, we can and do proclaim without the slightest fear of contradiction that if education and intelligence is the test, Oklahoma should at once be promoted to her rightful place in the list of sovereign States.

Now, as to the financial condition of our people, a conservative and not a full estimate of the value of taxable property in Oklahoma would unquestionably place it at over $300,000,000. The total Territorial tax levy for 1901 was 7.5 mills, an increase of 2.35 mills over the preceding year. This increase was caused by the erection of new buildings for educational purposes.

The total taxable property in 1901 was $60,464,686, an increase of $12,000,000 over that of 1900. This is not a fair estimate of the value of our property, however. Congress kindly donated $16,000,000 in free homes to the people of the Territory, but in our total assessment we have but $17,000,000 charged as assessments from farm property, and I want to say here now that Oklahoma feels grateful to the American Congress for that great boon—yes, and when I say that I include the gentleman from Ohio [Mr. GROSVENOR], because he aided us in procuring the passage of that bill. And I would be untrue to the great cause of free homes did I not refer, in thought at least, because words fail me, to the great and honorable record of the gentleman from Pennsylvania [Mr. GROW], by whose work and energy the great American nation became known as the country of free homes for free men. We owed him, and we owe to many members of this floor, thanks for their kindness in voting to give these people what they did, and in carrying out the doctrine of that party to which I belong, and which, thank God, the other side of this House voted to sustain us in when they passed the last free-home bill. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. KNOX. I ask unanimous consent that his time be extended in order that he may conclude his remarks.

The CHAIRMAN. The gentleman from Massachusetts asks unanimous consent that the time of the gentleman from Oklahoma may be extended, that he may conclude his remarks. Is there objection?

There was no objection.

Mr. FLYNN. Sixteen States had less taxable property at the time of admission. Before Oklahoma would become a State under the operation of this bill the real value of her taxable property would be largely in excess of $300,000,000.

The appended statement shows the taxable value of several States at the time of their admission into the Union:

Arkansas	$19,000,000
Alabama	24,000,000
Missouri	22,000,000
Florida	21,000,000
Iowa	24,000,000
California	22,000,000
Oregon	29,000,000
Kansas	35,000,000
Nevada	30,000
Idaho	26,000,000
Wyoming	23,000,000

The total Territorial indebtedness of Oklahoma on June 30, 1901, was $466,220.13, or less than $1 per capita. Of this entire amount, but $48,000 was in the form of bonds, which in the first year of the Territory were issued for educational purposes, when we had no property to tax. There is not a bond issued by the Territory of Oklahoma, or by any county or municipality in it which has ever been repudiated or upon which there has been any default in the payment of interest. Our bonds of all kinds are at a premium, and our people, while striving to make the best terms possible whenever they borrow money, are equally anxious to keep unsullied their business reputation and their financial honor.

Sheperd & Co., of New York City, who have probably handled three-fourths of the warrants and bonds issued in the Territory, say in their last statement:

> We have handled more than half a million dollars of the bonds issued by the Territory of Oklahoma, by its counties, cities, and school districts. Our experience with the securities has been eminently satisfactory. Payments of interest and principal have been regularly made, and at the present time there is not a dollar of interest in default on any Oklahoma securities that we have ever handled.

That is our financial record, as viewed, if I may use the term, "on Wall street."

According to the latest figures there are in the Territory 125 Territorial banks and 61 national banks. The number of national banks has doubled since the end of the last fiscal year, and there are now pending in the office of the Comptroller of the Currency a dozen applications for charters for national banks in Oklahoma. In addition to these there are in the Territory various building and loan associations and other financial institutions, all of which are of a substantial character; and to say that we have 200 banking institutions of all kinds in the Territory, with resources of over $20,000,000, is to place a low estimate on them.

There are now in the Territory over 1,200 miles of railroad, with enough projected to bring the mileage up to 2,000. Of the 26 counties in the Territory only one is without a railroad. The 50 largest cities and towns of the Territory are connected by railroad and telegraph lines, some of the towns having three and four lines of railroad running into them. The assessed valuation of the railroad property in Oklahoma amounts to over four and a half million dollars. During the year ending June 30, 1901, the railroads shipped to markets outside of the Territory nearly 50,000 carloads of live stock and agricultural products, and over 100,000 bales of cotton.

Oklahoma is very largely a farming section. It surpasses every other section of the country in its ability to raise the four great staples—wheat, corn, oats, and cotton—upon the same piece of land. All fruits abound in great luxuriousness and perfection. Watermelons, sweet potatoes, and peanuts can be raised on every quarter section of land in the Territory. Oklahoma's wheat was awarded first prize at the Chicago World's Fair against the competition of the entire balance of the Union, and its wheat and flour carried off the premium at the Trans-Mississippi Exposition at Omaha in 1898.

Oklahoma raises annually over 25,000,000 bushels of wheat, 60,000,000 bushels of corn, over 150,000 and up to 200,000 bales of cotton, and other products in proportion. There are in the Territory 1,500,000 cattle, about 500,000 horses, to say nothing of about 1,000,000 swine and 50,000 sheep.

We have as yet devoted very little attention to mining, but with the opening of the reservations last August the Wichita Mountains are being thoroughly prospected, and there are indications of zinc, iron, and copper, and even silver and gold. Asphalt is found in many counties.

One of the agents of the Union Central Life Insurance Company, not a resident of Oklahoma, passed the following compliment upon us:

> We consider Oklahoma farm mortgages first class, and are making all the desirable loans that we can make. During the past five years we have loaned nearly, if not quite, $400,000 to the farmers of Oklahoma. We have not a single default in the payment of interest that is at all serious, and have never taken a foot of land in Oklahoma for foreclosure. The most serious trouble we have had with our Oklahoma loans has been that the farmers take advantage of the prepayment option which we grant them to pay off their loans long before we want to see our money come back.

That is our record on farm loans.

Oklahoma believes in encouraging all the industries and enterprises. It is not opposed to a man because he has not been successful in life elsewhere; neither does it believe in taxing especially those who have been successful.

We believe that this statement of facts and figures concerning the financial standing and business integrity of our people can not be questioned, and that it adds the last argument that is necessary to show that the Territory of Oklahoma not only possesses all the necessary essentials for statehood, but possesses all of them more abundantly than did any State that ever presented itself for admission into the Union on an equal footing with the thirteen original States.

Mr. BOWIE. Mr. Chairman——

The CHAIRMAN. Does the gentleman yield to the gentleman from Alabama?

Mr. FLYNN. I do.

Mr. BOWIE. I do not wish to interrupt the gentleman. I am going to vote for the bill; but I have heard it reported that not one of the Delegates who have argued in its favor intends to vote for its passage. [Prolonged laughter.]

Mr. FLYNN. That is true. I regret to say that under the rules of the House I will not be permitted to vote for the bill.

Mr. Chairman, the Committee on the Territories carefully considered the question of including the Indian Territory within the limits of the proposed State of Oklahoma in the manner prodosed by the amendment offered by the gentleman from Arkansas [Mr. MCRAE], and unanimously decided that such action is wholly impracticable at this time. But in order that Congress may be left free to exercise its best judgment in the future, a clause has been inserted in the bill requiring the constitutional convention to pass an irrevocable ordinance giving the consent of the State of Oklahoma that all or any part of the Indian Territory may be added to said State at any time or from time to time as conditions may justify and the landed property becomes subject to taxation. In my judgment this is a wise provision. But it may be asked, Why not do it in this bill, as proposed in the pending amendment? I will tell you why.

The reasons are abundant and are known to all who are conversant with the unsettled and unfortunate condition of affairs which prevail in the Indian Territory. That Territory has an area nearly as large as the State of Indiana. At the present time only a few allotments have been made, and not a single foot of land is subject to general taxation. The only realty that can be taxed is that segregated from the land held in common by the Indian tribes and divided into town lots, and these lots can only be taxed for municipal purposes. Under these conditions that part of the State of Oklahoma now constituting that Territory would have to pay the taxes of the State government. And what does this involve? In the first place, not a foot of land nor a single dollar of money has been reserved in the Indian Territory for school purposes.

The census of 1900 shows that there are more than 150,000 persons of school age in that Territory who know nothing of public schools and with no proper facilities for any sort or kind of public education. As a result the percentage of illiteracy has reached alarming proportions. No land to tax, no schoolhouses, no school money, and no kind of government except the Indian governments; and more than this, there is an existing agreement between the United States and the Choctaws and Chickasaws that there is to be no change in tribal governments until 1906.

May it not well be asked, Mr. Chairman, in view of these conditions, is it fair to the people of Oklahoma to be required to divide the lands which Congress has generously reserved for the education of the children of Oklahoma with the Indian Territory. All these lands are within the boundaries of Oklahoma, and I will never consent to a union of the two Territories at this time without Congress first providing for a school fund in lands or money for a public-school system in the Indian Territory equal to the grants made to Oklahoma. I shall here and elsewhere defend to the best of my ability the rights of the school children of Oklahoma to enjoy the benefits of the magnificent fund to be derived from the grants of land made in this bill and which in the years to come will be the pride and glory of a great commonwealth.

In the second place, there is not at this time a single mile of public road in the Indian Territory. It will take not less than $10,000,000 to provide for these roads and no provision has been made by which they can be located. With no government for the white population, with no settled titles, and with the court costs reaching nearly half a million dollars annually, it would be the height of injustice to require Oklahoma to bear the heavy burden that would be imposed upon her by attaching the Indian Territory before Congress, by appropriate legislation, has equalized the unequal conditions to which I have alluded. Let Oklahoma be admitted with all her magnificent qualifications for statehood; let the destiny of the Indian Territory be worked out as rapidly as possible, and the lapse of time will place Congress in a position to properly settle the perplexing problems, with which it is now impossible to deal, with justice to all concerned.

In the meantime the urgent need of the Indian Territory is a Territorial form of government. The Committee on the Territories have unanimously reported a bill for this purpose, which ought to meet the approval of Congress. It will give protection to life and property; hasten the work of the Dawes Commission; give the people there a Delegate upon this floor, and in every way promote the welfare of a long-neglected section of our common country.

Why should Oklahoma, so large, so populous, so intelligent, and so prosperous, be governed differently from the States you represent? Why should our Territory, with its great population, with its manifest intelligence, with its unbounded wealth, with its unlimited prosperity, be denied the right to vote for the President of the United States, to elect its own governor, to choose its own judges, and to make its own laws? The prosperous and intelligent people of Oklahoma are tired of a Territorial form of government and strenuously object to longer marching in a procession tied by a Congress which, though trying to be just and kind, is not at all times able to appreciate the local situation or to give much needed and speedy relief. Our people believe that they possess not only the right to be heard but the right to vote in the councils of the nation, and they now ask that they be permitted to exercise that right. As has been said in the past of another great Territory which was making its last demand for admission, Oklahoma is "a peerless beauty in resources, in wealth, in numbers, and in intelligence, the pride of all America, yet ignored by Congress and denied the right to enter her father's house."

We hope that will not be true as far as this House is concerned when the hour arrives to record your votes. The only way to encourage people who have gone forth and builded a new commonwealth is to give them to understand that there is still room for a star on the flag, invite them to prepare their star, and I, for one, will guarantee to you no act of any of these Territories will ever cast odium or stain upon Old Glory. [Prolonged applause.]

The Best Roads are the Cheapest Roads in the End.

SPEECH

OF

HON. GEORGE A. PEARRE,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 30, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 13885) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1903—

Mr. PEARRE said:

Mr. CHAIRMAN: I desire to submit a few remarks upon the question of this appropriation. The gentleman from Oregon has anticipated me in offering an amendment, which I hold in my hand, increasing this appropriation to $40,000. I believe that $40,000 would be adequate to meet the needs of this Bureau at this time. I shall endeavor as far as I can to secure the $40,000 appropriation, and if not able to secure that increase I shall vote most willingly for the $30,000 appropriation, which is a ten-thousand-dollar increase over the present appropriation for public-road inquiries.

Mr. Chairman, this appropriation applies to the Bureau of Public Road Inquiries, which, in my judgment, is one of the most important bureaus connected with the Government of the United States, and, indeed, a bureau without the proper operation of which, and without an adequate appropriation for which, almost every other bureau, if not every other bureau, of the Agricultural Department becomes absolutely ineffective. It may be well for a moment to glance at the history of the establishment of this bureau. It was established in 1893, after an agitation set on foot by the National Good Roads League of the United States. This league was made up of gentlemen from various sections of the United States—I may say from every section of the United States—without reference to local or political feeling, and it met in Chicago in 1892. It was suggested at that convention that the Congress of the United States should be appealed to for the establishment of a bureau of public road inquiries. In that convention, Mr. Chairman, Secretary Rusk made some remarks which were very pertinent, and to which it may be well to call the attention of Congress. Hon. Jerry M. Rusk was at that time Secretary of Agriculture, and in his remarks to that audience he said:

> The United States Department of Agriculture is in full sympathy with this movement. It ought to be, as the national representative of the agricultural interest. A dollar saved in transportation is a dollar added to net production. What shall the farmer do with his surplus product, and why raise this surplus if his way to the outside world is barred by impassable highways or obstructed by obstacles which increase threefold the expense of realizing the fruits of his industry? Can we enlighten him by showing him a better way of expending the taxes levied upon him for the improvement of his roads? Can we show him such a system, well driven home with clear persuasion and positive assurances, as will induce him to take hold of the subject with energy? I believe that the time is ripe to submit this matter to the intelligence of the American public. There should be a unity of interest between the city and the country. The city is almost as much interested in getting good roads as the country itself. To the country it means enhanced net value to country products; to the city it means a greater variety and no essential increase to cost to the consumer.
>
> No one man can improve the highways of a neighborhood. All must act together in behalf of their common interest, and people in yielding something to the common interest will in the end, by intelligent cooperation and systematic methods, be the recipients of benefits far beyond any possible results arising from discordant and uncompromising individual demands. Every person must be brought to see this and be induced to yield his individual interest to a wider range of road improvement, and to a single system wider than the horizon as seen from his own doorstep.

Mr. Chairman, the result of that convention was an invitation from the chairman of the Committee on Agriculture of the House, to a committee appointed by the National Good Roads League, to appear before the Committee on Agriculture and present their views upon the necessity and propriety of establishing a bureau of public-road inquiries, and the following item was included in the agricultural appropriation bill for that year:

> To enable the Secretary of Agriculture to make inquiries in regard to the systems of road management throughout the United States, to make investigations in regard to the best method of roadmaking, to prepare publications on this subject suitable for distribution, and to enable him to assist the agricultural colleges and experiment stations in disseminating information on this subject, $10,000.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PEARRE. I ask unanimous consent to continue for fifteen minutes.

The CHAIRMAN. The gentleman from Maryland asks unanimous consent that he may extend his remarks for fifteen minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. PEARRE. Mr. Chairman, this Bureau, therefore, was the result of this convention. It was not created by politicians, but was the offspring of a spontaneous popular demand. None

of its advocates expected to make anything out of it in the way of salaries or other emolument, but all were animated solely by the desire to subserve a great public purpose. These gentlemen gathered together in this convention, and they represented the people of their various localities. The present appropriation of $20,000 is too small to enable this Bureau to properly perform its functions and its work. The Secretary of Agriculture has set apart $7,500 for the road-material laboratory, and $3,000 for two experts in the field—a total of $10,500—leaving $9,500 for the total expenses of this Bureau, including the salaries of all the clerks, all the assistants, road experts, and engineers, and carrying on the work of object lessons in road building.

This, Mr. Chairman, is too little for the work. The work may extend over the 45 States of the Union, and the work of this Bureau of the Agricultural Department has already extended over 23 States. The needs of the Bureau, Mr. Chairman, are great. Heretofore it has been compelled to borrow its machinery, to use the road-making machinery of the various counties in which it has gone for the purpose of building object-lesson roads.

It has to beg from the railroad companies transportation for this machinery, and it indeed has been compelled to rely upon the National Good Roads League to bear part of its expenditure, even to the extent sometimes of bearing the expense of the salary of some of its officials. The Government of the United States should not and does not desire to be placed in any such humiliating position. The needs of this Bureau are fully and forcibly set out in the annual report of Hon. Martin Dodge, director, for the year 1901, in which he recommends an appropriation of $75,000, and a part of which report I will insert in my remarks.

In order to meet the constantly increasing demands that are being made upon us from time to time for practical assistance and advice it would be advisable to organize two or three outfits of road-building machinery, including rock crushers, screens, rollers, road graders, etc., and to send them to the various places which have asked for the cooperation of the Department and where preparations have been made for actual road construction. Each of these outfits should be accompanied by one or two practical road builders and a competent road engineer to direct the work.

Heretofore this office has been aided generously by the loan of road-making machinery, but the time has now come to abandon this make-shift policy and for the Government to purchase its own equipment for object-lesson work. This item of expense would not be a large part of the total sum needed and recommended. The leading railroads are deeply interested in the improvement of the public highways and have heretofore carried all our machinery free of charge, and it is thought that they can be relied upon in the future to carry it at a comparatively small expense to the Government.

If an appropriation is made by Congress for carrying out this plan, the only expense to the Department will be the salaries and traveling expenses of the engineers and expert road builders, the cost of the machinery, and the freight on the same from point to point. The local authorities would cheerfully furnish the road materials, which could be selected by our divisional agents and tested in our laboratory. They would also contribute the common labor, teams, and fuel, and attend to the grading down of hills, if that should be required.

This plan has been operated to a limited extent by the office for several years, and during the months of April, May, June, and July almost the same project was carried on by the National Good Roads Association in cooperation with this office. It is but proper to state here that this object-lesson work could not have been entered into by the office but for the national association, which paid the expenses, including the salary of our own engineer and a portion of the traveling expenses of the director and assistant.

The general adoption of this method of experimenting and disseminating practical information establishes a very wide cooperation, comprising the department, the railroads, the various local road authorities, the agricultural colleges and experiment stations, and interested individuals. It makes the expense of building experimental and sample roads very easy to be borne, and would enable the Government with a small expenditure to accomplish much practical benefit.

Scientific road building necessitates not only the consideration of local conditions, such as climate and soil, rainfall and drainage, but also a study of available materials adjacent to the road. To transport materials a great distance adds so much to the cost as to render roads scientifically constructed of foreign materials impracticable. Competent road builders should discover and test the available materials and show by practical object lessons how the most good can be made of them with the least possible expenditure of money and labor.

The best materials are not always discovered, and thousands of dollars are wasted in this country annually by the use of poor materials where a little expert study and advice would have developed good materials close at hand. The best methods of using these materials are ofentimes unknown, and money is wasted in their improper application. All these things require scientific study and investigation. The people of the country are now interested in this matter as never before, and they are demanding and are sorely in need of authentic information along these lines. Furthermore, this is a work which the Government can do for them much better and more economically than they can do for themselves.

After having considered all letters, requests, and resolutions which have come to the Department, and after consulting and corresponding with many of the most prominent farmers and road advocates throughout the country, I have the honor to recommend that Congress be asked to increase the appropriation for this office for the next fiscal year to $75,000. If this increase is granted, I would recommend that there be devoted, provisionally, to investigations and educational work $1,000 in each of the States and Territories, and that the balance be used in defraying the running expenses of this office and the road-material laboratory.

The necessity of furthering the work of this laboratory is felt all over the country, and at least $10,000 is needed for carrying on this branch of the work for the next fiscal year. The small sum of $1,500 heretofore allotted to each of the four divisions of the country is not sufficient to pay the salary and expenses of competent persons. The Department should be able to command the entire time and attention of those representatives, but in order to do this at least $2,500 should be set apart for each division.

Our small force has been so completely occupied with outside work that the preparation of didactic literature had to be neglected. This branch of the work should also receive more attention, especially the collection, illustration, printing, and distribution of practical and scientific information. I trust, therefore, that you will find it within your power to secure at least $75,000 for the use of this office for the next fiscal year.

When the last report was submitted, there was some doubt as to whether we could secure a sufficient number of trained men to carry on extensive investigations in the various States, but during the past year the office has devoted a great deal of attention and study to the selection of persons who are sufficiently skilled to inaugurate this work. It is gratifying to announce that we are now prepared to greatly extend the work of this office, and the appropriation above mentioned, if granted by Congress, will be expended judiciously and wisely.

An increased appropriation is also recommended by the Secretary of Agriculture in his report on page 99, where he says:

The work of this office is of great and growing importance. Popular appreciation of its efforts has greatly increased, as shown by press comments and resolutions adopted by many popular gatherings. The demand for the services of the Director and his assistants far exceeds the limit of their time and energy. There is an unmistakable popular demand that the Office of Public Road Inquiries be given a largely increased appropriation, a demand with which I am in hearty sympathy. If a larger sum should be appropriated for this purpose, I believe it would be profitably expended in carrying on and extending the work of this office.

In the estimate of the Agricultural Department the exact amount of my amendment ($40,000) is estimated and recommended by the Secretary of Agriculture.

Mr. Chairman, this recommendation of the Secretary of Agriculture is significant when we examine the report of the Secretary and discover that in no single other instance has the Secretary of Agriculture recommended with the same earnestness and positiveness any increase in appropriation. If you will glance at the report of the committee on the bill, it will be discovered that there are increases of appropriation provided for the Weather Bureau, Bureaus of Animal Industry, Forestry, Biology, Chemistry, Entomology, Soils, Public Experiment Stations, Silk Investigations, Plant Industry, etc. It reads as follows:

	Current fiscal year.	1902-3.	Increase.
Office of Secretary	$71,670	$73,690	$2,020
Weather Bureau	1,148,320	1,251,760	103,440
Animal Industry	1,154,030	1,247,180	93,150
Plant Industry	496,680	601,780	105,100
Forestry	185,440	282,860	97,428
Chemistry	35,800	73,200	37,400
Soils	109,140	168,960	59,820
Entomology	36,200	57,200	21,000
Biology	32,800	45,600	12,800
Accounts	18,900	24,100	5,200
Publications	198,020	228,820	30,800
Experiment stations	789,000	792,000	3,000
Silk investigations	Nothing.	10,000	10,000
Total increase			581,150
But deducting $5,000 carried in last year's bill for preparing plans of new building for Department of Agriculture			5,000
Leaves a total net increase for administration purposes of			576,150

You look in vain, sir, through the report of the Secretary of Agriculture for a recommendation of increase for these various bureaus, and, notwithstanding that, the Committee on Agriculture makes increase of large amounts in these various bureaus, not earnestly recommended by the Secretary of Agriculture, and overlooks the one item of an increased appropriation for the only bureau upon which the Secretary of Agriculture lays any special stress.

Mr. Chairman, this appropriation is not only recommended by the Secretary of Agriculture and the Director of the Public Road Inquiries, but it is also recommended by the Industrial Commission. If gentlemen will take the trouble to examine, they will see in volume 10 of the Industrial Commission that the Industrial Commission has made a careful investigation of this subject, and after that careful investigation has made this recommendation to Congress:

We recommend to Congress that increased appropriations be made for building sample stretches of improved roads in various sections of the country, so as to encourage the more rapid construction of such roads at State and local expense.

In addition to that, sir, the International Good Roads Congress, which met at Buffalo, N. Y., September 29, 1901, also adopted a resolution recommending an appropriation of $150,000 for this Bureau, and if there be no objection I will embody that recommendation in my remarks in the RECORD.

The CHAIRMAN. The gentleman from Maryland asks unanimous consent to print the resolution referred to in the RECORD. Is there objection? [After a pause.] The Chair hears none.

The resolution is as follows:

Resolved, That it is the sense of this International Good Roads Congress—

(1) That now, while the public-road systems of this country are in a somewhat chaotic condition and in a state of transition, the need for investigation and educational work by the Government is greater than at any time in the past.

(2) That the office of public-road inquiries in the Department of Agriculture should, therefore, at once be enlarged into a bureau and supported by such larger appropriations as will be more in keeping with the great work to be done by it.

(3) That in the opinion of this congress an appropriation of at least $150,000 should be made by the United States Congress for this purpose, and all members of Congress are respectfully urged to secure such an appropriation.

Mr. PEARRE. Mr. Chairman, this is no new matter, the interest that the Government may take and is taking in the improvement of the public roads. One of the very first matters which was brought to the attention of the Congress of the United States in the very infancy of this nation was the establishment or construction of a great highway for internal commerce. That, sir, I claim, was brought about, or the completion of the work (the child of the brain of Henry Clay) was brought about, to the everlasting credit of the State of Maryland, by its determined refusal to acquiesce in the Articles of Confederation until the other States and colonies negotiating for that confederation had consented to yield up to the common Government all the lands that they owned or claimed west of the Allegheny Mountains. That put into the hands of the United States the enormous public lands, out of the proceeds of which our public-school system has been largely built up, out of which the great national road, the greatest and only national highway we have ever had, was constructed.

Mr. Chairman, that road during the period of its usefulness was one teeming artery of the life and trade and commerce of the people of the United States.

True it is that after the construction of railroads it fell practically into "innocuous desuetude;" but it serves still to illustrate and emphasize the fact that the fathers of our country in the early history of this Government recognized not only the constitutionality and the legality but the propriety and wisdom of looking after the public roads. Mr. Chairman, that road cost $7,000,000, and was to have been extended far beyond Ohio to the city of St. Louis.

This matter of the improvement of the public roads has been taken up by every other country of the world, and large sums expended annually in their construction and improvement. England and Wales spend annually $20,000,000 on their roads; Ireland, $3,000,000; France, $37,500,000, while the United States, the pioneer of all nations in public improvements, the leader of the world in devising and perfecting plans to add to the comfort and welfare of mankind, lags in the race with the disgraceful record of but $100,000 expended in connection with the improvement of the common roads—excepting the National Road—and the Agricultural Committee of this great body refuses to adopt the earnest recommendation of an able and conservative Secretary of Agriculture for a paltry appropriation of $40,000 looking to the improvement of the roads of 77,000,000 of people. If the committee will indulge me for a moment, I will read from United States Consular Reports, volume 3, 1891. The document from which I propose to read is a report from Consul Danforth, of the Liege district, in Belgium, and will serve to show to the committee what other governments have done in regard to their roads:

> One can mount his wagon at the English Channel and drive through the breadth of Europe—except in time of snow—or its length, without sinking as deep as the fellies of his wheels in any weather or at any time of the year. The roads are so firm that rain does not soften them; they are so thick that frost does not break them up. There are no sloughs to wade through, no periods when the factory and the farm are cut off from the rest of the world by an impassable sea of mud. Two horses start with a cart or wagon weighing a ton, having upon it a load weighing 2 or more tons, and arrive with no breakage, and at least no friction, to their destination.
>
> How discreditable is the comparison between this condition of roads in foreign lands and those in our own lands, where, the Industrial Commission says, 99 per cent of the common roads are still bad? Is it not time to change the character of this comparison to the credit of our own country?

Now, Mr. Chairman, since the establishment of this Bureau, has it served any practically good purpose? If you will glance over the laws of the various States of the Union, looking to the improvement of the roads, you will discover that road improvement in the various States of the United States began with the establishment of this Bureau of Public Road Inquiry of the Department of Agriculture. California, Indiana, Massachusetts, Michigan, Missouri, New Hampshire, New York, North Dakota, Oregon, Washington, Wisconsin in 1893, New Jersey and Vermont had road laws prior to that time, but improved them greatly after 1893. New York passed its present law providing for State aid in the construction of roads in 1894.

Before this Bureau began its labors to educate the public and stimulate it to improve the public roads, in the States of Massachusetts, Rhode Island, Connecticut, New York, and New Jersey a limited mileage of roads was being built almost entirely at local expense, with one exception—of New Jersey—which adopted a State-aid plan in 1891. After the Bureau had performed a great amount of work in these States, they began to go forward with most extensive improvement. In New Jersey 10 miles of road were built in 1892, 25 miles in 1893, 64 miles in 1894, and since 1895, the year in which the Bureau did the most work in that State in the way of building object-lesson roads at the State Agricultural and Experimental Station, the applications for new roads have been in excess of the limit prescribed by law. The first State appropriation in New Jersey was limited to $75,000. The appropriation which the State now contributes to the construction of public roads in New Jersey is $350,000, and over 100 miles of permanent State roads have been built.

Roads in New Jersey, which at first cost $10,000 per mile, were subsequently built, under the direction of an expert of this Bureau, for $3,500 a mile, and owing to the increased knowledge and practical experience of these experts, as well as by the use of improved machinery and methods, the cost in more recent years has been reduced to a much smaller figure, running from $1,000 (gravel road) to $1,800 and $2,500 per mile for macadam roads. The results in New York, stimulated by this Bureau, are even more encouraging than in New Jersey. New York has profited greatly by the suggestions and instructions of this Bureau, for in March, 1898, the Higbie-Armstrong State-aid law was approved and $50,000 appropriated by the State. This year that appropriation was increased to $850,000 to aid the counties in improving the public highways. These improvements in the laws, reductions in the cost of construction, and increased State appropriations in the two States I have just mentioned were brought about, without doubt, by the stimulation of public interest in public-road matters by the literature issued by this Bureau and by the construction of object-lesson roads therein, all of which shows the invaluable work of this Bureau.

It may be contended by some gentlemen that it is not the function of the Government of the United States to construct roads for the various States of the Union. With this proposition I entirely agree, but this appropriation, Mr. Chairman, does not contemplate anything of that sort. It simply contemplates the same purpose which is contemplated by every one of these bureaus of the Agricultural Department, namely, to stimulate a desire and purpose upon the part of the various States to take up the various matters investigated by these bureaus for their own good, and by State appropriations to do the work as to which the Government is educating the people through the bureaus of this Department. The function of this Bureau is clearly and forcibly set out by the Hon. Martin Dodge at page 251 of his report, to which I have already referred, as follows:

> It is proper just here to call attention to a misconception, which appears to exist in the minds of some, to the effect that increased appropriations for this work may lead to national aid. It should be distinctly understood that the work of this office, like that of many other divisions of the Department, is peculiarly educational. In requesting an increased appropriation it was not the intention to shift the burden and responsibility of constructing improved roads from the States and counties to the General Government. Such a plan is not feasible, and even if it were it would not be desirable, for there could be no surer way of postponing the building of good roads than by making them dependent upon national aid. Under such a system States and counties would wait for national aid, and little or nothing would be done.

Just here I desire to call the attention of the committee to the fact that without this Bureau of Public Road Inquiries the good arising from every other bureau, appropriated for in this bill, will be curtailed. And why? Because each one of these bureaus has for its purpose the improvement and the increase of some natural product of the land. The Bureau of Animal Industry has for its purpose the ascertainment of the best methods of protecting the farming animals of the country from disease; investigating the best method of improving the breed, developing the animal and adapting him for the purposes for which he is used. How useless, then, is it for the Government to appropriate money to ascertain the best methods of protecting the health and developing the power of the horse if he is to be dragged to death in hauling loads through roads which, during a part of the year, are little less than mires. How futile the effort to develop cattle and then to have the weight, which is added to them by the best methods of breeding and feeding, dragged off in driving them through miles of mud knee-deep to the railroad station to be shipped to the market? How absurd to tax the farmer to meet an appropriation of $1,247,180, carried in this bill for the Bureau of Animal Industry, to aid him in part in developing the best and most productive breed of milch cows and protecting their health, when the legitimate benefit which should arise from this appropriation is torn from him by the increased cost of transporting his milk from the farm to the railroad or market by dragging it over roads at times axle-deep with mud?

There is appropriated in this bill $601,780 for the Bureau of Plant Industry—an increase of $105,100 over the appropriation for the current fiscal year. The design of this Bureau is to aid the farmer in improving all plant products on the farm; in protecting them from the ravages of the insects which are fatal to them, and in causing them to bring forth the greatest amount of product. How is the farmer compensated for this tax, unless something is done to improve the road from the farm to the railroad or market, in order that he may get the benefit of the increased production without having his profit reduced by an extra cost of hauling it through mud roads? I might go on, Mr. Chairman, through the appropriations for the bureaus of Forestry, Chemistry, Soils, Entomology, and Biology provided for in this bill, and show that the benefits arising from any and all of them

(and these benefits are great) will be destroyed unless the means of the farmers' transportation are improved and reduced in cost. The function of each one of these bureaus is to improve the farmer's product, and in every instance the profit from this improved product will be lost to him unless something is done throughout the country to improve the common roads over which that produce passes to the markets. Therefore, I assert with every confidence that the appropriation for this Bureau is the most important one contained in this bill, and is the basis of the benefit to be derived from any and all of the bureaus. Instead of being the only one which is not increased, it is the one which, perhaps, should be most increased.

This proposition is vigorously and clearly stated by Gen. Roy Stone, formerly director of this Bureau, in the Yearbook of Agriculture for the year 1897, in which he says:

The various divisions of the Department teach the farmer how to increase his product and how to care for it to the best advantage, but the question which finally interests him most is how to dispose of this product. It is useless for him to raise anything beyond supplying the mere necessities of his family unless he can be sure of finding a market and of reaching it at the proper time. Taking the country at large, the Chamber of Commerce of the State of New York declares this country is handicapped in all the markets of the world by an enormous waste of labor in the primary transportation of our products, and the National Board of Trade says that the country is "poverty stricken in the midst of its riches by reason of the badness of its roads."

The improvement of the public roads brings the city market nearer to the country and the farmer by increasing the ease with which the farmer reaches town. It cheapens the product to the consumers in town and city without reducing the profit to the farmer. Every ton, every pound, and every bushel of the farmers' surplus product must be marketed somewhere. In order to reach a railroad the distance between the farm and the railroad, ranging from nothing to 5, 6, 8, and 10 miles, must be traversed. That distance and the cost of traveling it is reduced by the cutting down of grades and the smoothing of the surface of the roads, and every improvement in this respect in effect reduces the length of the haul and saves the farmer money. This is not idle speculation, Mr. Chairman, but is based upon well-ascertained facts. There are over 5,000,000 farmers in the United States. They are the bone and sinew of the land. From their homes come the new blood and the strong nerve which meet the great draft made by the strenuous commercial, mercantile, and professional life of the large cities. Their farms comprise one-fourth of the total property of the country. The average cost of transportation from these farms to the nearest market or railroad over bad roads is not less than 25 cents per ton per mile; on good roads about one-third of this, or 8 cents per ton per mile. Each cent by which the cost of carrying a ton a mile is reduced is added to the farmer's profit without being added to the price.

In a prize essay by David H. Bergey, of North Wales, Pa., written in a contest where the awards were made through the University of Pennsylvania by a committee of the citizens of Philadelphia, with Dr. William Pepper, the famous physician and philanthrophist, as its chairman, the following statement is made:

The price of wheat is increased for localities having properly improved transportation facilities. If it costs a farmer $1 to haul 100 bushels of wheat over a dirt road, and by macadamizing the road this cost can be reduced to 20 cents per mile, the price of wheat is raised accordingly. One mile saves 80 cents. Ten miles save $8 for a hundred bushels or 8 cents per bushel—the increase in price of each bushel—not considering the larger load that can be carried on macadam roads. The price of wheat is then permanently raised by improved facilities for transportation. The value of farm lands is also relatively increased. The value of farms is increased by the improved facilities for transportation of their products, and thus find an earlier market. As the time needed to reach the market is lessened, the farm is brought relatively nearer the town and its market. If improved roads make the journey an hour shorter, the farm is, relatively speaking, an hour's journey nearer the market.

He also says that—

The farmer also receives some benefit in the saving of time and draft and in hauling coal, feed, and other commodities from railroad and mill. The time saved in hauling each load, and the increased burden that it is possible to carry greatly reduces the real cost of these commodities. In Montgomery County, Pa., nearly every farmer sends his milk either to the creamery or to the depot and ships it to Philadelphia. The time lost in this manner amounts to a considerable sum during the year. If the roads were macadamized this saving of time would represent that much profit on the dairy. If the loss of time amounts to one-half an hour each day for half the year—and many farmers lose more—or ninety hours during the year, the loss would amount to $9, since the hired help of the farmer costs him at least 10 cents an hour, including his keep. The saving of time of this item alone would go far toward paying his road tax and would be so much profit on his dairy.

The reduction in the cost of transportation to the farmer by the improvement of the roads arises not only from the greater ease with which and the shorter time in which he can haul the same load, which he now hauls over a bad road, to market, but also from the increased load that he can haul. Careful estimates have been made from experience, both abroad and in this country, to ascertain the saving upon this score. Mr. Harry Fielding Reid, chief of the division of highways of the geological survey of the State of Maryland, in an excellent article on "The advantages of good roads" in a publication called The Highways of Maryland, published in 1899, states that—

In Belgium, roads compete with railroads. Wagons bring merchandise from Brussels (60 miles) or Antwerp (72 miles) to Liege, and one horse pulls an enormous load. Dog carts come to Liege, 12 or 15 miles, laden with farm products, and two grown people ride back.

William H. Rhawn, chairman of the Philadelphia committee, to which I have already referred, states in a publication of the work of that committee called "A Move for Better Roads" that the census of 1880 gave the farm products of Pennsylvania as 6,500,000 tons, half of which is consumed on the farms, and the balance is hauled an average of 5 miles to market. Assuming that a 2-horse team makes two trips per diem, at a cost of $2.50 per day, the cost of movement on clay and macadam roads will vary as follows:

	Clay road.	Macadam road.
Load for 2 horses.....pounds..	1,400	2,180
Number of loads for the 3,250,000 tons.....	4,643,000	2,981,000
Cost at $1.25 per load.....	$5,703,750	$3,726,250
Saving by reducing the surface resistance.....	.....	$1,977,500

This is the waste entailed upon the farmers' products by clay roads. It is enough to keep in repair 30,000 miles of turnpike, at an annual cost of $60 per mile, or it represents 831,000 days of labor, which might be employed in other wealth-producing industries.

Arthur Newhall Johnson, highway expert of the Maryland geological survey, in a carefully prepared article on the construction and repair of roads, makes this statement:

It is seen in the case of an earth road that forty-one one-hundredths as much can be hauled on a grade of 5 feet per 100 as on a level earth road, and but 10 per cent as much on a grade of 15 feet per 100. Thus, if a horse can pull 1,000 pounds on a level dirt road, on a 5-foot grade he can only pull 410 pounds, and on a 15 per cent grade but 100 pounds.

It requires no argument to show that the lighter the grade and the smoother the surface the larger load one horse can drag; the heavier the road and the rougher the surface the greater number of horses it will require to draw the same load and the lighter the load. Mr. Byrne in his excellent work on Highway Construction makes the following estimate of the relative number of horses required to pull an equal weight on various surfaces:

Road.	Horses.
Iron rails.....	1
Macadam.....	5¼
Earth, dry.....	20
Sand.....	20

The illustrations could be multiplied of what must be apparent to every thinking man, that the reduction of grades and the smoothing of the surface of our roads will shorten the distance between the farm and the market, reduce the cost of transportation of the farmer's products, and thus increase his profit. But this is not the only way in which the farmer is benefited. The increase in his profit thus brought about increases the value of his land. The reason for this is plain. It brings the farm nearer to the market.

Gen. Roy Stone, vice-president of the National League for Good Roads, and formerly United States special agent and engineer for the Bureau of Public Road Inquiries of the Agricultural Department, states in his book on New Roads and Road Laws in the United States, published in 1894, that—

The Canandaigua (New York) roads by their improvement have increased the value of the adjoining farms many times the cost of the roads, and that the cost of keeping them in good repair is much less than that of keeping poor roads in poor repair.

He also states that—

The owner of a large tobacco plantation some miles from Henderson, Ky., having great difficulty in moving his product to the market in that city, organized a company and built a toll road. He estimates the increase in the value of his property at threefold, while the road has paid annually over 10 per cent in dividends.

In 1896 Prof. W. C. Latta, of Purdue University, Indiana, collected some important information on the subject of the increased value of lands in Indiana due to good roads by sending a number of questions to about 60 farmers living in 40 counties in the central part of the State. Over 40 answers were received, and from these Professor Latta draws the following conclusions:

First. The average estimated increase of the selling price of land due to the existing improved highways is $6.48 an acre. The estimates from which this average is made refer in most cases to land near improved roads, but in a few instances have applied to all the land in the county.

Second. The estimated average increase per acre that would result from improving all the public roads is $9.

Third. The estimated average cost of converting common public roads into improved highways is $1,146 per mile.

Fourth. The estimated average loss per 100 acres from poor roads is $76.28.

Mr. Reid, in the article I have already referred to, states that the farmers of Cayuga County, N. Y., who have built themselves a number of miles of hard road at a cost of $1.50 per acre of the adjoining farms, found that their land has increased in value from $20 to $30 per acre, and in the southwestern part of the State of Connecticut there are three towns in juxtaposition, the outer two of which have improved their roads, with the result that their land values are 50 per cent higher than those of the middle town.

Mr. Edward Burrows, formerly road commissioner of New Jersey, has collected the opinions of a number of farmers in that State who have resided in the neighborhood of the roads lately improved. One farmer writes:

I would not sell my house and accept another worth $7,000 as a gift and be obliged to live in it 2 miles from a macadam road. No farmer in the neighborhood would buy a farm not located on the macadam road.

Mr. Charles C. McBride, of Elizabeth, N. J., in writing on the improved roads in Union County, of that State, says:

The cost and expense of these manificent roads are easily computed. The total outlay by the board of freeholders has been nearly $350,000 and there are now nearly 40 miles of Telford and macadam road in the county. The figures are not in excess of what was expected by those who have given the matter careful study, thus showing that the financial part has been as discreet as the preparatory part. But the question will arise at once, Has this expense of nearly $10,000 a mile proved wise as well as beneficial? Good roads are, of course, good things, but do they pay?

The answer may in part be found in the fact that the property in Union County has actually appreciated in value far more than the cost of the roads; and this not only in cases of sale or exchange, but upon the tax levy. Notwithstanding the fact the $300,000 worth of county bonds had been issued to build these roads and the interest must be met annually, the tax rate has not been increased in the county or in any city in the county in consequence of the extra interest expense: and it is but fair to say that the actual appreciation of property due to the increased values of land benefited by the improved roads meets the increased taxes already. As an advertising medium alone they have been worth what they cost, for they have brought county property into prominence, have already caused the sale of many residential sites, have brought new wealth and new enterprise into the midst of us, have given direct impetus to the building and improvements in every city and town touched by them, and as yet the benefits are only beginning to be realized. It is fair to say that the citizens and taxpayers of Union County would not go permanently back to the old system, with its roads, if they were paid many times the cost of the new roads.

Gen. Roy Stone, formerly connected with the Agricultural Department, in endeavoring to ascertain or estimate the difference in the cost of transportation on good and bad roads, sent 10,000 letters of inquiry to all parts of the country. He found that the cost of hauling varied in different regions, being as low as 22 cents per ton per mile in prairie States and as high as 32 cents in the Eastern States. He estimated that nearly 220,000,000 tons of farm and labor products are annually carried on wagons in the United States at a total cost of nearly $1,000,000,000 and that probably two-thirds of this could be saved by good roads.

The highway commission of Maryland, Mr. Chairman, has been doing some good work in the way of collecting statistics on the advantages to the farmer of good roads. Mr. Reid, in his article, states that one of his correspondents, living near Bradshaw, Baltimore County, Md., at which place an excellent piece of macadam road was laid down less than two years ago under the direction of Mr. Harrison, of the United States Office of Public Road Inquiries, states that he hauls twice as much over this road in half the time as he formerly did and with less wear and tear on his harness and wagon. He says that his land has doubled in value.

The improvement in public roads reduces the number of draft animals that have to be kept and minimizes the wear and tear on them. There is also a great saving in repair to wagons and harness. The wear and tear on a horse on bad roads is a great loss to the farmer. It is authoritatively stated that stronger and more expensive horses are required in Baltimore than in Washington for the same class of hauling, on account of the difference in grades, streets, pavements, and car tracks. It is stated with equal authority that there is a company doing a large business in delivering freight in Baltimore and in Washington which finds that the annual repairs to their wagons in the former city are over three times as much as in the latter; and this is due to the difference in the streets and car tracks.

Mr. Harry Fielding Reid, chief of the division of highways of Maryland, states in the report of that commission, made by Prof. William Bullock Clark, state geologist of Maryland, in 1899:

That answers from correspondents in Maryland show that there are annually hauled from their farms 38,504 tons, and to their farms 17,504 tons; that is, the total freight moved is 57,045 tons. The farms of these correspondents have an aggregate area of 57,638 acres. One can therefore say with sufficient accuracy that there is annually moved 1 ton of freight for every acre of farm lands in Maryland. This ton is hauled an average distance of 6.7 miles, at an average cost of 26 cents per ton per mile, or $1.74 for the 6.7 miles of haul. The census of 1900 shows that the State contains 46,012 farms, aggregating a total of 5,170,075 acres. Multiply this number of acres by $1.74 and the total cost of transportation to and from Maryland farms amounts to about $8,925,800. If the cost of hauling was reduced one-half by good roads, the annual saving would be about $4,497,900.

This estimate includes nothing but what is hauled to and from the farm and does not include timber, lumber, mine props, crossties, and various other species of freight hauled over the public roads to railways, factories, etc. Mr. Reid estimates another great saving to the farmer which is effected by good roads. The better the roads the lighter the grades and the smoother is the surface. The lighter the grades and the smoother the surface the fewer are the horses needed to haul the loads, the larger are the loads, and the shorter is the time consumed in hauling them. Answers, he says, to his inquiries showed that on an average farm of 210 acres there are six horses, and that good roads would diminish the cost of repairs to wagons and harness about $10 annually, and if we take $15 as the value of the annual saving on each horse as the result of less food needed and a longer life service by reason of the greater ease with which he can do his work on well-graded and well-surfaced roads, and $10 as the saving in repairs to wagons and harness, we find that there would be an annual saving of about $100 per farm of 210 acres, and as the total acreage of farm lands in 1900 is about 5,170,075, the saving for the whole State would be about $2,461,900.

The arguments heretofore educed lose none of their strength by the suggestion that the transportation over the common roads in the future may not be by horse power but by steam or electric motors. If this be conceded (and for practical purposes it is a long way off), the lighter the grades and the smoother the surface the less resistance there will be to the power whatever it may be, and the larger the loads and the quicker the hauls. Indeed, there is scarcely a road in the United States over which electric trolley lines are being run the grade of which has not been lessened and improved. In eight cases out of ten it is necessary. Even if such motors be introduced, they will never supersede the farmer's own private method of transportation—namely, by his own horses and wagons.

I might multiply instances of this sort, Mr. Chairman, and add to my remarks innumerable calculations and estimates based upon authentic information to show the special benefits arising from good roads and the special losses due to bad roads, but neither my time nor the patience of the House will permit. If any of these estimates which have been made by careful men engaged in this work, both in this country and abroad, are within 50 per cent of being accurate, the advantages to the farmer and the public generally of good roads and the disadvantages of bad roads from a financial point of view become startling.

I may be pardoned for referring to my own home county for further illustration. In Allegany County, in Maryland, where I live, we have expended, sir, in the last three years $172,032.49 on public roads and bridges, the amount for new roads being but $10,600. In the ten years prior to that time, from 1889 to 1898, this same county spent $269,042 on its roads, and yet on account of the lack of sufficient knowledge of the proper method of road building the improvement of our roads has not been permanent. The Industrial Commission, in its review and analysis of the testimony heard by it on the subject of public roads, states that "99 per cent of the entire road mileage of the country is still practically unimproved;" which shows that the condition existing in my own county is the condition that exists in 99 out of every 100 counties in the United States, or 99 out of every 100 roads in those counties.

Under the existing laws in most of the States and under existing methods of road building (if the way our roads are built can be dignified by the word method) the labor and money that is annually expended on the roads is annually washed into the ditches and ravines. Much, if not all, of this enormous waste of energy and money can be avoided by encouraging the Bureau of Public-Road Inquiries of the Agricultural Department and by sufficient appropriations enabling it to continue the good work it has already begun and which has already been so fruitful of good results. The most important function, perhaps, of this valuable Bureau is, by the building of object-lesson roads, to teach the people of the United States how to expend the public money devoted to road building in the various States in the most judicious way and to the greatest permanent benefit.

We sanctioned the policy of the construction of public roads in the early part of this century by the construction of the great National Road, as I have already said, and we are to-day, sir, in every part of our possessions, outside of our own land, pursuing, and wisely pursuing, the policy of common-road improvement for which I appeal. As a result of the Spanish war and the treaty of peace we have taken Porto Rico and the Philippine Islands, and now hold them as territory belonging to the United States. Perhaps our first act after assuming jurisdiction over these possessions was to improve the highways. In Porto Rico we have expended or are expending a million of dollars on the public roads. Upon this subject the Hon. Charles H. Allen, governor of Porto Rico, in his report to the President of the United States on May 1, 1901, says:

The crying need of the island is above all things roads. The peculiar configuration of the insular surface and the frequent and continued rains which fall in all parts of the country render intercommunication impossible for weeks at a time, except where military roads have been constructed. Schoolhouses

may dot the hills and valleys to the north and south of the great central cordillera, the coffee tree may put forth its fragrant blossoms on every mountain side; the sugar cane may clothe every plain with perennial verdure; the tobacco plant may brighten and beautify every landscape, and all the forests, fields, and meadows may offer their stores of wealth to the horny hand of the industrious farmer; but of what avail are the means of education or the sources of wealth if communication is cut off between the neighboring farms and villages and the markets and seaports for lack of roads passable in all seasons and in every state of tropical weather? It is an imperative necessity to devote every dollar which can be spared from the surplus revenue to the construction of permanent roads.

It is understood that nearly a million dollars was allotted to the military authorities for the building of roads throughout the island. Plans were prepared and 20 contracts made for the construction of roads and bridges. In addition 4 Spanish contracts were continued in force, making altogether 24 contracts for the building of 86 miles of road and 2 bridges of the aggregate length of 674 feet. But these works were scattered over the island, and the roads were built in detached sections, so that the entire amount of money would be expended and scarcely a single highway completed, thus necessitating the expenditure of much more money to connect the roads already constructed. Evidently the plans were laid with the expectation of a further appropriation to carry on the work to completion; or perhaps the distribution of the funds to the different sections of the country may have been the principal object, in view of the plans adopted.

We have expended or are now expending a million dollars in the construction and improvement of the highways in the Philippine Islands. The report of the United States Philippine Commission to the Secretary of War for the period from December 1, 1900, to October 15, 1901, contains the following on the subject of highways:

The first law enacted by the Commission, pursuant to your direction, was one appropriating $1,000,000, gold, to be expended for the construction of roads, primarily for strategic purposes.

We have expended large sums of money in the construction and improvement of roads in Cuba, while in connection with the public roads of the United States we have expended but $100,000 in the history of the Government on the Bureau of Public Road Inquiries of the Agricultural Department, and the Committee on Agriculture of the Congress of the United States hesitates to appropriate a trifle of $40,000 for the beneficent purposes of this Bureau.

We will expend before the Nicaraguan Canal is finished perhaps $200,000,000 or more. This canal will connect ocean with ocean, and will place New York City in closer communication with Hongkong and the growing oriental trade than Liverpool is now through the Suez Canal. We expend annually millions of dollars on the rivers and harbors of the United States. We have within the last few years adopted the magnificent and growing system of rural free delivery and are annually and wisely increasing our appropriation for this boon to the farmers. With each one of these appropriations, judiciously made and carefully expended, I am, sir, in hearty sympathy. Nay, more; I glory in the greatness of the land which with no selfish purpose founds republics and carries the light of civilization and the hope of liberty to the islands beyond the sea; but at this time, when we are engaged in this grand work in the pursuance of a manifest destiny imposed upon us by an infallible providence, I feel bound to utter a word of caution lest in doing so much for others we may, perchance, forget ourselves.

Liberate Cuba, Porto Rico, and the Philippine Islands from the iron heel of Spanish tyranny if you will. Carry to them as generously and as humanely as you may all the blessings of modern civilization. Halt not at the difficulty, but boldly facing the new light of a coming century courageously meet and overcome every obstacle that stands between to-day's enormous task and to-morrow's glorious consummation of the work, but in your zeal for other lands and other races do not forget the convenience, the comfort, and the welfare of the people of your own land.

With good roads the Porto Rican may better bring his product to our markets; with good roads the work of reclaiming the wasted Philippines may be advanced; with good roads the liberation of Cuba and its establishment as a republic may be made permanent, and the expenditures made for this purpose in those possessions are therefore wise.

Almost every American product before it reaches the Nicaragua Canal must pass over the common roads. Almost every American product before it reaches the ocean steamer, the subsidization of which is now contemplated by the expenditure of millions of dollars, must pass over the common highways of the country. Almost every American product before it reaches the great transcontinental railroads to which the Government has appropriated millions of dollars in the shape of donations of public lands, must pass over the roads of the people. Every ton of the farmer's product before it reaches the rivers and harbors, for the improvement of which we have appropriated $60,000,000 at this session of Congress, must pass over the common roads before it reaches the market, domestic or foreign.

Is it not wise, therefore, that liberal appropriations should be made to stimulate the States to improve these roads and reduce the cost of the carriage of the farmers' product, the product of the mill and forest, from 25 cents per ton per mile to at least 10 or 15 cents? The Government of the United States has a direct economic interest in the improvement of the public roads since the establishment of rural free delivery. The better the grades and the smoother the surface of the roads throughout the States the greater distances can the United States carriers of rural mail go in a given time, thus saving hundreds of thousands of dollars annually to the Government of the United States.

Mr. Chairman, while I approve of all the appropriations which I have just mentioned, when they are judiciously made, as they have been by Republican Congresses; while I favor the extension of human liberty and the rights of man, not only over every foot of American soil and every possession of this Government, but over the entire earth, I would not, in this period of the mighty expansion of our progress, neglect the internal economy and domestic welfare of our people. Upon these the wealth, prosperity, and welfare of Americans at home must first and finally be based, and upon such basis must our power to extend the beneficent influences of our American civilization be founded. If we carefully guard our domestic economies, we will add to the safety and strength of our external endeavors.

Upon the hearthstone of the farmer's home is lighted and burns the brightest, the steadiest, and surest light of individual and national liberty. Keep these fires glowing by proper and just attention to the honest demands and necessities of the farmer's life, and from these home altars of happiness, strength, and freedom will radiate the beams of a safe and lasting progress, which will make us happy, contented, and prosperous at home and mighty, just, and powerful abroad. [Loud applause.]

The Late Representative J. William Stokes, of South Carolina.

REMARKS

OF

HON. JOSEPH T. JOHNSON,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 26, 1902.

The House having under consideration the following resolutions:

"*Resolved*, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. J. WILLIAM STOKES, late a member of the House of Representatives from the State of South Carolina.

"*Resolved*, That as a particular mark of respect to the memory of the deceased, and in recognition of his eminent abilities as a distinguished public servant, the House, at the conclusion of these memorial proceedings, shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk be instructed to send a copy of these resolutions to the family of the deceased"—

Mr. JOHNSON said:

Mr. SPEAKER: To-day, as we lay aside the regular business of this body, as it is eminently proper that we should do, to pay tribute to the memory and worth of our deceased brother, we are forcibly reminded that death comes with equal pace to the palace and the hut. Though I was not intimately acquainted with the late Representative STOKES, it became my duty as a member of this House to attend his funeral. Dr. STOKES was not a resident of the city of Orangeburg, but all places of business were closed out of respect to his memory during his funeral. All classes from every section of his own and adjoining counties were there to show their appreciation of him who had served them so faithfully and so well.

Of his services in this body I shall not attempt to speak, because his colaborers are better fitted for that duty. Suffice it for me to say that a man of his moral, Christian character could not have done less than his duty as God gave him light to see it. This leads me to refer not to Dr. STOKES nor to Congressman STOKES, but to Mr. STOKES, the modest, unassuming, Christian gentleman. The official clergyman at the funeral read one of the beautiful Psalms of David, and stated that it was the chapter read by Mr. STOKES when he erected in his home an altar to the living God. Would that every man in an office of honor and trust recognized his responsibility to and dependence on God, and would erect in his home an altar to Him.

Referring to the funeral, the text was:

For I know whom I have believed, and am persuaded that He is able to keep that which I have committed unto Him against that day.

These were the words spoken by Mr. STOKES when the chill, cold hand of death was upon him and he was entering the valley of the shadow of death. What a sublime and beautiful faith; what a happy ending of life's battles!

The highest compliment that can be paid any man is to be able to say of him that he was a Christian gentleman. I believe that the late J. WILLIAM STOKES was a Christian gentleman.

National Sanitarium at Hot Springs, S. Dak.

SPEECH

OF

HON. CHARLES H. BURKE,

OF SOUTH DAKOTA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 19, 1902,

On the bill of the Senate, "An act for the establishment, control, operation, and maintenance of a national sanitarium of the National Home for Disabled Volunteer Soldiers at Hot Springs, in the State of South Dakota."

Mr. BURKE of South Dakota said:

Mr. SPEAKER: I hope that this bill will not only pass, but that it will have the vote of every member of the House. It is indeed a meritorious measure, and, as has been stated by my colleague, has been before Congress for several years, having passed the Senate four different times, and was reported to the House by the Committee on Military Affairs in the Fifty-sixth Congress, and has been unanimously reported by that committee in this Congress.

That the several Soldiers' Homes are now overcrowded has been made apparent by the remarks of my colleague.

The purpose of this bill as amended is to establish a sanitarium where soldiers may be sent for treatment who are afflicted with the many diseases, especially rheumatism, which so many of the soldiers of the civil war are subject to. The bill also provides that soldiers in the late war with Spain and those who have served in the Philippines or anywhere in the Army of the United States may be sent to this sanitarium.

That the waters of the Hot Springs possess great curative properties has been fully tested and demonstrated by an experiment which was made several years ago, as stated by Mr. MARTIN. In this connection I desire to submit and have printed with my remarks a letter dated February 7, 1894, from Gen. William W. Averell, U. S. A., assistant inspector-general, National Home for Disabled Volunteer Soldiers.

BATH, N. Y., *February 7, 1894.*

DEAR SIR: I have been requested to present to you my views regarding the advisability of and necessity for the establishment of a sanitarium at Hot Springs, S. Dak. Your committee, I presume, has my reports of three visits to the State Home for Disabled Volunteer Soldiers at that place made in 1891, 1892, and 1893, which contain my knowledge of the climate and of the healing qualities of the waters of the Minnekatah or Hot Springs.

The unusual number of members discharged from the State Home during the year by reason of their recovery from the disabilities which had entitled them to its care and benefits first attracted my attention, and subsequently the results of the remarkable test made last year (1893) upon thirty disabled men selected and sent from the Western Branch of the National Home, have induced my belief in the efficacy of the waters of the Hot Springs for rheumatism, sciatica, spinal irritation, and nervous prostration.

The test, which is fully described in my report, was severe, but too brief. It was upon about 30 men, 18 of whom were treated for rheumatism. In the sixty days' test 8 of them, or 44 per cent of those who were treated for rheumatism, were practically cured, the remainder all benefited excepting 1, and those suffering from sciatica, spinal irritation, and nervous prostration were improved. I believe the percentage cured would have been doubled with four to six months' treatment. During the year ending June 30, 1893, there were in the Central, Marion, Northwestern, and Western Branches of the National Home an average number sick of 1,590, of which 853, or 53 per cent, were treated for rheumatism in its various forms, acute, subacute, and chronic (articular and muscular). These Branches are the nearest and most accessible to the South Dakota Hot Springs, and if provision were made for the treatment of those 853 members afflicted with rheumatism at the Hot Springs, and 44 per cent of them were cured, there would ensue a saving to the Government of the cost of their maintenance in the Homes, viz, $52,875, computed upon the per capita cost of $140.75 per annum, and there would be something added to the producing power of the country.

In the ten State Homes nearest the Hot Springs—Illinois, Ohio, Pennsylvania, Michigan, Wisconsin, Minnesota, Iowa, Nebraska, Kansas, and Colorado—there were on the 30th of June, 1895, 488 members sick, of whom a much larger proportion, over 400, were treated for rheumatism. Assuming the same percentage of cures, 44, would result from a treatment at Hot Springs, there would be 176 restored to health, and there would follow a saving of $100 per capita to the Government per annum, or $17,600. Thus there might be a total saving effected per annum of $70,000.

If a sanitarium were established at Hot Springs at a cost of $100,000, and one-half the cases of rheumatism should be cured that might be sent to it for treatment from the most convenient Soldiers' Homes, I have no doubt it would pay for itself within five years after it was ready for occupation, in saving from cost of maintenance in Soldiers' Homes without cure. Without a cent of savings in money, the rescue from pain and misery, and the restoration to health of those men for whose welfare the Government is responsible, would, I believe, fully justify the establishment of the sanitarium.

In this view it would be an economical undertaking for the public good, which the public would appreciate and approve.

I am, General, very truly, yours,

WM. W. AVERELL, U. S. A.
Assistant Inspector-General,
National Home for Disabled Volunteer Soldiers.

Gen. JOHN C. BLACK,
Chairman Subcommittee on Soldiers' Homes, etc.

Dr. R. D. Jennings, surgeon in charge of the test, in his official report, said:

As will be seen, almost every man was afflicted with rheumatic or nervous troubles, the same being cured in almost every instance. I am satisfied that a careful inspection by the medical board on the return of the men will bear me out in saying that, all things considered—age of patients, shattered constitutions of some of them, variety and complication of diseases, and the chronic nature of all—the result of this test, as shown by detailed report, is in every substantial sense, highly satisfactory. A realization of all the claims put forth by the promoters of this experiment as to the virtues of the waters and climate of Hot Springs, S. Dak., and the desirability of this place for the location of a United States sanitarium for the treatment of such chronic diseases as most usually affect the old soldier is fulfilled.

Gen. Alfred Pearson, a member of the board of managers of the National Home, in a communication dated January 25, 1900, states:

I am deeply interested in the passage of the bill (H. R. 2967) introduced by Mr. Gamble for the establishment of the Northern Branch of the National Home for Disabled Volunteer Soldiers at Hot Springs, S. Dak. Aside from the reports of General Averell, assistant inspector-general for the National Military Home (which convinced me that the Government should establish a Branch of the Home at Hot Springs), the very many old veterans applying for admission to the Home, broken down with weight of years and suffering from disease, principally rheumatism, added to the reasons given by General Averell from personal observation, I have no doubt many would be greatly benefited by the use of the waters at Hot Springs, and I sincerely hope your honorable committee will favorably consider the bill.

Maj. William H. Bonsall, a member of the National Board, in a letter dated February 10, 1900, states as follows:

I am in receipt of H. R. 2967, for the establishment of a Branch Home at Hot Springs, S. Dak. I am heartily in favor of the bill referred to. The benefits, in so many ways, are inestimable, and the Branch Home should be established by all means.

General Averell, in a letter under date of January 8, 1898, in referring to the necessity for this sanitarium, stated:

There is no question of the necessity for such a sanitarium. If several hundreds who are afflicted with rheumatism, and not too old to be moved, were sent from the Homes to an adequate sanitarium at Hot Springs, they would at once make room for worthy, needy, and eligible soldiers who are pressing for admission, and if the sanitarium was full, some of those that were cured might make their way and leave room to be filled with fresh accessions.

Commandant Lucas, of the South Dakota Soldiers' Home, located at Hot Springs, in a report to Assistant Inspector-General Averell, says:

After a careful observation of the results in the treatment of our sixty-odd veterans for severe and desperate cases of rheumatism, I am constrained to say that I have no longer doubts about the curative properties of the waters. Every case that has been treated in the Home (not an exception) has resulted in a perfect cure, or the patient is approaching it. These results I regard little less than miraculous, when the enfeebled and broken-down condition of these men is taken into account. The waters are equally good and effective in treating cases of indigestion, scrofula, and all skin or cutaneous diseases.

I think, Mr. Speaker, that it has been sufficiently demonstrated that there is a necessity for the establishment of this sanitarium, and, that being the case, certainly no member of this House ought to oppose this bill.

I desire to submit and have printed with my remarks a copy of the analysis of the water of some of the hot springs, which analysis was made by Prof. G. A. Maringer, a Chicago chemist, as follows:

MINNEKAHTA SPRINGS.

[Constituents, in grains.]

Silica	2.464
Peroxide of iron	Trace.
Calcium sulphate	16.352
Magnesium sulphate	4.320
Sodium sulphate, Potassium sulphate	25.620
Sodium chloride and potassa	13.790
Total	62.546

Analysis of two of the prominent springs by Prof. Charles B. Gibson, of Chicago, Ill.

MAMMOTH MINERAL WATERS.

[Constituents, in grains, per gallon of 58.329.]

Total residue	83.1000
Inorganic and nonvolatile	71.0000
Organic and volatile	12.1100
Sulphate of sodium	23.2628
Sulphate of potassium	5.6272

Silica	1.8300

As has been stated, this measure has received the indorsement of two national encampments of the Grand Army of the Republic, and it has also been indorsed and recommended by several State encampments in States adjoining South Dakota.

The location is certainly a good one, and accessible to a vast section of country having a large soldier population, and where it can be easily reached from the Home at Leavenworth and the Home at Milwaukee, from which Homes soldiers can be sent for treatment who may be afflicted with rheumatism or other diseases.

Hot Springs has two lines of railroad, namely, the Fremont, Elkhorn and Missouri Valley Railroad and the Burlington and Missouri Railroad. This gives them connection with the East and South, and they also have western connections to Denver, Colo., and Cheyenne, Wyo.

Under this bill, the citizens of Hot Springs are required to donate sufficient ground for all the needs of the Home, and to furnish a perpetual lease of one or more of the medicinal hot springs, and the site and the springs are to be selected by the Board of Managers of the National Home for Disabled Volunteer Soldiers, and they are to have exclusive jurisdiction over the property.

The late Senator Sewell, in the Fifty-fourth Congress, in reporting this measure from the Committee on Military Affairs of the Senate, referring to the location at Hot Springs, did so in the following words:

It is a location possessing advantages that can not elsewhere be acquired—advantages provided by nature and so rare in their combination that they are duplicated in only a few instances the world over. From the surrounding hills come forth unfailing streams of water, medicated and tempered in the great laboratory of subterranean earth, endowed with health-giving properties in relative proportions so exact that man, with all the skill that scientific knowledge imparts, may strive in vain to improve upon, and at last can only imitate. It is the product of centuries of processes—a part of the grand scheme of nature, which, in preparing the earth for man's habitation, made provision also to combat the ills to which man has fallen heir.

Mr. Speaker, I am indeed very glad that no one has arisen to oppose this meritorious measure, and I have been particularly gratified to note the fact that the distinguished gentleman from Illinois [Mr. CANNON] is in favor of the bill in its amended form, or at least is not opposed to it. There being no apparent opposition to the bill from any source in this House is an evidence of the fact that the sentiment of the American people is that the Government should be liberal and do everything possible to add to the comfort of the noble and brave men who sacrificed everything and unselfishly gave their services to their country when its honor was imperiled, and if by the passage of this bill we can to any degree contribute to their comfort in their declining years, or do that which will tend to alleviate their suffering, I am certain that our action will have the approval of the country.

Eulogy on Death of Hon. Rufus K. Polk.

REMARKS

OF

HON. HENRY D. CLAYTON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 10, 1902.

The House, as in Committee of the Whole, having under consideration the following resolutions:

"*Resolved*, That the business of the House be now suspended that opportunity may be given for paying tribute to the memory of Hon. RUFUS K. POLK, late a member of the House of Representatives from the State of Pennsylvania.

"*Resolved*, That as a particular mark of respect to the memory of the deceased and in recognition of his eminent abilities as a distinguished public servant, the House at the conclusion of the memorial proceedings shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk be instructed to send a copy of these resolutions to the family of the deceased"—

Mr. CLAYTON said:

Mr. SPEAKER: While we now commemorate the life, character, and public services of our departed friend, Mr. POLK, we witness the unprecedented spectacle of three desks in this House clad, at the same time, in the habiliments of mourning. Since the adoption of the resolution setting apart this day as the time for tributes to this young Pennsylvanian, Mr. Cummings, of New York, the Union veteran of the war between the States and an experienced Representative; Mr. Otey, of Virginia, a Confederate veteran and a Representative of little less experience than Mr. Cummings, and Mr. Salmon, of New Jersey, have gone hence to await the roll call in another assembly. These three were of riper years, and had accomplished the greater part of life's work.

The morning of Mr. POLK'S life had not passed—the dew was yet upon the flowers—and now we stay the ordinary proceedings of the House to manifest our sorrow at his untimely taking off, to testify to his public service, his character, and his many virtues. Remembering his youthfulness, his genial disposition, and the warmth of his friendship, we must feel a peculiar and deep bereavement on this impressively sad occasion.

I knew some of the members of the family of our deceased friend for a number of years, but I never had the pleasure of knowing him personally until he came to Congress. I desire to add my testimony to what my colleague [Mr. RICHARDSON of Alabama] has so beautifully said about the distinguished family of which Mr. POLK was a member. His father was Brig. Gen. Lucius Polk, of the Confederate army. He was a brave and gallant soldier. The Polk family of the South has furnished not only a President of the United States, but distinguished divines and men renowned in the civil and military annals of the country.

Among the characteristics that I would truthfully and reverently ascribe to our dead friend would be his fervent patriotism, his uniform urbanity, his kindness of heart, his integrity, and his unswerving devotion to duty in all the relations of life, both public and private. In addition to these characteristics, we must recognize that he possessed another virtue that may be said to be too rare in political life. He was, with all his talents and distinguished name, a modest man. He was never a self-seeker. He never referred to his own achievements or to his meritorious conduct. One of the best evidences of his modesty is furnished in the Congressional Directory, a copy of which I have before me.

The new member of Congress sometimes imagines that, in the public mind, the compiler of the Directory is given the credit of being the author of these biographical sketches, but you know, Mr. Speaker, and all of us who have been serving here for any considerable length of time know that these biographical sketches are autobiographical. With your indulgence, I read from the Directory, in substantiation of the modesty of our friend, his plain and unexaggerated biographical sketch:

RUFUS KING POLK, Democrat, of Danville, was born in Maury County, Tenn., August 23, 1866; was educated at Webb's Academy, Culleoka, Tenn., and Lehigh University, South Bethlehem, Pa., graduating as mining engineer; served as first lieutenant Company F, Twelfth Regiment Pennsylvania Volunteer Infantry, in the war with Spain; is interested in the manufacture of iron and steel as a member of the firm of Howe & Polk; was chosen delegate at large from the State of Pennsylvania to the national Democratic convention at Kansas City, 1900; was elected to the Fifty-sixth Congress, and reelected to the Fifty-seventh Congress.

To this sketch, Mr. Speaker, his friends here to-day have added their testimony, showing the true worth of the man, his life, and service. He was too modest to indulge in self-praise. In this brief summary are the simple material facts pertaining to his life. There is an absence of adjectives; there is an absence of anything which might look like a desire on his part to say of himself what he might fear his friends and the public generally who knew him were not willing to say.

Mr. Speaker, the untimely taking off of this young man, in the morning of life, ere the sun had reached its meridian, serves to remind us of the frailty of human life, to remind us that we must make the most of it while its flitting moments pass; for the common end comes to all sooner or later.

Kind words and flowers are all that we can give to the dead. May the memory of our lamented friend abide with us and be as the perfume of sweet flowers. And may the words which we have uttered in truth and sincerity serve to console bereaved ones and furnish us ennobling thoughts and higher aspirations. Farewell, dear friend, until the new and radiant life, the Christian's hope, shall come in fulfillment of the blessed promise of our Lord and Saviour.

Civil Government for the Philippine Islands.

SPEECH

OF

HON. JETER C. PRITCHARD,

OF NORTH CAROLINA.

IN THE SENATE OF THE UNITED STATES,

Friday, May 9, 1902.

The Senate having under consideration the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. PRITCHARD said:

Mr. PRESIDENT: I had not intended to discuss the pending measure until after I read the speech of my colleague [Mr. SIMMONS], which was delivered in the Senate a few days ago, and it is not my purpose at this time to discuss it at any great length.

As I understand the matter, there is but one issue raised by the measure which is now pending before this body. The bill now being considered is entitled "A bill temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes." The only question presented to us in the consideration of this matter is the question of

administration. The question as to whether we own the Philippine Islands and as to whether we are to retain them has already been settled, and we are now called upon to decide as to whether we shall adopt the bill brought in by a majority of the committee or the proposition submitted by the minority.

Mr. President, I am satisfied that a majority of the people whom I have the honor in part to represent are heartily in favor of the adoption of the proposition brought in by the majority of the committee. Not only is this the case, but I believe that a majority of the Southern people to-day, regardless of party affiliations, are in favor of adopting the pending measure. In this connection I desire to call attention to the following editorial, which was published in the Charlotte Observer, of my State, one of the leading Democratic papers in the South, in discussing the speech of my colleague.

Mr. SIMMONS. Mr. President——

The PRESIDING OFFICER (Mr. KEAN in the chair). Does the Senator from North Carolina yield to his colleague?

Mr. PRITCHARD. Certainly.

Mr. SIMMONS. I understood the Senator to say that he proposed to read an article from the Charlotte Observer.

Mr. PRITCHARD. Yes.

Mr. SIMMONS. And I understood him to say that that is one of the leading Democratic papers in the South.

Mr. PRITCHARD. That is what I said.

Mr. SIMMONS. I should like to ask the Senator if he does not know the fact that in the last Presidential election the Charlotte Observer opposed the election of Mr. William J. Bryan, the Democratic candidate for the Presidency?

Mr. PRITCHARD. The Charlotte Observer did oppose the election of Mr. Bryan at the last election, but it did so on the ground that Mr. Bryan was in favor of the free and unlimited coinage of silver, and that alone, and a number of Democrats in my State were in accord with the paper with respect to that subject.

Now, I desire to read what the Charlotte Observer in its editorial of recent date has to say about this matter.

It is to be inferred from the Associated Press synopsis of it that the speech of our junior Senator Monday in opposition to the Philippine government bill was a very strong one. We can not subscribe to his proposition that these islands should at this time be turned over to their inhabitants. We are there, and it is not clear how, regarding all the interests concerned, we are now to get out; but apart from this there is nothing in the speech that can be fairly objected to.

Mr. President, I trust that my colleague will not object to what the Charlotte Observer has to say in regard to his speech, which I concede was a very good one under the circumstances.

I also desire to call attention to the following statement from the Vicksburg Herald, published in the State of Mississippi, which is also a leading Democratic paper, and which I presume supported Mr. Bryan at the last election:

The Philippine question has resolved itself into terms that need not be misunderstood and can not be avoided. It is no longer a question of possession and retention, but merely a question of administration.

Mr. SIMMONS. If my colleague will permit me, before he leaves that part of the discussion I should like to ask him just one other question.

The PRESIDING OFFICER. Does the Senator from North Carolina yield?

Mr. PRITCHARD. Certainly.

Mr. SIMMONS. In view of the fact that my colleague has stated that in his opinion a majority of the Democrats of North Carolina and of the South are in favor of imperialism, I ask him whether he can name any other Democratic paper in North Carolina, outside of the Charlotte Observer, which is in favor of the Republican policy of imperialism in the Philippine Islands?

Mr. PRITCHARD. Mr. President, I have not said that the majority of the Democrats of North Carolina are in favor of imperialism.

Mr. SIMMONS. I thought you said so.

Mr. PRITCHARD. I know of no one in that State who favors imperialism, but I do know that a majority of the business men of North Carolina are in favor of industrial expansion, and they are in favor of the Republican policy with respect to the Philippine question.

Mr. McLAURIN of Mississippi. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Mississippi?

Mr. PRITCHARD. With pleasure.

Mr. McLAURIN of Mississippi. Will the Senator allow me to make a suggestion in reference to the Vicksburg Herald?

Mr. PRITCHARD. Certainly.

Mr. McLAURIN of Mississippi. That paper did not support the Democratic ticket in 1900.

Mr. PRITCHARD. I am delighted to hear it. It certainly showed good judgment in not doing so.

Mr. McLAURIN of Mississippi. The Senator made a statement, as I understood just now, that that paper did support, or he understood that that paper had supported that ticket. I only wanted to show to the Senator that his information was incorrect.

Mr. PRITCHARD. I will say to my distinguished friend that I presumed that that paper supported Mr. Bryan, as they usually vote Democratic in his State when they vote at all.

Mr. McLAURIN of Mississippi. Mr. President, I will suggest that shows good judgment.

Mr. PRITCHARD. On that point I beg leave to differ with my distinguished friend.

Now, Mr. President, the one proposition that is submitted to us is as to whether we will carry out in good faith the principles set forth in the Paris treaty and the moral obligation that the American people assumed when that treaty was ratified. If we adopt the proposition which is submitted by the minority, we absolutely abandon the Philippine Islands. We turn over the class of people residing in those islands who have been friendly to the American people to the tender mercies of Aguinaldo and those who have followed him in opposition to the American Government. I can not understand how any American citizen can for one moment entertain such an idea with respect to this question. We have been opposed by a majority of our Democratic friends at every stage of the proceedings since this proposition was first brought before the Senate.

The war with Spain, at the beginning, was not desired by the Republican party. The Republican party until the very last moment deferred action, hoping that by diplomatic intercourse with the Government of Spain we could secure the freedom of the Cubans, and thereby avoid bloodshed and the enormous expenditure of money incident to any war we might have with Spain. But after our illustrious President had exhausted all peaceful means to bring about a satisfactory solution of the question, then it was that the Republican party, with that courage and patriotism which has always characterized its course, inaugurated that which proved to be the most successful war in modern times. As a result, absolute good faith in every respect has been observed. We have given to the Cubans the independence which we assured them that they should have, and we likewise propose to establish and maintain a stable form of government in the Philippine Islands, in accordance with the provisions contained in the Paris treaty, which was ratified by the votes of Senators representing both political parties in this country.

Mr. President, I am at a loss to know why so much irrelevant matter has been lugged into this discussion. My distinguished friend from the State of Tennessee [Mr. CARMACK] consumed an hour and a half on yesterday in a discussion as to whether Aguinaldo was excusable for the killing of Luna, or whether he was guilty of murder. I can not understand what bearing the question of Aguinaldo's treatment of Luna can have upon the proposition which is now pending before the Senate. I am also at a loss to know what effect it can have upon this subject to investigate the alleged cruelties on the part of American soldiers in the Philippine Islands, in so far as this measure is concerned. That there ought to be an investigation, prompt and speedy, and that every guilty man ought to be punished, no one will deny; but I insist that these propositions ought to be dissociated from the measure which we are now discussing, and that we ought to consider this measure on a higher plane, and consider it purely as a question of administration.

I noticed in the newspapers this morning an interview with a distinguished officer of the Navy, Admiral Remey, who has just arrived from the Philippine Islands. Among other things he says:

Concerning general conditions in the islands, General Chaffee told me before I left that things were progressing satisfactorily—slowly but surely—and that pacification was only a matter of time. Talk of the withdrawal of the United States from the Philippines is based on an inaccurate and incomplete knowledge of conditions out there. This country could not withdraw. Chaos would be the result. My observations have convinced me that the natives are not capable of self-government yet. They need a guiding hand, and now that we have undertaken the task we can not, for the sake of humanity, withdraw until the work is completed.

Mr. President, here is an officer of the Navy, who is presumed to have no political opinions one way or the other, who tells us that those islands are practically pacified. He tells us that it would be a fatal mistake to withdraw the Government forces at this time; that for us to turn those islands over to the Filipinos would mean utter chaos and a worse condition of affairs than existed there before Admiral Dewey compelled the surrender of Manila.

My colleague [Mr. SIMMONS] the other day, in discussing this question, said that he was satisfied that no good could come to the South from the policy which was pursued by the Republican party with respect to this question. Mr. President, I have some figures here, which I propose to submit to the Senate, with respect to our trade relations with the Philippine Islands.

From the ports of Norfolk and Portsmouth, Va., the exports from the United States to the Philippines in 1899 amounted to $70,336, and in 1900 the exports amounted to $118,173, showing an increase of $47,837 within a period of one year from this South Atlantic port.

In 1899 the total exports from the United States to the Philippine Islands amounted to only the sum of $404,193, whereas in 1900 it amounted to $2,640,449, showing a net increase of $2,236,256 in one year.

Let us see from what source the Philippine Islands obtained their cotton goods. I have examined with great care the importation of cotton and cotton goods to the Philippine Islands from all countries, both manufactured and unmanufactured cotton, for the twelve months ending June, 1901. I find that the total importation of cotton and cotton goods to those islands for the period named amounted to $9,510,307. Of this total the United States furnished the small amount of $127,325. These figures are surprising but true. Those islands imported $9,382,982 worth of cotton and cotton goods from countries other than the United States in 1901. Is it not reasonable to suppose that when our commerce with those islands is firmly established, as it will surely be at an early day, that the South will furnish the greater part of this $9,382,982 worth of cotton and cotton goods that has heretofore been furnished by other countries?

The point I make is that if we retain the Philippine Islands, as we shall do, the Southern States will be able to control the greater part of the $9,510,307 worth of importations into that country. Not only that, but it is fair to assume that once we establish friendly relations and commercial intercourse with the people of those islands the importation of our cotton goods into that section of the world will more than treble, and the South will be the chief beneficiary thereof. So I can not understand how any Southern man, representing a section of country where cotton is grown and manufactured, can afford to vote against a proposition which has for its object, incidentally, the extension of our cotton markets in foreign countries, or at least in the direction of the Orient, as well as into the Philippine Islands.

My colleague also contended that our trade with China did not amount to anything. I desire to call his attention to the following facts with respect to our cotton trade in China.

Mr. DUBOIS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from North Carolina yield to the Senator from Idaho?

Mr. PRITCHARD. Certainly.

Mr. DUBOIS. I do not want to disturb the Senator from North Carolina in his argument, which is very interesting——

Mr. PRITCHARD. It is no disturbance.

Mr. DUBOIS. But I should like to ask him if cotton is a drug in the market, or have you not a sale for all the cotton you raise?

Mr. PRITCHARD. Cotton to some extent has heretofore been a drug in the foreign market. Now that we have resumed friendly relations with China and increased our trade with other countries, there is a very good demand for cotton.

Mr. DUBOIS. Then without the Chinese trade and the Oriental trade there would be no demand for the cotton of the South, as I understand the Senator?

Mr. PRITCHARD. I do not propose to say that, but I do say the demand would not be so great, and consequently the price would not be so good. That is all.

I want to submit some figures that are very significant.

During the year 1890, just preceding the Boxer troubles, and before the exports to China from this country were shut off, within the single month of July there were exported to China 15,519,945 yards of domestic cottons, valued at $871,000, but within less than ninety days after the trouble began this export demand dwindled down to only 390,000 yards, valued at only $25,375, and still kept down to this nominal figure until July, 1901, when, the reaction having come, and the markets of China having been thrown open, the exports for the single month of July of that year aggregated 33,988,783 yards, valued at $1,709,605. It gravitated around these figures from that time on until it crawled up, in January, 1902, to the very encouraging figures of 37,672,467 yards, valued at $1,773,585. It is estimated that for the current fiscal year our exports of manufactured cottons will probably exceed in value $30,000,000.

These statements within themselves are sufficient to warrant me in the assertion that those of us who live in the South can not afford under any circumstances to give our sanction to any policy which undertakes to permit these islands to pass from under our control as a nation. Being in the gateway to the Orient is not the only feature which renders them desirable, but when we come to consider the possibilities of our future trade with the people of those islands, there is every reason why we should give our hearty support to the policy advocated by the Republican party with respect to them.

Mr. President, the trouble with the otton grower in the past has been that there has not been sufficient demand for his product. I remember that under Democratic rule in 1893 5 cents was the highest price that we received for our cotton, and we were delighted to sell it at that price. Nearly all the cotton growers, as well as the manufacturers, of North Carolina and the other Southern States were almost bankrupt during the four years of Democratic rule with which we had to contend during Mr. Cleveland's last Administration, but since the Republican party has come into power, since we have restored public confidence, since we have adopted the policy of industrial expansion, and since, by diplomatic relations, we have extended our trade into the Orient, there is, as my distinguished friend says, an increasing demand for our raw cotton as well as our cotton fabrics.

Mr. SIMMONS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from North Carolina yield to his colleague?

Mr. PRITCHARD. Certainly.

Mr. SIMMONS. I understand the Senator from North Carolina to say that during the Democratic Administration the trouble was that there was no demand for our cotton, and therefore the prevailing prices were low.

Mr. PRITCHARD. I did not say that.

Mr. SIMMONS. Now, I desire to ask the Senator if it is not a fact that during the whole of Mr. Cleveland's last term did not we export to Europe and to other countries about two-thirds of the entire raw cotton crop of the South, and if there was not in those countries a ready demand for our cotton crop?

Mr. PRITCHARD. My colleague misquotes me. I said there was no price for cotton or anything else under Democratic rule in North Carolina. I am sure my colleague will bear me out in that statement.

Mr. BEVERIDGE. Will the Senator permit me?

Mr. PRITCHARD. Certainly.

Mr. BEVERIDGE. I was interested in the question just asked by the Senator's colleague [Mr. SIMMONS], and also in the question asked by the Senator from Idaho [Mr. DUBOIS], whose questions are always fruitful of suggestion; and I should like to ask the Senator from North Carolina if it is not true that the cotton-manufacturing industries of the South are continually increasing in number and in producing capacity, and therefore whether it is not true that it is absolutely necessary to constantly find new markets corresponding to the increase of production?

Mr. PRITCHARD. My distinguished friend has stated the question exceedingly well.

Mr. CLAY. Will the Senator permit me to ask a question?

Mr. PRITCHARD. Certainly.

Mr. CLAY. I agree with the Senator that it is very essential to have new markets for our cotton, our cotton goods, and all our manufactured products, but I ask the Senator, is it essential to finding new markets that we should own all those countries? I ask the Senator, if his position be correct, would it not be better for us to go and buy China, or take it by force, and buy all the other countries we possibly could get? Is it essential to own a country in order to trade with its people? Is not all that is necessary for us to do to secure trade to furnish manufactured products more cheaply than any other nation and to be on friendly commercial relations with all the nations of the world?

Mr. PRITCHARD. I know of no one who contemplates purchasing all of the countries with which we propose to trade. Certainly, the Republican party has not offered any such proposition.

Mr. CLAY. I understand the Senator to take the position that, in order to trade with the people of the Philippine Islands, we must own those islands and govern them. What I mean to ask is simply this, That if we had retained the friendship of the people of the Philippine Islands—as we once had it before we ratified the treaty, and for a short while after we ratified the treaty—is it not true that in all probability we should have had more trade with the people of the Philippine Islands then we shall have by incurring their hatred and their ill will?

Mr. PRITCHARD. Mr. President, my distinguished friend forgets the fact that when we ratified the treaty of Paris, for which, I believe, he voted——

Mr. CLAY. I did.

Mr. PRITCHARD. That we assumed certain moral obligations which we as a nation are compelled to carry out. So that leaves out entirely the question which my distinguished friend has raised. It is not a question as to the ownership of the Philippine Islands. It is not a question as to their retention, but it is a question as to whether we shall give the inhabitants of those islands a stable form of government. That is all there is of it.

Mr. CLAY. I beg to say to the Senator that a ratification of the treaty of peace did not mean, under the circumstances, that we should retain the Philippine Islands and that we were to govern them. There is quite a difference. I voted in favor of the ratification of the peace treaty, because I desired peace and

because I believed we could deal with the people of the Philippine Islands, when the sovereignty of Spain was done away with, better in a state of peace than we could in a state of war, and I believed that the American people would have the patriotism to deal with them fairly and to deal with them justly and eventually give to them a government of their own.

Mr. PRITCHARD. My distinguished friend is too good a lawyer to undertake to say that by the ratification of the treaty with Spain we did not take title to the Philippine Islands.

Mr. CLAY. I did not say that. I have never questioned that we had title to the Philippine Islands. I believe we have a legal and a valid title to the Philippine Islands; but I want to say that I believe, as a matter of justice and as a matter of right, we ought to deal with those people, a foreign race, not adapted to American institutions, fairly and justly, and that we ought to give to them such a government as they desire, to be administered by their own people.

Mr. PRITCHARD. Mr. President, my friend knows full well that if we should relinquish jurisdiction over those islands we could not deal with them one way or the other. I am satisfied, as I said before, that if we do relinquish jurisdiction over them we shall have chaos throughout the islands.

Mr. CLAY. Does the Senator mean to say——

The PRESIDENT pro tempore. The Senator will please not to interrupt without first obtaining permission of the Senator who is on the floor.

Mr. CLAY. I beg pardon of the Chair. The Chair is right.

The PRESIDENT pro tempore. Does the Senator from North Carolina yield to the Senator from Georgia?

Mr. PRITCHARD. Certainly.

Mr. CLAY. Does the Senator mean to say that by the ratification of the treaty we acquired title to the islands; that we can not dispose of them, and that we are bound to keep them and govern them?

Mr. PRITCHARD. I do not say that; but I say good morals require us to stay there, give them a stable form of government, and also not to relinquish our control of the government of those islands until the people are capable of administering their own affairs in an intelligent manner. I only speak for myself.

Mr. CLAY. Mr. President——

The PRESIDENT pro tempore. Does the Senator from North Carolina yield to the Senator from Georgia?

Mr. PRITCHARD. Not now. I will yield in a moment. I am only speaking for myself, and I want to say that for one I am in favor of retaining the Philippine Islands permanently.

Mr. CLAY. Then the Senator has answered the question I intended to ask him. The Senator says he is in favor of our staying there until we can give those people a stable government. I was going to ask the Senator how long he thought it would take to give a stable government to the people of those islands and to ask him further if he would be willing to get away after we had given them a stable government.

Mr. PRITCHARD. So far as I am concerned, I am in favor of remaining there permanently. I am only speaking for myself.

Mr. CLAY. I understand the Senator.

Mr. PRITCHARD. I hope that is satisfactory to my friend.

Mr. CLAY. That is all right.

Mr. PRITCHARD. Among other things, my colleague, in attacking the policy pursued by this country with respect to the government to be established in the Philippine Islands, stated that—

> In this country and in every government entitled to be call free it is a fundamental principle that there shall be no taxation without representation. Under this system which we have established in these islands the people have no voice in levying the general tax for the support of the government or in disbursing the proceeds when collected.

My colleague places himself in direct opposition to the policy which was adopted by his party in North Carolina and pursued for about twenty years. In 1868, when the Republicans came into power in North Carolina, they gave to the people of that State a constitution which permitted them to elect every official from governor down to township constable. That constitution was unchanged until 1875, when the Democrats came into power. At that time they changed our constitution so as to permit them to inaugurate a system of county government by which the justices of the peace in the various counties were elected by the legislature. They in turn elected what are known as our county commissioners—officers vested with the jurisdiction of our county affairs. The county commissioners, in turn, appointed the assessors, who assessed the taxes in the various townships. There we had under Democratic rule, which received my colleague's sanction, taxation without representation, and my distinguished friend was never heard to object to it. It is amazingly strange to me that he should have more solicitude for the Filipino who resides 6,000 miles away than he has for the white man who resides in his own State, and that he should want to give to the Filipinos greater privileges than his party, when they were in power, gave to the people of North Carolina.

Mr. SIMMONS. May I interrupt the Senator?

Mr. PRITCHARD. Certainly.

Mr. SIMMONS. The Senator creates the impression by what he has said that in the State of North Carolina, under the system of county government which we had there for twenty years, and which he knows was for the purpose of protecting certain counties in that State against the irresponsibility of the majority of the voters in those counties, there was no representation in the matter of taxation while that system prevailed. As a matter of fact, in North Carolina there has never been a time when those who were entitled to vote—and we have in that State a qualification, as they have in nearly every State in the Union some sort of qualification, upon the suffrage—there has never been a time when those who were entitled to vote did not in some sense, and in a very large sense, participate in the levying of the taxes imposed upon the people.

Under the system, to which the Senator refers, the legislature of North Carolina elected the magistrates, just as I believe had been the case from time immemorial up to the beginning of the new system in North Carolina in 1868, and the magistrates sitting with the county commissioners imposed the taxes; but every voter in the State, who was not disqualified to vote under the suffrage laws of the State, had an opportunity to vote for members of the legislature that elected these magistrates. They levied the taxes, and in that way the voter was consulted, and had a voice in the levying of the taxes.

Now, I want to say——

Mr. PRITCHARD. I did not yield for a speech, Mr. President. I simply yielded for a question.

Mr. SIMMONS. I could not properly answer the question the Senator asked much more briefly than I have done. Having done that, I wish myself to ask the Senator a question.

Mr. PRITCHARD. All right.

Mr. SIMMONS. I understand the Senator approves of the government which has been inaugurated under the auspices of the Republican party in the Philippine Islands, and I understand that he approves of the system of voting which has been adopted there, although he withholds his assent to the system of voting which prevails in my State.

As I understand, Mr. President, in the Philippine Islands the people of those islands are permitted to vote for certain insignificant or minor provincial and municipal officers, and they have a suffrage provision with reference to their voting by which only those who can read and write the English or the Spanish language, or who own $250 worth of property, or who pay $15 a year taxes, can vote. Now, I desire to ask the Senator if he approves of that system of suffrage inaugurated in the Philippine Islands by the Philippine Commission?

Mr. PRITCHARD. Mr. President, the bill proposed by the majority provides, among other things, for a census to be taken of the people residing in the Philippine Islands, and until that census shall have been taken we shall have no information upon which we can base an opinion one way or the other as to the capacity of those people to exercise the right of suffrage. In the meantime we give them the very best government we can under the circumstances.

Now, Mr. President——

Mr. SIMMONS. I should like, Mr. President, to say——

Mr. PRITCHARD. I should rather not be interrupted further.

The PRESIDENT pro tempore. The senior Senator from North Carolina declines to yield.

Mr. PRITCHARD. I decline to yield for the present.

My colleague undertakes to say that we did not have taxation without representation in North Carolina. The county in which I live has about 4,000 voters and we have not elected a Democrat to an important office in that county for the last twenty-five years, and I do not think we will in the next twenty-five years. Now, under the rule inaugurated by the party of my distinguished friend in North Carolina, every official of the character to which he refers in my county was appointed by the legislature, and selected from the party to which my colleague belongs, and the majority of the voters had no voice in the matter one way or the other.

Mr. BEVERIDGE. Mr. President——

The PRESIDENT pro tempore. Does the Senator from North Carolina yield to the Senator from Indiana?

Mr. PRITCHARD. Certainly.

Mr. BEVERIDGE. I do not desire to interrupt the Senator from North Carolina, but a phrase of his colleague's caught my attention, and I, in common with other Senators, I am sure, would like to hear the Senator's explanation of it. The Senator said something about the constitution being designed to protect the people against the irresponsibility of the voters. I am not very familiar with the North Carolina constitution, and I should be glad to hear the Senator explain what his colleague probably

meant by a constitutional measure designed to protect the people against the irresponsibility of the majority of the voters.

Mr. QUARLES. Against themselves.

Mr. PRITCHARD. That is a difficult question to answer. I presume what my colleague intended to say was that we have in North Carolina 97 counties, and of those counties we have 12, I believe, or had at the time to which he referred, wherein the colored people were in the majority. But I want to say that in most of those counties—in fact, in all of them—the majority of the boards of county commissioners were composed of white men. Occasionally a colored man was put on the board. I believe my friend will agree with me that on one or two occasions the Democrats elected or appointed a colored man as a member of the board of county commissioners. On one occasion a Democratic legislature elected quite a number of colored men as justices of the peace.

Mr. SIMMONS. May I interrupt my colleague?

Mr. PRITCHARD. But under our constitution we were permitted to have one form of government in the 12 counties and another form of government in the other counties, and if the Democrats had desired to do so they could have given the people in the counties wherein the colored voters predominate the form of government I have described, and permitted the remainder of the counties to elect their officials by popular vote; but they did not choose to do so.

Mr. BEVERIDGE. That is the irresponsibility?

Mr. PRITCHARD. Yes. But I have not stated the worst feature of the law.

Mr. CULBERSON. Mr. President——

Mr. PRITCHARD. I hope my friend will allow me to complete my sentence.

Mr. CULBERSON. I simply wish to ask a question, suggested by the inquiry of the Senator from Indiana.

Mr. PRITCHARD. In one moment I will yield.

The PRESIDENT pro tempore. The Senator from North Carolina declines to yield.

Mr. PRITCHARD. In addition to the legislature electing the magistrates, and the magistrates in turn electing the county commissioners, it gave the county commissioners the power to appoint poll holders in every township in North Carolina, and those officers who were not responsible to the people one way or the other, exercised that power in an arbitrary manner. Instead of permitting the Republican party in eastern Carolina to select competent, capable, and efficient men to represent them at the polls, the Democratic party, under the policy to which I have referred, in many instances appointed the most incapable and corrupt men they could get to represent the Republican party, and when they did so it generally resulted in the Democratic party carrying what is known as the black belt.

At the last election Mr. Bryan, as candidate for President of the United States, carried the Second district of North Carolina by over 9,000 majority, a district wherein the colored people have a majority; and in fact the great majority which was received by Mr. Bryan at the last election in North Carolina was received in what is known as the black belt of North Carolina. I do not undertake to say they stole those votes, because that would be harsh language; but they either cheated them out of their votes or they voted the Democratic ticket, and I do not know which. My colleague may take either horn of the dilemma, and he will place his party in an inconsistent attitude before the American people.

Mr. CULBERSON. Mr. President——

The PRESIDENT pro tempore. Does the Senator from North Carolina yield to the Senator from Texas?

Mr. PRITCHARD. Certainly.

Mr. CULBERSON. I understood the Senator's colleague to ask him if he indorsed the educational qualifications of voters provided by the Philippine bill, but I did not catch the Senator's answer distinctly. I should like to have it, if he pleases.

Mr. PRITCHARD. I said that I only indorsed the provisions now in the bill as a temporary expedient until we could get such information from the Philippine Islands as would enable us to deal in an intelligent manner with the subject. I am in favor of manhood suffrage. I hope my distinguished friend understands me.

Mr. CULBERSON. You indorse, then, the educational qualifications of voters in the Philippines?

Mr. PRITCHARD. You may take my statement for what it is worth, and make the best you can out of it.

Mr. SPOONER. It is a little better and fairer than the grandfather test.

Mr. PRITCHARD. I think so.

Mr. SIMMONS. I do not know whether my colleague declines to yield to me or not.

Mr. PRITCHARD. I will yield, certainly. I did not want to yield a while ago in the middle of a sentence.

Mr. SIMMONS. My colleague has in the meantime, since he declined to yield, addressed himself to me and discussed several phases of the political situation during the last few years in North Carolina, and if I am permitted to answer him now, I will have to do so otherwise than by merely answering a question.

Mr. PRITCHARD. I did not yield for the purpose of my colleague answering me at this time. The other day when my colleague was addressing the Senate I remained quiet and permitted him to make his statement. My colleague will have ample time to reply to any statement I may make, and I am thoroughly prepared to discuss the questions which I presume he wants to raise, and will gladly do so at any time. But on the present occasion I prefer to proceed and discuss the issue at bar, and that is as to whether we shall give the Philippine Islands the form of government proposed by the majority.

Mr. SIMMONS. Then do I understand that my colleague declines to yield to me at this time?

Mr. PRITCHARD. I decline to yield for the purpose of permitting my colleague to make a speech at this time.

Mr. SIMMONS. Does he decline to yield for the purpose of permitting me to answer the aspersions he has made upon the party in my State which I represent?

Mr. PRITCHARD. I certainly do. If my colleague wishes to ask any question, he may do so, but I will not yield for the purpose of affording him an opportunity to make a speech.

Mr. SIMMONS. Then I will wait until my colleague finishes.

Mr. PRITCHARD. Mr. President, as I understand, the Army of the United States is a nonpartisan organization. It is composed of men who represent all grades of political opinion and all phases of human life. It is the rarest case that an Army officer or a soldier ever exercises the privilege of voting. It does seem to me that it is unjust to undertake to saddle the Republican party with the responsibility for the conduct of any American soldiers in the Philippine Islands. It would be just as unfair for me to attempt to hold the Democratic party of North Carolina or my colleague responsible for many cruelties that were practiced during the recent campaigns in our State. I am sure that the perpetrators of those acts did not receive the sympathy of my colleague. I feel that he would not for one moment sanction the many outrages that were perpetrated by the emissaries of the Democratic party in certain sections of North Carolina at recent elections.

Mr. President, if I were inclined to do so I could give numerous instances where different kinds of cures were administered to Republicans in North Carolina for the purpose of preventing them from exercising the right guaranteed them by the Constitution of the United States. We had not only the killing cure in North Carolina in our campaigns, but we had the whipping cure; we had the red-shirt cure, and we had the sand cure.

In one notable instance a Republican voter was thrown on his face, with his mouth in the sand, and whipped until he agreed that if they would cease beating him he would remain away from the polls on election day.

It would be unfair for me to charge my colleague with responsibility for those outrageous acts. It would be unfair to charge the great bulk of the Democratic party in North Carolina with them, because I do not believe they sanctioned them.

The Democrats of North Carolina in the main are patriotic and conservative, and I can not believe that they sanctioned these measures; but it would be just as fair for me to say they ought to be held responsible for those outrages as it is for our friends on the other side to say that the Republican party shall be held responsible for the alleged misconduct of soldiers in the Philippine Islands.

Has there been any disposition on the part of the Republican party to condone the offenses of soldiers who have acted unbecomingly in the Philippine Islands? Not at all. On the other hand, the President of the United States has taken prompt action with respect to every instance which has been called to his attention, and courts-martial have been organized for the trial and conviction of these people, if they are guilty. Mr. President, they will be tried, and if they are guilty they will be convicted, and if they are convicted I hope they will be punished in such manner as to vindicate the honor of the American people and prove a lesson to evil doers in the future.

I do not care to discuss this matter any further. I do not deem it necessary to do so. The people of North Carolina are happy, prosperous, and contented, and I believe to-day that a majority of the people of that State are not only in favor of industrial expansion but I believe they are in favor of the policies and principles of the Republican party, and if anything like a fair election is held in North Carolina this fall we will carry the State for the Republican party and put her in the position which she ought to occupy as one of the States of the Union.

North Carolina was a Whig State before the war. Our people are protectionists. It is to their interest to advocate the doctrine

of protection. We have the finest water power of any Southern State. We have more undeveloped resources than almost any other State in the Union, and of recent years there has been a constant stream of Northern capital going into our State for the purpose of developing that section. I am here to-day not only to represent the Republican party with respect to national issues but to represent the Democrats of North Carolina who believe in progress, who believe in building up North Carolina and making her what she ought to be.

Civil Government for the Philippine Islands.

SPEECH

OF

HON. FURNIFOLD McL. SIMMONS,

OF NORTH CAROLINA,

IN THE SENATE OF THE UNITED STATES,

Friday, May 2, 1902.

The Senate having under consideration the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. SIMMONS said:

Mr. PRESIDENT: I do not propose now to enter upon a full answer to the speech of my colleague. I shall undertake to do that a little later, when I have had an opportunity to secure data to refute more completely the statements which he has made with reference to my State and the administration of the affairs of that State by the Democratic party.

I wish now to put in the RECORD an emphatic denial of one of the statements just made by my colleague. I understood my colleague to say that under the Republican régime in North Carolina there was a time when there was in several counties, comprising what is known as the black district of the State, a number of negro county commissioners.

Mr. PRITCHARD. I did not say so. I said in one or two instances.

Mr. SIMMONS. The Senator might have said there were a great many negro county commissioners in the black belt of the State under the administration of his party. I understood the Senator also to say that after the Democrats came into power they elected negro commissioners in one of the counties.

Mr. PRITCHARD. I wish to correct my colleague. My colleague evidently misunderstood me.

Mr. SIMMONS. I certainly understood my colleague to say that; and I am very glad he did not say it, because there would not be a particle of foundation in truth for such a statement.

Mr. PRITCHARD. What I did say was that in some of the counties in one or two instances they made combinations with the colored people in which they agreed to elect, and did elect, a colored man as a member of the board of county commissioners.

Mr. SIMMONS. I know of no such instance in North Carolina, and I deny that there is any instance in the history of Democratic rule in North Carolina where the Democratic party ever coalesced or fused with the Republican party, the Populist party, or any part of the colored people of that State, by which a colored man was made a county commissioner.

Mr. PRITCHARD. Will my colleague permit me to interrupt him?

The first coalition movement that was ever had in North Carolina was entered into between the Democrats of Craven and the colored people of that county. At that time they did not elect a commissioner, but I can furnish my friend—I have the record here—with the name of the county wherein the colored man was elected or appointed by the Democratic party?

Mr. SIMMONS. The Senator is inaccurate in that statement. The instance to which he refers was a coalition between a wing of the Democratic party and a wing of the Republican party. There were two tickets and both parties were divided in support of those two tickets.

Mr. PRITCHARD. The wing was the greater portion.

Mr. SIMMONS. Both parties were divided. There were kickers on both sides.

The Senator refers to the system of county government which prevailed in North Carolina under Democratic rule. That system of county government was adopted to remedy the intolerable conditions which existed in the eastern counties, where the colored population largely outnumbered the white population, and where, under Republican administration, they had brought about a condition of things destructive to every interest of society and government. In these counties, where the negroes were in a majority, they controlled county government. The officers elected by them were incompetent and irresponsible, and generally nonproperty holders. These incompetent and irresponsible officers levied the taxes, collected the taxes, and disbursed the taxes, and, as I said, a condition was created in those counties which was intolerable, and, as a remedy, the system of county government, to which the Senator refers, was adopted. When the Republican party came back into power in North Carolina, these same conditions were restored in these eastern counties.

Mr. President, in reply to the suggestion that there has been nothing in the political conditions in North Carolina under Republican government to justify the white people of that State in providing means for protecting themselves against irresponsible majorities in certain sections of the State, and in reply to the statement so often made by Republicans that there was no negro domination in that State, I need only to recite as an illustration the conditions in one county in that section. The conditions there were largely typical. I refer to the county of Craven. In that county, when the Republican party was in power, between 1894 and 1898, a county in which is situated one of the largest cities in the State, whose people are noted for their culture and refinement, many of them possessed of great wealth, in 1898 the party to which my colleague belongs and of which he was at that time the leader, nominated a negro for the legislature, a negro for county treasurer, a negro for register of deeds, and a negro for coroner.

Upon the county ticket proper there were only two white men, the candidate for sheriff and the candidate for clerk of the court; and both of these two white men, at the time they received their nominations for these offices, were required to state in open convention that if elected they would appoint none but negro deputies. The conditions in this county, I say, were typical of those in many other counties in the eastern part of the State. In these counties negro domination was complete, and a condition of things existed against which, I believe, not only the white people of North Carolina and the South, but of any part of this country, would protect themselves, and ought to protect themselves, their property, and their families.

Mr. McCOMAS. Will the Senator from North Carolina allow me?

Mr. SIMMONS. Certainly.

Mr. McCOMAS. In my absence from the Chamber, if the Senator has made any explanation about the sand cure, I will not ask him to repeat it, but if not——

Mr. SIMMONS. I have said nothing about the sand cure.

Mr. McCOMAS. If he has not done so, I am curious to hear what he has to say.

Mr. SIMMONS. I have said nothing about the sand cure and know nothing about it.

Mr. McCOMAS. Can the Senator explain the statement of his colleague in reference to the sand cure?

Mr. SIMMONS. If my colleague made any statement with reference to the sand cure, I did not catch it. My friend, the Senator from Mississippi, was talking to me at the time and it escaped me. I would be glad if the Senator from Maryland would tell me what the sand cure is.

Mr. McCOMAS. I shall be very glad if the Senator from North Carolina [Mr. PRITCHARD] would tell his colleague what his statement was, because I would like to hear his colleague say what he thinks about it.

Mr. SIMMONS. Certainly, I should be very glad if my colleague would tell me what he said about it.

Mr. PRITCHARD. I did not put in any evidence on the subject; but if it is to be a matter of controversy I can do so.

Mr. SIMMONS. I should be very glad to have the Senator from North Carolina tell me what he said with reference to the so-called sand cure. This is the first time I have ever heard anything about the sand cure.

Mr. PRITCHARD. What I said was that, among other things, we had what is known as the sand cure, resorted to in recent campaigns for the purpose of compelling Republicans to vote the Democratic ticket or have their names taken off the books.

Mr. SIMMONS. I will be glad if the Senator will explain to me about the sand cure, because, frankly, it is an expression I have never heard before.

Mr. PRITCHARD. I will do so, with pleasure.

I will call the attention of the Senator to the evidence taken in the case of Dockery *v.* Bellamy, from the Sixth Congressional district of North Carolina, page 150. Neill McLelland, after being duly sworn, among other things, gave the following testimony:

A. They came up and hailed; wanted to know was I at home. I came to the door; "Who is that?" Says, "Come out, Neill; we want to see you." I says, "I am undressed; come in." They says, "No; come out, Neill; we want to see you." "Soon as I get my pants." I started to get my pants. There was some three or four—coming in at the door as I turned away from it—caught hold of me and commenced pulling, and I commenced pulling against them. They outpulled me. They pulled me on out into the field on the road. They said, "Get down here." They just crushed me right down there, and there they beat me and say, "You have been mighty busy around

here, have you not?" I started to answer them, and they buried my face and mouth down in the sand. One beat a while and then another beat a while, saying, "—— —— you, you stay away from the polls!" One stood off a piece and says, "Put it on him, —— —— him." When they got tired of beating me they told me to get up and go on to the house.

This is not the only case. This book is full of such cases—not of the sand cure, for I believe this is the notable instance of the sand cure being administered. In one instance I remember a man was shot down in his house.

Mr. SIMMONS. This is the first time I have ever heard of the sand cure or of the evidence of the witness McLelland. I do not believe there is any truth in that statement. If the indignities to which he refers were offered him, I do not believe they were for political purposes. I have never heard of this case before. I have no doubt the charge in this case is equally unfounded as the charge in the case to which I will presently call the attention of the Senate, and which attained great celebrity in the campaign of 1900 in my State. I have been chairman of the Democratic executive committee in my State during the last six years, and I want to say to the Senate that I know of no instance of personal outrages practiced during that time for political effect or for political ends. I know charges of this sort have been made by irresponsible persons.

I know of but one charge of political outrage in that campaign which has been investigated in the courts of North Carolina, and that was a charge made by a negro named Steptoe—an infamous charge—against some of the best people in North Carolina. This charge was brought into the courts under the auspices of the State Republican executive committee. It was investigated by a member of my colleague's party, then and now one of the associate justices of the supreme court of the State, upon a bench warrant, and after the most thorough and searching investigation this charge, which had been paraded by the chairman of the Republican executive committee and his party associates on the stump and in the newspapers of that party as a monumental outrage on the part of the white people of the State toward the negroes, was dismissed by this judge without requiring the defendants to introduce testimony other than their personal statements.

That is the only time, so far as I have ever known, of any of these alleged charges having been brought into the courts, and that was selected and brought before the courts because it was claimed that the facts were well authenticated.

Mr. PRITCHARD. Will my colleague permit me to ask him a question?

Mr. SIMMONS. Certainly.

Mr. PRITCHARD. Before doing so I wish to say that I stated distinctly a while ago that I knew that these outrages did not meet the sanction of my colleague. I am satisfied he does not want to condone them now. But I ask him if it was not a fact that organized bands of red shirts rode over certain counties of North Carolina during the recent campaign in North Carolina for the purpose of terrorizing the people.

Mr. SIMMONS. I answer my colleague emphatically that, while during the campaign of 1898 there was organized in North Carolina what were known as the red shirts, that organization never had as its object any belligerent purpose toward the voters of North Carolina. It was merely an organization for the purpose of more effectually organizing the Democratic voters of the State. As a matter of fact, there is not on record in North Carolina, and my colleague can not bring a well-authenticated case from that State, where the red shirts were guilty of violence or personal outrage for the purpose of influencing voters.

Mr. PRITCHARD. I should like to ask my colleague one question.

Mr. SIMMONS. Let me finish what I am about to say and then I will yield.

I wish to say, Mr. President, in reference to the evidence that my colleague has just read from the Bellamy case, that after a most thorough and searching investigation in that case, made by a Republican committee of the House of Representatives (and Mr. BELLAMY was elected from a district where the Red Shirts more largely prevailed than elsewhere in North Carolina), I think there was a unanimous report, although I am not absolutely certain about that—there was at least a majority report of this committee in favor of retaining Mr. BELLAMY in his seat in that body, and he was so retained.

Mr. PRITCHARD. I wish to ask my colleague if he did not read the account of the Red Shirt parade published in the Washington Post just a few days before the election, by its special correspondent sent down there for that purpose?

Mr. SIMMONS. No, sir; I did not read the account in the Washington Post.

Mr. PRITCHARD. You did not read it? The Washington Post is pretty generally taken in Raleigh. Most of the people in Raleigh subscribe for it.

Mr. SIMMONS. I never subscribed for it before I came to Washington, although I occasionally read it and regard it as a very fine paper.

Mr. PRITCHARD. If I understand my colleague, he says these Red Shirt organizations were not organized for that purpose. I did not ask him that. I asked him what they did. I ask him if they did not ride over the country and terrorize the people.

Mr. SIMMONS. I state frankly to my colleague and the Senate, and I state it upon my responsibility as a Senator upon this floor, and I state it as the chairman of the Democratic executive committee of my State, that the stories which have been circulated throughout the country with reference to the so-called outrages committed in my State by this Red Shirt organization in 1898 and 1900 are absolutely and utterly without foundation, and I state that I know of no personal outrages committed by that body which could be traced to the organization itself. Now, I do not pretend to say——

Mr. PRITCHARD. Will my colleague——

Mr. SIMMONS. I can not say that individual members who belonged to that organization, just like other individuals of the State of my party or of my colleague's party, or of any other party, may not have committed wrongs; but I say that that organization itself had never in North Carolina, by any responsible party, except for political purposes, been charged with being an unlawful organization. If that organization, Mr. President, was an unlawful association of persons for an unlawful purpose in 1898, I want to ask my colleague will he please explain to the Senate and to the country why at that time, when these alleged outrages were being committed—with three judges of the supreme court belonging to his party, with nearly every judge of the superior court in that State of his party, with his party in control of the judicial branch of the government from chief justice down to constable—indictments were not brought against this organization, or against the individual members of this organization, for this alleged violence, disorderly, and unlawful conduct? I say there is not an instance—not a single, solitary instance—in the judicial history of the State during that campaign or after that campaign where this organization or any member of this organization was ever arraigned before a court of justice charged with a violation of the laws of the State. If there ever was such instance, I do not remember it.

I will now submit to the interruption of my colleague.

Mr. PRITCHARD. I ask my colleague if he does not know that it is a physical impossibility to identify those men who went, at night time, disguised, for the purpose of whipping men, and if also he does not know that it would have been useless to indict those people, the public sentiment being wrought up as it was during the campaign? I ask him if he does not know how difficult it is to secure convictions in political cases like those to which he refers?

Mr. SIMMONS. I understood my colleague just a little while ago to say that this was an unlawful organization, and that, in his judgment, it did not meet the approval of the good people of North Carolina. If that statement be true, then, Mr. President, I ask my colleague why it is that public sentiment was in favor of the organization in that State and so much in sympathy with it that convictions could not be secured in the courts for these alleged outrages and violations committed by it against the law?

Mr. PRITCHARD. I said in the sections where these outrages were committed. I expressly excepted those sections.

Mr. SIMMONS. But my colleague forgets the Federal courts. Not only were there State courts where these people could have been prosecuted if these outrages had been committed as he charges, but if this band of unlawful men were parading the State and committing these diabolical crimes why could they not have been indicted in the Federal courts? There are two Federal judicial districts in North Carolina, both presided over by Republican judges, both partisans before they went upon the bench, both at present residents of the State, and whatever local prejudice may have existed in the State courts against the enforcement of the laws against this organization and the members of it, that prejudice did not exist, as everybody knows, in these Federal courts. Besides, in these courts the juries are drawn by the clerk, and the jury box generally purged so as to largely exclude Democrats and give Republicans preponderance on the juries.

Mr. PRITCHARD. Does my colleague undertake to say that in North Carolina the juries are composed in Federal courts exclusively of Republicans?

Mr. SIMMONS. No; I do not.

Mr. PRITCHARD. Does he not know that it is the rule of the Federal court to select two Democrats and two Republicans from each county? I ask my colleague to answer that question.

Mr. SIMMONS. I practice in the Federal courts, and I have generally found Republicans preponderating upon the juries.

Mr. PRITCHARD. But preponderating is one thing and excluding Democrats is another. My colleague said that Republicans were selected on the juries and Democrats left out.

Mr. SIMMONS. No; I qualified that, Mr. President.

Mr. PRITCHARD. I think that in the past I have practiced in the Federal courts in North Carolina as much as anyone, and my experience has been that the rule of taking a Democrat and a Republican has been scrupulously observed in every court in North Carolina, and I never heard the charge made before.

Mr. SIMMONS. I did not make the charge in the way that my colleague puts it.

Mr. PRITCHARD. The idea of Federal courts having jurisdiction over offenses committed by Red Shirts is something I can not comprehend.

Mr. SIMMONS. Mr. President, it is a well-understood proposition of law that the Federal court has jurisdiction of conspiracies to suppress suffrage in cases of Federal election. I have never heard that proposition questioned before, and it is the gravamen of the charge that the Senator makes against these Red Shirts that they were organized and put into operation for the sole and exclusive purpose of intimidating voters in an election where candidates for Congress and other Federal officers were to be voted for.

Mr. President, I have not said, and I do not say, that all the jurors selected in the Federal courts are partisan. I said that the rule was, and I believe that statement to be true, that Republicans predominate in the juries in those courts.

My colleague attacks the Democratic party on the ground that they did not appoint members of his party as registrars and judges of election or, when it did appoint them to these positions, persons who did not suit his party were appointed. In some of the eastern counties that might have been so, for in some of the eastern counties the Republicans selected by his party for these positions were notoriously unfit. But under the law the Republican party was entitled to representation upon this board, and it was given representation, though in instances such as I have referred to the man selected by the organization of that party may not, and I know was not, chosen for this position.

Mr. PRITCHARD. I ask my friend——

Mr. SIMMONS. I decline to yield until I have finished what I am now saying.

My colleague also charges that in the last election in North Carolina the Democratic registrars were guilty of the most outrageous wrongs and crimes in suppressing the votes of his partisans. As a matter of fact, Mr. President, when that campaign was going on, and after the campaign was closed, my colleague's party caused to be indicted a number of registrars in the Federal courts of the State, and later, for reasons best known to himself (because my colleague is not only the Republican Senator from North Carolina, but he is chairman of the Republican executive committee in that State)—for reasons best known to himself, and without my consent as chairman of the Democratic executive committee, of his own motion, with the acquiescence of the district attorney, my colleague went into the Federal courts where these indictments were pending and voluntarily caused to be withdrawn every one of these charges that had been preferred against these Democratic registrars.

Now, Mr. President, to sum up this matter, wherever these charges, of whatever kind, of outrage and corruption in connection with the campaigns of 1898 and 1900 have been brought before the courts, whether before the State courts or before the Federal courts of my State, they have either been dismissed by the court as groundless or they have been voluntarily withdrawn by those who instituted them. The same is true when these charges have been investigated by Congressional committees, both in the cases of Mr. BELLAMY, from the Sixth district, and Mr. THOMAS, from the Third district, both being districts in which there were Red Shirts. The basis of both these contests were largely the alleged violence and outrages of the Red Shirts, and yet the Republican committee of the House of Representatives, after thorough investigation, after the examination of thousands of witnesses by the contestants in those cases, decided unanimously in one case, and I think unanimously in the other—at least by a large majority—that the grounds of contest were insufficient, and reported in favor of both contestees retaining their seats. Yet, notwithstanding these vindications by the courts, State and Federal—and whatever else may be said of the Federal courts of my State, it is known in North Carolina these courts are dominated by Republican influences, from the judge down to the lowest bailiff—and Congressional committees, they are still repeated and reiterated by my colleague.

It is the natural presumption from these decrees of the courts and these findings of the committees that the other charges of fraud and violence and outrage are as groundless as those that have been thus investigated and decided against the political contention of the Republican party.

Now, Mr. President, I reserve the right, when I get the data to which I referred a little while ago, to make a fuller reply to the remarks of my colleague, if, after examining them, I think they shall need further attention.

I regret very much my colleague has injected this discussion here. I did not invite it. I simply asked my colleague a question with reference to the suffrage clause of the code that the Republican party has adopted in the Philippines. While my colleague declined to give a direct answer to that question, he made it the excuse for entering into a partisan discussion of politics in North Carolina.

I very much desire an answer to the question I asked my colleague with reference to these suffrage laws in the Philippines, and I again ask him if he approves of those laws. I ask him for a direct answer, for it is a question that can be answered yes or no. Do you approve of the suffrage laws which your party, through the Taft Commission, has put in force in the Philippines, by which no one is permitted to vote in the election of certain minor officers which the people are permitted to elect out there unless he can read and write the English or Spanish language, or unless he is the owner of $250 worth of property or unless he pays an annual tax of $15? I hope my colleague will answer categorically whether he approves of these provisions of that law.

Civil Government for the Philippine Islands.

SPEECH
OF
HON. JETER C. PRITCHARD,
OF NORTH CAROLINA,
IN THE SENATE OF THE UNITED STATES,

Friday, May 2, 1902.

The Senate having under consideration the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. PRITCHARD said:

Mr. PRESIDENT: I have answered the following question asked by my colleague about three times, I think:

I very much desire an answer to the question I asked my colleague with reference to these suffrage laws in the Philippines, and I again ask him if he approves of those laws? I ask him for a direct answer, for it is a question that can be answered yes or no. Do you approve of the suffrage laws which your party, through the Taft Commission, has put in force in the Philippines, by which no one is permitted to vote in the election of certain minor officers which the people are permitted to elect out there unless he can read and write the English or Spanish language, or unless he is the owner of $250 worth of property, or unless he pays an annual tax of $15? I hope my colleague will answer categorically whether he approves of these provisions of that law.

I have stated that under existing conditions I favored the provisions of this bill, of course reserving the right to extend the privileges of local self-government to these people after we have taken the census and ascertained their capacity for self-government.

Now, Mr. President, my colleague talks about negro rule in North Carolina. I want to call attention to the following table:

Vote, 1900, Second Congressional district.

County.	Bryan.	McKinley.	White voters.	Colored voters.
Bertie	2,420	1,067	2,137	2,204
Edgecombe	3,009	1,635	2,496	3,493
Greene	1,385	820	1,502	1,185
Halifax	3,990	2,174	2,855	4,394
Lenoir	1,942	1,224	2,594	1,697
Northampton	1,992	1,587	2,181	2,470
Warren	1,573	1,337	1,393	2,441
Wayne	3,104	1,965	4,159	2,785
Wilson	2,816	1,194	3,290	2,066
Total	22,231	13,003	22,607	22,735

Lenoir County gave Mr. Bryan 1,942 votes and McKinley 1,224 votes——

Mr. SIMMONS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from North Carolina yield?

Mr. PRITCHARD. I do not desire to be interrupted. I am reading a table now, and it is a very interesting table.

Lenoir County gave Mr. Bryan 1,942 votes and Mr. McKinley 1,224 votes. There are in this county 2,594 white voters and 1,697 colored voters.

Northampton County gave Mr. Bryan 1,992 votes, Mr. McKinley 1,587 votes. There are in Northampton County 2,181 white voters and 2,470 colored voters.

Warren County gave Mr. Bryan 1,573 votes, Mr. McKinley 1,337 votes. Warren County has 1,393 white voters and 2,441 colored voters. Therefore Mr. Bryan received 180 colored votes in Warren County.

Wayne County gave Bryan 3,104 votes, McKinley 1,965. That county has 4,159 white voters and 2,785 colored voters.

Wilson County gave Bryan 2,816 and McKinley 1,194 votes. There are 3,290 white voters and 2,066 colored voters.

Bertie County gave Mr. Bryan 2,420 votes and Mr. McKinley 1,067 votes. There are in Bertie County 2,137 white voters and 2,204 colored voters. Therefore Mr. Bryan received 283 colored votes in Bertie County.

Edgecombe County gave Mr. Bryan 3,009 votes and Mr. McKinley 4,635 votes. Edgecombe County has 2,496 white voters and 3,493 colored voters. Therefore Mr. Bryan received 513 colored votes in this county.

Greene County gave Mr. Bryan 1,385 votes and Mr. McKinley 820. Greene County has 1,502 white voters and 1,185 colored voters.

Halifax County gave Mr. Bryan 3,990 votes and Mr. McKinley 2,147 votes. Halifax has 2,855 white voters and 4,394 colored voters. Therefore Mr. Bryan received 1,135 colored votes.

In other words, Mr. Bryan in a district that has a majority of colored voters, received 9,228 majority.

For argument's sake I have assumed that every white man in the Second Congressional district voted the Democratic ticket at the last election, whereas the truth is that there were something near 3,000 white men in the Second district who voted against Mr. Bryan at the last election. And when we take into account this class of voters it is evident that either a large number of colored people voted the Democratic ticket or their votes were counted for that party.

In the State of North Carolina, at the last election, Mr. Bryan received 24,776 majority, and in what is known as the "black belt" he got 27,000 majority, or, in other words, he received 3,000 more votes in the black belt than the majority which he received in the entire State of North Carolina.

Mr. FAIRBANKS. Please give the total Bryan vote there.

Mr. PRITCHARD. Yes, sir. The total McKinley vote in this district is 13,003; the total Bryan vote is 22,231.

Mr. McCOMAS. The total colored vote is how much?

Mr. PRITCHARD. The total colored vote in this district is 22,735.

Now, Mr. President, I had not intended to enter into a discussion of this phase of the question, but when my colleague sought to raise a question which I understood we had recently settled in North Carolina—to wit, the race question—I deemed it my duty to give the Senate the information which I have in my possession with respect to this matter.

I had not intended to raise this question; but, Mr. President, it is impossible to discuss any question under the sun in North Carolina with a Democrat without having the color line brought into it. You may read to him the Ten Commandments, and he will yell back at you, "Negro." You may ask him how he stands on the tariff, and "negro" is the answer. You may ask him how he stands on the silver question, and he goes back to the negro question. You may ask him how he stands on the Philippine policy, and he always returns to the negro question.

But what I object to is that the Republican party is to be called the negro party of the South, and at the same time our Democratic friends get their largest majorities from the Black Belt. This thing ought to be settled one way or the other. If the colored people vote with them—and I hope that is the case, because I hate to say that they steal any of their votes—if they vote with them they ought to display more gratitude to them and cease their incessant abuse of the colored people. Why, my colleague said in his speech the other day that as a general rule a colored man was not capable of being educated so as to exercise the right of suffrage, and gave it as his opinion that on account of heredity he could not be qualified to vote.

We have in my State many colored people who are highly educated and cultivated. As a general rule the colored people of North Carolina are quiet and conservative. They are not inclined to interfere with the affairs of the white men. They are inclined to go along and attend to their own business. For years and years the Democratic party in eastern North Carolina made overtures to the colored man and did all they could to induce him to vote with them, and to-day the only objection they have to the colored man's voting is that he votes the wrong ticket.

The very moment a colored man votes the Democratic ticket his skin turns white in the estimation of the average Democrat, and they speak of him as being "all right." I remember a notable instance down in the city of Newbern. There was a colored man who organized a league down there in the last campaign. While he was a Republican he was plain "Mr. J. T. York," but after he organized the league the Democratic papers spoke of "Captain York," as having organized a Democratic league down there.

I have always contended that the best possible solution of this question in the South would be a division of the colored vote, and had it not been for the policy which has been pursued by the Democratic party in order to keep the South solid I am of the opinion that years ago the colored men would have divided their votes and we would have been rid of this race question—a question which ought never to have been raised. Had it not been for the action of the Southern Democrats after the close of the war we would never have had the fifteenth amendment.

When the Howard amendment was submitted to the Southern States every Southern State, with the exception, I believe, of Tennessee, rejected it. The Howard amendment simply gave the colored man status as a citizen of the United States, but left the regulation of suffrage entirely to the Southern people.

The greatest mistake that ever was made, Mr. President, was the rejection of this amendment, because, in my opinion, if that amendment had been adopted the colored man would have been enfranchised by the very men who are to-day trying to disfranchise him, because they would have desired the power that his being counted in the Federal enumeration would have given to the Southern States in the electoral college and in the House of Representatives.

I think it was a mistake to enact the fifteenth amendment at the time it was adopted, but it was not done until the Democrats of the South stubbornly refused to receive the proposition which was held out to them by the Republican party in the North. Still we have to suffer for this thing, and it seems that we are to have the question ever with us.

In North Carolina my friend says I counseled and advised that certain election cases be nol prossed. I was appealed to by the conservative, law-abiding Democrats of North Carolina, in the tnterest of law and in the interest of peace, to ask the district atiorney to nol pros these cases, and feeling as I did that I could promote good feeling among our people by doing so, I recommended that they be nol prossed.

But, Mr. President, inasmuch as my colleague has gone into that question, I want to remind him of one other fact. They tried to impeach our judges in North Carolina for purely political purposes, and while the impeachment trial was in progress an emissary representing the Democratic party in North Carolina came to Washington and said to me, "If you will nolle prosse these election cases we will stop the impeachment proceedings in North Carolina." I told the gentleman who bore the message to go back and tell his friends in Raleigh that if those judges had been guilty of improper conduct it was the duty of the legislature to convict them, and that I would not for one moment treat with him on that subject.

Mr. President, after that matter had gone by——

Mr. SIMMONS. May I ask my colleague a question?

The PRESIDENT pro tempore. Does the Senator from North Carolina yield?

Mr. PRITCHARD. Certainly.

Mr. SIMMONS. I will ask the Senator if the gentleman to whom he referred as an emissary of the Democratic party——

Mr. PRITCHARD. He claimed to be; that is all I know.

Mr. SIMMONS. Was not one of the attorneys of the impeached judges?

Mr. PRITCHARD. No, sir; he was not.

Mr. SIMMONS. Will the Senator tell us, then, who he was?

Mr. PRITCHARD. I do not know that I am called upon now to do it, but I can if it becomes necessary.

Mr. SIMMONS. I do not know. That is the reason why I inquired.

Mr. PRITCHARD. It is well understood and nobody in North Carolina questions but that the proposition was made. There can be no question about that. But, Mr. President, when the Democratic legislature was in session I submitted a proposition to them to give us representation on the election boards, and I am glad to say that, upon the advice of my colleague, they did it. Having done that, after having agreed to give us fair elections in the future, in so far as they could, I felt it was my duty to stop all these political prosecutions, and I did so, not because I thought these men ought not to be convicted.

If a bill of indictment could have been sustained under the section under which they were indicted, there is no question about the facts. I had some question in my mind as to whether or not they could have been convicted under the section under which they were indicted, but there was no question about the fact that they refused to register thousands of men who were entitled to vote, and they were indicted for refusing to register those men.

Now, Mr. President, I would not have gone into this other matter, but, inasmuch as my colleague has seen fit to bring in the question of nolle prossing those cases, I want all the facts to go in the RECORD. I am prepared to show that not only one emissary but two came from North Carolina, one a Republican and

the other a Democrat, and asked me to stop those cases and they would stop the impeachment proceeding. It was boldly proclaimed in North Carolina that these judges were to be impeached for the purpose of getting a Democratic bench to pass upon the grandfather's clause referred to by my distinguished friend from Wisconsin [Mr. SPOONER].

I want to say to the credit of the Democratic party in North Carolina that a number of the most prominent Democrats in the legislature opposed and voted against impeachment, and had it not been for the action of these honorable, patriotic gentlemen two Republican judges would have been impeached in our State for no cause whatever except for political purposes.

Civil Government for the Philippine Islands.

SPEECH

OF

HON. FURNIFOLD McL. SIMMONS,

OF NORTH CAROLINA,

IN THE SENATE OF THE UNITED STATES,

Friday, May 2, 1902.

The Senate having under consideration the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. SIMMONS said:

Mr. PRESIDENT: I ask the Senate to bear with me a few moments, that I may reply to the statements of my colleague made in his last remarks submitted to the Senate.

My colleague refers to the impeachment proceedings against the judges of the supreme court in my State. I do not desire to discuss that question further than to say that the statement made by my colleague that the gentlemen who visited him here in Washington for the purpose of compromising these proceedings were not the representatives of the Democratic party, and that no fact is better understood in North Carolina than that fact. Shortly after the visit to which my colleague refers I heard that certain gentlemen, acting on their own motion, had been to see my colleague in Washington and had discussed the question of the settlement of these proceedings with him somewhat in the light in which he puts it. As soon as I heard of this matter, as chairman of the executive committee I publicly repudiated the suggestion, or rather the intimation, that had been made to the effect that those gentlemen had the slightest authority from the Democratic party for making that visit or entering into those negotiations. My understanding has always been that the gentlemen who came here——

Mr. PRITCHARD. If my colleague will permit, I do not intimate that my colleague sent them.

Mr. SIMMONS. I know of no one in authority in the Democratic party in North Carolina who authorized that mission.

Mr. PRITCHARD. I shall have no trouble about proving what I have stated.

Mr. SIMMONS. I have always understood until to-day that those gentlemen were representing the judges who were under impeachment; that they came here in the interest of the judges, and not by authority of the Democratic party. It was probably hoped by them that some adjustment of that kind could be made.

With reference to the counties which my colleague has singled out here to-day in the eastern part of my State, I want to say, so that the country may be in possession of the facts with reference to that matter, that in the counties he mentions, and in other counties similarly situated in eastern North Carolina, there were in office at one time during the control of his party, in 1897 and 1898, about one thousand negroes—postmasters, registers of deeds, deputy sheriffs, constables, school committeemen, justices of the peace, policemen, sanitary officers, etc. In one county there were as many as 87 negro officeholders; in all there were 300 negro magistrates in the State, and I think about eighty-odd negro constables and policemen. These magistrates issued their warrants, not only against white men, but against reputable white women; and these white men and white women were arrested by negro constables and by them dragged for trial before these negro courts. At that time there were in office in that section of the State about twenty-seven negro postmasters, either appointed upon the recommendation of my colleague or of Republican members of the House from my State.

Some of these negro Federal officeholders are still in office in this State, but there are not so many of these negro postmasters in office there now as there once was, for they have been greatly thinned out by being sent to prison for embezzlement and other malfeasance in office by the Republican Federal court in the eastern judicial district in that State. Although my colleague used to be regarded in the State as a very great champion of the colored people while they were permitted to vote and while their votes, added to those of the white Republicans and white Populists, constituted a majority in that State, since the Democrats have come into power and since a part of those colored voters have been disfranchised he has been rapidly turning these negro postmasters out of office, and it is generally understood in North Carolina that he is to make, before he gets through, a clean sweep of them.

Only a few weeks ago there met in the capital city of my State a convention composed of the leading negroes in eastern North Carolina. There were present at that convention 150 of the most influential colored politicians in North Carolina. They discussed to some extent my colleague, and finally passed a resolution, unanimously, I think, condemning my colleague and advising the negroes against sending him back to the Senate again, because, as they charged, he was turning out of office, now that the negro had lost his political power, the same negroes he had put in office when they were the dominant influence in North Carolina.

Mr. President, my colleague is correct. I did state, a few days ago, as he says, and I repeat it here now, that in my judgment, after mature consideration, and with, I think, a pretty thorough knowledge of the negro, both as a citizen and as a voter, I do believe that he is utterly incapable of exercising an intelligent and responsible suffrage, and I believe his lack of capacity in this respect is the result of heredity, and that it can not be removed by education or by training. In my opinion, the greatest mistake that has ever been made in this country was the adoption of the fifteenth amendment, by which the colored man became a voter. The suffrage has done him no good, and it has worked incalculable harm to the country, especially to the South, where he chiefly lives.

In concluding these remarks, Mr. President, I want to say, in North Carolina there is no prejudice against the negro as a man. The white people of the South rather like the negro. He has always lived among them, and they understand him. Aside from politics, there is the friendliest relation between the two races. In the matter of education, we are doing as much in the South for the black man's child as we are for the white man's child. We levy all the taxes for that purpose we are able to pay, and we divide it per capita between the races. Every time we levy a dollar of tax to educate a white man's child we put alongside of it a dollar to educate the black man's child. We furnish them the same accommodations for their insane, for their blind, and for their deaf and dumb as these unfortunates of the white race are given. We make absolutely no discrimination in these great humane and charitable objects of government. But, Mr. President, we are not willing in the South, we are not willing in North Carolina, that the white people shall be governed and controlled by the negro. Negro control, negro government, is to the white man repugnant; he will not submit to it.

My colleague refers to the constitutional amendment recently passed in my State. We have no concealment to make about that. We passed it for the express purpose of excluding from the suffrage these irresponsible negroes. We passed it for the purpose of protecting ourselves against the possibility of negro domination in the future—the possibility of the recurrence of the horrible and unspeakable outrages that resulted from negro domination during the years from 1894 to 1899. Any negro who can read and write can still vote in North Carolina, as he could before that amendment, and we are doing all we can to educate those who can not read and write. Our motive in passing this suffrage amendment was not to harm these irresponsible negroes. The ballot has never helped them. To take it from them will not hurt them. In adopting that amendment we were not actuated by prejudice against the negro, but we were moved by a high desire to preserve and perpetuate the civilization of the white man in that State.

Now, Mr. President, my colleague seems to have acquired a habit of injecting North Carolina politics in every debate in which he participates in this Senate. It is difficult to see the relevancy of the local matters he has injected in the debate on the pending measure. I suppose, however, the argument which my colleague intends to make is that because a negro had his head pushed in the sand and got a whipping down in North Carolina during the campaign of 1900, most probably for insolence, if at all, we are estopped from saying anything about the horrors of the water cure systematically praticed in the Philippine Islands by our Army, and because the Red Shirts scared some negroes down in North Carolina during that campaign our mouths are shut to denounce the infamous order made by General Smith to make the island of Samar a howling wilderness and to kill every male 10 years of age and over in that ill-fated island. If my colleague is satisfied with this logic, I see no reason why his tranquillity should be disturbed.

Rural Free Delivery.

SPEECH

OF

HON. GILBERT N. HAUGEN,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 7, 1902.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 11728) to classify the rural free-delivery service and fix the compensation to employees thereof—

Mr. HAUGEN said:

Mr. CHAIRMAN: In the few moments that I expect to occupy I wish to offer some observations along the line indicated in this bill. First, to that part of the bill which provides that the service of carrying the mail on any mail rural free-delivery route shall be awarded to the lowest bidder.

Mr. Chairman, I am somewhat skeptical of this proposition and reluctant in voting for such a radical change at this time, and fail to see the wisdom of the proposition that has been proposed by this bill, and fail to get the consent of my mind give my support to this proposition. While I have the highest regards for the sound judgment, integrity, and strong desire to do what seems to be for the best interest of this country by the worthy chairman of this committee, yet I can not concur with him in his views upon this proposition or believe it will be for the best interest of the service or the country to make this change. I believe this radical change will prove destructive to the service, and the service which I believe is one of the most important services that has ever been contemplated by the Government; one that has proven beneficial in so many ways; one that is so deserving of encouragement and much desired, I believe, by all the people; a service that has contributed not only in a large degree in the increase of value of farm land, but has given great blessings, conveniences, and benefits to the rural communities, and added much pleasure and happiness to country life, and that has and will give an incentive and encouragement to build up and develop the rural community.

Why this legislation at this time; at a time when we can least afford to cripple it? This service is yet in its infancy, and it has hardly passed the experimental stage. Up to two years ago in my district we did not have a single rural free-delivery service. Now we have 50 in operation, and about 25 more have been inspected, with upward of 50 petitions yet on file not reached. What is true in my district is true in other districts. Less than 50 per cent of the applications from all over the country have not yet been reached. Hundreds, yes, thousands, of petitions filed over a year ago are waiting consideration. The people are getting impatient in waiting for the service, and justly so. Not that I have any complaint to offer.

My district has been treated fairly, having had its proportion of routes established, and more than 50 per cent of the applications on file from my district have been acted upon and favorably reported; nor have I any complaint to offer as to the rules adopted by the Department. They have an established rule to take up the applications in the order of their filing so far as practicable, and a rule which, I understand, has been enforced and which seems absolutely fair. I have received nothing but the most courteous, generous, just, and fair treatment at the hands of Mr. Machen, superintendent of the rural free-delivery service. He is a worthy, obliging, and very excellent gentleman; he is to be commended for his successful management and his efficient service—a service commanding and deserving general approval; but I submit to you in view of the numerous applications on file, the universal demand for the service from all parts of the country, it behooves us at this time, at this critical period, to discuss this matter dispassionately, calmly, quietly, and intelligently, and with a view of improving and extending the service rather than to cripple it.

I fully realize that at first the establishment and operation of this service will cost a great deal of money. It has been estimated by the worthy chairman of this committee that it will cost upward of $50,000,000 to deliver mail to and from all communities, but I firmly believe if an effective and efficient rural free-delivery service is put in effect so as to meet the needs and wants of the people living in the rural districts in this country, operated on sound basis, with the view of giving the best service possible, it will be but a short time when the rural free-delivery service will pay for itself, if not more; but if we inaugurate a system that will prove injurious and ruinous, and thus impair and cripple the service, we can not hope for such results, and I trust it will not be done at this time.

No one will contend that the people living in the rural districts are not entitled to as good and efficient service as those in cities and towns, where they have free delivery. These people contribute as much to the welfare of this Government and country as those in large cities, both in time of peace and days of unpleasantness. They are loyal and law-abiding citizens, intelligent, and deserving just and fair consideration.

There can be no disposition on the part of any member of this House to deprive the people in rural communities of the advantage, conveniences, and blessings given those in the city—that is, so far as is practical and possible. If so, it is our duty to give them the same service; that we enact laws that will encourage the development and growth of this service and to enable the Postmaster-General to select trustworthy men as carriers—men of integrity, character, capacity, competent, capable—that the service may be performed with accuracy, promptness, and dispatch, and not to advertise for the cheapest cart, the lame, blind, the most swayback and oldest mule and the slowest service. Why not leave this matter with the Postmaster-General and trust to the Administration to promulgate and carry out its own regulations, its own rules, its own laws, and its honest enforcement, as they have in the past?

Why apply this contract system to the carriers in the rural free-delivery service? No one has even dreamed of applying this system to any other employee of the Government. No one would think of putting up the post-office service or the service of carrying mail in the cities to the lowest bidder; yet the same personal qualification, aptitude, and efficiency is required of the carriers in the rural free-delivery service as is of country postmasters. As much personal fitness is required of them as postmasters and city carriers. They collect letters, mail matter of all kind, same as the carriers in the city, and in addition they give receipts for letters which are to be registered, receive money for the purchase of money orders, sell postage stamps, and cancel stamps, which are not required of the city carrier. They are paid less for their services. Up to this last month they have been paid only $500 a year.

The city carriers are paid from $600 to $900. The rural carrier must furnish 1 to 3 horses, wagon, and harness; the horses must be fed, the wagon and harness kept in repair, and occasionally a new horse must be bought to take the place of a cripple or dead one. They are subject to more exposure; they travel 25 miles every day of the year except Sundays; rain, storm, or sunshine, good or bad roads, and at the end of the year, after the expenses are paid, there is but little left for their services. Considering the hardship, exposure, personal fitness, aptitude, and efficiency, and number of days required, they are paid less than any employee in the Government. It is proposed that this particular class of employees shall be subject to competitive bidding, which may result in lower salaries, and possibly before we get through with this legislation as to the Post-Office Department you will increase the salaries to a large number of employees who are less deserving and paid much more for their services.

Why inaugurate a system so destructive to the best interest of this Government and people and possibly deal the death blow to the whole system? I have gone through the appropriation bill reported by this committee carefully and failed to find a single reduction recommended by the committee except the discontinuance of the subsidy paid for the mail services from New York to Washington. Six hundred and forty-one thousand dollars is recommended for internal-mail transportation for steamboat routes; $36,260,000 is recommended for internal transportation by railroad routes, which is $1,560,000 in excess of appropriations in 1902; $5,104,960 for railroad and car service post-office carrier service, which is $288,960 more than the appropriation for the current year; $450,000 for inland transportation of mail by electric and cable cars, which is $50,000 more than last year; $2,587,000 for transportation of foreign mails; $6,715,000 inland mail by star route, which is $1,135,000 more than for the current year; Railway Mail Service, $11,282,540, being $907,840 more than appropriated for the current year.

The committee recommends a total appropriation of $137,916,598.75, which is $14,133,910 more than the appropriation for the current year, which amounted to $123,782,688.75. Out of this amount $17,139,800 is appropriated for clerks in post-offices, which is $2,776,100 more than the appropriation for the current fiscal year. Eight hundred and fifty thousand dollars is for promotions, the average salary paid the post-office clerks, being about $900 per annum, having been increased from an average of $700 to $900 in about three years; $11,282,540 is recommended to pay railway clerks, or $907,840 more than last year. Here we have a liberal increase in salary for quite a number of clerks; $17,430,450 for pay of letter carriers in offices already established; $90,000 in new offices; for horse hire, $650,000, and so on until we have the enormous sum of $137,916,598.

I submit to you that if it is the purpose of this House to economize, why strike at a class of employees who are paid less than any class of employees in the service of the Government? Why does not the distinguished gentleman of this committee include the hundred of carriers in his city in California? Not a single suggestion as to that; and I am frank to say that I believe it should not be done. I take it that the main object of all these

carriers is to give the best service and not the cheapest. If the cheapest service is sought, why not let the carrying of the mail across the continent to the lowest bidder. It can be carried by freight at much less cost than it can by a special and fast trains, and you could save enough in this one item to pay the total expense of the rural free-delivery service.

If it is the purpose of this House to adjust salary as to our Government employees, why not begin right here in Washington with our own salaries, for instance? We can better afford to have our salaries reduced than to cut the salary of one who receives one-tenth the salary we do. Why not dispense with some of the dead wood in the different departments? We have been told time and time again in this House that a large number of clerks, at least 20 per cent of them, might be dropped from the pay roll without impairing the service in the various departments. Cut off these four or five thousand of surplus clerks and you will save enough to pay the rural free-delivery expense for the last year.

In view of the experience we have had under the contract system in the star-route service, and in view of the salaries paid the carriers in the rural free-delivery service, and what is required of them; and in view of what is paid other employees, and the way other employees are treated in this bill, it does not seem wise to embark upon this radical change which, I fear, will prove detrimental to the service of the best interest of this Government. This service has been placed under the classified service, and there is and can be no politics in the matter. Every applicant must subject himself to an examination and receives his appointment upon his merits. The examination is to be conducted by the special agent, who examines the routes, and can not be let to any pet friend of the postmasters or members of Congress.

Mr. Chairman, I will not detain the House any longer at this time. I fully appreciate that after a whole week's discussion upon this bill the arguments have been fully exhausted; but in view of the misapprehension on the part of many people relative to this service I ask unanimous consent to print in the RECORD the regulations governing the manner of appointment to the position of carrier in the rural free delivery, approved December 26, 1901, by the Postmaster-General; also extracts from the report of the First Assistant Postmaster-General for the fiscal year ending June 30, 1901—the part relating to the rural free-delivery service; also a detailed statement of the rural free-delivery service in my district as soon as it can be had from the superintendent of the rural free delivery, and the privilege of withholding the proof from the print until the desired data can be obtained.

APPENDIX.

REGULATIONS GOVERNING THE MANNER OF APPOINTMENT TO THE POSITION OF CARRIER IN THE RURAL FREE-DELIVERY SERVICE.

The following regulations governing the manner of appointment to the position of carrier in the rural free-delivery service are hereby approved and promulgated, to become effective from and after February 1, 1902:

1. In pursuance of the provisions of section 3 of the civil-service act the Civil Service Commission shall appoint, after consultation with the Postmaster-General, a board of examiners of not less than three members, who shall be officers or employees of the Post-Office Department, located in Washington, D. C., such board to be known as the central board of examiners for the rural carrier service. All special agents and route inspectors in the rural free-delivery service shall be appointed by the Commission as auxiliary members of such central board of examiners.

2. Whenever a postmaster shall receive notice from a special agent that he will visit his post-office for the purpose of investigating the feasibility of the establishment of a rural free-delivery route from his office, from which the prescribed petitions have been filed, and for the purpose of conducting the examination of persons nominated by the petitioners and any others who desire to compete for the position of carrier on the proposed route, the postmaster shall at once post in a conspicuous place in the public part of his office a copy of such notice and an announcement that he will receive the names of any persons who desire to enter the examination, and in such other ways as may be practicable shall give publicity to such notice and announcement. The postmaster shall notify all applicants of the date of the examination.

3. The special agent, after investigating the feasibility of establishing the route petitioned for, shall, in his capacity as a representative of the Commission, conduct the examination of all applicants for the position of carrier.

4. Whenever a postmaster shall receive notice from the Department of the existence of a vacancy in the position of carrier on an established rural free-delivery route from his office, if there are no eligibles as a result of a former examination for this position, then the postmaster shall at once post the notice of such vacancy and an announcement of an examination for securing eligibles for the same in a conspicuous place in the public part of his office, and in such other ways as may be practicable give publicity to such notice and announcement; and he shall receive the names of any persons desiring to enter the examination. The route inspector who may be directed by the Department to proceed to the post-office for the purpose of conducting the examination shall in advance notify the postmaster of the date of his arrival at the office, and the postmaster shall notify all applicants to appear for the prescribed examination, and the same shall be conducted by the route inspector in his capacity as a representative of the Commission.

5. The examiners will carefully observe the provisions of section 5 of the civil-service act, and under no circumstances shall they give out an application form in advance of an examination; nor shall they disclose any information as to the contents of said form nor permit any person to peruse or copy the same. A violation of this regulation will be considered sufficient cause for the dismissal of the offending examiner.

6. Under the direction of the Commission, the central board of examiners shall have custody of the application forms, which will be numbered consecutively and furnished by the central board as may be required to the special agent or route inspector, who will be charged with the exact number he receives and will be required to account for each form. Forms that are spoiled or mutilated shall be turned in to the central board of examiners.

7. The special agent or route inspector shall personally conduct the examinations and must be constantly present.

8. Applicants shall not be permitted under any circumstances to assist each other in the examination, and an attempt to do so will cause the immediate rejection of both the offending competitors. Political or religious affiliations of applicants shall not be given any consideration whatever, nor shall political indorsements be received or entertained. The merit and the qualifications of the applicant and the good of the service alone shall be considered.

9. The examination as conducted by the special agent or the route inspector shall require only such scholastic ability as may be necessary to enable the applicant to read and write, and shall consist of answering a series of personal questions in the applicant's own handwriting relating, among other things, to his physical condition, his previous experience, training, and occupation, the length of his residence in the community, and his ability to furnish the necessary equipment and to provide a suitable substitute in cases of emergency; the reading of 25 addressed envelops or cards, and such other practical tests as will demonstrate the competitor's ability to actually perform the work required. The examination shall further consist of a careful inquiry and report by the special agent or the route inspector as to each competitor's acquaintance with the patrons of the route and the extent to which he has their confidence, his general characteristics, suitability, and fitness for the position, and his character and reputation; and in any case where the examiner has doubt as to the competitor's character or reputation, he shall not only make inquiry of the persons given as references in the application, but also consult two or more prominent citizens not mentioned by the applicant.

10. After completing the examination the special agent or the route inspector shall at once forward all the papers to the central board of examiners, including a report of the results of his inquiries and observations concerning the competitors and his recommendations as to those best qualified. Subject to the direction of the Commission, the central board shall have permanent custody of such papers.

11. Upon receiving the papers of an examination the central board of examiners shall proceed to rate the same, the rating to be determined by a careful consideration of the qualifications of the competitors as shown by all the papers submitted by the special agent or the route inspector, in accordance with sections 9 and 10 of these regulations. The central board of examiners shall prepare a list containing the names of all those who become eligible as a result of the examination, arranged in the order of their rating, with the highest first: *Provided*, That the names of eligibles who are entitled to preference under the provisions of section 1754 of the Revised Statutes shall be placed at the head of the list in the order of their ratings, if such persons are found to fully possess the business capacity and physical ability necessary to perform the service. After the competitors in any examination have been rated and the list of eligibles has been prepared, the central board of examiners shall furnish a copy of the eligible list to the Post-Office Department and to the Civil Service Commission.

12. For filling a vacancy in the position of carrier the person will be selected for appointment whose name is at the head of the list of eligibles established as the result of examination held for the route on which the vacancy exists: *Provided*, That when selection is to be made for the initial appointment of a carrier on a newly established route one of the persons nominated by the petitioners will be selected if in other respects his qualifications are equal to those of the other eligibles; and when a selection is to be made for filling a vacancy in an established route the person who may have been serving as substitute carrier on the route will be selected if in other respects his qualifications are equal to those of the other eligibles.

13. Applications of persons under 17 or over 55 years of age will not be considered, except in the cases of honorably discharged United States soldiers or sailors of the civil war or of the Spanish-American war and of those entitled to the benefits of section 1754 of the Revised Statutes who are physically able to perform the service required.

14. An applicant will be required to show that he possesses the necessary equipment for the service, namely, suitable horse and wagon or cart, or to satisfy the special agent or route inspector that he will be able to supply such equipment in case he receives appointment.

15. Application shall not be received from a person who is badly crippled or deformed. Application shall not be received from a person who does not live directly on or within the territory to be supplied by the route where the vacancy exists.

16. Application shall not be received from a member of the postmaster's family, especially if other members of his family are already in the Government service, unless there is a lack of a sufficient number of other applicants.

17. A carrier who resigns will not be permitted to discontinue service until his successor is appointed and qualifies.

18. A carrier will be required to furnish a suitable substitute. Whenever a carrier becomes separated from the service the postmaster shall employ the substitute carrier, if there be one at the time, and if not, any suitable person until regular appointment can be made. The appointment of a new carrier shall operate to separate the former substitute from the service, the new carrier to furnish his own substitute as herein provided.

19. A carrier and his substitute will each be required to give bond in the amount of $500.

20. All persons who can comply with the requirements and who desire to enter the examination which may be held for the position of rural carrier on either a route proposed to be established or an established route should so notify the postmaster at the post-office out of which the route may extend.

POST-OFFICE DEPARTMENT.

Approved December 26, 1901.

CH. EMORY SMITH,
Postmaster-General.

UNITED STATES CIVIL SERVICE COMMISSION.

Approved December 27, 1901.
By direction of the Commission:

JOHN R. PROCTER, *President.*

RURAL FREE DELIVERY.

There has been no backward movement in rural free delivery, defined by President McKinley in his last annual message to Congress as the "most striking new development in the continued and rapid growth of the postal service." Its extension has kept pace with the appropriations made by Congress for its introduction and maintenance. The origin and the progressive development of the service may be epitomized as follows:

Fiscal year.	Appropriation.	Services in operation.	Fiscal year.	Appropriation.	Services in operation.
1894	$10,000	[a]	1899	$150,000	391
1895	10,000	[a]	1900	450,000	1,276
1896	10,000	[a]	1901	1,750,000	4,301
1897	40,000	44	1902 (Dec. 2, 1901)	3,500,000	6,009
1898	50,000	148			

[a] Not used.

The sum allowed by this bill, $7,529,400.

Congress appropriated $3,500,000 for the maintenance and extension of rural free delivery for the fiscal year ending June 30, 1902. Orders have been issued by the Department raising the total number of services to be in operation on December 2, 1901, to 6,009. Every State in the Union, except Montana, a mountainous State with few rural settlements, is represented in this aggregation of services, and every Territory, except New Mexico, where two applications for rural free delivery are now under investigation, and Hawaii, which is too new an acquisition to be considered in this connection. Even in our most northern territory of Alaska, within a short distance of the Arctic Circle, an exceptional rural service was operated during the past summer between Nome and Gold River for the accommodation of thousands of miners congregated in that vicinity.

It is estimated that at the end of the present fiscal year rural free delivery will be in successful operation over not less than 8,600 routes. The number of services established in the month of October was 492; the month of November, 482, and for the month of December, 230 new services have been ordered.

There were on file in this office October 15 completed cases calling for 700 routes, only awaiting Department orders assigning a date for their establishment, and there were in the hands of special agents in the field 6,129 petitions for service, as against 2,159 at a corresponding period last year. Thus, though the services started have been more than doubled, the applications received during the same period and remaining unacted upon have increased threefold. The 6,000 routes which will be in operation December 2, 1901, represent just 50 per cent of the total number of applications received to date since the establishment of the first route five years ago. Inasmuch as it has been and is a physical impossibility to establish all the service applied for as rapidly as the people desire, the Department has aimed to make an equitable distribution of the service among the States and Congressional districts on a basis of 50 per cent of the applications filed. The following list, including service effective December 2, 1901, shows the condition of the service record by States:

Percentage of establishment of rural free delivery in the different States.

*Including "county service."

General average for the United States, 46 per cent.

THE ANTAGONISMS ENCOUNTERED.

This brings again into consideration a disturbing factor consequent upon the added service, i. e., the necessary discontinuance of the smaller post-offices, whose function is taken away by the establishment of rural free delivery, and of the star routes which supply them.

These two elements are responsible for the greater part of the protests and complaints which often delay the work of establishment, annoy Representatives in Congress, and embarrass the Department.

It ought to be understood that the greatest care is exercised in all parts of the administrative work to make the rural free-delivery service an improvement upon any mail service which it supplants, and to assure the greatest amount of benefit to the greatest number of people. Occasionally a few individuals may be inconvenienced by the abolition of a small post-office immediately adjacent to their home, but the resulting advantage to the greater number of people accommodated is always in the end found to be ample compensation for the trivial deprivations suffered by the few.

RIVALRIES AS TO TERRITORY.

The work of establishing rural free-delivery service is often seriously retarded by the struggle on the part of individuals and communities to include in their petitions for service territory naturally tributary to other post-offices. Special agents engaged in examining projected routes are instructed to use every effort to adjust such differences in advance of their reports. It happens, however, that such adjustment is not always possible. The aim of rural free delivery being to serve the largest number of patrons with the best service, individual and selfish interests must often be ignored in order to secure this end, and projected routes must be extended, curtailed, or changed to best serve the majority. It is found, as a rule, that the friction which sometimes exists when new routes are first put into operation wears rapidly away as the service becomes known and appreciated, and patrons adjust themselves to the new condition of things.

COUNTY SERVICE.

Reference was made in last year's report to the plan originally tested in Carroll County, Md., of extending the free delivery at one time over an entire county, to the practical exclusion of all other service except such as might be needed to supply distributing points for rural free delivery. Since then the system has been extended to nine other counties, so that the record, including Carroll County, stands as follows:

County and State.	Carriers.	Miles traveled.	Area covered.	Population served.	Houses en route.
			Sq. miles.		
Anderson, S. C	35	808½	694	26,285	5,279
Carroll, Md	49	960	523	27,569	5,545
Delaware, Ind	26	628½	397	17,400	3,480
Fairfield, Conn	54	1,118½	687½	37,024	8,258
Frederick, Md	56	1,168	653	35,997	7,812
Hardin, Iowa	41	1,021½	840	18,065	3,616
Jefferson, Ala	29	579	495	32,215	6,443
Niagara, N. Y	42	937	485	24,836	5,891
Washington, Pa	97	2,008½	1,221½	44,797	8,332
Washington, Tenn	31	729½	521	16,450	3,330
Total	460	9,958½	6,517	280,938	57,986

To this list must be added the county service in Jackson County, Mo., fully investigated and awaiting orders for establishment, which provides for 39 carriers, who will serve a population of 20,520; also a nearly completed county service in Kent County, Del.

In connection with the county service postal wagons, accompanied by postal clerks and having all the facilities of a post-office, have been provided where their use is required, as follows:

Carroll County, Md.—Wagons A, B, C, and D.
Washington County, Pa.—Wagon A.
Frederick County, Md.—Wagons A and B.
Jackson County, Mo.—Wagon A.

The number of fourth-class post-offices and star routes which have been dispensed with in connection with the county services thus established appear in the following statement:

County and State.	Post-offices discontinued.	Star routes discontinued.
Anderson County, S. C	39	10
Carroll County, Md	64	33
Delaware County, Ind	11	6
Fairfield County, Conn	27	17
Frederick County, Md	49	32
Hardin County, Iowa	3	1
Jefferson County, Ala	24	10
Niagara County, N. Y	34	12
Washington County, Pa	53	29
Washington County, Tenn	49	15
Total	353	165

County services have been carefully and gradually inaugurated on the presumption, which now seems indisputable, that rural free delivery must eventually extend over the whole country outside of cities and towns now served by free delivery, unless sparse settlement or impracticable roads render such extension temporarily impossible. The latest experience has shown that where the physical conditions are favorable to the laying out of rural service over a whole county at one time, and the cooperation of the citizens and Representatives in Congress is fully assured, this method of inaugurating service can be made more effective and less liable to disturbance on account of the abolishment of the village-store post-office and star routes than the system of establishing routes on separate petitions.

Every variety of territory and all sorts of conditions as to population and roads have been experimented on in the establishment of the above-named county service.

Steps will soon be taken to completely cover those counties which now have a considerable amount of service, and in which the establishment of a few additional routes and the readjustment of existing services will make the accomplishment of a complete county service comparatively easy. This is now being done in Santa Clara County, Cal., where the local conditions, both as to roads and land divisions, are most favorable to an ideal service.

POSTAL STATIONS.

In county service may be found what are known as rural free-delivery postal stations. They are established at points where it is desired to provide special money-order and registry facilities for patrons residing in a village or hamlet, and to secure a meeting point for rural carriers for the supply and exchange of mails of routes distant from the main distributing offices. A rural station is invariably established in lieu of a post-office, and the compensation paid the clerk in charge fixed at about 25 per cent of the compensation formerly received by the postmaster, but not to exceed $150 a year. In some instances the cost of managing the station is included in the salary of the rural carrier who delivers mail through the village and in the immediate neighborhood. Stations of this kind are subordinate to and supplied from the county seat or main distributing point for the rural free delivery.

The western division, with States added to its territory, has now pending 1,897 cases, as against 566 cases at the corresponding period last year. They are as follows:

State or Territory.	1901.	1900.	State or Territory.	1901	1900.
Arkansas	15	3	North Dakota	16	1
Arizona	1	1	Oklahoma	26	1
California	29	5	Oregon	35	6
Colorado	28	4	South Dakota	55	13
Idaho	12	8	Texas	109	29
Iowa	604	238	Utah	10	3
Kansas	402	148	Washington	20	1
Minnesota	263	63	Wyoming	4	
Montana	7	5			
Nebraska	258	87	Total	1,897	566
New Mexico	3	1			

To facilitate the work of route inspectors, and to insure a full and accurate inspection of the service, a specially prepared form has been provided for their use, which embraces 36 questions bearing upon every phase of the service and the conduct of the carriers. It is used in what are called general inspections, and when properly filled out gives this office a perfect knowledge of the efficiency of service, the condition of the highways, and the conduct and general reputation of the carrier, and enables it, through correspondence, either to correct irregularities disclosed by the inspection or to make suggestions to the postmasters looking to the raising of the service to even a higher standard of efficiency.

Special inspections comprise complaints against carriers, requests for extension or change of route, and changes of schedule. Such cases are invariably made up and jacketed at Washington. In handling requests for changes of routes, route inspectors are especially cautioned not to recommend them simply to comply with the whims or desires of interested parties, but to consider what would be the best service for the greatest number.

CARRIERS' SCHEDULES.

To be really efficient and satisfactory a rural free-delivery service must be performed with regularity and punctuality. Excepting Sundays, it must be performed daily, and, under ordinary weather and road conditions, in such a manner that a patron may know with some degree of certainty at what time every day the carrier will pass his gate or the point at which his box is erected. If he wishes to purchase stamps, register a letter, or transact other business with the carrier, he can do so without wasting time, for he will know just when the carrier will arrive at the box.

RURAL LETTER CARRIERS.

As a class they discharge their onerous duties with great fidelity, frequently under adverse conditions of weather and roads, and the percentage of complaints against them for derelictions of duty is much less than that of the city service. During the fiscal year 33 rural carriers were dismissed from the service, in every instance for a just cause—4 having been arrested for theft of mail. In a total of 1,135 general inspections made between August 1 and October 15, 1901, the inspectors found cause to complain of 29 carriers, the conduct of 2 being reported as bad and 27 as careless or indifferent. Surely this record speaks well for the personnel of the force and shows that the average rural carrier is faithful to his trust. Whether selected from the thinning ranks of the civil-war veterans or from among those who served their country in the Spanish war, whether fresh from the district school or just from behind the plow, he who enters the service of the United States as a rural letter carrier enjoys the esteem and confidence of the people. He is always a welcome visitor, and soon becomes a factor in the everyday life of a rural community.

STATISTICS.

During the year the special agents completed 3,037 routes, so that on July 1, 1901, including service established on that date, 4,301 routes were in operation. The work of the current year will provide for as many more routes, bringing the total up to 8,600 on July 1, 1902. On December 2, 1901, 6,009 will be in existence. (For complete list of rural free-delivery offices, including those to be established December 2, 1901, see Appendix, Tables D and E.)

The number of pieces of mail of all kinds handled during the year was 151,259,160; 175,744 money orders were issued on applications received by rural carriers, and 49,839 letters registered en route.

Four thousand three hundred and one carriers traveled daily an aggregate of 100,299 miles of road, or an average of 23.32 miles per carrier. The total area covered by these routes includes 116,960 square miles, or an average of 27.2 square miles per route. This equals the land area of the New England States, New York, and New Jersey combined.

The cost of maintaining a route for the first year is about $512, including salary of carrier and incidental expenses. At this rate the cost per square mile of territory served is about $18.50. On July 1, 1901, the force of 4,301 rural carriers was serving 2,840,644 people at a fraction over 75 cents per capita, and by December 2 of this year 4,000,000 of our rural population will be enjoying a free delivery of mail.

DISCONTINUANCE OF STAR ROUTES.

In every State into which rural free delivery has been extended during the period covered by this report it has been found practicable to discontinue some star-route or mail-messenger service. With the cooperation of the honorable Second Assistant Postmaster-General these discontinuances have been ordered into effect.

Between November 15, 1900, and November 15, 1901, 1,032 star routes and messenger services were discontinued. These services, if maintained, would require a total annual expenditure, under the terms of the contracts entered into, of $174,404.41. The greater part of this amount, less the month's advance pay which is given the star-route contractors when their contracts are abrogated, has been saved to the contract division of the office of the Second Assistant Postmaster-General, and the cost of maintaining the service has been assumed by rural free delivery.

The total saving in the star-route service superseded by rural free delivery within the twelve months, summarized by States, is as follows:

State.	Number discontinued.	Compensation.	State.	Number discontinued.	Compensation.
Alabama	13	$2,893.07	New Jersey	7	$812.40
Arkansas	2	154.00	New York	78	14,725.92
California	4	602.00	New Hampshire	6	789.77
Colorado	4	731.20	Ohio	90	12,911.34
Connecticut	23	4,649.92	Oregon	1	309.88
Delaware	1	75.00	Oklahoma	1	180.00

FOURTH-CLASS POST-OFFICES DISCONTINUED.

The fourth-class post-offices discontinued within the same period as the star routes abve referred to, viz, from November 15, 1900, to November 15, 1901, effect a total saving to the Department of $120,221.43. These post-offices have been discontinued by orders issued by the honorable Fourth Assistant Postmaster-General because the service heretofore rendered by them is now performed by rural free-delivery carriers.

Summary of the total number of post-offices discontinued in each State or Territory.

State or Territory.	Number of offices.	Compensation.	State or Territory.	Number of offices.	Compensation.
Alabama	29	$962.58	New Jersey	10	$700.75
Arkansas	2	105.13	New Hampshire	15	1,034.58
California	8	956.28	New York	136	10,641.95
Colorado	3	1,115.17	North Carolina	2	178.91
Connecticut	41	5,169.57	Ohio	154	13,763.21

Montana	2	89.90	Total		120,221.43
Nebraska	20	1,672.75			

INCREASE OF MAIL HANDLED.

Every establishment of service is promptly followed by a phenomenal increase from month to month in the number of pieces of mail delivered and collected by the carrier, and it is remarkable that the increase does not cease after the first few months, but continues with regularity and without any appreciable decrease of rate.

This may be clearly shown by the statement made up from the records of 24 of the post-offices at which rural free delivery was originally established in 1896. (See Appendix, Table E.) The statement includes the years 1900 and 1901. In 1900 the carriers at those offices delivered 1,607,972 pieces of all classes of mail, and collected 250,719 pieces. In 1901 the same carriers delivered 1,934,237 pieces, and collected 305,578 pieces, showing in the number delivered an increase of 326,265 pieces, or 20.16 per cent, and in the number collected an increase of 54,859 pieces, or 27½ per cent.

It must be borne in mind that this remarkable showing is made by offices where the service has been in operation for four or five years, so that the increase for the year 1901 does not represent a "spurt" such as follows the introduction of the service.

The next statement is made up from the records of the Carroll County service, and is for corresponding periods of six months each in the years 1900 and 1901. (See Appendix, Table F.) During the first period the number of pieces delivered reached 780,315 and the pieces collected 218,240, while in the second period the deliveries increased to 1,173,425 and the collections to 308,006. This shows an increase of 393,110 in the number of pieces delivered, or 50.33 per cent, and 89,766 in the number of pieces collected, or 41 per cent. This wonderful record is due to the county system, in operation there for the past eighteen months, which permits of the development of an ideal rural service freely patronized by the people.

Another statement is made up from the records of 50 rural free-delivery offices at which no additional services have been established during the years 1900 and 1901. (See Appendix, Table G.) The summary shows that in 1900 the deliveries aggregated 3,110,640 pieces and the collections 471,495. In 1901 the same offices delivered 4,033,501 and collected 603,244 pieces. The increase in the number of pieces of mail delivered was 922,861, or 29¾ per cent, and of mail collected 131,749, or 28 per cent.

At many points the increase is almost beyond belief. A statement has just been received from the post-office at Owosso, Mich., to the effect that during the month of October just passed carriers 1 and 2 delivered 28,560 and collected 1,772 pieces of mail. The same carriers during the corresponding month last year delivered 10,392 pieces and collected 1,131 pieces—an increase of 175 per cent in the number of pieces delivered and 56 per cent in the number collected.

An important feature disclosed by the foregoing statements is the comparatively large increase in the number of pieces of mail collected from rural routes. This means much more than the larger percentage of increase of mail delivered. The latter includes large numbers of newspapers and periodicals which are mailed at the rate of 1 cent a pound, and on which, it has been repeatedly shown, the service reaps no financial gain. But the collections from rural routes are made up almost entirely of letters and postal cards, first-class matter, from which the postal service derives the bulk of its revenues. The farmer seldom mails a newspaper, and when he does pays postage on it at the rate of 4 cents per pound; he never has occasion to send circulars. His mail usually bears the 2-cent stamp.

Rural free delivery stimulates letter writing. The letter box erected along the rural route is a standing invitation to the farmer to write letters. He does not now hesitate to write, because he knows the letter will be called for at the farm gate and its answer eventually delivered to him at the same spot.

The comparative statements included in this paragraph will suffice, I think, to satisfy the most skeptical that the people are quick to make use of the facilities brought to them through the medium of rural free delivery, and that their appreciation and gratitude for the service are abundantly shown by the liberal manner in which they patronize the service.

EFFECT OF RURAL FREE DELIVERY ON POSTAL REVENUES.

It is not possible to make an exact estimate or statement of the increase of revenues caused by the rural free-delivery service as it is now distributed throughout the country, but a fair understanding of its effect upon the revenues may be obtained by a study of the results produced in counties and localities enjoying a complete rural service. Carroll County, Md., has had a satisfactory rural free-delivery service in operation for about eighteen months. The aggregate revenues of the first three quarters after the service was fully adjusted were $20,489.19, and of the succeeding three quarters, ending September 30, 1901, $22,553.46, an increase of $2,064.27, or a fraction over 10 per cent.

On account of the more recent date of the introduction of rural free delivery in Washington County, Tenn., it is only possible to make a comparison between two periods of six months each. The revenues of this county for the six months just preceding the establishment of rural free delivery were $6,810.25, and for the first six months under the new service $7,312.12, an increase of $502.87, or 7.4 per cent.

In Table I of the appendix will be found a statement showing separately the postal revenues for three years of 35 post-offices with rural free delivery and 35 post-offices without rural free delivery, the towns or villages in each class having about the same population. This statement shows gratifying results in favor of the offices having rural free delivery, where the percentage

of increase of 1900 over 1899 was 10.3 per cent, and that of 1901 over 1900 is 11 per cent. On the other hand, the increase in the 35 towns without rural free delivery was 4.7 per cent for the year 1900 over 1899, and 4.6 per cent for 1901 over 1900.

Frederick County, Md., until recently has had no rural free delivery. Excepting the free-delivery office at Frederick city, the gross revenues of that county for 1900 were $20,984.33. In 1901 the same county yielded a revenue of $21,263.88, an increase of but 1.33 per cent. This county adjoins Carroll County, in which it has just been shown the increase in the revenues since the establishment of rural free delivery has been 10 per cent.

An analysis of the gross postal revenues of the United States for the year 1901, which were $111,631,193.39, shows that $74,295,394.47 came from 866 free-delivery cities. The remaining 3,600 Presidential offices yielded $16,063,251.81, while the 72,479 fourth-class offices produced $18,913,519.21. These amounts show an increase over the preceding year as follows:

Free-delivery offices	$7,519,490.81, or 11.11 per cent
Presidential offices (non free-delivery)	552,265.58, or 3.56 per cent
All fourth-class offices	405,678.46, or 2.19 per cent

It is not surprising that two-thirds of the postal receipts come from the free-delivery cities, in which are concentrated 30,000,000 of our population, and which include the great industrial centers and marts of trade, leaving the other third to be made up by non-free-delivery and fourth-class offices in rural districts, among which are distributed the other 48,000,000 of the population. But why the annual percentage of increase in the revenues of the free-delivery offices should be three times greater than it is in the smaller cities and five times as large as that of the fourth-class offices requires explanation. This is found in the fact that the postal service of our large cities is practically perfect.

Numerous house-to-house deliveries and frequent collections of mail are provided daily. Modern means of transportation are supplied regardless of cost. In short, the postal facilities are not only manifold and adequate, but the people are given ample opportunity to use them, and they use them more and more every year. On the other hand, the smaller cities are without free delivery and lack the facilities that stimulate the use of the mails. Therefore the increase in the revenues of this class of offices is correspondingly small. In strictly rural communities (except where rural free delivery is established) the postal service is still more deficient, and the patrons for whom it is provided are too remote from the post-offices to take advantage of the meager facilities except when some urgent necessity compels them to do so; hence the comparatively low rate of increase in fourth-class offices. It is safe to say that in rural communities it does not exceed 2 per cent annually. Frederick County, Md., demonstrates by actual figures that it is but 1.33 per cent.

These unsatisfactory conditions disappear as rural free delivery, with its attending benefits, reaches out into the country, giving the people equal postal facilities without regard to locality, which has the effect of increasing the revenues at a rate at least equal to that maintained in the free-delivery cities, where during the past five years it has averaged 8 per cent. It may then be reasonably claimed that a general extension of rural free delivery will increase the postal revenues from year to year at such a rate that eventually the service will become self-sustaining. This is no more than was claimed by the friends of free delivery in 1863, when the introduction of that service in our large cities was opposed by those who saw in it a senseless expenditure which would entail upon the future revenues of the service a burden which it was feared they could not bear.

POST-OFFICE DEPARTMENT,
FIRST ASSISTANT POSTMASTER-GENERAL,
OFFICE OF GENERAL SUPERINTENDENT FREE-DELIVERY SYSTEM, DIVISION OF RURAL DELIVERY,
Washington, May 23, 1902.

Hon. GILBERT N. HAUGEN,
House of Representatives, Washington, D. C.

SIR: In compliance with your request of the 22d instant, I herewith send you a detailed statement of the rural free-delivery service in the Fourth Congressional district of Iowa.

Very respectfully,

A. W. MACHEN,
General Superintendent.

Rural free-delivery service in the Fourth Iowa district.

Subsidiary Silver Coinage.

SPEECH
OF
HON. GEORGE SUTHERLAND,
OF UTAH,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, May 28, 1902,

On the bill (H. R. 12704) to increase the subsidiary silver coinage.

Mr. SUTHERLAND said:

Mr. CHAIRMAN: It is a matter of sincere regret that I am compelled to differ with the distinguished gentleman from Connecticut [Mr. HILL], who is in charge of the pending bill, and for whose great ability and learning upon financial questions I have the utmost respect.

I am not opposed to that provision of the bill which contemplates an increase in the quantity of the subsidiary coin. The officials of the Treasury seem to regard it as necessary, and I have no doubt that it is.

The bill under consideration provides that the silver bullion now in the Treasury shall be used for the purpose of this subsidiary coinage, and provides, further, that when this bullion shall be exhausted, and that as public necessities may demand thereafter, the Secretary of the Treasury is authorized to recoin the existing silver dollars into subsidiary coins. This latter provision I regard as both unnecessary and unwise. The silver dollars are now by law full legal tender for all debts, public and private. They comprise more than one-quarter of all the full legal-tender money in existence in the United States. They have always been maintained at par with gold, even in the dark days between 1892 and 1896, when the business affairs of this country were in a condition of stagnation and financial ruin, and panic spread from one end of the land to the other.

There is not, in my judgment, the slightest danger of the silver dollar going below par the infinitesimal fraction of a cent under any imaginable business conditions so long as they are full legal tender for billions of dollars of private and public debt. It is proposed by this bill to convert this full legal-tender money, which in everything but name is as good as gold, into a class of coins that are not full legal tender, but have only a limited legal-tender quality under the law. To the extent to which this is done, to the extent to which these silver dollars are converted into subsidiary coins, the basic money of the country is contracted.

What is the necessity for this proposed action? The advocates of the bill say that we have in existence more that 500,000,000 of these silver dollars, and we are able to put into circulation less than $100,000,000; that the remainder are held in the vaults of the United States; and they say that it is better to convert this class of silver money, which will not circulate among the people, into a subsidiary coinage which will circulate among them.

Now, Mr. Chairman, the truth about it is that the silver dollars circulate precisely the same as the twenty-dollar gold pieces circulate—that is, in the form of paper certificates redeemable in coin—the silver dollar in the form of certificates redeemable in silver dollars, the gold coin in the shape of gold certificates redeemable in gold coin.

When the gentleman from Iowa [Mr. SMITH], who strongly advocates this bill, was discussing this question, I asked him why it was objectionable to circulate our silver in the form of silver certificates and not objectionable to circulate our gold in the form of gold certificates. He answered me that there was no objection to circulating silver in the form of silver certificates that he knew of. And yet he at once proceeded to advocate the passage of this bill because, in his own language, "the bill provides that the dollars which do not circulate may be taken and coined into money that will circulate."

In one breath it is urged that the silver dollar ought to be converted into something else because it does not circulate, and in the next breath it is admitted that the silver dollar does circulate in the form of silver certificates, and there is no objection to this method of circulation.

Now, Mr. Chairman, it is conceded that if the present stock of silver bullion now in the Treasury is utilized for subsidiary coinage purposes only, it will not be exhausted for at least six and possibly ten years. We are therefore by this legislation attempting to make provision for a condition which will have no existence for many years to come. For at least six years, or possibly ten years, this provision of the bill can have no practical operation or use whatever. Why should we do this? Why tie our hands so many years in advance of any necessity for so doing? "Sufficient unto the day is the evil thereof."

In six years from now, or ten years from now, when the silver bullion shall be exhausted and more subsidiary coin shall be called for it may be exceedingly unwise to provide for the recoinage of the silver dollars for this purpose. It may at that time be perfectly clear that the wise and sensible thing to do is to purchase additional silver for this purpose and leave the existing issue of silver dollars intact.

Let us cross that bridge when we get to it.

I am opposed to a declaration of this kind so long in advance of any practical necessity for it, because it is an unnecessary blow at one of the great and thriving industries of this country. We are producing in the United States about one-third of all the silver of the world. It is a legitimate industry. It is as much entitled to the fostering care of the Republican party, if that care can be extended without injury to the country or to other interests, as any industry in the United States.

The value of silver has already declined to such an extent that many of the mines in the Rocky Mountain region have been forced to close down. Why should we still further discourage it by this declaration, which must be conceded by everybody to be entirely unnecessary now, whatever may be the fact as to the necessity of it some time in the future. If you pass this bill containing this provision it is equivalent to a declaration to the silver producers of the country that the market for coinage purposes in the United States is forever closed to them, and to that extent it is a discouragement to the industry. It is a slap at an industry that is wholly gratuitous and unnecessary, and as such I enter my most earnest protest against it.

Mr. Chairman, there is too much of a disposition among gentlemen who are learned, or think they are learned, upon financial questions to insist that unless their peculiar views prevail ruin will result. The advocates of this bill seem to consider it necessary to get rid of our five hundred and odd millions of silver dollars. They declare that they want only the best money.

The danger arising from the existence of too much poor money is not avoided by a provision which will result in the existence of too little good money. The evils of inflation and contraction of the currency lie at opposite poles of the financial system, but both are equally bad. There is such a thing in athletics as overtraining, so that a man in endeavoring to get rid of his surplus flesh overdoes the business and gets rid of his muscle as well. Let us be careful that we do not make a mistake of an analogous character in finance.

What is the matter with the silver dollar anyway? Is business unsettled because of its existence? Is there any danger of a panic? Is there any menace to the stability of our trade and commerce because of the existence of the silver dollar? Are the people clamoring for its retirement?

Business is good. The laboring man is employed at remunerative wages. The mills and factories are in operation from one end of the country to the other. Peace and plenty are abroad in the land. We hear a great deal about leaving well enough alone. Why not leave well enough alone on the money question? Gentlemen complain that the silver dollar does not circulate. The truth about it is that both gold and silver circulate in specie in the West, but neither circulates east of the Mississippi River. In the West we have become accustomed to the silver dollar and the gold coin, and they are in use everywhere in preference to their paper substitutes. But I will venture to say that there is not a man in this House who has seen any kind of a gold coin since Congress has been in session. And nobody grows delirious about that.

The gentleman from Connecticut [Mr. HILL] and the gentleman from Iowa [Mr. SMITH] draw their salaries from the Sergeant-at-Arms in gold certificates with the utmost calmness. The gold lies month after month in the Treasury and there is no hysterics. The silver dollar obeys exactly the same law, and at once the stability of our financial system is threatened.

If the provision for the conversion of silver dollars into subsidiary coins shall be stricken from the bill, I shall be glad to vote for its remaining provisions, but if not I shall feel constrained, much as I shall regret the necessity of differing with my friends upon this side of the Chamber, to cast my vote against the entire bill.

Reclamation of the Arid Public Lands—It Will Benefit the Whole Country—Involves No Competition With Eastern Agriculture.

SPEECH

OF

HON. FRANCIS G. NEWLANDS,

OF NEVADA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 14, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 14046) making appropriations for the naval service for the fiscal year ending June 30, 1903, and for other purposes—

Mr. NEWLANDS said:

Mr. CHAIRMAN: The irrigation bill will probably come up for consideration within the next two weeks, and as the session is drawing to a close and sufficient time may not be available for full discussion of this important question, I have concluded, with the permission of the House, to take up this question now and present it as thoroughly as possible, in the hope that my remarks may be generally read and considered before the debate comes on by those of our Eastern members whose minds are in a tentative condition and who desire information.

The West has been for years insisting that some legislation should be inaugurated by Congress looking to the reclamation of the arid public lands owned by the Government, and constituting in some States over 90 per cent of the area. The agitation has progressed slowly because the portion of the country most interested in the question is scantily settled, and has not the influence in national councils which numbers give, and also because it is difficult for those living in the humid States to form any proper conception of the irrigation question, and the Senators and Representatives from States having no direct interest in the question have been slow to acquire the information necessary to bring them to a full realization of its importance.

It is not especially strange that so many of our people should be unfamiliar with the subject. It is one that does not present itself in a practical way in the portion of our country which contains nine-tenths of our entire population, for, although the arid region is of vast extent it is but thinly settled, and must always be so compared with the part of the country in which nature furnishes and distributes an abundance of water for agricultural purposes.

IRRIGATION NOT A NEW QUESTION.

Our legislators seem to regard irrigation as something new, whereas it is as old as time. Agriculture is the most ancient art of which we have any record. It was the beginning of civilization. The first agriculture was accomplished through irrigation. It was commenced, according to scientists who have sought the records of primitive man, under conditions of great aridity, and the civilized cities of the ancients were either on the edge of or in the desert. The earliest civilization of America indelibly stamped its impress on Arizona and New Mexico, where to-day are to be found the remains of the cities and great irrigation works which flourished thousands of years before Columbus discovered America. Almost all the ancient civilizations which history records were based upon irrigation, and irrigation is to-day practiced in more than one-half of the world.

England has expended $300,000,000 in India on irrigation works, which have done much to render more certain the crops of that region. England is to-day expending millions of dollars on the Nile in extending the area of irrigation. Italy and Spain illustrate the practical results of scientific irrigation. A German company is preparing to enter upon the work of restoring cultivation in the plains of Mesopotamia, near the Tigris and the

Euphrates rivers, in which were situated the ancient cities of Babylon and Nineveh, surrounded by the most fruitful cultivation produced by the utilization of the waters of those rivers. Doubtless some barbaric tribe swept down from the north and destroyed or reduced to subjection the civilized peoples occupying them, and, being unaccustomed to agriculture, allowed them gradually to drift back into the desert from which German enterprise is again to rescue them.

The Anglo-Saxon invasion of this country began in the opposite direction. The humid lands were settled first. The Atlantic seaboard was dotted with homes and farms as the axman cut his way into the primeval forest. Later the settlers crossed the Alleghenies and made homes in the fertile Ohio Valley. Next they spread over the vast prairies and alluvial bottoms of the Mississippi valley, converting a broad wilderness into a land of homes carved out by individual effort. This great land-seeking movement went as far west as the one-hundredth meridian. There it was obstructed by the lack of rainfall. In all this settlement of a continent the home builder had found in the main good farming land with sufficient rainfall to grow and mature his crops. He knew nothing of irrigation.

But in western Kansas and Nebraska the rainfall was found to be insufficient for agriculture, and there the great tide of homestead settling was halted until the Anglo-Saxon, realizing that the rivers flowing from the snow-clad peaks of the Rocky Mountains carried vast volumes of water to the seas which if spread over the desert plains would make them fruitful, and beginning again where the forgotten people of thousands of years ago left off, took up the problem of diverting those waters over the arid plains and spreading them upon thirsty land for the purpose of growing crops. As a result, 7,000,000 acres of this arid land are now under irrigation through private enterprise. The limit of this development by individual enterprise has now been nearly reached, although there yet remain great tracts of irrigable public lands.

THE ARID REGION.

The so-called arid region extends from about the one hundredth meridian of longitude to the Pacific coast. Draw a line north and south through the middle of the two Dakotas, Nebraska, Kansas, and Oklahoma, and all to the west of it is either arid or semiarid, the aridity increasing as the Rocky Mountains are approached. The eastern portion of this great region is semiarid, while the narrow fringe along the Pacific seaboard is humid. Within the boundaries named thirteen States and three Territories lie wholly or in part, and, excluding Alaska, they constitute nearly one-half of the superficial area of the Republic. It is estimated that they contain about 600,000,000 acres of vacant public land, of which about 60,000,000 acres may be irrigated if the water supply is properly conserved and distributed. In other words, it is possible in the future to actually reclaim for cultivation in this vast region an area about equal to the area of the two States of Illinois and Iowa. The rest of this vast area can not be cultivated. It will consist largely of mountain ranges and arid plains, for which it will be impossible to obtain sufficient water for irrigation, though they will be useful for grazing.

This region was once called "The Great American Desert." It is mainly mountainous. The Rocky Mountains, the Sierra Nevada, and the other mountain ranges take up a very large proportion of its area. It is impossible anywhere to cultivate by means of rainfall. Grasses adapted to the arid region grow on these plains and mountains and sustain the wandering herds from which most of the beef cattle of the country are recruited. Only valleys and plateaus in their vicinity are level enough for cultivation. The mountainous character of the country would prevent cultivation even were water abundant; but there is only sufficient water for a small part of the level portion of this area. The waters for cultivation must come from the creeks, streams, and rivers which have their sources in the snows of the mountains. These waters must be led away from the streams by lateral canals and ditches, and in order to accomplish this the water must be taken out where damming the river is comparatively easy. The snows which are the source of these creeks, streams, and rivers fall in the winter and melt in the spring and early summer. Most of these snows melt before May, leaving a scanty supply for June, July, and August, the period when the heat is intense, and when the dry air sucks the moisture out of everything, and when moisture is most required for ripening crops.

The first lands taken up in such a region are along the creeks and rivers and in the valleys where water is needed for supply. These lands being overflowed by the spring freshets, would produce wild grasses, which the stockmen would cut for hay, thus tiding over severe winters when the snow covered and concealed the wild grasses of the plains and imperiled the lives of the stock. Then, growing more provident, the stockmen would divert the flood waters by canals over the land not naturally overflowed, and thus increase the hayfields. Then come the mines with their communities of merchants and miners requiring food supplies of every kind. And so the small farmer was developed, who, by diverting canals and ditches, sought to give his land the needed water for cereals, vegetables, and fruits.

From these conditions has come the present irrigation development of the West. The condition of the streams in the period of lowest water was the measure of possible reclamation. The flood waters were of no use, for they were not available when needed for ripening the crops, and it is these flood waters which finally make their way to the ocean or to great lakes in the sink of the desert, like Salt Lake, Humboldt Lake, Walker Lake, and others, that it is proposed to make available for the arid lands now remaining unsettled. To accomplish this requires the broadest generalization, the study of an entire river, with all its tributaries and their subtributaries; the maintenance of an equal and sustained flow of the river during the planting and growing season, and the utilization of every device upon every part of the river necessary to preserve this equal flow. The lands to be benefited may be hundreds of miles away from the location of the stored waters, but these stored waters being above them, not below them, will be on tap, responsive to the demands of intelligent husbandry.

WHAT IS IRRIGATION.

Irrigation is practiced only in arid and semiarid countries where the rainfall is either entirely lacking or is insufficient to raise crops. In our arid region there is a heavy deposit of snow during the winter on the mountains. This snow melting forms streams, which are torrential in the spring and early summer, but dry, or nearly so, later in the season. For irrigation the water is taken out of such streams by canals and ditches and distributed over the land. The difficulty is that the water is abundant when it is least needed and scant when it is necessary to mature the crop. The aim, therefore, is to store in reservoirs the water that runs to waste during the flood season. To do this the various watersheds must be treated in a scientific way. The ground must be accurately surveyed and located so as to store the greatest quantity of water at the most available places. The idea is that the Government should do the primary work of constructing the reservoirs and larger canals, so that the water may be brought within the reach of those who are to settle on the public lands and use it in their reclamation and cultivation.

Storage enables the utilization of a greater amount of the torrential waters in irrigating the arid plains, as the stored waters supplement the torrential waters later on and ripen the crops which would otherwise be burnt by the hot sun. Storage involves the treatment of an entire watershed in a scientific way, regardless of State lines. The problem is to maintain an equal and sustained flow of the streams, so that the torrential waters may be kept from flowing to waste and may be conserved and let into the stream when the natural supply is exceedingly limited. Very large rivers have numerous tributaries, with their sources in the snows of the mountains. The more water there is stored the greater the extent of the torrential waters that can be utilized in irrigation, for storage guarantees the service of water when it is most needed, and settlers can safely take out the torrential waters in the spring and bring larger areas of land under cultivation when they feel assured that the stored waters will come on later in a period of drought, and furnish the crops with the needed moisture.

WHY SHOULD THE GOVERNMENT UNDERTAKE RECLAMATION?

The question is frequently asked, "Why should the Government undertake reclamation?" And the question is generally accompanied by the suggestion that the work should be left to individual enterprise. There are conclusive answers to both the question and the suggestion. First, the limit of individual effort has already been practically reached. Small tracts, favorably located with reference to water supply may continue to be reclaimed by settlers, but nothing in the way of a general system can be successfully inaugurated and carried out by individual effort. Nearly every enterprise of the kind heretofore undertaken has proved a financial loss to the projectors, in fact, has resulted in bankruptcy, although, as shown by the official statements of the Geological Survey, the bankrupt enterprises have created large values and conferred great public benefits. The ill success of these private ventures has been owing mainly to the circumstance that neither individuals nor companies can control both the water supply and the land to be irrigated, which is a prime essential. This the United States Government can do, for it is the owner in fee of the land, and the water can be conserved by it and utilized.

IRRIGATION NECESSARY TO PROMOTE SETTLEMENT OF PUBLIC DOMAIN.

In this latter circumstance we find a second answer to the question why the Government should take hold of the work. The Government owns 600,000,000 acres of arid and semiarid land. It is the Government's duty to open this land to settlement and to do what is necessary to promote settlement, namely, to conserve the

snow and flood waters and to construct such high-line ditches and canals as are necessary to bring the waters of that region within reach of the settlers. The settlers will do the rest. They will actually reclaim the land, and the Government will simply make the waters available. The settlers can not do this work, because it must be conducted on a very large scale. Large capital must be employed and scientific knowledge applied.

A water shed must be treated as an entirety, regardless of State lines, for a river with its tributaries may pass through several States. It has not been, nor should it be, the policy of the Government to grant this land in large tracts to corporations or individuals; that would mean land monopoly in its worst form. In order, therefore, to promote settlement of small tracts for home builders it must itself make the waters of that region available, so that they can be utilized by settlers. The work of conserving the waters and rendering them available for cultivation is a part of the preparation of the public domain for settlement, and is just as essential as their survey and mapping. The States can not do the work, as they have no title to the lands, and if the Government should grant them to the States they would be powerless to operate outside of their State lines. The scientific and comprehensive work of stream control by the States would be impossible. The lands to be reclaimed may be in one State, while the waters which ultimately reach them must be stored at favorable places in an adjoining State.

The Government is a great landholder. Public policy demands that it should part with its lands in small tracts to actual settlers who propose to make homes. The Government simply does the work and makes the expenditure that is necessary to promote settlement. It is not expected that it will actually reclaim the lands.

HOW PAID FOR.

The question as to how this work should be paid for has been a matter of great consideration with the Western men. They realize that there will be some indisposition to appropriate money from the Federal Treasury for the purpose, though there is no reason why, if Government money is to be expended on rivers and harbors to promote navigation, such moneys should not also be spent on rivers to promote irrigation. But the Western men concluded to urge a measure which would simply utilize the receipts from the sales of public lands in the arid region.

So the bill, which is now pending before Congress, provides that the proceeds of the sales of such lands shall go into a special fund in the Treasury, to be called the arid land reclamation fund, and that they shall be expended by the Secretary of the Interior in the construction of storage and irrigation works; and that the lands for which the waters are made available shall be sold to actual settlers in tracts of not less than 40 and not exceeding 160 acres, the price to be so fixed by the Secretary of the Interior as to restore to the fund from the sales of lands granted to settlers the amount expended in each project. The price is to be paid by the settler in ten annual installments, and title does not vest until payment is complete. In this way a revolving fund is created out of the sale of the lands reclaimed, which is applied to new work, and thus, in the end, the arid region will be reclaimed without taxation of the general public. The Secretary of the Interior can make no contract for irrigation work unless the moneys therefor are in the fund. Every guard is thrown around the bill so as to prevent land speculation or land monopoly. The purpose of the bill is to provide homes for actual settlers.

The measure has been framed with a view to meeting the objections urged by some of the Eastern farmers and taxpayers. No money is appropriated directly from the Treasury for the work of reclamation, but merely the proceeds from the disposal of the public lands in the arid and semiarid States. These States, though vast in area, have very small resources. The Government owns from 50 to 90 per cent of their area, and these States, with small population and in some cases burdened with debt, must furnish police protection to the Government land, without any power of drawing revenue directly or indirectly from these lands.

The inhabitants of the Western States contribute their share to the national revenues through the revenue duties and internal-revenue taxes. Few of them have rivers and harbors of such importance as to be improved for navigation, and it is a matter of simple justice to these States to allow the proceeds from the disposal of the lands within their borders to go to works of improvement such as will tend to the upbuilding of these localities.

It is not, however, so much a matter of justice to the States as of business on the part of the Government, the owner of the land. If a great private corporation were in the position of the Government, possessing such a vast estate, it would be considered the height of folly not to take the proceeds from the disposal of portions of the estate to improve the remainder. This is what is now proposed, viz, to take these funds and use them in such a way that the remaining land will have greater value.

It must not be supposed that this money, or the results of its use, are to be given away. On the contrary, the sums taken from the reclamation fund are used in the construction of works the cost of which is to be returned to the Treasury, so that in this respect the proposition is on a far higher plane than that of river and harbor improvement. In the latter case the Government gets back its investment indirectly; but with the reclamation fund, not only are indirect results obtained through general increase of prosperity, but the money itself is to be refunded when the works are completed and in operation.

The population of the United States increases at the rate of 2 per cent a year, and it may be assumed that the demand for agricultural land will increase at least at this rate. The area of agricultural land, taking the country as a whole, can not be increased under irrigation at anything like this rate. If the reclamation fund should be made available, it is estimated that the ratio of increase of tilled area, through the operation of this fund, would not be more than one-tenth of 1 per cent. In other words, the population will increase twenty times as fast as the agricultural lands can increase in extent through this means.

While this increase means very little as far as farm values in the East are concerned, it means very much in the development of civilization in the West. It will bring in a larger population and enable, as before stated, the development of many industries, such as low-grade mining, which are now impracticable. It will do away with the anomalous condition of disproportion between area and population which now exists in some States.

A misconception has arisen in the minds of some persons that under this reclamation bill the Government proposes to irrigate the land and give it away. Nothing can be further from the truth. It is not proposed to actually irrigate the land, but to make it possible for men to provide water and to take up lands, as was done by the pioneers, who found streams available for such uses. These early settlers have come in, taken up the choice spots, and have left great tracts of land surrounding them wholly untouched. Work has proceeded as far as can be carried by individuals and associations. The Government alone, being the great land owner, can go further, store the floods in the mountains, dig tunnels through the hills, and bring out waters into the dry channels, so that the settlers now coming upon the ground can obtain a supply for their ditches, a supply which, however, they must ultimately pay for, returning the cost to the United States. Can any farmer living in the East object to such a course, knowing that he will not be injured, but, on the other hand, the prosperity of the country will be increased, and that he will prosper accordingly?

The reclamation bill provides that the moneys thus set apart for construction shall be used by the Secretary of the Interior for surveying and examining various projects, and for constructing these after he has become assured of their feasibility. He will then set aside the lands which are to be irrigated, and make arrangements with the settlers so that they will ultimately repay the proportional cost of construction. He will not interfere with the local customs or rights which have already accrued, but will act in accordance with these, and the control of the waters will ultimately be vested in the communities benefited. In other words, the working out of this project means no ultimate expense to the Government, and home rule for irrigation in its broadest sense.

WORK NOT PREMATURE.

It is claimed by some that this work is premature, but it must be recollected that the public lands of the United States which are watered from the heavens have nearly all been taken up. The line of settlement has now advanced away beyond the Dakotas and Nebraska and Kansas. The quickness with which Oklahoma was settled up demonstrates this. Besides this, it will take at least fifty years to do the work, as irrigation work is exceedingly slow. We have been for many years disposing of from ten to fifteen million acres of public land annually. It is not probable that we can reclaim and dispose of more than five hundred thousand acres annually in the arid region.

A WORTHLESS CHANGED INTO A VALUABLE ASSET.

The Government would be improving its own property and facilitating disposal and settlement. Under existing conditions the vast area which we are considering is an almost worthless asset. The most of the water runs to waste, and without it the land is of little or no value. Unite the land and the water for agricultural purposes and we will have, within the arid region itself a national domain of great productive capacity. The lands which it is proposed to irrigate can not now be disposed of at any price except in large holdings for stock raising.

According to the estimates of the Geological Survey, it will only be necessary for the Government to provide for the conservation by large works of water sufficient to reclaim about one-third of the total area capable of reclamation which will render possible the gradual reclamation of the remaining two-thirds by means of smaller individual systems. Hence, by simply making general provision for the reclaiming of one-third of these now worthless lands, great value will be imparted to all of them.

Estimates differ greatly as to the probable cost of this work, and it is not easy to get the figures with close accuracy, because the conditions vary so widely, and so much depends upon the completeness with which the work is done. The estimates run all the way from $3.50 to $20 or $25 per acre. Probably the great bulk of the work which it would be necessary for the Government to do would not involve an expense much, if any, in excess of $5 per acre for the lands to be reclaimed thereby, for the Government would only make the waters available. The settlers would, at their own cost, do the work of actual reclamation.

But whatever the cost may be, the plan proposed by the Western friends of irrigation will keep it well within the limits of the reclamation fund to be derived from the sale of the lands and the distribution of the water. No moneys are or will be required except the receipts from land sales in the States and Territories included within the region under consideration. The cost of all reservoirs, canals, and ditches constructed by the Government is to be charged against the lands to be irrigated and paid in annual installments by the settlers before title vests, thus constantly replenishing the fund, and making the enterprise practically self-sustaining.

But in dealing with such a question as this we should look beyond the mere matter of governmental expense, and the direct returns to the Treasury. These are only the preliminary incidents of a scheme of internal improvement which means the creation of almost fabulous national wealth. Since the system of river and harbor improvements was inaugurated, the Government has expended hundreds of millions of dollars on that account. There has not been a cent of direct returns to the Treasury, nor has anything of the kind been expected. The purpose of the expenditure has been the upbuilding of the country through the development of its commerce; and while mistakes doubtless have been made, and some work done of no value, it is not to be doubted that the country has been amply repaid for all that these improvements have cost. The irrigation project stands upon a higher plane of merit, for, as already shown, the measure is to be made directly self-sustaining, while the national benefits to accrue are of a magnitude to almost stagger the imagination.

Let us assume that there are 60,000,000 acres of reclaimable land. This land is scattered through a wide belt extending from the British Columbia line to the Mexican border, presenting almost infinite variety of soil and production. In the South the reclaimed lands would be largely devoted to the raising of fruits and semitropical products. Under such conditions of culture it is generally estimated that a tract of from 20 to 40 acres of land is ample for the support of an average family. Farther north, where grasses and grains are the staple products, 160 acres are considered to be none too much for a family. Taking 80 acres as the average quantity required for a family, the 60,000,000 acres of irrigable land would provide good homes for nearly a million families—say 5,000,000 of people. But there would also be one or two hired men upon each farm, and, with their families, the total number of people directly supported by the farms would be 10,000,000 or 12,000,000, perhaps more. The nonagricultural population indirectly dependent upon the farms might easily double this number, making a total of not less than 25,000,000 of people.

These figures, however, relate merely to the conditions coexistent with the work of reclamation. As the settlements become older, and the lands are more closely and carefully cultivated, smaller areas will suffice for the support of a family, and it is not unreasonable to estimate that the now almost uninhabited arid region will ultimately support a population of from thirty to forty millions of people directly or indirectly dependent upon the reclaimed lands.

Nor need we stop here. There are also areas suitable for grazing purposes, save for the remoteness of water. A general system of irrigation will bring water into closer proximity to these ranges and make these many millions of acres available and valuable for stock-raising purposes. Besides all this would follow the development on other lines, notably in the exploitation of the mineral wealth, which, in almost every form, abounds throughout the whole of that vast territory. Taking everything into consideration, it is entirely within reason to say that if the Government will do the larger work necessary for the reclamation of 20,000,000 acres of these lands, private enterprise can and will then take up the work in detail, with the result that the arid and semiarid region of the country will within half a century become the abode of 50,000,000 of the most prosperous people in the world. When we recall that our population in 1850 was 23,000,000, in 1880 50,000,000, and in 1900 75,000,000, it is not unreasonable to expect that our population will more than double in the next fifty years, and at least half of this increase ought to go to the Western third of our country. Surely a policy which will cost nothing, and which gives reasonable assurance of such results, should commend itself not only to the patriotic enthusiasm of the American people, but to their safer business judgment as well.

IMMEDIATE ACTION NECESSARY.

It is essential that some definite policy should be immediately adopted regarding the public lands, for the reason that by the perversion of the existing land laws the sources of water supply are gradually being monopolized by the owners of cattle herds and the controllers of the great cattle ranges. Their purpose is to obtain the title to the water and by this means to control the land, prevent settlement, and perpetuate the monopoly which they now hold. If the Government does not act promptly it will be difficult for it to move at all. Vested rights at every step will clog the progress of national enterprise. The water will be monopolized and the Government will be without opportunity of securing it for its lands.

The first object of a cattle owner is to obtain the control of water. This he does by securing the entry of title to the public lands along the banks of the stream. He has no interest in the promotion of settlement. The fact is that small homes interfere with his business and their multiplication will ultimately substitute for it a number of independent farmers, having small irrigated tracts on which they will raise the hay necessary to support their small herds during the winter season, when the storms and the wind threaten the lives of the cattle. Irrigation means the multiplication of the small homes and of the small herds and a larger utilization of the great American desert.

This project is by no means experimental. Private enterprise has already irrigated over 7,000,000 acres, and has practically reached its limit, as large works have not been profitable to the investors, although small works have. Since nearly all of the opportunities for small works have been utilized, and there remain only the great enterprises, it results that unless the Government steps in to lend its aid and temporary financial support further progress must cease. The matter has been fully discussed in Congress, and in popular assemblages, and the consensus of opinion among those who appreciate the condition of the West is that the Government can no longer evade its responsibility.

The President in his message says:

> Public opinion throughout the United States has moved steadily toward a just appreciation of the value of forests, whether planted or of natural growth. The great part played by them in the creation and maintenance of the national wealth is now more fully realized than ever before.
>
> Wise forest protection does not mean the withdrawal of forest resources, whether of wood, water, or grass, from contributing their full share to the welfare of the people, but, on the contrary, gives the assurance of larger and more certain supplies. The fundamental idea of forestry is the perpetuation of forests by use. Forest protection is not an end of itself; it is a means to increase and sustain the resources of our country and the industries which depend upon them. The preservation of our forests is an imperative business necessity. We have come to see clearly that whatever destroys the forests, except to make way for agriculture, threatens our well-being.
>
> The forests are natural reservoirs. By restraining the streams in flood and replenishing them in drought they make possible the use of waters otherwise wasted. They prevent the soil from washing, and so protect the storage reservoirs from filling up with silt. Forest conservation is therefore an essential condition of water conservation.
>
> The forests alone can not, however, fully regulate and conserve the waters of the arid region. Great storage works are necessary to equalize the flow of streams and to save the flood waters. Their construction has been conclusively shown to be an undertaking too vast for private effort. Nor can it be best accomplished by the individual States acting alone. Far-reaching interstate problems are involved; and the resources of single States would often be inadequate. It is properly a national function, at least in some of its features. It is as right for the National Government to make the streams and rivers of the arid region useful by engineering works for water storage as to make useful the rivers and harbors of the humid region by engineering works of another kind. The storing of the floods in reservoirs at the headwaters of our rivers is but an enlargement of our present policy of river control, under which levees are built on the lower reaches of the same streams.
>
> The Government should construct and maintain these reservoirs as it does other public works. Where their purpose is to regulate the flow of streams, the water should be turned freely into the channels in the dry season to take the same course under the same laws as the natural flow.
>
> The reclamation of the unsettled arid public lands presents a different problem. Here it is not enough to regulate the flow of streams. The object of the Government is to dispose of the land to settlers who will build homes upon it. To accomplish this object water must be brought within their reach.
>
> The pioneer settlers on the arid public domain chose their homes along streams from which they could themselves divert the water to reclaim their holdings. Such opportunities are practically gone. There remain, however, vast areas of public land which can be made available for homestead settlement, but only by reservoirs and main-line canals impracticable for private enterprise. There irrigation works should be built by the National Government. The lands reclaimed by them should be reserved by the Government for actual settlers, and the cost of construction should, so far as possible, be repaid by the land reclaimed. The distribution of the water, the division of the streams among irrigators, should be left to the settlers themselves, in conformity with State laws and without interference with those laws or with vested rights. The policy of the National Government should be to aid irrigation in the several States and Territories in such manner as will enable the people in the local communities to help themselves and as will stimulate needed reforms in the State laws and regulations governing irrigation.

HAS THE GOVERNMENT THE MACHINERY FOR THIS KIND OF WORK?

The bill intrusts the work of construction to the Interior Department, which will doubtless avail itself of the services of one of its bureaus—the Geological Survey. No one who is familiar with the history of the Geological Survey can contend for a moment that it is not well equipped for this kind of work. It is regarded by Congress as one of the most capable of the scientific bureaus of the Government. It is absolutely free from political

control. It utilizes the services of the most intelligent and capable engineers in the country. It has been engaged for ten years or more, through its engineers, in the study of the various rivers and streams of the arid region, their capacity, their flow, the possibilities of the conservation of their waters, the places where the waters are to be conserved, the engineering questions connected with their diversion, and the construction of reservoirs and high-line ditches, the examination of the topography with a view to ascertaining what lands can be brought within the reach of the waters so conserved. This Bureau has in its consulting department many of the most skillful hydraulic engineers of the West, and is fully equipped now, through long examination and investigation of the question, to enter upon the practical work of construction.

RIVER CONTROL.

The reclamation of that portion of the arid region where rivers are tributary to the Mississippi will do much to maintain the equal and sustained flow of the Mississippi River. The difficulty upon the Mississippi and Missouri rivers is that during the spring and early summer months the flow is torrential, dangerous to the adjoining banks, and threatening the overflow of large areas of land subject to cultivation. Later on the river becomes low—so low as to endanger navigation. Sand bars and obstructions appear. So that the work of river control is a doubtful work, one involving the construction of levees to protect against overflow, and the other involving the dredging of bars and obstructions so as to promote navigation.

Now, it is true that the larger proportion of the torrential flow of the Mississippi River comes from the Ohio and Cumberland rivers. But a large proportion of it also comes from the Missouri River and its tributaries, the Yellowstone and the Platte and other rivers, and a considerable portion also comes from the Arkansas River, which takes its source in the arid region of Colorado. In other words, the snows of Colorado, Utah, Wyoming, and Montana largely contribute to the torrential flow of the Missouri and of the Mississippi rivers, and if the flow of the tributaries should be diminished in spring and increased in the latter part of the summer, the tendency would be to equalize the flow of the Missouri and the Mississippi rivers.

Now, the very purpose of irrigation works will be to prevent the torrential flow of those rivers which take their source in the mountains, and to hold those waters back in great artificial reservoirs so that it can be useful when the period of drouth comes. The result is that the very existence of these great reservoirs will promote the reclamation of vast areas of arid lands, and these lands themselves become storage reservoirs which retard the flow of the water in the great streams. If these arid lands are assured of the flow of the stored waters in July and August the result will be that the torrential waters of the early spring will be led over large areas and thus kept from going down into the Mississippi and the Missouri rivers. These waters, being led over the land, will be gradually absorbed and will seep gradually back to the river bed later on in the season, thus giving a larger flow below, when the water is really needed in the Missouri and Mississippi rivers for the purpose of navigation.

Particular stress must be laid upon the fact that the storage of the torrential waters thus accomplished by leading them over these great plains will be many times as great as that accomplished by the construction of artificial reservoirs, and yet this storage on the plains will not take place unless the artificial storage also is accomplished, simply because unless artificial storage is afforded, the plains, whilst having an abundance of water in the early spring, would have none in the late months of summer, when it is most required.

STATE CESSION.

It is often suggested that the cession of the arid lands to the States would produce the same results as a national system of irrigation, and would relieve the Federal Government of a great work. I insist upon it that the Government has no right to abdicate the great trust imposed upon it by the ownership of 600,000,000 acres of land intended for the homes of unborn millions. It would be cowardly for it to place the obligations connected with such a trust, and such an ownership, upon the individual States. In the first place, experience has demonstrated to us that the States do not providently administer such trusts. They are likely to be administered in the immediate interest of the sparse population there living, and with a view to an immediate realization of benefit, whereas the true view is that they should be administered not in the interest of existing population, but of the vast population that is to come into them through immigration from the Middle, Western, and Eastern States.

No restraints can be placed upon such a grant which will prevent the gradual absorption and monopoly of the lands by the few. In addition to this, no State can properly administer the trust simply because the arid region is composed of thirteen States, and three Territories about to become States, whose boundary lines are absolutely arbitrary and artificial and are not determined by topography or the lay of the country or the control of the watersheds. The unit that should be viewed in this great irrigation enterprise is not the unit of the State, but the unit of the watershed—first, the great river which flows to the ocean; second, the tributaries to this great river; third, the small creeks and streams tributary to those tributaries.

There are few watersheds which are entirely embraced within the lines of a single State. The lands which are to be reclaimed may be hundreds of miles from the place where the waters that are to assist in their reclamation are to be stored. The land to be reclaimed will be in one State, while reservoirs intended for their reclamation will be in another. Unity of interest, unity of ownership, and unity of control are absolutely essential to the carrying out of these great projects, and the Government alone, by reason of its ownership of the whole 600,000,000 acres, and its practical control, through such ownership of each watershed, is competent to deal with the matter in a scientific and comprehensive manner. No State can operate outside of its own boundaries. In the promotion of this great enterprise the land and the water must be united in the same ownership and control. Then when the water is so utilized as to secure its largest use over the land the Government, as the owner of the land, can part with it, assuring to each settler his proportional right to the water diverted and conserved.

The Government might relieve itself of this great trust by transferring all its land to some great private corporation, which could then undertake the reclamation of the land, of which it would be the owner. No private corporation would undertake it without united ownership and control of both land and water. Enterprises intended either for the conservation or the diversion of water, without ownership of the land, have, as a rule, proved unsuccessful. But if the Government should convey its vast domain to a great corporation, no language could describe the contempt which it would deserve, for such a corporation would be administered simply with a view to the profit of its incorporators and not with a view to the general welfare of the entire nation. The imagination would fail to picture the abuses to which such a system of reclamation would lead.

CONSTITUTIONAL POWER.

It is contended by some that the Constitution does not warrant a work of this kind. When we point them to the numerous things which the National Government has done in the past, not expressly authorized in the Constitution, they refer to some of the general powers of the Constitution, such as the interstate commerce power, but they ignore the most general power contained in the Constitution, namely, the power to promote the general welfare. This power, broad, extensive, and almost limitless in its terms, they would contract into a mere glittering generality. Thus, for instance, they contend that the work done on rivers and harbors is for the promotion of interstate and foreign commerce, yet they ignore the fact that the work actually done has gone beyond the requirements of either interstate or foreign commerce, and that for years the Federal Government, on the Mississippi and Missouri rivers, has been engaging simply in the work of preventing the overflow of waters over adjoining lands, the erosion of the banks, and the washing away of the land itself.

The President truly says that the storage of the floods in reservoirs at the head waters of our rivers is but an enlargement of our present policy of river control under which levees are built on the lower reaches of the same streams.

Under the interpretation of these strict constructionists the Government would have no power to organize and maintain an agricultural department, to maintain experimental farms, to support bureaus of animal industry and bureaus for the investigation of the various forms of plant life. Under their contracted construction the Government has no power to organize the geological survey, to make examination of the mineral wealth of the country, to make a survey of the topography of the country. All this work could be done by the States, and yet the National Government has been and is doing it.

If the Government can maintain all these various forms of activity; if it can vote the public moneys to the support of the sufferers at Martinique; if it can display the many varied activities organized by the National Government for the promotion of the intelligence or dissemination of information and the promotion of the general welfare, it can certainly do the work necessary to promote that home building on its public domain which has been, according to the statement of the President, but another name for the upbuilding of the nation. If it can survey public lands; if it can put section posts on public lands; if it can put fences on public lands, it can make the waste waters available for public lands, and whilst this work might also be undertaken by a State, yet a State's lack of ownership of the lands, and its inability to reach out beyond its boundaries for the purpose of conserving the waters of a watershed doing service within its boundaries,

makes State reclamation practically impossible, whilst the ownership of the land by the United States makes it possible for the National Government to join land and water and promote settlement of and create homes in the national domain.

It should be remembered, however, that the objections which might be urged against direct appropriations from the Treasury for the purpose of reclaiming arid lands do not relate to the application of the proceeds of the sales of public lands to this purpose. The Constitution gives the Congress of the United States the right to dispose of the territory of the United States, and this has been uniformly construed to apply to the proceeds of such disposal. Congress has not hesitated to apply the proceeds of the sales of the public lands to the maintenance of agricultural colleges and the schools of the industrial arts. It has not hesitated to grant the lands themselves for the promotion of great railroad enterprises, and for the promotion of the wagon-road enterprises before railroads were inaugurated. It has given to the various States 5 per cent of the proceeds of the sales of such public lands for educational purposes. It is too late now to say that the Government of the United States can not apply the proceeds of the sales of the public lands to any purpose it deems proper. Under these various acts, 245,000,000 acres of land have been given away, and of the proceeds of sales over $33,000,000 have been appropriated and paid over for the purposes above enumerated. It has been the rule of Congress to apply the proceeds of the public lands to any purpose which it might regard as conducive to the general welfare.

These strict constructionists claim that the Government can do indirectly what it can not do directly; that it can grant these lands to the States and put upon them the burden of their reclamation, and limit the grant by conditions intended to promote small settlements and actual home building, but that it can not apply the proceeds of those lands to this purpose, and that it can not create out of such proceeds a trust fund which will enable its officers directly to accomplish the promotion of the general welfare by the upbuilding of the nation, the increase of population, the discouragement of land monopoly, and the promotion of homes for actual settlers, and yet these strict constructionists are the upholders of a policy which enables the Government of the United States to expend $600,000,000 in the subjugation of a people 7,000 miles away and to expend $5,000,000 in the purchase of the friar's land in the Philippines for the purpose of destroying the land monopoly which exists there to-day. It can promote small holdings 7,000 miles away in a land which it has conquered, but it can not promote small holdings in the vast domain which it controls, not simply in its sovereign capacity, but as actual proprietor of the soil.

COMPETITION.

Nor is there any danger of an injurious competition with the existing farms of the East and West. It should be recollected that all the States outside of the original thirteen States were public land States. Since the beginning of this century the Government has disposed of over 1,000,000,000 acres of public lands, and it has thus developed the great States of the South and West.

It might as well be contended that the people of the original thirteen States suffered from Western development as that the 80,000,000 people now occupying this country will suffer from the development of the arid region. The arid region will simply furnish a market for Eastern manufactures and Eastern products. It will not compete with the Eastern or Middle Western farms because in the northern part of the arid region cultivation will be devoted largely to alfalfa, which is very useful in the fattening of cattle, and in the Southern region cultivation will be confined largely to the citrous fruits and other products of a semi-tropical character. You have only to bear in mind that the entire area capable of reclamation does not exceed 60,000,000 acres, and that this area will only equal the area of the two States of Iowa and Illinois.

If a nation of a few million people did not suffer, but on the contrary benefited from the development of Iowa and Illinois, how can it be contended for a moment that a country with 80,000,000 of people can suffer from the development of the arid region.

I am aware that some men who represent farming constituencies are opposed to the opening up of the arid land, but I can not believe that they will adhere to their opposition when they reflect upon the history of this country, whose glory and strength have largely had their source in the development of the Western region.

As there was no reason why settlement should terminate with the western boundary of the thirteen original States, and there was no reason why it should stop at the Ohio, and as there was no reason why it should stop at the Mississippi or the Missouri, there is no reason why it should stop at the edge of the great American desert, which, by the hand of science, can be made a region of great fertility and wealth.

It must be recollected that under irrigation development must necessarily be along very slow and gradual lines. The proceeds of the sales of the public lands in the arid States and Territories now amount to about two and a half million dollars per annum. It is not probable, therefore, that the Government would be able to conserve water for more than 500,000 acres annually at an average cost of $5 per acre. Contrast then this increase of the farming land of the country with the increase that has been made during the past ten years. During those ten years the total area of public lands disposed of has been 112,000,000 acres, distributed as follows:

Statement showing the area of public lands disposed of from July 1, 1891, to June 30, 1901.

	Acres.
1892	13,566,552.55
1893	11,801,686.04
1894	10,377,224.72
1895	8,384,300.18
1896	13,174,070.68
1897	7,753,606.75
1898	8,421,703.73
1899	9,990,623.03
1900	13,391,464.87
1901	15,453,449.28
Total	112,294,681.88

All of this land, which has entered into competition with the Eastern farmers, has been humid land, and yet the development of these farms has vastly increased the wealth of the country. Under this irrigation law, assuming that the proceeds of the sales of the public lands reach only $2,500,000 annually, we will be able in ten years to dispose of only about 5,000,000 acres, or about a one twenty-second part of the area disposed of in the last ten years. It should be remembered that the cost of each project is to be reimbursed to the reclamation fund by making each settler pay his proportionate part of the cost in ten annual installments and before he receives his title. The question therefore of the irrigation development will depend upon the sales of the land. If the lands be sold it will indicate that there is a demand for them, and the money will be forthcoming for new irrigation work. If the lands do not sell, it will be an evidence that there is no need of pushing faster the irrigation development.

DEMAND GREATER THAN SUPPLY.

The fact is that the demand for public lands is now greater than the supply. Heretofore the settlers in the Far West have usually come from the States immediately to the east of them. The sons of Ohio and Indiana settlers have settled in Iowa, Kansas, and Nebraska, and the sons of Kansas and Nebraska settlers are now going still farther in the West. Owing to the exhaustion of the lands in the humid area, these farmers' sons are now proceeding to Canada and taking up farms. Secretary Wilson, in a recent address, stated that the sons of Iowa farmers were now moving to Canada for the purpose of getting cheaper lands. It is estimated that during the last six months 10,000 men have gone to Canada for this purpose, and the report of the Canadian commissioner on immigration states that it is confidently expected that 100,000 American settlers will take up farms during this year in Canada. We are thus losing the brawn and the muscle which ought to be utilized in building up and extending this great country.

While we are promoting immigration from the southern parts of Europe we are losing the sons of our own people, who, finding the area of settlement in our own country contracted, are now placing themselves under a foreign jurisdiction.

NO COMPETITION WITH EASTERN FARM PRODUCTS.

The people of the West are not looking to competition with the farm products of the East. The products of the 7,000,000 acres of the Eastern land now under irrigation do not lower the price of the Eastern farm crops. The things which California sends to the Atlantic seaboard are luxuries. She could not possibly ship her wheat over the long haul across the country and compete with the wheat that passes through the New York market. She sends, instead, oranges, lemons, fine raisins, fancy prunes, fruits, wines, etc. The market which California finds for those products in New York State is a distinct gain to the New York farmer. These products of irrigation are purchased by the wealthier class, and the money goes back to California from whence it immediately comes back to New York again to be expended for the staple articles which California buys from the East—farming implements, cotton and woolen fabrics, and all the manufactured goods which are made in New York factories. Those factories furnish a market for the products of the New York farmer.

It is an incontrovertible fact that the prosperity of the West causes a reflex agricultural prosperity in the agriculture of the East. Suppose the 600,000,000 acres of arid land west of the one hundredth meridian and the industries which have arisen in connection therewith should be suddenly wiped from the face of the earth. What would be the result? Disaster would follow in many an Eastern community because thousands of farms and factories depend upon the orders of their Western customers. Those factories employ hands, and those hands, when employed, live well and spend well. They create a demand for great amounts of farm products. To bring the illustration still further,

does anyone contend that the Atlantic States would be benefited if the whole country west of the Alleghenies were effaced from the map? The cases are parallel. One part of the country is the complement of the other, and the prosperity of one section will not retard but will help all the others.

Especially would the Atlantic States be helped by the development of the Pacific slope, for the Western States would buy from the East, while at the same time they would bring great sums of money into the country from their own sales of produce to the Orient.

As far as staple products are concerned, such as corn, wheat, and the other cereals, a condition of stability has been reached in this country. The great farming areas of the United States are for the most part under plow, and further development will not notably change the conditions as regards the price or amount of those crops. It is a mistaken idea to suppose that the development of irrigation will injuriously influence the farmers already owning lands, for even under the most liberal assistance of the Government the area of the irrigated land must increase with comparative slowness, and the crops raised on this land will be different in character and find a different market from the staple crops elsewhere. In short, the injurious effect which some farmers fear are now a part of the history of the past, and the reclamation of the vacant public lands will benefit rather than injure the Eastern farmers.

Another feature of this question is that the irrigation of the West will to some extent relieve the congested conditions of some of the sections of the East. Mr. Thomas F. Walsh, the president of the National Irrigation Association, touched on this point in a recent article in the National Magazine. He said:

It must be borne in mind that the benefits to come from the opening up of this arid land to homeseekers are not so much for the people of the West as for those of the East. The great multitude who will seize the opportunities will come from the East. They are now working in the congested cities and want the chance to get a home of their own where they can be independent; or they are farmers' boys growing to manhood, who want the same chance, still farther West, that their fathers had in the earlier days when land was easy to get in the great Mississippi Valley; or they are tenant farmers, longing to own the land they cultivate. It is these men from the East who will make the new homes in the West and get the first benefits. The next benefit will go to the Eastern manufacturer who will furnish all that is needed to establish those homes.

In a recent speech Secretary Wilson, of the Department of Agriculture, in speaking of the settling of the middle West, said:

The Eastern manufacturer got such a market as is not to be found anywhere else in the world, outside of the Mississippi Valley, and the prosperity of the Eastern manufacturer has in turn brought prosperity to the Eastern farmer.

Whatever temporary detriment the opening up of the rich lands of the Mississippi Valley to agriculture caused the Eastern farmer has been wholly overcome and overbalanced by the benefit which the Eastern farmer has received from the establishment of the great manufacturing industries of the East.

We have gone on developing the West as far as the one-hundredth meridian. Last year we sold $950,000,000 worth of American farm products in foreign countries, and we are developing a market for our products in Asia which will absorb the whole surplus of farm products from the West, no matter how many additional acres of arid lands we may reclaim and cultivate. The products of the western lands will simply increase the great aggregate of wealth which the American farmer is bringing back to this country for our agricultural exports.

I am in favor of having more homes out in the West. Uncle Sam has a great deal of land and a great deal of water out there. That land is arid, and the water which would make it productive is running to waste. It would wet some of those great mountain valleys and plains, and build more homes, and make more markets.

You must not alarm our Eastern brethren by trying to do everything all at once. This great work will take time. It will take many years to wet all that dry land, but we ought to begin now and go along carefully each year until the task is done.

You will not get many dams built or neighborhoods started before the Eastern business men will have their traveling men out there to sell goods. They will find it is a grand thing to have people out there to buy from them.

Col. Hiram M. Chittenden, an officer of the United States Engineer Corps, who has made a careful study of the irrigation question, in a recent article in the North American Review, speaks of the effects of Western reclamation on the Eastern States. He says:

Government construction of reservoirs is opposed by the Eastern farmer on the ground that under such a policy he would be taxed in the interest of competitors in his own line of business. Of all the plausible economic fallacies that find lodgment in the public mind, this has, perhaps, the feeblest foundation. It is like that other argument which one hears nearly every day, that the invention of machinery restricts the field of labor.

Although it has been proven over and over again that mechanical invention, by increasing wealth, has made possible the employment of labor on a scale that would be utterly impossible without it, still the advent of every new machine is condemned in many quarters as a new invasion of the rights of labor. So in the case here considered.

The permanent establishment in the Western country of a large and vigorous population would stimulate markets of all kinds in the East far more than it would depress any by reason of competition. Its agricultural products would be largely consumed at home. If perchance certain products can be raised on these irrigated lands of better quality than elsewhere, is not the country as a whole the gainer by having them raised there? Does anyone believe it would promote the general welfare to drive from the markets the fruits of southern California, or the potatoes and melons of Colorado?

It is one of the chief advantages of this great nation, where no custom-houses restrict the free interchange of commodities between States, that every community can enjoy what is best in every other community, and the whole country work together with a maximum of economy in promoting the public good. The agricultural interests of the East and the narrow and provincial statesmanship which occasionally echo their contention in this matter should stand on higher ground. The upbuilding of the West will promote rather than injure their prosperity.

The President sums up the situation accurately, to my belief, in that part of his message in which he says:

The reclamation and settlement of the arid lands will enrich every portion of our country, just as the settlement of the Ohio and Mississippi valleys brought prosperity to the Atlantic States. The increased demand for manufactured articles will stimulate industrial production, while wider home markets and the trade of Asia will consume the larger food supplies and effectually prevent Western competition with Eastern agriculture. Indeed, the products of irrigation will be consumed chiefly in upbuilding local centers of mining and other industries, which would otherwise not come into existence at all. Our people as a whole will profit, for successful home making is but another name for the upbuilding of the nation.

The Orange Judd Farmer, the leading agricultural paper of the country, in the issue of October 13, 1900, thus disposes of the narrow view that the opening of the arid West would injure the Eastern farmer:

"The cost and the limitations of irrigation are such that the new population in the arid West must increase in a gradual and substantial manner, occupied with supplying their own necessities and having comparatively little surplus to ship to the Eastern States. The bogy of 'Western competition' is without a sound basis. The people of the arid West would increase the home market for the manufactures of the Central and Eastern States enough to increase their demand for farm products more than sufficient to offset whatever produce might be shipped from the now arid lands."

A comprehensive view of this subject in all its phases leads inevitably to the conclusion that the Government can do nothing better for the interests of the whole country than to embark upon a proper system for conserving and distributing the water supply of the arid region.

Some have taken the ground that it is a narrow and selfish policy that would retard the development of the West, even if it should be at the expense of the East, and that even local and personal loss should be waived aside in favor of the national benefit and increase of wealth to the country which would result were national irrigation to become a fact. I do not know that I quite subscribe to this view. I believe that if a man sees an evil coming which is going to destroy him, even though it is going to benefit somebody else, he has the right to attempt to stop it, for self-preservation is the first law of nature.

But I believe that certainly no such condition here exists. Were I a farmer in an Eastern State, I should have no fear in seeing the policy of national irrigation put into operation; on the contrary, I should look forward with confidence to receiving a share of good results indirectly myself, and I believe that careful study and thought will convince any man of the correctness of this position. The East will get its general share of the prosperity of the West, and the more activity there is in the West the more stimulation will be felt in the East, while at the same time the two will not be, in any sense, competitors.

But few people realize the wonderful future which lies in store for the country and its citizens when all the waste waters and the waste lands shall have been utilized to their full extent; when the vast resources of the West, at present almost untouched, shall have been well developed and the great ore bodies of the Rocky Mountains, mined as the miniature hills of the Alleghenies have been and are to-day, and when our ships shall traverse every sea, carrying our manufactures and food products to every country, so that we shall control the trade of the world.

The policy of the Eastern citizen of the United States who would stop the development of the West is not so much one of selfishness as of shortsightedness, arising from a misconception of the true conditions and the facts. No sacrifice will be necessary to carry out a great national plan which will make fertile the waste places of the West. The benefit will be national—truly and magnificently national, and no one will be a sufferer by reason of its execution.

THE SURPLUS FOOD PRODUCTS OF THE PACIFIC SLOPE WILL GO TO ASIA.

The food products of the Western irrigated region will not be rushed upon the Eastern markets, because of the high price of transportation. The great hope of the transcontinental railroads, which serve the arid region, is that they can stimulate production in that region for the purpose of supplying the oriental markets. In a recent interview Mr. James J. Hill, the president of the Great Northern Railway, spoke of the undeveloped trade of the Orient as follows:

The 76,000,000 people of the United States are supported more or less directly by the trade with Europe and Africa with their 400,000,000 of population. On the other hand, there are a thousand million people off our western coast with whom we should trade, and yet we have only 3,000,000 on the Pacific slope to reach out for it. To develop this trade national irrigation is necessary, which will build up an agricultural community on the Pacific slope. * * *

The execution of this work—

is the one thing needed to give to the United States the domination of the Pacific Ocean commerce and the supremacy of the world's trade. Without it progress will be slow, because unless there is abundant supply of food products always available at shipping ports it will be impossible to insure full cargoes and quick dispatch to the vessels of large capacity, which alone can be profitably employed in the trade. Every business interest which hopes to benefit by participation in the trade of the Pacific Ocean must be in favor of the reclamation of the great mountain valleys for the occupation of agricultural workers. If successful in the advocacy of this public improvement full rewards will come in the shape of new markets in the Orient, and it will be found additionally that the settlement of the Western mountain region has developed a local market richer in natural resources than any other portion of the earth's surface.

There, where the soil under irrigation will grow the best quality and greatest quantity of all the grains except corn, all the grasses and fruits,

the ground is seamed with deposits of gold, silver, copper, lead, iron, and coal. There is the largest supply of standing timber, and petroleum and natural gas abound. Under the influence of the dry atmosphere and constant sunshine good health prevails, and the melted snow in falling to the sea level creates a water power available for electric heat, light, and motor service equivalent in energy to the combustion of 300,000,000 tons of coal per annum.

People regard with amazement the present rapid growth of wealth in the United States, but this will be comparative poverty when, with 20,000,000 people on the Pacific slope engaged in raising food and manufacturing flour for the Orient, we can dispatch large freighters daily from each of the Pacific ports loaded with the manufactured goods of the Eastern factories, the cotton of the South, and the food products of the mountain valleys. Then a river of wealth will be turned into the United States which will put to shame the visions of the wildest dreamers.

The agricultural products of the Pacific slope can not come into competition with the farmers of the Middle West. On the contrary, the section will open a large market for corn and hog products not producible there. The storage of the water in mountain reservoirs will reduce the flood level of the lower rivers and measurably relieve the cotton and sugar estates from the dangers of overflow.

The mining which, among other things, Mr. Hill speaks of is indeed one of the comparatively undeveloped resources of the great West. Although wealth untold has been taken from the mountain region, there are millions of tons of ore lying throughout the arid region which are not sufficiently high grade to warrant their working at the present high cost of living in the regions where they are situated. It costs too much to work them. But with irrigation, which would mean cheaper living for man and beast, and with cheaper transportation, which always follows an agricultural development, these mines could be worked with profit and produce a stream of gold, silver, copper, and other metals beyond the dreams of avarice.

In speaking of the Asiatic trade as connected with American irrigation, in his report of the Trans-Mississippi Congress last year Mr. William M. Bunker, of the San Francisco Chamber of Commerce, who has recently returned from the Orient, said:

My personal experience in Asiatic countries enabled me to view the irrigation issue from a new standpoint. At the request of several delegates I gave my ideas in resolutions that were unanimously adopted. In these resolutions I associated irrigation with the possibilities of Asiatic trade. While in China, Japan, and Siberia I was struck with the fact that the people of those countries must depend more and more on the United States for food stuffs. Japan is a very little larger than Montana, and yet has a population about half that of the United States. All the available ground in Japan is tilled. China, one-third larger than the United States, has six times our population. The policy of the Russian Government is of necessity to increase the Russian population of eastern Siberia, although the area of tillable soil in that vast region is comparatively limited. Up to this time the eastern Siberians have been unable to meet the demand for food stuffs in their own market, and after a personal inspection of the country I have no hesitation in saying that the larger the population of eastern Siberia the greater will be the demand from that region for food products of other countries.

I have quoted freely from the message of the President, whose familiarity and sympathy with Western problems is nowhere more clearly shown than in his strong presentation of the claims of forestry and irrigation to the consideration of Congress.

With the permission of the House I shall add as an appendix quotations from Secretary of Agriculture Wilson, Secretary of the Interior Hitchcock, Mr. Bunker, of the San Francisco Chamber of Commerce, and Mr. Chadwick, of the Chicago Board of Trade, on this subject.

GENERAL MILES ON "OUR UNWATERED EMPIRE."

I shall also add as an appendix to my remarks an article written by General Miles over twelve years ago, and published in the North American Review of March, 1890, upon the subject of "Our unwatered empire." This article, broad, comprehensive, and statesmanlike, covers all the phases of the irrigation question, and presents every consideration that should appeal to enlightened legislation. No speech in the Senate or in the House could present the question in a more intelligent, thorough, and attractive way, and I shall republish this not only because it presents the views of a man of distinction who, not content with prominence in the art of war, has also trained himself in the arts of peace and in those great constructive policies which mean the upbuilding of a nation, but also because this article, printed in 1890, indicates that the question was thoroughly understood twelve years ago; that as nothing can now be added to the argument then presented, so nothing can be added twelve or twenty years hence, and that a great question which has received the careful consideration of able minds for so long a period, has received the sanction of boards of trade and chambers of commerce throughout the land, and the approval of the three great political parties in the last campaign, can no longer wait for action. The time is now.

APPENDIX A.

OUR UNWATERED EMPIRE.

By Brig. Gen. Nelson A. Miles.

[From the North American Review of March, 1890.]

Those pioneers of American civilization who had the fortitude and enterprise to cross the Atlantic and plant their colonies upon the inhospitable shores of this continent in order that they might be free from the tyranny of monarchical governments and better exercise the rights and privileges of independent life; who for generations contended against a savage foe, felling the forest, clearing and cultivating the fields to obtain sustenance for themselves and their families, and who early established institutions of learning for the benefit of all classes, and eventually inaugurated and established a most perfect system of government, must of necessity have had within themselves the heroic elements of character which have made people great and preeminent in all ages of the world.

Possibly if there is one moral influence that has contributed more to the success of that people during the past three hundred years than any other, or which will warrant their prosperity and perpetuity in the future, it is the home life of the settlers of this country. Nothing could be more beautiful and sacred than the traditions, memories, and influences that are embraced in that one word home; and immeasurably is this the fact when it is blessed with the assurance of independence and competence which characterize the homes of our country. Loyalty to American institutions is assured by the bonds of citizenship, and the actual ownership of that blessed portion of earth, however humble it may be, that can be called an American home. The simplicity and purity of such a life is one of the glories of our country. The free air of heaven inspires pure thoughts and noble actions, industry without avarice, luxury without intemperance, economy blended with charity and generosity; and it is these associations and surroundings that have contributed to our physical and moral worth as a people and a nation.

In contradistinction is that unfortunate class of people who have sought this country either for a place of refuge or an asylum, crowding our cities and towns, inhabiting the alleys, breathing foul air, and living upon limited and unwholesome food, their idea of life contaminated even beneath its natural sphere by the associations and influences constantly before them and surrounding them. Hence, any measure that our Government can adopt that will, in the main, promote the general good of the people, by which the true American character and spirit can be sustained and encouraged, is indeed worthy of careful consideration.

As we review the acts of our Government for the public good, prominent among which appear the improvements to our great natural water courses and harbors for the welfare and benefit of commerce, and the interchange of products of our country for those of others, although there may have been unwise discrimination used in such appropriations, yet, in the main, they have undoubtedly been of national benefit. The homestead act, by which the vast public domain has been surveyed and subdivided into small tracts and placed within the reach of an industrious people, is, perhaps, the most judicious single act of which our Government can boast. Next in importance may be mentioned the preemption act, similar in effect and with results as far-reaching and beneficial. The timber-culture act is another, and one of more benefit than most people realize, for the rapid destruction of our forests must in a few years produce a timber famine if it is not counteracted by the cultivation of forests; and as these are developed the disastrous effects of drought, tornadoes, and cyclones will be diminished.

Another commendable act of the Government has been the appropriation of vast tracts of our public domain to the establishment in each State and Territory of agricultural colleges, by which most useful knowledge has been disseminated to every portion of the United States. Last, but not least, has been the aid given by the Government in the way of land subsidies for the construction of the great transcontinental railways, by which the nation's loyalty and unity are bound by iron bands, and the people of one section are enabled to communicate readily with those of another, not to mention the benefits that have been assured to the commercial interests of the country; and while these methods have been criticised, and in some respects condemned as injudicious, it must be remembered that the country at large has been greatly benefited. The price of every alternate section of land held by the Government was immediately doubled, and the Government realized $2.50 per acre instead of $1.25 cents for every acre sold; and the value of such lands was increased fully 100 per cent over what it would have been had they remained remote from any means of communication.

In view of the fact that there are vast areas of public domain still remaining unoccupied, which seem to require an intelligent and judicious system of improvement by the Government in order that the best results may be obtained in their settlement, and in order to prevent a small percentage of the people from taking possession of the water courses and holding them exclusively for their own benefit, thereby shutting out all others from the occupation of a much larger portion and practically controlling the use of hundreds of acres of public land where they are entitled to one, it might be well for the Government to inaugurate some system by which these lands may be utilized and colonized for the benefit of the home builders who constitute our best population.

There is another view of this matter which should not fail to be duly considered. Within the last few years we have witnessed the terrible results occasioned by drought, and half crops have been reported throughout many of the States and Territories. We have also noticed that this has resulted in a very large percentage of land in several of the States and Territories referred to, being placed under very heavy mortgages; and should this impending evil continue for a series of years, no one can anticipate what may follow. That good results can be produced by a scientific and judicious control of the water courses of the Western country is a fact so well established that it does not require argument. We may have reached that period in which attention should be drawn to this important subject, and it is not surprising that the question of water storage and irrigating works in the arid regions of our Western country has been engrossing the attention of the people of the United States, especially the citizens residing west of the one hundredth meridian more in the past few years than ever before.

While the people of nearly every State and Territory west of that meridian have carefully considered the question, and their legislators have enacted laws bearing upon it, the Federal Government but recently took up the matter by act of Congress authorizing the investigation of this subject to ascertain to what extent the arid regions of the United States can be benefited by irrigation. It stipulated that $100,000 be appropriated for topographical surveys for the fiscal year ending June 30, 1889, or any part thereof, to be used by the very able Director of the Geological Survey, Major Powell, with the approval of the Secretary of the Interior, for the purpose of ascertaining the feasibility of providing reservoirs of water with a view to establishing a system of irrigation of the lands in question, and Major Powell was directed to make his report to Congress at as early a date as was practicable. Upon his report and the recommendations of the Secretary of the Interior, the $100,000 was supplemented by an additional appropriation of $250,000 during the last session of Congress, by the passage of an act for the further investigation of the arid region. A committee of Senators was appointed to visit the arid regions of the different Western States and Territories the past summer. It completed its work of investigation; was on the road some fifty days, traveling in that time about 12,000 miles, and taking the testimony of hundreds of witnesses.

These were the first Federal steps toward the utilization of what is commonly called desert land. The bill reserves all lands that may hereafter be designated for reservoirs and ditches, and the lands to be reclaimed by irrigation for such reservoirs, from the date of the passage of the act; and provides that the President may from time to time remove any of the reservations made by the bill, and, in his discretion, by proclamation, open any portion of all of the lands reserved by the provision to settlement under the homestead laws. This, however, should be modified so as to fix the price of such lands, improved by the General Government, as will compensate it for the expense of such improvement. The sums appropriated, it is hoped, are but the commencement of necessary appropriations for irrigating purposes,

as they will scarcely cover the amount requisite for preliminary investigation, without in the least considering the vastness and exent of the work to follow. The engineers employed in the work are required to measure the various streams and sources of water supply, select sites for reservoirs and other hydraulic works necessary for storage and utilization of water, make maps of arable lands surveyed, and furnish full information for the use of Congress in considering further legislation on the subject. They are at present engaged in their investigations and surveys.

The Japanese have practiced this improved system of agriculture for thousands of years, although their country is blessed with as much rainfall as the fertile valleys of the eastern slope of our continent. They viewed the matter in its most practical light, using reservoirs and catchment basins for the storage of water when it was at flood, thus preventing destruction to growing crops, and diffusing the water so stored to the lowlands by a regular flow in periods of drought. Even the Chinese have been able, by careful, intelligent, and patient husbandry, to retain the fertility of their soil for thousands of years.

The natives of India, by their system of wells, tanks, and reservoirs, have contended against the calamities of nature for ages. They store the water brought by the monsoon, and husband it for use throughout the whole year. In some of the districts they have formed large artificial lakes by obstructing the rivers in the valleys at the most available points. The English Government has spent millions of pounds sterling in furthering the interests of the cultivators of the soil in India by making permanent channels, which carry off the water, secured by means of dams, at all seasons of the year, and by obstructing the bases of the valleys so as to form immense reservoirs; conducting the water from them over the fields by means of canals, from which the Government derives a valuable revenue, and by which the droughts, formerly so frequent and fatal, causing famine and disease, have to a great extent been obviated.

Not only have these judicious measures benefited the 250,000,000 of people of that country, but their prosperity has seriously affected the market of the American farmer. Although irrigation in India has been maintained for generations, the English Government saw the necessity of improved works, and right liberally has it appropriated funds for the various improvements. The outcome of it has been the increased number of square miles now under cultivation, in excess of what was cultivated before the improvements were projected, results mainly from the utilization of land formerly devastated by drought and flood. In a great portion of India the population depend entirely upon irrigation.

The Spaniards and Mexicans in the southwestern Territories and in southern California, many years before that part of the country came into the possession of the United States, brought the much-needed source of life to their lands generally from small streams by their system of acequias and zanjas. There are to this day in the Salt River Valley of Arizona what appear to be the remains of an immense system of canals, which no doubt existed a thousand years before Columbus discovered America, and aided in the production of enough vegetation to sustain a population many times the number at present in that Territory. The engineers of to-day are running the lines of their channels along the water routes of that prehistoric race.

This has been a prominent question in the history of all the Western States and Territories, and by being brought to the attention of the general public the necessities and usefulness of irrigation may in time be extended to all needed parts of the country. In some parts of the country the system would prevent the desolating effects of drought, and in others, by the use of reservoirs and dams for storing the waters, the disastrous floods that almost periodically destroy growing crops and injure routes of travel and commerce would be rendered less frequent and destructive. The small amount of work necessary for making lands bordering on a live stream proof against any drought occurring in any part of this country is remarkable; and it is even more remarkable to witness with what passiveness the agriculturist sees his crops withering, blasted for want of water almost every summer in the different parts of our country, when the remedy is so near at hand. There is not a piece of land sold in the West in regard to which the judicious purchaser does not look well into the question of how many inches of irrigable water goes with the land, as it is the most important factor to be considered. The water right, the number of miner's inches that can be used, and the cost price per foot per acre are all matters to be considered.

History teaches us that irrigation is the oldest and surest method of intelligent agriculture. It was understood in the earliest days of semicivilized races, and practiced in Egypt, Persia, and Assyria ages before the Christian era. The richest and most productive regions of the earth have been cultivated for thousands of years in this manner. The valley of the Nile, various parts of Europe, and a great portion of India have always depended upon it for the product of their soil. Some portions of Egypt which the Nile did not irrigate were watered by canals, filled by taking to them the waters of that great river, and the people were impressed with the necessity of keeping these canals free and unobstructed and always filled with living water.

The following resolution was presented in the platform of one of the political parties in a Western State some time ago as an important measure:

"*Resolved*, That the waters of the State belong to the land they irrigate, and we favor and will aid in maintaining a broad and comprehensive system of irrigation that looks to the benefit of the irrigator as primary to the assumed rights of the riparian and appropriator; a system controlled by the Government, free to all, under the control of no class of persons, and established and maintained by a revenue derived from those whom the system will benefit. We believe the water is the property of the people, and that it should be so used as to secure the greatest good to the greatest number of people."

The Government of our country has an important mission to perform, now that it has once taken charge of the work, and it is presumed that it will continue until a time when the whole irrigation system will be under its control, with one simple law governing it alike in all States and Territories. Otherwise, there is danger of confusion and clashing of interests. As to whether it will be taken charge of by the Federal Government remains to be seen. The enormous amount of money required to place the desert lands in a productive state would have to be furnished by the Government, as it would be impossible for the States and Territories to complete such a system as is in contemplation; and the funds expended should, by a well-matured and comprehensive plan, revert again to the Treasury of the General Government from the sale of its lands thus improved.

The people of California interested in irrigation, at the State Irrigation Convention in 1887, presented the following propositions in the form of amendments to the State constitution:

"First. The declaration that every natural stream and water source is public property.

"Second. That the appropriation for beneficial uses of any such stream must be made under legislative enactment.

"Third. That all water so appropriated in the State is declared to be a public use.

"Fourth. Rates and rents for use are to be fixed by public authority, but must not exceed 7 per cent on capital actually expended in constructing irrigating works."

The legistature of Wyoming Territory has adopted the water legislation of the State of Colorado, which is considered the best in use by any of the States and Territories. The subject has been discussed at length in the various reports by the governors of different Western States and Territories, and all the Western States have fostered and cared for irrigating enterprises; and their citizens have invested millions of dollars, the revenue from which makes it a very profitable investment and benefits the people and the country adjacent to the plant.

Now let us consider the area of the region wherein the surveys are to be made. The area of our country consists, according to the records of the Agricultural Department and other sources, of 1,500,000 square miles of arable land, and an equal amount equally divided in pasture land and in mountain and timber, Alaska not being included in the estimate. Of the arable land it requires a little over 300,000 square miles to produce all our grain, hay, cotton, sugar, rice, and vegetables. The extent of the territory west of the one hundredth meridian is estimated at 1,300,000 square miles, of which over one-fifth will not admit of cultivation, owing to its rugged, mountainous character, while the remaining area requires only water to make it serviceable for either agriculture or pasturage. Of the million square miles that can be made productive, it is estimated that 150,000 can be redeemed, being equal in area to one-half of the land cultivated in the United States. It will be seen at a glance what a vast population the land in question will be able to support, and the immense benefit that will in time accrue to the Government and the people.

The precipitation of water in the mountainous portions of the arid belt averages about 20 inches yearly, although in parts, in some years, as much as 75 inches have fallen, causing floods in the streams, frequently creating destruction in the arable low lands, and the most of it disappearing in the sandy wastes; where the average rainfall is scarcely 5 inches. The lesser amount falling on low desert lands and the greater in the mountains, the plan for obstructing the mountain valleys or canyons, wherever it can be done to advantage and at small cost, should in all cases be pursued to completion. Where natural catchment basins exist—and there are any number of them in the mountains—the Government should reserve them for future irrigation purposes.

Private enterprises, mindful of the advantages and large returns for money invested and the indifference shown by the Federal Government, have taken up many important sites for reservoirs which drain areas many square miles in extent, and control the water for vast districts. On the surface of the arid regions it is estimated that about 15 inches of water falls annually, most of which can be utilized for the 1,000,000 acres estimated to be productive for pasturage and cultivation, by the use of reservoirs, canals, and artesian wells. As over four-fifths of the 1,000,000 square miles can only be used for pasturage for the immense herds that now roam the valleys and mesas, this will require very little water when compared with the land to be cultivated. Nearly all of the arid region embraces arable lands favorable for agriculture in all its phases, from the cultivation of the products of the north temperate zone to those of the Tropics.

Where irrigation is used in the North the season for watering is generally not longer than three months, but in the South it embraces at least eight or nine months of the year. As much water is used at a time as would result from a day's severe rain. A practical knowledge is requisite, as too much water is liable to produce more injury than benefit. While the irrigated farms are larger generally in Colorado and Utah, in southern California, 20 acres is as much as one family can well care for when devoted to the cultivation of vines, fruits, and alfalfa.

That eminent journalist, statesman, and scholar, Sir Edwin Arnold, recently passing through the continent, made this observation:

"Nothing has struck me more in my visit to America than the slope of your Sierras. Your orchards and vineyards were a revelation to me. You will be the winegrowers of the world. Then, in your sagebrush plateaus you only need irrigation to make them fruitful. The land I saw in Nevada is almost exactly like what I saw in India and Arabia, which has been made so productive."

Dividing the area to be reported upon by the Geological Survey into three divisions, the first would embrace the land whose eastern limit would be near the one hundredth meridian and its western bordering the foothills of the Rocky Mountains, near the one hundred and fifth meridian, while its extent would each from the Rio Grande in Texas to the Canadian boundary. The second division would have its eastern limit near the one hundred and fifth meridian and its western boundary the Sierra Nevada and Cascade ranges of mountains. Much of this division is a mountainous country. The streams of the west find their sources near the summits of the mountain peaks covered with eternal snow, and derive their main supply from the rains and snow that fall within the great basin through which they course to the sea; and it is on this vast mountain region that the low lands and foothills will have to depend for the water to make them beautiful in the garb of nature. Its canyons can be formed into great catch basins for retaining the rains in their season, while natural lakes are numerous throughout its length.

The State of California, blessed with prosperity derived from its irrigating works, comprises most of the last division, and it is fast being populated with an intelligent class of agriculturists, brought thither mainly through the richness of the soil, the public enterprise and success of irrigating works, and the assured prosperity of the country. The changes wrought in places in California which not long ago were considered valueless have been indeed wonderful. Where once it was thought nothing but sagebrush and cactus would grow, the land has been cleared, ditches have been formed, trees planted, crops cultivated, and the land placed in a higher state of cultivation than many favored localities of the Eastern and Southern States. In ten years villages and cities have sprung up where before coyotes starved.

In fact it is impossible for one to conceive how much a country supposed to be utterly worthless can be benefited by the use of water, unless he has seen such effects. To pass from the hot, arid regions into the fertile valleys of California is as gladdening to the eyes of the beholder as the sight of an oasis is to the traveler in the desert. To see the countless acres of trees with their ripening fruit (for some kind of fruit is always in season in that region), the unlimited acres of grapes, fields of wheat, barley, and alfalfa, and everything breathing life and health, is to see the blessed use of water, husbanded and cared for and appreciated in all its worth. From land valued at less than $1 per acre it has increased through the medium of improvements of land adjoining, and the benefit of a sure supply of water, until 1 acre is worth as much as 100 would have been had not the systems of irrigation been established. No part of this country has attained such success in irrigation as this. The practice of it has spread from this part of the country to all parts of California, Arizona, Utah, Colorado, and other States and Territories. Without irrigation, except in certain moist lands, these beautiful valleys and lowlands would once more revert to desert wastes.

It is a well-known fact that after land has become thoroughly cultivated by irrigation less water is required; and it is safe to assert that thousands of acres of so-called desert land may become adapted for agricultural purposes without the continued help of irrigation. Immediately following the establishment of an irrigation district, after the canals with their lateral ditches have been completed and the cultivation of crops has commenced, the planting of trees should be encouraged.

The eucalyptus variety is mostly planted in California, and the cottonwood in Arizona and New Mexico. The former is of very rapid growth, and as a wind-break and a protection to crops it is used extensively, although it is

very exhausting to the soil. Coincident with irrigation should be tree planting, which would in a short time not only change the appearance of the country, but supply the wood which is necessary for fuel. It would hardly be possible to estimate the value of trees in their usefulness toward reclaiming arid lands, and too much can not be said in urging the profuse planting of them. In fact it would be well for the Government, in selling land reclaimed by it through the irrigation works to be established, to make it compulsory on the purchaser to plant a portion of his acreage in forest trees. They would only require thorough irrigation during the first year, less the second, very little the third, and none at all thereafter. Tree culture, especially the planting of trees indigenous to the country, should by all means be encouraged.

As we review the past we notice the action of the unscrupulous and the insatiable following in the wake or hanging upon the flanks, and very often seen in a position far in advance of any humane progressive measure which may be adopted for the benefit of mankind or to promote the welfare of a worthy people. It is wonderful how difficult it has been to ward off the schemes of these avaricious creatures; and in a measure of this kind, which has in view the welfare of the entire people, safeguards can not be too strongly applied to protect it from such contaminating influences. It is a fact to be regretted that many of our most commendable measures, whether municipal, State, or national, which have given us avenues of commerce, works of art, and many improvements for the public good, whether patriotic, humane, or beneficent, have been embarrassed and contaminated by the touch of these creatures, and the purpose of the designer has often been marred and debased by the contact of those who see nothing in any public or progressive measure other than the opportunity to gratify their craven and selfish desires.

Moreover, it should be distinctly understood that there are hundreds of square miles of public domain where it would be utter folly to spend more money than the amount necessary to ascertain the fact of their worthlessness. Dangers of this kind should be avoided, and the Government should systematically improve what property it possesses worthy of such expenditure and divide it up in such a manner that it can be cultivated by an industrious, enterprising, and intelligent people who build for themselves and their posterity homes that will adorn and beautify any State or Territory, thus encouraging and sustaining the true spirit and character of American citizens, and promoting the general welfare of our entire country. As we can point to the past with just feelings of pride, it is hoped that our future may be as bright, prosperous, and progressive.

APPENDIX B.

IRRIGATION CREATES HOME MARKETS.

Hon. James Wilson, Secretary of Agriculture.

[Extract from a speech delivered December 23, 1901.]

If we take note of what is in men's minds at the present time, we find that public discussion turns more upon markets than on any other one proposition in planning for our national prosperity. The policy of the United States for the last forty years has been to build up home markets, not only for our manufacturers, but for our farmers as well. We have built up our manufacturers in order that we might have home markets for our farmers, and also to encourage everything that could permanently live and prosper within the United States through the diversification of our industries.

Changes are coming about gradually. When I was a boy, forty-six years ago, I went to Iowa. It was a new country in those days, and there was no homestead law, so we bought our land. Our friends, the farmers of the East, were somewhat alarmed as to what the result might be. But those friends in the East built railroads out to us, and overtook us with the railroads, and sometimes went farther West with them than we had gone, and waited for us to come, and the result in regard to the marketing of Eastern farm products was, in some cases, unsatisfactory to the Eastern farmer. But the Eastern manufacturer got such a market as is not to be found anywhere else in the world outside of the Mississippi Valley. And the prosperity of the Eastern manufacturers has, in turn, brought prosperity to the Eastern farmer.

Whatever temporary detriment the opening up of the rich lands of the Mississippi Valley to agriculture caused the Eastern farmer has been wholly overcome and overbalanced by the benefit which the Eastern farmer has received from the establishment of the great manufacturing industries of the East.

We have gone on developing the West as far as the one hundredth meridian. Last year we sold $350,000,000 worth of American farm products in foreign countries, and we are developing a market for our products in Asia, which will absorb the whole surplus of farm products from the West, no matter how many additional acres of arid land we may reclaim and cultivate. The product of the Western lands will simply increase the great aggregate of wealth which the American farmer is bringing back to this country for our agricultural exports.

The immigration in those early days of which I have spoken was of homeseekers. People who came from foreign countries in those days wanted farms, and they got them, and they built up the Northwest. A change has come—a most undesirable change. The homeseekers who want farms are not coming to such an extent as they did in those early days. The man is coming to this country to live in the cities and work in the factories, and the admonition is forced upon us that the United States of America in its population is becoming somewhat out of balance as regards the town and the country. The cities are growing in proportion faster than the country.

There is danger in this, as all recognize. We should do everything we can to promote the growth of a rural population, by opening up opportunities for people to get homes on the land, and training them to till it, so they will know how to get their living from the ground. Everything we can do and that which the Department of Agriculture is doing to make conditions of rural life more pleasant and prosperous, tends to correct this growing evil of too many people in our cities and too few in the country. A prominent question to-day in the minds of a great many people is a desire for foreign markets. But we must never forget that the best market is the home market, both for the farmer and the manufacturer. The Mississippi Valley is worth to the manufacturers of the United States, as a market, more than all the rest of the world put together, because those people all have good incomes and they spend their money.

I am in favor of having more homes out in the West. Uncle Sam has a great deal of land and a great deal of water out there. That land is arid, and the water which would make it productive is running to waste. I would wet some of those great mountain valleys and plains, and build more homes, and make more markets.

The population of this country is out of proportion. Only about one-tenth of it is in the western half of the country. It would be a good thing for all sections to more nearly equalize the growing population of the United States. I would dam some of those rivers and streams, and spread the water out over the land in Uncle Sam's valleys and establish new fruit ranches and new farms to grow the new kinds of wheat we are producing, so we could send more flour to Asia; also new farms to grow sugar beets, so we could grow more of our sugar in this country, and start new mines and make all sorts of new demands in these new Western communities, and make new markets for all our Eastern manufacturers. The Eastern manufacturer will sell in the West, but the Western farmer will not sell in the East, except fruits and things like that which will not compete with the Eastern farmer.

In 1900 we sold $840,000,000 worth of farm products to the outside world, and we brought back just half of that. We paid $420,000,000 in 1900 for things we can not grow in the United States. The Department of Agriculture is at work to get those things grown in the United States, so as to make more homes for our own people, give more work to our own people, make better wages for them, and make more markets for us here at home that will stay with us forever.

We can grow over $200,000,000 worth a year of farm products in the United States more than we are growing now. We will produce that $200,000,000 worth of things that grow in the fields that we have heretofore been importing right on our own American farms, and we will increase the American home market as all you can do with foreign countries throughout the world would not increase it. We can do it quicker and better by far if this great arid region out West is reclaimed and made productive.

That is the development of the United States that I want to see. And I want to say to you, gentlemen, that I have all the confidence in the world that you will move along conservative lines. You must not alarm our Eastern brethren by trying to do everything all at once. This great work will take time. It will take many years to wet all that dry land, but we ought to begin now and go along carefully each year until the task is done.

You will not get many dams built or neighborhoods started before the Eastern business men will have their traveling men out there to sell goods. They will find it is a grand thing to have people out there to buy from them. It will make such a purchasing force there as the world never saw before. Stop for a moment and think what our home market is to-day. The whole world wants to get into the United States to sell things, but our home market is for ourselves first, to develop it to the fullest extent.

APPENDIX C.

DEMANDS OF THE ORIENT—THE MUTUAL DEPENDENCE OF IRRIGATION AND THE FAR EASTERN TRADE—GREAT ACTIVITY ON THE PACIFIC COAST.

[Remarks of William M. Bunker before the United States House of Representatives Committee on Irrigation of Arid Lands.]

MR. CHAIRMAN AND GENTLEMEN OF THE COMMITTEE: The mutual dependence of irrigation and the oriental trade is a fertile theme. As commissioner of the Chamber of Commerce of San Francisco, I studied the trade conditions of the Orient, inspected the farming lands of eastern Siberia, followed the trans-Siberian railway route from Vladivostock to St. Petersburg, and learned the probable influence of that 6,600 miles of railway on Pacific coast trade and products.

It had been assumed by many political economists and writers that the railway would develop vast areas of wheat land in eastern Siberia, and that wheat from that section would injure, if not wholly ruin, the oriental market for our cereals. In the forests of Siberia, especially those bordering the Amur River and its tributaries, many publicists saw an equally deplorable menace to the lumber interests of the Pacific coast. My mission was to procure and present the facts bearing on these great interests, to mirror the situation and prospects, through an independent investigation, and make the proper predictions.

THE DARK SIDE OF SIBERIAN FARMING.

Eastern Siberia has an area of 132,000 square miles, a population of 1,328,150, and comprises mountains, plains, and river valleys. The Altai mountain region, west of the Yenisei River, the former granary of Siberia, is 3,000 miles from Vladivostok and its products do not figure in the Russian market for Pacific coast cereals. There are many reasons aside from the long haul that prevent the cereals of this granary from competing with those shipped from the Pacific coast. The Siberians are poor farmers, and the seasons are uncertain. A fine crop in one section of the fertile region of eastern Siberia is almost always accompanied by a famine in another. The current season illustrates the situation. In this Altai granary the failure of the crop induced a famine of appalling proportions. Nearly 8,000 cases of typhus-hunger and scurvy were reported. As the peasants were finally forced to eat their seed grain, no spring crops have been sown. In a slightly lesser degree the same uncertainty of harvest results marks farming in the arable portions of Siberia, nearer the Asiatic coast, and therefore more likely to affect the Asiatic market for Pacific coast cereals. The grain lands in the eastern part of eastern Siberia consist, for the most part, of two plateaus; the larger one, near Blagovestchensk, on the Amur River, is 500 miles square, and the other, lying between that city and Vladivostok, is 200 miles square. These figures are liberal approximations.

WHY EASTERN SIBERIA CAN NOT COMPETE WITH PACIFIC COAST WHEAT.

The wasteful system of farming has lessened the available farming area. Certain land is sown every year without interruption and without manure. After six or eight crops have been raised from the field and its growing power exhausted, fresh land is sown. Spring wheat, spring rye, oats, buckwheat, and a small amount of barley, maize, and millet represent the grain products. The grain, especially the wheat, is of inferior quality, and the percentage of starch is small. The Siberian flour is far less nutritious than that imported from the Pacific coast. California wheat sown in Siberia yields the inferior Siberian grain. The climate is at fault. The dry, small, and shriveled Siberian wheat seeded in California yields California wheat. In the opinion of experts this clearly shows the fault is with the Siberian climate. The winters in the Amur river region are practically snowless and the temperature is very low. Under favoring conditions and with a larger cultivated area eastern Siberia can not, in my judgment, impair in an appreciable degree the Asiatic market for Pacific coast cereals. The discriminating tariff on flour in retaliation for our countervailing duty on sugar has inured to the disadvantage of our flour market in Asiatic Russia. The other portions of Asia are as available as ever, and no cereal product of Siberia will ever interfere with their demand for American flour. This fact is important when we reflect that the increasing tonnage of the Pacific Ocean will furnish larger and cheaper shipping facilities for our oriental trade. Our interest is in the Siberian cereal yield as a factor in the oriental trade problem rather than in the details of farming. And yet the details are necessarily a part of the exhibit. They furnish the facts through which we reach a verdict.

THE MISLEADING WILD FLOWERS.

When I passed up the Amur and Shilka rivers the landings were marked by piles of sacked flour from Washington, Oregon, and California. The bread on sale was made of mixed American and Siberian flour. The popular idea that Siberia, especially eastern Siberia, is a fertile belt, and with intelligent farming will yield a vast amount of wheat, is as far from the truth as the previous popular idea that Siberia is a block of ice on which convicts, police, and polar bears struggle for the mastery. In summer the banks of the Amur

and tributary rivers are dotted with wild flowers, grasses grow lush, and the traveler sees signs of surpassing fertility. The signs are more apparent than real. There is no clearly defined spring, the summer season is short, no friendly blanket of snow wraps the land in winter, and the climatic conditions that favor wild flowers are not necessarily friendly to wheat.

LARGE FORESTS OF SMALL TREES.

The encyclopedic articles on the timber resources of Siberia are misleading in that they teach the reader to think Siberia abounds in large trees. The forests of that country are as vast as the authorities state, and for days and nights the traveler rides on the railway through a dense growth of firs, pines, and birches. The trees are slender, as a rule, and in that portion of Siberia east of Lake Baikal nearly all the trunks are about the right size for use in building log houses. There is no longer a superabundance of lumber along the Amur River and its tributaries. The fuel demands of the steamers on this river system have exhausted the timber within easy reach of the river; and in this, as in other parts of eastern Siberia, forest conservation is rigorously enforced. The largest single shipment of lumber ever made from the Puget Sound was for Vladivostock.

HOW PACIFIC COAST TRADE WITH THE ORIENT HAS BEEN HANDICAPPED.

In invading the Asiatic market the United States has been under great disadvantage. The proximity of the Pacific coast to the Orient has been more than offset by the superior shipping facilities enjoyed by European nations. Under the changed and changing conditions of ocean transportation this superiority must speedily disappear. In 1899, 63 per cent of the total annual trade of China was with the British, and, although Great Britain could not show the same relative gain in Chinese trade that was credited to the United States, that country could partially console itself with the knowledge that 61 per cent of the tonnage entering Chinese ports flew the British flag. European domination of Chinese trade has all along been due in a great measure to a shipping advantage that is about to pass away.

THE AMERICAN TRADE STAKE IN THE ORIENT.

As illustrating the trade stake of this nation in oriental countries, it may be said that our exports to the Orient have grown from $40,000,000 in 1891 to $115,000,000 in 1901; this while the total exports of the United States increased only 50 per cent. Our imports from oriental countries increased during the same time from $105,000,000 to $162,000,000 while the total imports were increasing only 10 per cent.

TREMENDOUS EXPANSION OF PACIFIC COAST COMMERCE.

While American exports to the Orient reached $115,000,000 in 1901, the exports of breadstuffs, hay, and dairy products from Puget Sound ports, from San Francisco, and from San Diego and Willamette, during the fiscal year ending June 30, 1901, as given by the Bureau of Statistics, Treasury Department, formed only a small portion of the grand total. As recapitulated the statistical showing is as follows:

Countries to which exported and ports from which exported.	Breadstuffs.	Hay.	Dairy products.
Chinese Empire:			
Puget Sound	$88,250	$28,359	$26,359
San Francisco	191,551	85,871	73,778
Willamette	55,363	13	.....
Total	335,164	114,243	100,137
China, Russian:			
Puget Sound	231,464	.....	15,598
Asiatic Russia:			
Puget Sound	361,887	260	15,400
San Francisco	14,042	40	4,763
Willamette	237,060	.....	880
Total	612,959	300	21,043
British East Indies:			
Puget Sound	1,500	.....	.....
San Francisco	4,391	.....	651
Willamette	2,526	.....	.....
Total	6,417	.....	651
Hongkong:			
Puget Sound	1,405,590	.....	30
San Francisco	1,414,485	.....	24,306
San Diego	4,760	.....	.....
Willamette	1,151,614	102	31
Total	3,976,449	102	24,367
Japan:			
Puget Sound	624,408	9,621	38,366
San Francisco	247,446	4,919	104,545
San Diego	88	.....	.....
Willamette	233,594	.....	.....
Total	1,105,536	14,540	142,911
Korea:			
Puget Sound	802	.....	1,155
San Francisco	6,340	.....	2,814
Total	7,142	.....	3,969
Philippine Islands:			
Puget Sound	549,444	286,365	2,202
San Francisco	14,028	.....	14,350
Willamette	5,695	37,629	.....
Total	569,167	323,994	16,552
Total oriental countries	6,846,298	453,179	325,228

The exports thus statistically reported are of the class that would mainly represent the yield of the arid-land region under the influence of irrigation. In this class should also be included an output of the fruits especially adapted to canning and curing.

The exports of breadstuffs, hay, and dairy products from the Pacific coast to oriental countries in the fiscal year ending June 30, 1901, had a total value of $7,624,705.

ORIENTAL DEMAND FOR PACIFIC COAST FOOD STUFFS.

It has been the custom to appraise the oriental trade from an Atlantic Coast point of view. With the annexation of the Hawaiian Islands, the acquisition of the Philippine Islands, and the increased maritime activity on the Pacific as a result of annexation, expansion, civilization, and industrial development, Pacific Ocean commerce can only be comprehensively viewed from Pacific coast points. The demand for shipping facilities on the Pacific has swamped the resources of every transportation company. No one can foretell the growth of Pacific coast commerce in the next few years.

Among the steamers to enter the Pacific coast-Orient trade this year are the following:

	Tons.	
2 Pacific mail liners	12,000 12,000	24,000
2 J. J. Hill steamers	20,000 20,000	40,000
2 Kidder-Peabody	10,000 10,000	20,000
Grand total		84,000

These six steamers will carry about 575,000 tons of freight in a year. Other large steamers are being transferred from the Atlantic to the Pacific. These are simply a few of the active and tangible signs of commercial expansion on the Pacific, signs that compel the attention of thinking Americans, signs that must convince every searching student that Pacific-coast domination of oriental trade is no longer a dream, and that one of the features of this trade will be a great oriental market for Pacific coast food stuffs.

THE NATURAL OUTLET FOR ARID-LAND PRODUCTS.

To-day Pacific coast flour and dairy products are shipped to China and Japan in immense quantities, and largely to Siberia and other Asiatic countries, and the demand for our food stuffs steadily increases. Slowly but surely flour is displacing rice in parts of China. Given favoring freight rates, the small reduction which increased shipping tonnage and cheaper operating expenses absolutely insures, and the Pacific coast will control the oriental market for cereals, canned and dried fruits, and other food stuffs.

The Orient will absorb the products of the irrigated lands and those of all other Pacific coast lands within easy reach of tide water. This new market will obviate Pacific coast competition with the farm products of the East and Middle West. It may be assumed that this thought, the idea that these food stuffs will furnish a reliable freight, impelled the Pacific Ocean transportation companies to build their new steamers of from 10,000 to 20,000 tons. These companies realize that no matter what changes may be in store for the commerce comprehending silks, teas, and other oriental products, the oriental demand for food stuffs will endure for all time, and appreciation of American flour, fruits, and dairy products will increase with use.

The Orient is the natural outlet for the surplus farm products of the arid region for all time to come. The Orientals can not increase their food-producing resources to any great extent. China and Japan take all the rice Korea can spare, and such is the demand from those countries that several times Korea has had to prohibit the exportation of rice. It is well known that under the most favorable circumstances there are famines in portions of China every year. The traveler in Japan is struck with the fact that the soil of that country is tilled to the final limit of production. For the reasons given, and because of the growing popularity of our food stuffs in the Orient, I maintain, first, that the oriental market will easily absorb our food-product surplus; and, second, that the greater the agricultural surplus available for export to the Orient, the better and cheaper will our shipping facilities become.

THE INTEREST OF THE STEAMSHIP COMPANIES.

The transportation companies have a natural and selfish interest in promoting an agricultural surplus on the Pacific coast. The export of American farm products to the Orient has been retarded by inadequate shipping facilities. About $1,000,000,000 worth of American farm products are sold in foreign countries annually. The proportion sold in the Orient is absurdly small and for the stated cause, namely, inadequate shipping facilities. Now that oriental custom is being continuously and systematically solicited, now that it is about to be dealt with as we deal with the custom of Europe, we shall have results as surprising to the average citizen and as gratifying to the nation as those attending our European trade.

Facilities unused might as well not exist. The great transportation companies of the Pacific are not increasing the tonnage of their fleets on speculative lines. These companies know past and present conditions and are in position to fairly gauge the future. They know that irrespective of what may be termed the goods phase of oriental trade there is an assured traffic in American food stuffs that will with slight stimulation reach enormous and highly profitable proportions. This fact is already admitted by James J. Hill and others prominent in railway and shipping circles. Another and equally patent fact is the inability of Pacific coast producers to meet the oriental demand for American food stuffs without conferring a reflex advantage on the farmers and manufacturers of the East and middle West. Not only will the Orient absorb the surplus food stuffs of the Pacific coast and thus lessen Pacific coast competition with Eastern producers, but the increase in the farming area, through the irrigation of arid wastes, will create a larger demand for agricultural implements and other mechanical products of the Eastern manufacturing belt.

FUEL OIL CHEAPENING PACIFIC OCEAN TRANSPORTATION.

I have referred to the increasing shipping facilities of the Pacific Ocean as a prime factor in the solution of the Asiatic trade problem, in so far as that problem relates to the Pacific coast. In this connection permit me to point to the sudden cheapening of fuel for steam purposes as a result of fuel oil developments in California. In 1901 California yielded 4,329,952 barrels of fuel oil. In 1902 the yield was 8,742,500 barrels. The yield would have been still larger had the railway companies met the transportation demands, a difficulty which within a few months has been obviated by transportation concessions and increased equipment. A pipe line from the oil fields to San Francisco Bay will soon lead to a largely increased production of fuel oil.

The figures of comparison between coal and oil fuel realized in recent practice in the British navy and reported by the admiralty were that 2 tons weight of oil were equivalent to 3 tons weight of coal, and 36 cubic feet of oil to 67 cubic feet of coal as usually stored in a ship's bunkers. The saving of stokers was considerable. In some instances a stoker's and trimmer's crew of 32 was now represented by a fireman's crew of 8 hands, whose duty was mainly cleaning and helping the engineers with their greasing. The greatest commercial gain was the increase of weight and space available for freight. If 3 tons of coal were taken as equal to 2 tons of oil fuel, there was a gain in weight of, say, 1,000 tons in the freight of a first-class Atlantic steamer, and a gain of nearly the whole of the bunker space, which, subject to drawbacks

of nonstorage in the hot parts, would be available for measurement freight. Allowing for these, and assuming the storage of the whole of the fuel in the double bottom and peaks, there would be a gain approaching 100,000 cubic feet of measurement made available for freight in such a vessel. The gain from substituting the new fuel in vessels of less steam power proportionate to the size would be correspondingly reduced, but it might be fairly estimated for most ships that 25 per cent of the space now occupied by coal-bunker storage could be utilized for cargo by the transfer of the fuel in a liquid form to the double bottom and other parts not now of any direct use. The cleanliness of oiling instead of coaling passenger ships and the saving of detention at ports of call were obvious advantages.

WHY THE FAR WEST FARM SURPLUS MUST GO TO THE ORIENT.

The figures in favor of fuel oil were presented to the British Institution of Naval Architects by Sir Fortescue Flannery, M. P. They support my claim that several contributing causes will inevitably bring about such a reduction of freight rates between the Pacific coast and oriental ports as will permit the profitable shipment of our cheapest and commonest food stuffs to oriental ports, and thus enable Pacific coast producers, those near the shore and those well back on the irrigated lands, to market in the Orient every pound of surplus food stuffs they can possibly grow. For reasons that will suggest themselves to the most casual observer, the farm products for the Orient must be produced on the Pacific coast, and within easy reach of tide water. These products form a freight that will not bear the cost of overland transportation.

The final influence of fuel oil on oriental trade is partially indicated by the following statement from Dr. C. T. Deane, secretary of the California Petroleum Miners' Association, and an authority on fuel oil and its uses:

"The United States transport *Meade* uses 80 tons of coal per day to make an average of 11 knots, for which the Government pays $8.50 per ton. Allowing for sixty days' steaming to Manila and return, it requires 4,800 tons of coal, costing $41,000. If she used oil she would burn 19,200 barrels, or 2,955 tons. Allowing four barrels of oil to equal one ton of coal, this would cost, at $1 per barrel, $19,200, saving in fuel alone $21,800. The same transport employs 38 men as stokers and coal passers; these would be reduced to 12, saving the wages of 28 men, not counting loss of time, dirt, etc., in placing fuel on the ship."

The Pacific Ocean steamers are rapidly displacing coal with oil. The resulting economy of operation will enable the transportation companies to carry Pacific Ocean products to the Orient at reduced rates, and thus encourage the shipment of food stuffs to China, Japan, and other oriental countries. There is no chance for a shortage of fuel oil. The several fields are only partially developed; the yield is steadily increasing, and hardly a week passes without fresh announcements of the use, or intended use, of oil in place of coal on Pacific Ocean steamers.

A SAMPLE PACIFIC COAST CARGO FOR THE ORIENT.

A timely and instructive illustration of Pacific coast cargoes for the Orient, showing the variety of one of these cargoes and also the oriental demand for Pacific coast farm products, happens to be available for present use. Under a traffic agreement between the Toyo Kisen Kaisha, Pacific Mail, and Occidental and Oriental companies (providing for direct and regular steamship communication between San Francisco and Manila), the steamer *Nippon Maru* sailed from San Francisco on the 9th of May, with a general merchandise cargo, valued at $168,440, manifested and destined as follows: For Japan, $79,007; Philippine Islands, $71,495; China, $12,713; Korea, $1,463; East Indies, $2,815; Vladivostock, $910; Siam, $37. The principal shipments were as follows: To Japan, 399,186 pounds compressed cotton, 73 packages asphaltum, 137 cases canned goods, 606 packages groceries and provisions, 55 packages hardware, 240 pounds lard, 2 bales leather, 1 package machinery, 2,120 pigs lead, 2 packages agricultural implements, 175 packages bicycles and sundries, 250 sacks cement, 4 packages electrical goods, 1 case firearms, 9 packages rubber goods, 10,015 pounds tan bark, 983 gallons wine, 18 cases whisky, 3 cases salmon, 2 bundles paper.

To the Philippine Islands—1,500 barrels flour, 1,850 casks bottled beer, 2,479 cases canned goods, 1,500 pounds coffee, 22 bales dry goods, 321 packages groceries and provisions, 69 packages hardware, 87 pigs lead, 200 cases mineral water, 10,960 pounds beans, 2,000 pounds codfish, 1,860 pounds cheese, 555 pounds dried fruits, 100 cases blackberry brandy, 49 packages drugs, 39 packages electrical goods, 8 packages machinery, 9 packages bicycles and sundries, 11 cases hats, 15,200 pounds ham and bacon, 11 packages leather, 7,600 pounds lard, 25 cases nails, 10,146 pounds dried pease, 2 packages paints and oils, 43 cases rubber goods, 1,650 pounds seeds, 1,000 cases salmon, 98 boxes type, 103 cases whisky, 15 cases potash, 21 coils rope, 31 packages boots and shoes, 400 pounds starch, 25 boxes soap, 45 packages stationery, 960 gallons spirits, 200 cases and 28 gallons whisky.

To China—1,203 barrels flour, 113 cases canned goods, 500 pounds dried fruits, 500 packages groceries and provisions, 20 packages hardware, 588 pigs lead, 516 pounds hams and bacon, 3 packages fresh fruits, 1,058 pounds cheese, 200 casks bottled beer, 5,800 pounds pearl barley, 3 boxes soap, 14,770 pounds seaweed, 35 sacks sea shells.

To Korea—5 packages groceries and provisions, 13 packages hardware, 1 bale dry goods, 64 cases whisky.

To Vladivostock—38 packages groceries and provisions, 11 packages machinery, 2 packages hardware.

To Siam—9 packages groceries and provisions.

To Java—105 cases canned goods, 80 cases salmon.

To Pedang—25 cases canned fruits.

To Penang—200 cases salmon.

To Singapore—45 cases canned goods, 305 cases salmon, 3 packages groceries and provisions.

To India—36 cases canned goods.

The steamer also carried $154,030 as treasure en route to China, of which $73,800 was silver bullion, $80,105 Mexican dollars, and $125 gold coin.

The food stuffs in the manifest may be accepted as an average showing of this class of freight in Pacific coast cargoes for the Orient. These food stuffs include flour; canned, dried, and fresh fruits; cheese; barley; dried pease, and unclassified products shipped as provisions. It should be borne in mind that the food stuff figures in the manifest represent one feature of only one of the many cargoes sent from the Pacific coast to the Orient every month.

THE INEVITABLE CONCLUSIONS.

The currents of air and water that so often facilitate trade and commerce have their complement in the commercial drift originating in conditions that may have been years in maturing or may have suddenly and almost unexpectedly appeared in the ocean of commerce. The developing oriental trade of to-day is merely the fulfillment of predictions following the admission of California into the Union. At various times in the last thirty years visits of oriental embassies have directed public attention to the possibilities and probabilities of American trade with the Orient, and this trade has seemed to have been viewed from every possible point. While trade prophets have often emphasized the advantages of oriental trade, and shown that at some time more or less remote the Pacific coast would be a great beneficiary of that trade, its tremendous certainties have only recently been silhouetted on the horizon. And with these certainties, which are due in part to new economies in transportation, to a better appreciation of irrigation values, and to the industrial progress of the nation, it has become apparent that the eastern as well as the Pacific coast States have a new interest in the oriental trade.

It is clear that the United States is likely to control the carrying tonnage of the Pacific; that the United States will have the share of oriental trade its favoring proximity and varying resources demand, and that the irrigation and development of the arid lands is necessarily a prime factor in solving the oriental trade problem. The great commercial drift toward the Orient will sweep in that direction the surplus food product of the Pacific coast. As the Pacific coast gains population and progress the Eastern States will correspondingly benefit. Under these new conditions, the strides in Pacific Ocean commerce, as shown by fact and figure, the assured oriental demand for Pacific coast products, and the resulting enlargement of the Pacific coast market for Eastern goods, I am satisfied the irrigation of the arid lands wil help the whole country, and that every section, North, South, East, and West, has a common interest in the adoption of a broad and national irrigation policy.

APPENDIX D.

[From the annual report of Secretary Hitchcock, of the Interior Department, for 1901.]

IRRIGATION.

In my report for last year attention was called to the importance of providing, through wise administration, for the creation of homes for millions of people upon the arid but fertile public lands. This matter is being given increased attention by the public press and by writers upon the subject, and at the last session of Congress hearings were held by the Committees on Public Lands and on Irrigation of Arid Lands of the House of Representatives.

Briefly stated, the results of the examinations of the extent to which arid lands can be reclaimed by irrigation, made by the committees of Congress, show that while one-third of the United States is still vacant there are relatively few localities where homes can now be made. This is not because the soil is barren or infertile, but on account of the difficulty of securing an adequate water supply. There is water to be had, but this water is mainly in large rivers, from which it can be taken only by great structures, or the supply comes in sudden floods and can not be utilized until great reservoirs have been built. It is impossible for a laboring man or an association of settlers to build these great works.

The pioneer coming to the arid region found many small streams from which water could be taken out upon agricultural land. He was able, through his own efforts, to irrigate a small farm and to make a home. These easily available waters have been taken, and a man can no longer secure a foothold, although there still remain 600,000,000 acres of vacant land. It is possible, by water storage, and by building diversion works from great rivers, to bring water to points where such men can utilize it and can enjoy opportunities similar to those had by the earlier settlers. Unless this is done much of the country must remain barren, and thousands of men and women eager to become independent citizens must remain as wanderers or tenants of others.

Enough work has been done by private capital to demonstrate the fact that water conservation and the diversion of large rivers is practicable, but, like many other works of great public importance, it can not be made a source of profit. The works of reclamation already constructed have, as a rule, been unprofitable, and capitalists are no longer seeking opportunities for reclaiming desert land when the probabilities are against their receiving an adequate compensation for the risk and labor involved.

The argument has been presented that if the Government will not make it possible to bring water to these lands they should be turned over to the States, but the majority of citizens who have studied the subject are opposed to such action, on the ground that the vacant public lands are the heritage of the people of the United States and should be held for the creation of homes, and not made a subject of speculation, as has almost invariably been the case with lands donated to the States. The whole trend of enlightened public sentiment is in favor of an expansion of industries and commerce internally through wise action by the National Government rather than attempting to get rid of the duties and opportunities of ownership by giving away this valuable property.

Two distinct conditions are to be clearly distinguished in the problem of water conservation for the development of the West. On the one hand there are localities where the agricultural lands along the rivers have been brought under irrigation and there is a demand for water to an extent far exceeding the supply, and where all of the flood water, though stored, would not suffice to satisfy the demands of the lands now partly tilled. The other contrasting condition is where there still remain vast bodies of public land for which water can be provided by means of reservoirs or by diversion from large rivers whose flow can not be used. Here the construction of works of reclamation in no way affects lands now in private ownership. Between these two extremes are all varieties of intermediate conditions, but these may be arbitrarily classed with one or the other.

In the first case reservoirs, if constructed, must be treated in the same way in which other public works having to do with rivers and harbors are managed. The water conserved should be used to increase the flow of the stream during the season of drought, regulating the volume so that it can be utilized to the best of advantage, according to the laws and customs prevailing in the locality. This is comparable to the conditions where the outlet of a harbor has been improved without reference to the benefits to the owners of the docks around the shores.

Under the other condition, where there are unappropriated waters flowing to waste which can be brought within reach of public land, it is possible to make provisions such that the Government can be reimbursed for its expenditure. The lands to be benefited by such works should be reserved for homestead entry only in small tracts, each being subject to the payment, before the title is finally passed, of a sum equivalent to the cost of storing and conserving the water, such payment to be made, if desired, in installments extending over a number of years.

Water should be brought to the point where the settlers can, with their own labor or by cooperation, construct ditches and laterals to reclaim the desert land. The conditions in this case would be comparable to opening a rich tract of land hitherto reserved. The moment the Government throws down the desert barriers or announces its purpose of so doing by making possible the obtaining of water, there will be an eager rush on the part of home seekers. With the requirement of actual settlement and cultivation, to be followed by the payment of the cost of storing water, the speculative element will be eliminated, leaving the ground free to bona fide settlers.

It is safe to predict, from the recent struggles for homes upon the public domain, that if it should be determined that the San Carlos dam, for example, is to be built by the Government, every acre of vacant land to be supplied with water would be immediately taken in small tracts by men who would not only cultivate the ground when water is had, but in the meantime would be available as laborers in the construction of the works, and

would ultimately refund to the Government the cost of the undertaking. In this manner thousands of the best class of citizens in the country would be permanently located in prosperous homes upon what is now a desert waste.

It has been estimated that the western half of the United States would sustain a population as great as that of the whole country at present if the waters now unutilized were saved and employed in irrigating the ground.

The first step in water conservation has been taken by Congress in giving authority for setting aside great areas of wooded land, largely for the beneficial influence which they exert upon the water supply. This should be followed by the construction, within the forest reserves, and elsewhere when practicable, of substantial dams impounding flood and waste waters.

Underground waters may be had in some localities where it is not practicable to irrigate the surface by means of stored water. The conditions favorable for artesian wells are believed to exist in a number of desert areas, and it is probable that important sources of supply can be had by artesian wells. The Division of Hydrography has begun the systematic study of some of these places, and has prepared maps showing the depth beneath the surface of the water-bearing rocks. Such maps are invaluable in the development of the country. These can be prepared for the edges of the artesian basins, where the rocks are partly upturned, but far out from the mountains it is necessary to sink test wells. If these are properly located, after thorough study of all the surrounding conditions, it may be possible to settle the question of artesian supplies and definitely outline the underground condition for hundreds of square miles of public land. Only by obtaining such information can the value of this and the practicability of settlement be made known. It is highly important, therefore, that a few such deep wells be drilled by the Government upon desert land for the purpose of demonstrating the possibility of reclamation. When it has been proved that water can be had, even at considerable depths, settlement will follow.

There is no function within the power of the Government higher than that of making possible the creation of prosperous homes. In his speech at Minneapolis, Mr. Roosevelt said: "Throughout our history the success of the homemaker has been but another name for the upbuilding of the nation." The remaining public lands are the heritage of the nation and should be held for homes, being reserved for actual settlers under the homestead act. The area to be taken by any one man should be reduced so that when water has been conserved by the Government the homestead shall, in certain parts of the country, be limited to 80 or even 40 acres.

The investigations of the Government experts have shown that, for example, in Arizona, where high-class fruits are cultivated, a family of five can obtain a good living upon 40 acres, or even 20. In the colder parts of the arid region, where forage crops are largely raised, the area may be made 160 acres.

The water for irrigation should be distributed in conformity with the laws of the State and without interference with any vested rights which have already accrued.

Where reservoirs or main-line canals are built by the National Government to furnish water for the public lands, the administration should proceed in harmony with the State laws, as would be the case with any other large landowner—State and Nation cooperating to accomplish a result of far-reaching benefit to both.

The expansion of our interior trade and commerce, through the settlement of the arid lands and the increase of population in the West, would benefit every class and section of our country in the same way that the settlement of the Ohio and Mississippi valleys has brought prosperity and wealth to the States east of the Alleghanies. The settlement of the vast arid region still farther to the west would benefit the whole eastern half of the United States by creating new home markets for Eastern merchants, Southern cotton growers, and all manufacturers. It would enormously increase local traffic, and would tend to relieve the congestion of our great centers of population, creating opportunities which would go far to allay social discontent. It would promote industrial stability by giving to every man who wanted it a home on the land. The rush for lands in Oklahoma testifies that there are a multitude of our people who will make great sacrifices to secure such homes.

There need be no fear of competition of Western products with Eastern agriculture, since the Asiatic markets now opened will absorb the surplus of the Western farms. The character of these is also such that the staple crops of the East can not now go to the remote West, nor those of the West come East, excepting in the case of semitropic and dried fruits.

The investigations which have been carried on demonstrate that, looking at the matter from all sides, there is no one question now before the people of the United States of greater importance than the conservation of the water supply and the reclamation of the arid lands of the West, and their settlement by men who will actually build homes and create communities. The appreciation of this condition is shown by the fact that both the great political parties inserted in their platforms articles calling attention to the necessity of national aid for the creation of homes on the public domain.

APPENDIX E.

[From the New York Evening Post.]

HOT WINDS OF AGRICULTURAL STATES HELD TO ORIGINATE IN ARID LANDS.

WASHINGTON, *April 24*.—William H. Chadwick, chairman of the transportation committee of the Chicago Board of Trade, has written a letter to Representative NEWLANDS, of Nevada, presenting new reasons why the pending irrigation bill should be passed. Mr. Chadwick holds that the States lying east and northeast of the arid-land States suffer enormous loss as a result of the burning heat coming from the arid quarters. He says;

"In behalf of many interests which will suggest themselves to you from my official position, I wish to call your attention to an argument in favor of the bill now in the House. The districts which compose the 'arid lands,' by reason of the intense dry heat there produced, and which, through the eastward movement of all atmospheric conditions across the continent, are, and always have been, a menace to all that great agricultural country lying to the east and northeast of the section in question, notably Texas, Oklahoma, Kansas, Missouri, Illinois, Iowa, South Dakota, Indiana, and Ohio. The tremendous losses experienced within the past twelve months by the farmer, the live-stock interests, the merchant, and common carriers, are fresh in our minds—a veritable calamity.

"The great loss entailed through the partial failure of the corn crop and enforced substitution on a large scale of other grain—wheat, rye, oats, etc., to supply the deficiency thereby caused, resulted in the curtailment of exports to such an extent as to be not only extraordinary, but in some instances, as with corn, sensational.

"The effects in the Eastern, or consuming States, are noticeable, and scarcely any part of the Union has been unaffected by the conditions produced by the scorching winds which, originating only in the arid region, blasted the crops over a large and important part of the country.

"We, who are directly affected by such misfortunes, desire to earnestly second the endeavor to remove the constant menace to prosperity in such a wide scope of territory, and ask for legislation to that end."

Naval Appropriation Bill.

SPEECH

OF

HON. JOSEPH T. JOHNSON,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 14, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 14046) making appropriations for the naval service for the fiscal year ending June 30, 1903, and for other purposes—

Mr. JOHNSON said:

Mr. CHAIRMAN: My knowledge of war ships being limited, I prefer to talk about the merchant ships. I shall therefore avail myself of the present opportunity to submit some observations against what is known as the ship-subsidy bill. The passage of this measure is advocated by some because less than 9 per cent of our imports and exports is carried in American ships which fly the American flag. The remedy for this stagnant and unsatisfactory condition of the American merchant marine, we are assured, is for the Government to subsidize American-built ships.

At the risk of being called an "old fogy" I protest against such legislation. I deny that we have the right, under our oaths of office and under the Constitution of the United States, to vote away millions of the people's money as a gift to any set of men. In taking this position I do not mean to be understood as being opposed to the upbuilding of an American merchant marine. I would like to see American ships with the Stars and Stripes at the masthead, manned with American sailors, on all the seas and in all the harbors of the world. I want all men to prosper; I want all industries to prosper; but I do not want any man or any business or any country to prosper at the expense of right and truth.

In this era of money making too many questions are discussed from the standpoint of profit rather than from the standpoint of right. The Constitution of the United States, the Declaration of Independence, and the principles of the fathers of the Republic are sneered at in some quarters and lightly brushed aside. Some of us who still believe in them are characterized as worshipers of dead heroes and the advocates of obsolete principles. It is said by our critics that the fathers of the Republic were wise in their day and generation, but the country has grown and expanded in population, territory, and business, and the old principles and policies must give way to enlightened, progressive statesmanship. I believe that the Ten Commandments are as binding on you and me as they were on Moses and the children of Israel. The Proverbs of Solomon are as wise and wholesome to the youth of to-day as they were to the young men of Jerusalem. The Sermon on the Mount, the essence of all truth, is as applicable to us as it was to the fishermen of Galilee. Truth and right do not change with increasing population and expanding commerce. Self-evident truths of one hundred and twenty-five years ago are self-evident now. Inalienable rights in the days of Thomas Jefferson are inalienable still, and will so remain till the end of time. The Supreme Court said that "to lay with one hand the power of the Government on the property of the citizen, and with the other to bestow it on favored individuals, to aid private enterprises and build up private fortunes, is none the less a robbery because it is done under the forms of the law and is called taxation." Justice Sharswood said:

> Legislation either to benefit or burden particular classes, under the idea that it is good for the State at large, infringes upon the natural and guaranteed right of acquiring, possessing, and protecting property subject to the fair and equal contribution to the just and necessary expenses of government in the exercise of its proper and legitimate functions.

The government which assumes the office of controlling and directing the lawful industry of the citizen into the channel it may deem to be best assumes what does not legitimately belong to it. These propositions are so clear and self-evident as to make the conclusion inevitable that it is wrong and not within the province of Congress to vote millions of the people's hard-earned dollars to shipowners, thus imposing burdens upon all the people for the benefit of a small class, under the assumption that the country at large will be benefited by the success and prosperity of the favored few.

In the argument on this measure we are constantly told that Great Britain and other countries, by resorting to subsidies, have built up a great ocean-carrying business, and have outstripped us in the race. In the first place, as I shall subsequently show, this statement is not true. In the second place, if it were true, it would not follow that we can or ought to adopt a like policy. The government of Great Britain is founded upon the idea that some men are born with the divine right to rule their fellow-men, and that the masses ought to support the classes in luxury and

ease. With us no such doctrine obtains. Every true man is as good as a king, and every true woman is a queen. There are with us no nobles by birth, but the land is full of men and women who have been ennobled by sacrifices and adversity. It is not, however, necessary to pursue this line of thought further. Let us return to the proposition of fact. Does Great Britain, whose ships carry more than half of the ocean freight of the world, subsidize her ships? The great tramp steamships that fly the British flag and are seen on all the seas and in all the harbors do not now receive, and never have received, one penny of bounty in any form from the English Government. The truth of this statement is so easily accessible to every man who cares to investigate the question, that it is incomprehensible to me why men of intelligence should constantly repeat that Great Britain's success in her ocean carrying trade is due to subsidies. Great Britain does pay certain lines of fast steamships liberally for carrying the mails, but she does not pay her ships as liberally as we pay our ships for carrying our mails. Great Britain pays fast steamships so much per pound for carrying the mail. The United States Government pays fast American ships a large amount whether they carry any mail or not. Last year England paid, all told, for foreign mail amounting to 24,000,000 pounds, $4,500,000. The United States paid for 9,198,853 pounds of mails $2,000,000. If liberal payments for carrying the mails are subsidies, we are already, and have been for many years, subsidizing ships. As we pay more for carrying mail than Great Britain, it would follow, if the arguments of the advocates of this measure are sound, that we should have a better merchant marine than Great Britain.

One of the stock arguments heretofore advanced in favor of this measure is that the people of the United States are paying out annually in ocean freights the vast sum of $200,000,000, which goes into the pockets of foreign shipowners. This allegation is based upon the assumption that foreigners own all ships that are operated under foreign flags. If upon investigation it turns out to be a fact that American citizens own and operate many vessels under foreign flags and get the benefits of the freight, then the argument that the American people are sending into foreign countries more than $200,000,000 every year to pay the owners of foreign ships falls to the ground. In 1901 Mr. Morgan purchased the Leyland Line of steamers. This line comprises many ships and is worth many millions of dollars. It is operated under a foreign flag, however. All the freights paid that line by the American people, as well as by the people of all countries of the globe, find their way to New York. Within the past few weeks practically all the great trans-Atlantic lines of steamers have been purchased by Mr. Morgan and his associates. These various lines will continue to operate under the flag of foreign countries, yet they are owned by citizens of the United States. Nominally they will maintain their separate existence, but in reality they are controlled by one man, and there will be no competition. In this day of consolidations and combinations I do not see what hope can be held out that by subsidizing American-built ships we would have competition in freight. Even if an independent company should undertake to build and operate ships in competition with the Morgan lines, the new company would be absorbed by the combination or driven to the wall and bought in. Of the 185,000 miles of railway in the United States, 120,000 miles are consolidated into five great companies. Under the idea of "community of interests," these lines are run practically without competition and are controlled by the same men. The Morgan lines of steamers and the great railways of this country are operated in sympathy with one another, without competition, and men under the most liberal bounties could not operate steamship lines in competition with the Morgan lines. The Morgan lines could make the water rate merely nominal in order to crush out attempted competition, and then recoup themselves by terminal charges and railway rates to the interior.

It is insisted that this bill is in the interest of the American laborer. We are told that the rate of wages paid on our ships exceeds the rates paid by other countries and that this subsidy is for the benefit of the sailors and not for the owners of the vessels. It will be observed that all the facts, as well as common sense, prove that the rate of the port and not the flag of the ship controls the wages. American ships can get seamen and laborers at Hongkong or any other port in the world where they can get them cheapest. However anxious the Republican party may be to protect manufacturers, it manifests a willingness to have free trade in seamen for the benefit of shipowners. Only a little while ago the representatives of steamship lines were protesting against a law that would prohibit them from employing Chinese sailors, the cheapest labor on earth, and their protest was respected by the Republicans in Congress.

I have no doubt the same men, or many of them, who were so anxious to preserve the right to employ Chinese sailors, advocate the passage of this vicious measure for the benefit, as they allege, of the American sailor. When the shipping bill is under consideration, the American sailor receives high praise and eloquent pleas; but when the Chinese-exclusion bill is before us, we are assured most positively that no American can stand the heat on a voyage from the Pacific to the Far East. There are and can be, they tell us, no American sailors on these lines. If that be true, there can be few American sailors on the seas, because all ships going to South America, Central America, Australia, Africa, and Asia, and most of the ports of the world, must pass through these climates, which we are told an American sailor can not endure. It is a case of "now you see it, and now you don't." They want the privilege of employing Chinese sailors because Americans can not stand the heat; they want the subsidy for the benefit of the American sailor.

One of the vicious parts of this measure is that the subsidy is given to ships now in existence, and yet the excuse offered in support of the bill is that we must encourage the building of ships in American shipyards. I respectfully suggest that instead of giving millions of dollars to ships now in existence the better way to secure the building of additional ships would be to give the bounty to ships hereafter to be built. I suspect that if the bounty proposed should be withheld from ships now on the seas and under our flag, strong influences pressing for this legislation would be withdrawn. Whatever might be said in favor of extending bounties to ships hereafter to be built, on the plea that such bounties would insure the building of additional ships and thereby increase our merchant marine, no such claim can be made in favor of subsidizing ships that we already have. If the ships now flying our flag are making money, what legal, constitutional, or moral right have we to give them millions of the people's money in order that their owners may receive still larger profits? On the contrary, if the owners of American ships are running them at a loss, why should the American Congress vote them millions of the people's money to save them from loss? We have never been in the habit of making good the losses of the thousands of men who have engaged in merchandising, manufacturing, and farming at a loss. Do you answer that the whole country would be incidentally benefited by having strong, prosperous steamship lines? Then I reply that the whole country would be equally benefited by the success and prosperity of its merchants or its farmers.

If the shipping bill should pass both Houses of Congress and become law, the American Navigation Company, with its four great ocean greyhounds, would receive the sum of about $1,700,000 each year from the Treasury of the United States. All the logic and all the eloquence of the ages can not convince the men in this country who live by the sweat of their faces that it is right to bestow the people's money with such a lavish hand upon the millionaires who own these ships.

We are told that it costs more to build ships in this country than it does in other countries. Why should it? Our raw material is cheaper than in any other country on earth. Our workingmen, while receiving more wages per day than the workingmen in other countries, turn out more and better work for a dollar than the laboring men of any other country on the face of the earth. The steel trust sells steel, which is the principal material in modern ships, in all the countries of the Old World. If the steel trust can ship steel across the ocean and sell it in competition with the steel plants of the Old World, the American shipbuilder ought to get it at European prices, less the freight, because he is favored above all other classes in this country in this respect. There is free trade for him. He can import free of duty steel, iron, and lumber, and all material that he intends to use, and does use, in the building of ships. It follows, therefore, that the shipbuilder is in a position to buy his material abroad whenever the home manufacturers undertake to demand higher prices than foreigners are willing to take.

It is suggested that all other countries pay subsidies, and as they have outstripped us in the ocean carrying business, the remedy is for us to pay subsidies. It is not true that all other countries pay subsidies, and it does not follow that the payment of subsidies is the cause of their outstripping us in the race of ocean freight carrying. There is, however, one thing that every nation on the face of the earth except the United States does, and that is this: They allow their citizens to buy ships anywhere on the face of the globe and sail them under their own flag. May this one thing not be the cause of our poor showing in this respect? An Englishman, a German, a Frenchman, an Italian, or a Russian can go into any shipyard in the world and buy his ship and take it home and place over it the flag of his own country. An American citizen is denied that privilege. If for any reason when he goes to buy a ship he finds it cheaper in some other part of the world than he finds it at home, and he wishes to buy where he can do the best, he has that right. But he will be compelled, as long as he owns the ship, to operate it under a foreign flag.

We are urged to pass this bill in order that in time of war we can use the subsidized ships as auxiliary cruisers. That means if we will give the owners millions of dollars each year in time of peace we will have the privilege in time of war of engaging in a game of "stand and deliver," with the Government as the victim. In other words, when the Government needs the ships

she can get them—by paying prices that would startle and shock our consciences. The Government in time of war can get these ships for precisely the same price—and that is an exorbitant one—whether they are subsidized or not. During the Spanish-American war, which lasted about three months, the Government pressed into service the *St. Paul*, the *St. Louis*, the *New York*, and the *Paris*, at a cost to the Government of $2,864,835. We had been paying these ships extravagant prices for carrying the mails for a good many years, and when the emergency came we did not get them one cent cheaper than we could have gotten them if we had not been so liberal in all these years.

There is another bad feature of this measure that I wish to refer to, and that is the enormous bounty provided for these magnificent passenger ships. The farmers and the laboring men of this country are told that they should submit to this taxation for the benefit of the shipowners, because, they say, it will ultimately result in cheaper freight rates on their products which find a market on the other side of the seas; and yet these great bounties are provided for the ships that transport across the seas not the farmers' products but the millionaires, who farm the farmers.

These subsidies are said in one breath to be necessary to equalize the cost of construction and operation of American-built ships with that of the ships of other countries; in the next breath we are assured that this bounty will reduce freight rates. If it takes the bounties to equalize the cost of construction and operation, then the very moment the freight rates are reduced the equality will be destroyed. These statements can not both be true. I do not believe that either of them is true.

In conclusion, Mr. Chairman, let me say that we ought to preach and practice here and everywhere the doctrine that every dollar in the Treasury belongs to the people. We have no right use one dollar of it except to defray the necessary expenses of the Government. We should neither take from the rich and give to the poor, nor take from the poor and give to the rich, but let every man enjoy the fruits of his own labors. If we are guided by that principle in our votes here, we will not pass the ship subsidy bill.

Civil Government for the Philippine Islands.

SPEECH
OF
HON. ALBERT J. BEVERIDGE,
OF INDIANA,

IN THE SENATE OF THE UNITED STATES,

Tuesday, June 3, 1902.

The Senate having under consideration the bill (S. 2235) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. BEVERIDGE said:

Mr. PRESIDENT: The honorable Senator who has just taken his seat [Mr. MCLAURIN of Mississippi] has stated that those of us who favor the bill have charged the opposition with slandering the Army, and that that charge is false.

Mr. President, why has that charge been made? It is because exceptional instances of the conduct of soldiers and officers have been taken out of the usual and general action and attitude of our forces and have been presented to the Senate and the country as though they were the customary conduct of the American Army.

I had not intended, Mr. President, to occupy the attention of the Senate any more upon this question, but upon looking over the RECORD this morning and finding there repeated what I have seen so often before—excerpts from the testimony of witnesses before the committee as to exceptional instances of harsh measures, from which was carefully excluded the testimony as to the general conduct of the war—it seems proper and right and just not only to the Army, not only to the policy of the Government, but to the American people, that the testimony as to the ordinary and habitual conduct of American soldiers from the very inception of hostilities to the present time should be presented to the country.

Mr. President, I do not think that the mere assertion of Senators will be controlling or convincing. But certainly the words of those who have been upon the ground and who have studied the question and who have observed conditions there ought to carry greater weight than those who bring their observations merely from their prejudices and their imaginations.

I.—CONDUCT OF OUR ARMY.

Therefore, Mr. President, starting out with the report of the Commission which was headed by President Schurman, I will take from that report written by him a statement, made at the very beginning of this affair, as to the conduct of our Army. President Schurman, who is now assailing this very policy, said, with reference to the conduct of our forces in the Philippines:

FIRST REPORT OF SCHURMAN COMMISSION AS TO CONDUCT OF ARMY TOWARD FILIPINOS.

The Commission is not willing to close this statement without paying just tribute to our sailors and soldiers. The presence of Admiral Dewey as a member of this body makes it unfitting to dwell on his personal achievements, but he joins with us in eulogy of his comrades. We were fortunate in witnessing some of the many brave deeds of our soldiers. All that skill, courage, and patient endurance can do has been done in the Philippines.

Attention of Senators in opposition is called to what Professor Schurman says immediately following. It appears that this attack on our Army is not new. But those who assailed our uniform when Schurman wrote are even now forgotten, and in their fate there is prophecy and warning. Says Schurman:

We are aware that there are those who have seen fit to accuse our troops of desecrating churches, murdering prisoners, and committing unmentionable crimes. To those who derive satisfaction from seizing on isolated occurrences—regrettable, indeed, but incident to every war—and making them the basis of sweeping accusations, this Commission has nothing to say. Still less do we feel called upon to answer idle tales without foundation in fact. But for the satisfaction of those who have found it difficult to understand why the transporting of American citizens across the Pacific Ocean should change their nature, we are glad to express the belief that *a war was never more humanely conducted. Insurgents wounded were repeatedly succored on the field by our men at the risk of their lives.*

Those who had a chance for life were taken to Manila and tenderly cared for in our hospitals. If churches were occupied, it was only as a military necessity, and frequently after their use as forts by the insurgents had made it necessary to train our artillery upon them. Prisoners were taken whenever opportunity offered, often only to be set at liberty after being disarmed and fed.

If it be said that this is a statement made at the inception of the war, let us turn to the statement of Governor Taft, who has spent two years there, and delivers the following in his recent testimony as his final judgment and conclusion; and no man has had better opportunity to witness the effect of kind or brutal treatment of natives than Taft. Governor Taft says:

TESTIMONY OF GOVERNOR TAFT AS TO CONDUCT OF ARMY TOWARD FILIPINOS.

COMPASSION OF AMERICAN FORCES.

After a good deal of study about the matter—and although I have never been prejudiced in favor of the military branch, for when the civil and military branches are exercising concurrent jurisdiction there is some inevitable friction—*I desire to say that it is my deliberate judgment that there never was a war conducted, whether against inferior races or not, in which there were more compassion and more restraint and more generosity, assuming that there was a war at all, than there has been in the Philippine Islands.* Now, I say that without having been in the war at all, having only been at Manila, where reports were constantly coming in and where I was talking with officers of the Army, and knew what the general orders were and what the general policy was.

The CHAIRMAN. You also talked with a great many Filipinos and insurgent leaders, I suppose?

Governor TAFT. I have.

And Governor Taft had traveled nearly all over the islands organizing civil government when he made that statement.

Mr. President, I desire to follow that by the testimony of General MacArthur, who commanded our troops, and by two orders introduced by General MacArthur in his testimony, as showing the spirit of our military operations.

TESTIMONY OF GENERAL MACARTHUR AS TO CONDUCT OF ARMY TOWARD FILIPINOS.

General MACARTHUR. I would like to say this—I thought I had made a note of it: That, in my judgment, from an intimate knowledge of military operations of the islands, from the operations against the Spanish in Manila, until I left the islands on the 4th of July, 1901, *I doubt if any war—either international or civil, any war on earth—has been conducted with as much humanity, with as much careful consideration, with as much self-restraint, in view of the character of our adversary, as have been the American operations in the Philippine Archipelago.*

The CHAIRMAN. In that connection, General, there have been a great many stories and statements in regard to cruelties practiced by our soldiers upon hostile inhabitants of the Philippine Islands. What have you to say in regard to that, as to the general directions of yourself and the other officers in command, as to the general conduct of the soldiers?

General MACARTHUR. The standards of course are established by general orders and by advisory memoranda and by the reviews of courts-martial. They are on a high ideal plane. There have been in the neighborhood, I think, of 125,000 men and soldiers in the islands. Some of those men have committed excesses under the provocation of hardship. That is not mentioned as an excuse, but as a cause. Wherever any violations of the laws of war have been detected the remedy has been instantly applied. It was my own purpose to promulgate views in orders, by personal admonition, and by punitive action; but of course in conducting war all of the ferocity of humanity is brought to the surface, and in individual instances excesses have been committed.

AMERICAN CHARACTER NOT "TRANSFORMED."

But to say that the Army commit excesses, or that excesses were encouraged, of course is to say that the character of Americans in the Philippines is immediately transformed by the question of latitude and longitude, which is not the fact. Individual men have committed individual outrages; but when we compare the conditions that exist in the Philippines to-day in that respect with what have existed in all modern wars between civilized states *the comparison is absolutely in favor of the self-restraint and high discipline of the American soldier.*

The CHAIRMAN. Where excesses were brought to your knowledge were they punished?

General MACARTHUR. Absolutely. It was my effort to get that idea permeated through the Army—that we were representing the highest stage of civilization and that our military movements and moves should comport therewith; that they must be such as to meet with the approbation of public opinion at home.

Senator BEVERIDGE. The general conduct of our soldiers and officers there, irrespective of orders from headquarters, was in the direction of kindness, mercy, and humanity, was it?

General MACARTHUR. Absolutely, sir.

Senator BEVERIDGE. Instead of the reverse?

"BEARING OF OUR ARMY SUPERB."

General MACARTHUR. *The bearing of our Army as a whole was simply superb.*

Senator BEVERIDGE. There were wards in our hospitals in Manila and elsewhere which were devoted to Filipino sick and wounded, were there not?

General MACARTHUR. Yes.

Senator BEVERIDGE. And what were the facts about Filipino sick and wounded in our hospitals being attended by our physicians and nurses?

General MACARTHUR. They were treated the same as our own people. A wounded enemy is a guest. A prisoner is a guest. That is the doctrine of military courtesy. The moment an unarmed man comes into your possession he is entitled to the hospitality of friendship, and they always receive it.

Senator BEVERIDGE. That was the spirit in which they were treated?

General MACARTHUR. That was the spirit in which they were treated.

Senator BEVERIDGE. And what is the fact about that being the case not only in Manila, in the general hospital there, but also as you progressed over the island, in the temporary hospitals you established?

General MACARTHUR. *That was so everywhere; not only by orders, but so by reason of the spontaneous generosity of our soldiers, who have uniformly displayed that kindness which is characteristic of American soldiers.*

PRIVATE SOLDIERS AS TEACHERS.

Senator BEVERIDGE. One more question. What is the fact, General, about the efforts of our officers and soldiers detailed from the ranks to establish schools in the towns possibly even before civilized government began and while it was under military control?

General MACARTHUR. *Soldiers were detailed in many instances; where no teachers were available we always put soldiers in.*

Senator BEVERIDGE. What was the efficiency and zeal of soldiers detailed from the ranks as teachers?

General MACARTHUR. Good, I would say. In that connection I would like to say something in behalf of the Filipinos. That was one of their first-expressed wishes. Whenever we entered a town one of their first-expressed wishes was that schools might be established. Of course that was responded to instantly by us,

Senator BEVERIDGE. By the military authorities?

General MACARTHUR. By the military authorities.

The CHAIRMAN. That, you say, was one of their first requests?

General MACARTHUR. Yes. And they show a great deal of ability in the minor administration of townships, in getting together school material, and getting the children into the schools.

EDUCATION BEGAN BY ARMY.

Senator BEVERIDGE. So that the work of education by Americans began before the civil administration, under the military control?

General MACARTHUR. It began instantly.

Senator BEVERIDGE. And as you passed forward with your troops you followed with your soldiers detailed as teachers?

General MACARTHUR. Wherever it was necessary, and it occurred in very many instances. That educational question was one of the easy and pleasant subjects of administration. The Filipinos wanted it, and we were eager to give it, and we came together on that issue immediately. It was the focus in which originated a great deal of good will, and which is spreading over the island still in that same form.

Senator BEVERIDGE. When your arms passed on and insurrection no longer existed in any particular locality or district, what is the fact about the people returning to their fields and homes and transacting the business and labors of everyday life in peace and freedom?

General MACARTHUR. They returned in large numbers.

Senator BEVERIDGE. And went to work?

General MACARTHUR. In fact, whenever I invited them to come back they always did. Came back and went to work.

Senator BEVERIDGE. And went to work?

General MACARTHUR. Yes. That was noticeably so in the towns northeast of Manila immediately after the first outbreak. They of course had been misinformed and were apprehensive, and when we entered the town they all fled; but on our invitation they always returned.

Senator BEVERIDGE. What is the fact about their having fled and about the insurrection itself having been aided and maintained by false reports of its leaders concerning us—our methods and purposes?

General MACARTHUR. That obtained to a very great extent; not only the Filipinos, but the Spaniards had——

Senator CARMACK. What was the character of those false reports?

General MACARTHUR (continuing). Talked of our peculiarities and stated many things that were not true, and the people were very apprehensive until they came in contact with us.

Senator BEVERIDGE. And then they found this to be untrue and returned to their homes and industries?

General MACARTHUR. Yes.

ORDERS OF GENERAL MACARTHUR AS TO TREATMENT OF FILIPINOS BY AMERICANS, INTRODUCED BY GENERAL MACARTHUR AS A SAMPLE AND ILLUSTRATION OF SPIRIT OF ORDERS.

FIELD ORDERS, } HEADQUARTERS SECOND DIVISION,
No. 2. } EIGHTH ARMY CORPS,
Malolos, P. I., April 2, 1899.

1. Many of the citizens of Malolos and other towns in the vicinity desire to return to their abandoned houses within the lines of the army.

The interests of the United States will be subserved by encouraging this disposition on the part of the natives in every way consistent with military interests.

All officers and soldiers are therefore urged to contribute to the end in view by considerate and kind treatment of these people, who are now part of and under the protection of the United States.

The controlling insurgent authorities have persistently represented the American soldiers as turbulent, undisciplined, and given to gross and licentious excesses upon helpless people.

In order to eradicate the effects of such mendacious misrepresentations, it is especially necessary that all concerned should sedulously abstain from practices in any way calculated to annoy or engender the feelings of timidity or mistrust.

Unarmed natives will be permitted to enter our lines at all times during the day, with a view to the resumption of their usual avocations and occupancy of their houses.

By command of Major-General MacArthur.

That was published and circulated as generally as possible, and the consequence was that thousands, tens of thousands, perhaps fifty thousand people, returned to different towns on the line of the railroad between Malolos and Manila.

Subsequently, in preparing for the advance from Malolos, the order of battle was issued on the 22d of April. [Reading:]

"The seventh paragraph of that order is to this effect:

"7. The purpose of the United States in these islands is beneficent. It is, therefore, one of the most important duties of American soldiers to assist in establishing friendly relations with the natives by kind and considerate treatment in all matters arising from personal contact. To exasperate individuals or to burn or loot unprotected or abandoned houses or property is not only criminal in itself, but tends to impede the policy of the United States and to defeat the very purpose which the Army is here to accomplish. All concerned are accordingly strictly charged to practice becoming self-restraint in the premises, and it is made the special duty of all officers to prevent thoughtless and ignorant men from indulging in any of the practices enumerated and to take necessary action to insure adequate punishment, as prescribed by the Articles of War, in the event of overt acts being committed by any member of the command, either during the contemplated actions against Calumpit or thereafter throughout the campaign."

I follow that by the testimony of General Hughes and by the testimony of General Otis upon this point, and by the testimony of Professor Barrows, not belonging to the Army, but who had carefully been well over the island of Luzon in the interest of our educational establishment:

TESTIMONY OF GENERAL HUGHES AS TO CONDUCT OF ARMY TOWARD FILIPINOS.

Senator BEVERIDGE. With reference to the line of inquiry just completed by Senator PATTERSON, I wish to ask you one or two questions, throwing light, perhaps, on the other side of the question. It is true, is it not, that the Americans established in Manila quite early and maintained there as long as necessary a hospital where Filipino wounded and sick, etc., could receive the attention of American surgeons and physicians, medicines, and other care, precisely like the American troops?

General HUGHES. My recollection is that one section of the general hospital was set aside for Filipinos, *where they received the same care and treatment that were given to our own people.* The one great trouble they had with them, though, was that their curiosity would compel them to push their fingers into the wounds and tear them open, and the surgeons said they had a very difficult time keeping the wounds in healthy condition.

Senator BEVERIDGE. But it was an instance which was uniformly repeated in various phases of practical kindness on the part of the Americans to the Filipinos?

CARE OF WOUNDED FILIPINOS.

General HUGHES. It was the case at all times. *The wounded were cared for just as you would care for civilized wounded.* In order to let them know that this was the case, I took great pains after they were cured to send out men who had lost an arm or a leg over the lines, in order that all fear of being made prisoners might be allayed, and instances of resistance to the death might cease.

Senator BEVERIDGE. What have you to say, from your experience, about the kindness and consideration shown by the American authorities and troops to the Filipinos who were soldiers or otherwise, relating instances, if you care to, or making your statement general, as you please?

General HUGHES. I have no hesitation in saying that, so far as I know, the same consideration was shown the Filipino when he was captured or wounded that was given to our own people when captured or wounded in the civil war. We have carried them by our carriers for miles; we have carried them two days to get them where they could get hospital treatment;

General HUGHES. *I have no hesitation in saying that, so far as I know, the same consideration was shown the Filipino when he was captured or wounded that was given to our own people when captured or wounded in the civil war. We have carried them by our carriers for miles; we have carried them two days to get them where they could get hospital treatment; we have carried them for a day to get them to a hospital.* I remember one case in Antique where the man was shot through the head, and I asked the officer what he intended to do with him. He said, "I am going to put him in the hospital." Said I, "He will run away unless you watch him." Sure enough, inside of forty-eight hours that man got up and ran away.

TESTIMONY OF GENERAL OTIS AS TO CONDUCT OF ARMY TOWARD FILIPINOS.

Senator BEVERIDGE. Now, will you tell the committee what the fact is about the cruelty toward the natives, prisoners or otherwise, of American officers and soldiers; as to whether cruelty by American officers and soldiers was practiced upon the people, or even upon prisoners, or whether, on the contrary, kindness and consideration was practiced by our troops toward them?

General OTIS. *The greatest kindness.* I investigated myself, and through inspectors appointed by me, every statement of harsh treatment that I heard of while in the islands. In some cases the investigation was pursued for weeks.

Senator BEVERIDGE. What is the fact about your having established, General, in Manila and elsewhere, if such was the case, hospital wards devoted to wounded Filipinos, and what care was taken of the Filipino sick and wounded, in comparison to the care taken of the American sick and wounded?

General OTIS. We put the sick and wounded in our own hospitals. When our own hospitals were filled, we hired the hospitals of the friars within the walled town. They were all taken care of. We hired doctors when we did not have sufficient medical assistance of our own. We hired Filipino doctors and Spanish doctors and looked after the sick and wounded of the Filipinos, and they received every care possible. In fact, one of the commissions, one of Aguinaldo's commissions, came in while we had a great many of the Filipinos in the hospital, and I invited the members of the commission to go around and visit all their sick and wounded throughout the city; and they did so, and came back and expressed themselves as greatly gratified.

Senator PROCTOR. You do not think, General, on the whole, that the character of the American Army, so far as common humanity is concerned, has changed entirely in a year or two's service over there, I judge?

General OTIS. No, sir. *We were laughed at by the Spaniards and by Europeans for the humanity we exercised.*

TESTIMONY OF PROFESSOR BARROWS AS TO EFFECT OF CONDUCT OF ARMY TOWARD FILIPINOS.

Senator DIETRICH. In your travels through the island of Luzon, did you find any evidence that American soldiers had perpetrated any cruelties or used methods of uncivilized warfare upon natives, especially the water cure?

Mr. BARROWS. I found very little evidence of it. I think I have met two persons whose word I would trust who professed to have seen the water cure administered. It did not injure the natives.

Senator DIETRICH. By whom was it perpetrated?

Mr. BARROWS. I think by small scouting parties.

Senator DIETRICH. Macabebes?

Mr. BARROWS. Usually a company of native scouts with perhaps a few soldiers along.

Not only this, Mr. President, but there also appeared before our committee many soldiers and two or three officers in addition to the general officers. The testimony of these men, all of whom I believe testified to the water cure, was that the general conduct of our officers and soldiers was humane, kindly, considerate, and compassionate, not only to the Filipino prisoners taken in war, but to the Filipinos themselves. I ask leave to print it without

reading. I have taken only that portion of the testimony as to the usual and general conduct of the Army officers, because that is the only standard for just judgment and because the portions of testimony relating to the exceptions have been repeatedly presented already.

The testimony referred to is as follows:

TESTIMONY OF CAPT. FRED MCDONALD AS TO USUAL CONDUCT OF AMERICAN OFFICERS AND SOLDIERS TOWARD FILIPINOS.

Questions by Senator DUBOIS:

Q. So far as you heard or knew there never was but one case of water cure over there, and that was the one at Igbaras?

A. So far as I knew; yes, sir. My men had explicit orders to treat natives with the greatest care—to be more than particular. I will show the committee to-morrow an order issued in relation to it—an official document. I was very careful to treat all prisoners with kindness. I might illustrate, if I am not taking up the committee's time.

The CHAIRMAN. We will be glad to hear you.

A. (Continued.) A case of an insurgent officer whose picture I have here. He was the commanding officer of the insurgent forces where I was in command of the American forces. His name was Clavira. His wife was sick in one of my towns, some 10 miles away from my station. I was informed of that fact, and *I sent my doctor with orders for him to go to the town of Guimbal and treat the wife of this insurgent officer.* He, you understand, was in active operation against the American troops. He did so, and while he was unable to do much for the woman he called on her twice. My sergeant and hospital steward at that station kept track of the case, and the woman eventually recovered.

We have any number of times taken sick insurgent prisoners to our hospital; we have treated the native police when they have been wounded. The cases of kindness by men under my command and by other officers were too numerous to mention.

The CHAIRMAN. That inscription on the back of this photograph that you showed me is to the effect that he gave it to you?

The WITNESS. Yes; and I received photographs from other insurgent officers. Here is a photograph of another insurgent officer who commanded a column. He went away out of his way to surrender to our station, when he had been ordered to proceed to Jaro, for the reason that he believed the officers and troops in my district were very, very fair and always treated his troops with kindness. All these officers called on us later and thanked us for different kindnesses we had shown their men.

"LIKE FATHERS TO CHILDREN."

By Senator BEVERIDGE:

Q. On that point, Captain, what was the general and ordinary course of conduct of the American officers and soldiers toward the people themselves who were not prisoners, and the people peaceably at work in their fields and homes, as to kindness and consideration?

A. *More like father and children; we always treated them with extreme kindness.*

Q. And the soldiers?

A. And the soldiers the same way.

Q. What orders did the soldiers have as to their treatment of the people?

A. To treat them exactly as they would citizens or natives at home. If a peaceable native was interfered with in his occupation in any way the case was investigated and the soldier who offended was put in the guardhouse; he was punished.

Q. Speaking of native prisoners, what was the treatment the prisoners you observed received at the hands of the American officers and men?

A. Exactly the same treatment that any prisoners would receive. They received, for instance, the same food that our soldiers received.

Q. If they were sick or wounded?

A. If they were sick or wounded they were sent to the hospitals and treated in the hospitals.

Q. By what physicians?

A. The American physicians.

Q. And if nursed, by what nurses?

A. By American Hospital Corps men.

Q. Now, about rations. You have some rations issued to men. I assume that no member of the committee wants any great volume of these ration reports. You may put in such as you want to, and eliminate such as you want to.

RATIONS ISSUED TO INSURGENT PRISONERS.

Q. There are some I have picked out at random while you have been testifying on other matters. I have looked over some of these while you have been testifying on other points. Here is one—ration No. 419. I find in a period of two weeks, from the 16th of December to the 31st of December, that the squad of prisoners provided for during that time was 26; that during this period for these 26 prisoners there were issued rations as follows: 126 rations of bacon, 169 fresh beef, 124 salmon, 419 rice, 419 coffee, 419 sugar, 419 vinegar, 419 soap, 419 salt. This was to the native prisoners, as I understand it?

A. *Entirely for their use; yes, sir.*

Q. I have made a very hurried, rough calculation here and I find that that means for each week each man had 3½ of fresh beef, each Filipino prisoner; each one had 2 of bacon, 2 of salmon, 8 of rice, 8 of coffee, 8 of sugar, 8 of vinegar, 8 of soap, 8 of salt. I wish you would look at that ration return and see if that general summary of food issued to these prisoners is correct.

A. (After examination.) Yes, sir; the figures on the back of this return were made by Lieut. W. H. Plummer, commissary officer.

Q. There are 26 of those men there, are there not?

A. Twenty-six prisoners on that day.

Q. I see there you issued them soap.

A. Yes, sir.

Q. You may explain that—but I suppose that the soap was issued precisely as it would be to the American soldiers?

A. Yes; it was.

Q. I perceive here the item of coffee and also the item of sugar. I assume that that also is accounted for by the fact that it was merely the issuing of rations to the prisoners precisely as to our soldiers?

A. Exactly as to our soldiers, according to the order covering that.

Q. Now, merely to illustrate this great bundle of stuff you have here—these were taken out at random—I find that on ration return No. 526, 29 native prisoners were served between December 1 and December 15, a period of two weeks, with 158 rations of bacon, 210 fresh beef, and 158 rations of salmon, 526 rations of rice, 526 rations of coffee, 526 rations of sugar, 526 rations of vinegar, 526 rations of soap, and 526 rations of salt. A rough calculation makes that something more than 2½ for each man a week of salmon, more that 7½ each of fresh beef, 18 of rice, coffee, sugar, vinegar, soap, and salt. Examine that ration return and please say if that is substantially correct, and if that is also accounted for by the issuance of the same rations as to American soldiers?

A. (After examination.) The statements you have made are correct as shown on this return.

Q. *So it appears on this ration return, which you say is correct, that we issued the Filipino prisoners fresh beef?*

A. *We did; yes, sir.*

Q. *We issued them coffee and sugar?*

A. *Yes, sir.*

Q. *Vinegar and soap?*

A. *Yes, sir.*

Q. *As well as the other items?*

A. *Yes, sir.*

Q. *Not only gave them rice, which was their habitual food, but these other items which are given to the soldiers of the American Army?*

A. *Yes, sir.*

Mr. BEVERIDGE. When, Mr. President, in any war, civilized or uncivilized, ancient or modern, were such rations issued prisoners and such treatment given them? Here, now, is the testimony of private soldiers who testified to the water cure:

TESTIMONY OF ISADORE H. DUBE AS TO ORDINARY CONDUCT OF AMERICAN OFFICERS AND SOLDIERS TOWARD FILIPINOS.

Questions by Senator BEVERIDGE:

Q. One of your last answers was, as I heard it, that when we entered a town we were received by the natives; that the natives accepted American authority and did everything they could for us. How long were you in the Philippines?

A. I was in the Philippines in the United States service about sixteen or seventeen months.

Q. During which time you were in what islands or provinces?

A. I was on the island of Panay.

Q. You were under General Hughes, then?

A. Yes, sir.

Q. During your service in aiding in the suppression of the insurrection you have or have not seen prisoners taken by us?

A. Yes, sir; I have.

Q. When we took Filipino prisoners, what was the treatment that they received from our officers and soldiers as respects kindness and care and attention?

GIVEN "SUCH FOOD AS THEY WANTED."

A. They were treated as prisoners of war and fed as such. They were given good, substantial food, according to their demands.

Q. That is, such food as they liked?

A. Such food as they wanted, such food as they were accustomed to. They were worked, and in my judgment they were treated as prisoners of war should be treated.

Q. And when they were sick or wounded, what was the attention they received in reference to medical attention?

A. They were treated and taken care of by American surgeons, and taken into the American hospital.

Q. And if nursed at all, by what nurses?

A. By American nurses.

Q. Now, continuing that same line, connecting it with your answer about the way we were received, what was the general treatment of the people who were peaceably inclined and that worked; what was the general treatment of the Filipino people by our officers and men with respect to kindness and consideration?

A. The treatment, I think, was all right—was good enough—the treatment that was authorized by the American officers.

"BE AN EXAMPLE OF AMERICANISM."

Q. What did you understand General Hughes's orders and the orders of the other American officers to be with reference to the conduct of soldiers toward the people?

A. *It was to treat them—the sympathizers—with kindness and to be an example of what Americanism was.*

Q. And did you do that?

A. Yes, sir.

Q. And did your comrades do that also?

A. As far as I know. Well, that is, my own comrades in my company; that is all I am supposed to know about it.

TESTIMONY OF GROVER FLINT AS TO USUAL CONDUCT OF AMERICAN OFFICERS AND SOLDIERS TOWARD FILIPINOS.

Questions by Senator BEVERIDGE:

Q. How long did you say you were in the service there—about a year and a half?

A. Yes.

Q. Did you ever observe in your service Filipino prisoners after they had been taken by us?

A. I have seen some in the guardhouse; yes; and some in the hospitals.

Q. You found them in the hospital?

A. Yes, sir.

FILIPINOS PRISONERS TREATED AS WELL AS OUR OWN.

Q. You may state what the facts are as to the care and attention they received in the hospitals as compared with the attention and care our own soldiers received.

A. I think it was usually quite good, as far as that goes. I never saw anything——

Q. What did you observe——

Senator CULBERSON. Let him finish his answer.

Q. (Continuing.) During your service as to the care and kindness manifested to the Filipino prisoners by American officers?

A. *I think it was most excellent.*

Q. That was the usual course, with reference to the Filipino prisoners?

A. Yes, sir; I think it was.

Q. And with reference to Filipino people engaged in peaceable pursuits—what was the conduct of the American officers and men toward them?

A. *I think it was as kind as you could make it in every case—that is, I never saw any other spirit.*

Q. You spoke about the guardhouse a moment ago. I want to ask you whether the Filipinos in the guardhouse were treated any differently from our own men in the guardhouse?

A. They were fed differently; that is all.

Q. That is, were they fed the food to which they were accustomed?

A. Yes, sir; the food to which they were accustomed, but they were treated the same as our men otherwise.

Q. The same as American prisoners in the guardhouse?

A. Yes, sir.

Q. You saw no distinction?

A. No, sir.

Q. Except in the case of food?

A. Yes; they were on a different ration. They did not like our ration.

Q. That is the reason they were given the different ration?

A. Yes, sir.

TESTIMONY OF D. J. EVANS AS TO THE USUAL CONDUCT OF AMERICAN OFFICERS AND SOLDIERS TOWARD FILIPINOS.

Questions by Senator BEVERIDGE:

Q. How long did you serve altogether in the Philippine Islands?
A. Very nearly two years.
Q. During that time you were in what part of the archipelago?
A. I was in the island of Luzon, from Manila to—do you want——
Q. Just generally. And during this time what is the fact as to your having observed any number of prisoners taken by our troops?
A. I have seen a great number of prisoners; yes, sir.
Q. Tell the committee what the fact is as to the treatment of those prisoners by American officers and men, as to kindness and consideration or the reverse.
A. The majority of the prisoners, until the time I went north, if they were taken and had arms they would be kept a few days and their arms would be taken away and then probably they would be paroled or released.

PRISONERS PREFERRED TO REMAIN WITH US.

Q. During the time they were in our custody what is the fact as to the food given them?
A. They were fed, and if there was any work to be done they had to do it; but they were treated, up to this time the water cure commenced, as well as they could be. *Some of the Filipino prisoners actually preferred to remain in the American lines, prisoners, than to be among their own people.*
Q. And the sick and wounded among them?
A. They were given hospital treatment.
Q. The same as our men?
A. Yes, sir. In the front of their hospital, I believe, there were two wards.
Q. You speak of their hospital. Do you refer to the hospital in Manila?
A. Yes, sir.
Q. That was given up entirely to the Filipino sick and wounded?
A. Yes, sir.
Q. And what physicians attended them?
A. Our physicians and our nurses.
Q. Our nurses also?
A. Yes, sir.
Q. What is the fact as to the treatment of these prisoners, and sick and wounded being given the same as to our sick and wounded?
A. I could not see any difference, except probably the rations would not be the same. The Filipinos themselves would prefer rice.
Q. They would prefer rice?
A. Yes, sir.
Q. They were given what they preferred?
A. Yes, sir.
Q. Do you understand that to be the reason why there was any difference in the rations given to our own soldiers and to the Filipino prisoners?
A. That is the only reason I can give.
Q. They being used to it?
A. Yes, sir.
Q. Yes; what is your observation as to the treatment of the people engaged in peaceable pursuits, as to kindness and consideration, or the reverse, from the American officers and the men?
A. They were never molested if they seemed to be peaceable natives. They would not be molested unless they showed some signs of hostility of some kind, and if they did, if we struck a part of the island where the natives were hostile and they would fire on our soldiers or even cut the telegraph lines, the result would be that their barrios would probably be burned.

PEOPLE RETURNED TO THEIR FIELDS.

Q. After our troops had passed over a district, what is the fact as to the people returning to the fields and engaging in the business of tilling the soil, returning to their homes after peace had been established?
A. As far as I could see we would not much more than get through a town until you would see the natives coming back from the hills, carrying little white flags on sticks. As we struck a town we could not see a native hardly, but when we got 200 or 300 or 500 yards beyond the town we could see them coming in with these white flags.
Q. And what is the fact as to their going to work in the fields after peace had been established?
A. They were continually working in the fields, and they would come back.
Q. What did you understand the orders from the officers and the commanding generals to be as to the conduct of American officers and soldiers toward peaceably disposed people engaged in peaceable work; as to kindness or the reverse?
A. We never had any orders to molest any of them who were peaceably inclined, none whatever.
Q. And you say that sick and wounded Filipinos had the same treatment as our own people?
A. That was the First Reserve Hospital in Manila; yes. I never observed them in any other hospital. I spoke of that because I had seen it.
Q. You say that upon our approach—that is, in the first advance—when we would come to a town, people would depart?
A. Yes, sir.
Q. After we would leave the town they would return?
A. Yes, sir.
Q. Then, when you came back again you found them at work in the fields. Is that correct?
A. Yes, sir.
Q. Now, then, when you returned, did or did they not run away, as in the first instance?
A. I had in mind the town of Taytay. When we approached that town we approached them under a line of fire, and we drove the natives from the town.
Q. That was on a Sunday?
A. I believe it was.
Q. I remember that very well. But what I am driving at is this: After our column had passed and peace had been established, and you returned and found the people at work in their fields, then did they run away again as in the first instance?
A. No, sir; they stayed right in their town.

PEOPLE LOST FEAR OF US.

Q. They appeared to have lost all fear or misunderstanding of us?
A. It appeared so; yes, sir.
Q. When did you leave there?
A. I left there the latter part of January, 1901.
Q. What were the last prisoners you saw in our custody? Did you see any the last month of your stay there?
A. I was in the hospital at Dagupan, and there was one prisoner brought there that our company had captured. They opened fire on our company at a place called Moncada, and we captured one man who had been shot a couple of times or three times.
Q. And you saw him?
A. I saw him when they brought him to the hospital. He was taken to our hospital, and then he was taken to another hospital called Lingayen, or something like that.
Q. What treatment was he given?
A. I did not see.
Q. You simply saw that he was taken to the hospital?
A. Yes, sir.
Q. So far as you know then and observed, there was no difference in the treatment of prisoners taken in battle or otherwise, at the end of your service, than there was at the beginning of it; that is to say, our treatment of prisoners—sick, wounded, or otherwise—was what as to kindness?
A. They were always fed, and if there was extra work to be done they did it as a rule.
Q. Did you observe any cruelty practiced upon the prisoners?
A. The prisoners we had captured?
Q. Yes.
A. No, sir; none that I can think of.

TESTIMONY OF JANUARIUS MANNING AS TO THE USUAL CONDUCT OF AMERICAN OFFICERS AND SOLDIERS TOWARD FILIPINOS.

Questions by Senator BEVERIDGE:

Q. How long were you in the service in the islands altogether?
A. Over a year; somewhere about a year and five months.
Q. During that time you observed prisoners taken from time to time?
A. Yes; a lot of prisoners.
Q. Will you state what the treatment of those prisoners was from our officers and men with reference to kindness and care and consideration, or the reverse?
A. Well, I never saw them ill-used; they always got enough to eat.
Q. What kind of food?
A. They got rice and meat.
Q. Was that the food they preferred?
A. Rice is what they generally live on. We gave them meat with it and hardtack.
Q. When they were sick and wounded what attention was given to them?
A. They would be given medical treatment.
Q. By whom?
A. By the Army surgeon.
Q. By the same surgeon that attended our soldiers?
A. Yes, sir.
Q. And where hospital treatment was required what occurred then?
A. Well, I have seen them take the prisoners up from the guardhouse and put them in the hospital.

SAME HOSPITAL OUR OWN MEN OCCUPIED.

Q. The same hospital that our soldiers occupied?
A. Yes, sir.
Q. And if nursing was required, who did the nursing?
A. The attendants in the hospital.
Q. *The same attendants that did the nursing to our soldiers?*
A. Yes, sir.
Q. General Hughes was in command at Panay, was he not?
A. Yes, sir.
Q. He was your commanding officer?
A. Yes, sir.
Q. What did you understand to be the directions and desires of Genera Hughes and your other superior officers as to the treatment which should be given by you and other soldiers to the people in general who were peaceably inclined, as to care and kindness and consideration, or the reverse?
A. *The orders were to treat everyone right; to treat them kindly.*
Q. Did you obey those orders?
A. Yes, sir.
Q. Was that the rule also with your comrades?
A. Yes, sir.
Q. So that the general treatment of the Filipino people engaged in peaceful pursuits by American soldiers and officers was kind, courteous, and considerate—or was it the reverse?
A. Yes; I would say it was.
Senator BEVERIDGE. That is, you mean——
Senator CULBERSON. Let him answer the question.
Senator BEVERIDGE. I want him to answer it. I put it in the alternative.
(The question was repeated by the stenographer.)
A. (Continued.) I would not say it was the reverse; I would say it was kind.

TESTIMONY OF CAPT. JESSE LEE HALL AS TO USUAL CONDUCT OF AMERICAN OFFICERS AND SOLDIERS TOWARD FILIPINOS.

Questions by the CHAIRMAN:

Q. Did you hear of any cruelties being inflicted by Filipinos on our men?
A. Yes; I heard that, of course. That ceased a great deal after we got so many prisoners. When we first went out there if a man got cut off they would do him. Many cruelties were inflicted, and especially in the Signal Corps.
Q. You say that ceased?
A. I say there was less of that toward the last.
Q. After we had——
A. There were a great many of the prominent men in our possession, but at the beginning we heard a great deal of that. When the game first started men were caught out and some of them boloed to death and hacked up.

By Senator CULBERSON:

Q. Did any of that occur in your command?
A. One of my men is all that occurred in my command. That was at Santa Cruz. He disappeared from the face of the earth, and afterwards we found some remains which were supposed to be his.
Q. Was he a Macabebe?
A. A Macabebe; yes.

By Senator DIETRICH:

Q. Up in these mountains there were usually what they called ladrones?
A. Yes, sir; ladrones.

"FED THEM AND LET THEM GO."

Q. And perhaps it was the ladrones and the outlaws that that order pertained to?
A. As I said, there was nothing left there but the bushwhackers and ladrones. I think the resistance to the organized army over there had ended. While there was an organized army, and we were following it from place to place, there was nothing of that sort. In fact prisoners were turned loose; we let them go, and we treated them like we would treat children. It was as if we would spank them and let them go.

By Senator BEVERIDGE:

Q. On that point, and on the point several times mentioned of the prisoners taken, what was the treatment by the American soldiers and officers of the prisoners of war which we took, as to kindness and consideration toward them?

A. *Well, we fed them and let them go.* We paroled them, as a usual thing. We took good care of them and dressed their wounds if they were wounded.

Q. And if they were sick?

A. They got as good treatment as our own men received.

Q. From our own physicians and surgeons?

A. Yes; by our own physicians and surgeons. If I ever took a man as a guide, under the directions of General Schwan, I always paid him; and we always paid for chickens and everything else we got. *Every horse we took I know was paid for.* I would always give a receipt, if I could find the owner, and commissions came around afterwards to settle up.

Q. Where you took a horse you gave a receipt and a commission settled for it?

A. The quartermaster would settle, although sometimes the owners were gone and we could not find the owners, you know.

INSTRUCTED TO IMPRESS FILIPINOS WITH OUR DECENCY.

Q. You spoke a moment ago about the understanding you had there as to the policy of our officers and men toward the people, as to kindness, and, as you said, you made up to them.

A. *That was the endeavor, to impress them with the idea of our decency and with the good conduct of American soldiers and American people, to give them the right idea of it.*

Q. Pursuing that and enlarging on the question of Senator LODGE, what was the general conduct of our officers and men toward Filipino people who were not engaged in hostilities, as to kindness and consideration?

A. They were kind to them. The idea was to impress them with the fact that there was no animosity existing as far as we were concerned.

Q. Were you with Lawton in May, 1899?

A. No; I reached him——

Q. You were not with him at San Isidro?

A. No; he was in San Isidro first; I did not get there until fall. That country had to be reoccupied. We fell back from there and we had to go out and go all over the same country again.

Q. When you left, that portion of the country had been pacified, had it not?

A. Apparently so. The telegraph lines were undisturbed there for three or four months.

Q. Were you over that country before you left?

A. Yes; I was up at Calumpit and Tarlac.

Q. That Bagbag district?

A. Yes; up the Bagbag River.

Q. Did you observe the people had returned to their homes and were at work in the fields?

A. Yes, sir.

Q. Were they peaceful and undisturbed under our authority?

A. Yes, sir.

MUNICIPAL GOVERNMENT AND SCHOOLS ESTABLISHED BY MILITARY AUTHORITIES.

Q. Captain, did you make any observation concerning the establishment of a civil government after we would occupy a place, such as Malolos or anything of the kind, or the establishment of schools by the military authorities?

A. I only saw the schools; there was no government except the military government; we had not gotten to the experiment of putting in any of the natives.

Q. I do not mean that; I mean the establishment of civil government under General Otis's orders?

A. Yes, sir.

Q. That is, municipal government?

A. Municipal government; yes.

Q. That was done by the military authorities immediately after occupation?

A. Yes, sir.

Q. And were schools established by the military authorities?

A. Not in all the places.

Q. In some of them?

A. In some of them; yes, sir.

Q. *And they were taught by soldiers detailed for that purpose?*

A. *Yes, sir.*

Q. That is, we would occupy a place and establish a municipal government, establish a school, and detail a private soldier to teach it?

A. Yes, sir.

TESTIMONY OF MR. RICHARD V. HUGHES AS TO THE USUAL CONDUCT OF AMERICAN OFFICERS AND SOLDIERS TOWARD FILIPINOS.

Questions by Senator BEVERIDGE:

Q. And how long were you in the island?

A. About a year.

Q. What portion of the islands?

A. Southern Luzon, in Batangas and Laguna provinces.

Q. Who was in command?

A. Lieutenant Merchant.

Q. I mean who was the general in command of that division?

A. I forget his name now.

Q. Did you during your service observe any number of prisoners taken by our forces?

A. Yes, sir.

Q. Will you state to the committee what treatment they received at the hands of the American men, as to kindness and consideration?

A. As to which?

"TREATED JUST AS GOOD AS AMERICAN PRISONERS."

Q. As to kindness and consideration, or the reverse?

A. We took some prisoners at Magdalena, and while they were in confinement at Magdalena *they were treated just as good as American prisoners.*

Q. And as to the food given them; whether abundant or not?

A. It was abundant of its kind, and was the regular ration, consisting of rice, bacon, and hardtack.

Q. The same as the American troops received?

A. No; we received beef once or twice a week and potatoes.

Q. The rice was the food——

A. The principal food which they got.

Q. That was the food to which they were accustomed?

A. Yes, sir.

Q. And which they preferred. Yes or no.

A. Yes; they preferred rice.

Q. When they were ill or wounded, what care was given them by the American authorities?

A. The doctor, Dr. Stoeckele, of North Eighth street, Philadelphia, attended them, not only as prisoners, but in the barrio.

Q. So not only the prisoners, but the people themselves received attention from American physicans?

A. He was the only physician, though, that I knew to do such a thing as that.

SAME TREATMENT IN HOSPITALS.

Q. In the hospitals where you have been, either as a patient or as an observer, what was the fact as to the treatment of the Filipinos in those hospitals; what kind of treatment did they receive in comparison to that received by our own men?

A. Just the same treatment.

Q. From American officers and from American nurses?

A. Yes, sir.

Q. Now, with reference to the treatment of people who were peaceably at work, from American officers and men—what was that, as to kindness and consideration, or the reverse?

A. They never molested them, to my knowledge.

Q. What was your understanding, as a soldier, of the general conduct which was expected from you by the commanding officer of your division with reference to the treatment of people who were peaceably disposed, who were at work?

A. I treated them the same as I would and did treat any persons that I knew—with kindness, with courtesy, in every respect. Whenever I found that they were in any way wrong I would arrest them and notify my commanding officer.

Q. And your comrades, the same or not?

A. The same, as far as I could see.

Q. So that the general treatment of the people by American soldiers and officers was as you have described your own treatment of them as being?

A. Yes, sir.

TESTIMONY OF LE ROY E. HALLOCK AS TO THE USUAL CONDUCT OF AMERICAN OFFICERS AND SOLDIERS TOWARD FILIPINOS.

Questions by Senator BEVERIDGE:

Q. Then, your entire service in the Philippines was how long?

A. About seventeen months, I think.

Q. During that time where were you most of the time?

A. At Leon.

Q. Is that in Panay?

A. Yes, sir.

Q. While General Hughes was in command there?

A. Yes, sir.

Q. Now, aside from the application of the water cure to these men under the circumstances you have told of, what was the general conduct of American officers and soldiers toward the people, as to kindness or otherwise?

Senator PATTERSON. He has said that where they were friendly it was good.

Q. (Continuing.) Where they were friendly?

A. I should say they treated them very well.

Q. And you observed during your period of service there prisoners in addition to these thirty that were brought in in these three conflicts?

A. Yes, sir.

Q. And when those prisoners had been captured what was their treatment by American officers and soldiers as to kindness and care, and as to the food they were given and places they were put?

A. They were put in the guardhouse and made to do some little work. They always had plenty of rice to eat, and hard-tack they gave them sometimes, and coffee.

Q. That was substantially the same rations as our own men received, except as to rice, was it not?

A. Yes, sir.

Q. Did they prefer the rice to our kind of food? Is that the usual food of the natives?

A. That is the food they used; yes.

Q. What is your understanding, Mr. Hallock, as to what your officers and the commanding general, General Hughes, expected of soldiers in their treatment and intercourse with the friendly natives?

A. To use them well.

Q. And you followed those orders?

A. I did; yes, sir.

Q. And of course your comrades the same?

A. Yes, sir.

TESTIMONY OF WILLIAM LEWIS SMITH AS TO THE USUAL CONDUCT OF AMERICAN OFFICERS AND SOLDIERS TOWARD FILIPINOS.

Questions by Senator BEVERIDGE:

Q. How long did you serve there?

A. We arrived there the 30th of October, 1899, and left there the 4th of March, 1901.

Q. So you were there practically two years?

A. About eighteen months on the islands.

Q. You were there in Iloilo part of the time?

A. We were there about a month; not over that.

Q. You were in Manila part of the time?

A. No, sir; I was never in Manila at all.

Q. Did you go about the hospitals in Iloilo?

A. Yes, sir.

Q. Did you observe Filipino prisoners, wounded or sick, attended to in our hospital by our surgeons and nurses?

A. I did not. I was not there at the time when any Filipino prisoners were in there. I was not there any great length of time anyway.

Q. Did you observe any kind treatment upon the part of the officers and soldiers during the service of your enlistment or your service there?

A. To the natives?

Q. Toward native prisoners?

A. I do not think they treated the native prisoners in our quarters in regard to sleeping quarters very well. We had about forty of them at the time——

Q. Did you know General Hughes?

Senator RAWLINS. Let us have an answer.

A. (Continued.) At the time Igbaras was burned we took about forty of them there, and they were made to sleep on the ground in the basement of the building.

ON THE GROUND OR ON MATS.

Senator BEVERIDGE:

Q. Really, on the ground.

A. Yes, sir. We had two places to keep them. We had to build one place; one place was where we locked our own prisoners, in case we had any, and we turned that over; and after that was full they lay on the ground, except for such mats as were brought them by their own people. Otherwise they had nothing to lie on.

Q. And their own people were permitted to bring in mats and other comforts?
A. Yes; food.

By Senator McComas:

Q. How did you treat them?
A. When I came in contact with them—well, if I took them out and worked them I was pretty careful to keep them at work and see that they did not get away.
Q. Did you treat them humanely and kindly?
A. I did not treat them unkindly. I kept them at work all the time.
Q. So far as you were concerned, you endeavored to treat the prisoners humanely?
A. Yes, sir. They treated me well and I treated them the same.

PRISONERS TREATED WELL.

Q. How did those about you treat them?
A. They treated them well.
Q. That is the extent of your own observation, is it not?
A. That is the extent of my observations, so far as I saw.
Q. Were the Filipino prisoners that you described as sleeping where our soldiers who were also under surveillance slept, as on some mats on the ground, fed abundantly by our authorities?
A. They were fed from our rations—yes.
Q. The same food that the American soldiers were fed?
A. Yes.
Q. They were not beaten or struck or abused, were they?
A. No, sir; I did not see them beaten or struck.
Q. And the men under your charge you merely kept at work?
A. Yes, sir.
Q. As you would keep any other men at work whom you supervised?
A. Yes, sir; and I looked out that they did not escape.
Q. If the prisoners got sick they were attended by the American physicians?
A. Yes, sir; they were.
Q. And they received the same medicine that our soldiers received?
A. They did at that time, quite a number of them.

SAME FOOD AND MEDICINES.

By Senator Beveridge:

Q. So far as you observed, they had the same treatment that our soldiers had?
A. Yes, sir.
Q. The same food and medical attendance?
A. Yes, sir; they were taken to the hospitals. I have taken them there myself, and they would be given medicine.
Q. So that the Filipino prisoners had the same food and the same medicine and the same attendance, so far as you observed, that our soldiers had?
A. They did not have the same rations; they were provided by the Government, but were not the same rations that we had.
Q. I understood you to say that they had the same rations; that they were fed out of the same rations.
A. That was a mistake of mine, then. It was issued by the Government, drawn from our commissary, but not the same class of rations that we had.
Q. It was plentiful and good food?
A. Yes.
Q. Food that they were used to?
A. Yes; it consisted more of rice, and the like of that, and they preferred it to our meats.
Q. In other words, they got the food that they preferred?
A. Yes, sir.
Q. And that is the only respect in which there was any difference in respect of food——
A. Yes, sir.
Q. (Continuing.) Between the treatment given them and the treatment of our own soldiers?
A. Yes, sir.

II.—RECONCENTRATION.

Along this general subject we have heard a great deal of assertion and a great deal of rather violent rhetoric upon the question of reconcentration camps. It is said that we have established reconcentration camps in the Philippines and there was associated with the word "reconcentration" the policy of Weyler in Cuba. The effort has been made to impress the American people with the fact that we were pursuing that same policy in the Philippines.

Mr. President, the testimony of those who were on the ground refutes that. I therefore present the testimony of Governor Taft, a portion of an interview of Mr. Johnson, introduced by General Hughes in giving his testimony, the testimony of General Hughes himself, the testimony of Professor Barrows, and the testimony of Colonel Wagner, who was appointed to investigate these camps, and others, and I ask that they be printed without reading.

The testimony referred to is as follows:

Governor Taft. The order of General Bell has been published since I left the Philippines.

GENERAL BELL'S ORDER.

Senator Culberson. I have here a copy of the order, published in the Washington Star of January 20. There is a copy not only of the general order of General Bell's in reference to concentration, but a copy of his special instructions to subordinate commanders on the subject.
Governor Taft. I will read it, if you desire me to comment on it. I have not read it.
Senator Culberson. You have not read it?
Governor Taft. No, sir.
Senator Culberson. I simply wanted to ask if you entertain the same opinion with reference to the character of the war after reading this order of Bell's that you expressed a few moments ago? [This reference is to the statement of Governor Taft already given above.]

PRESENT RESISTANCE TO AMERICAN AUTHORITY "A CRIME AGAINST CIVILIZATION."

Governor Taft. I have no doubt I should, for this reason: War has been ended in all these islands except in Batangas and Samar. *That which remains is a crime against civilization.* It is a crime against the Filipino people to keep up that war under the circumstances, and those engaged in it have worn out the right to any treatment but that which is severe and within the laws of war.

Senator Patterson. Do you mean by that statement that the army fighting for independence has become so small by captures, by battles, by surrenders, that those who remain fighting for independence are guilty of a crime? Is it a crime because the prospective independence is more remote now than it was two or three years ago?
Governor Taft. It is a crime because it is subjecting their own people, in whose interests they profess to be carrying on the war, to the greatest privation and suffering.
Senator Patterson. At the hands of the American Army?
Governor Taft. The people who are not in those provinces at all. They are keeping them back from earning a living. They are keeping them back from their ordinary vocations. In the very province of Batangas itself the great majority desire peace, and are only held there because of the system of terrorism of which I speak. Now, I say that warfare which depends upon terrorism and murder is a crime. That is all I have to say.
Senator Patterson. Is it because in your opinion the independence of the Philippine Islands has become hopeless that those who are contending for it are guilty of crime?
Governor Taft. I think independence for the time has become hopeless.
Senator Patterson. And therefore those who are fighting for it are guilty of a crime?
Governor Taft. They are guilty of a crime in the method which they seek to attain it.

Interview of A. Burlingame Johnson as to Concentration Camps (Reproduced from Newspaper and Introduced by General Hughes in Course of His Testimony).

"AS TO CONCENTRATION.

"I know it as it is practiced there. It is a misnomer to call it a policy of concentration, because the world has learned to put a significant meaning to that word. The policy as practiced in the Philippines has no element of cruelty in it. It is simply an order to the inhabitants of a particular locality to move from one portion to another, and there they reside and carry on their operations and business. If the locality into which they have moved does not afford them ample support, the United States Government provides them with food and shelter. *The people are pleased with it, because they are permitted to lead an easier life—much easier than at home.* There is no element of punishment or deprivation. They are simply requested to come into a certain district."

They are moved out of danger, then, for their own benefit?

"Exactly; because those who are inclined to favor the Americans are assailed by the ladrones or the rebels, and unless they came within the lines of the American Army they would be compelled to pay tribute to the insurgents. These people largely accept this concentration, as it is practiced, as a relief instead of a punishment. It is a relief from a punishment inflicted upon them by the insurgents, with whom they have no sympathy."

Testimony of General Hughes on Reconcentration.

Senator Culberson. You asked to introduce into the record a statement from Mr. A. B. Johnson. Do you indorse his statement in that paper that the policy of concentration pursued by General Bell is not intended as a matter of punishment?
General Hughes. It certainly is not intended as a matter of punishment. It is probably intended to put them out of harm's way in part, and to keep them out of mischief in the other. There is no idea of punishment in it. That is not the intention.
Senator Culberson. Do you indorse the statement of Mr. Johnson that it is intended for the good of these people that they should be concentrated within a certain limit, and that unless they shall so concentrate there their property shall be absolutely destroyed? Do you regard that order as in the interest of those people rather than in the interest of their subjugation by the United States authorities?
General Hughes. It is to their interests in this way—that if we can separate the insurrectos, of whom there are but few, from the peaceable citizens, the finishing up of the contract will be very short, and they can go back and live perfectly contented and happy. It is to stop these few guns from disturbing the whole community.
Now, I will give you an instance. A miserable beggar had a revolver and six cartridges. He disturbed a whole district until they caught him. They caught him with his gun on. There was not a good cartridge in it. Every cartridge in it had been tried and failed, and yet with that one revolver he kept the whole district in a state of terror.
Senator Culberson. Do you understand that the military authorities of the United States provide provisions and sustenance for the Filipinos after they are concentrated?
General Hughes. I do not know anything about it.

Testimony of Professor Barrows on Reconcentration.

Senator Beveridge. You were pretty well over the island of Luzon, as I judge from your answers to questions, particularly in those provinces going northward from Manila to the north portion of the island. Did you observe in the prosecution of your work the operation at any point of the reconcentration policy, of which so much has been said? If you did, tell the committee what it was with reference to its cruelty or the reverse. Describe it.
Mr. Barrows. I was in one province which was reconcentrado, and I think I visited all but one town in the province. I think the matter has been very greatly misunderstood. In this case the population was in no sense confined within barriers inimical to its well-being. There was no barbed-wire fence business at all. They were simply required to dwell and to work along a great cultivated stretch which made up the arable land of the province, within a certain distance of a military road that traversed it. They had to stay there. They could not go out to the mountains. They could not take to the woods. Of course within those limits they could pass, and pass for miles; harvest their rice; fish; do anything they wanted to do; but they must stay in the territory capable of patrol by the military forces.
Senator Beveridge. But within those limits their personal action was free?
Mr. Barrows. Yes, sir.
Senator Dietrich. There was no starvation?
Mr. Barrows. No, sir; that was impossible.
Senator Beveridge. Did you observe any cruelties in those lines?
Mr. Barrows. None whatever.
Senator Beveridge. It is just as you have described it?
Mr. Barrows. Yes, sir. For example, after the rice was cut they had to bring it in the vicinity of this military road and stack it there and thrash it there and harvest it there. They could not do as they had been doing—stack it way out in the country where the insurgents could come in and carry it off. It was simply a measure adopted to prevent the contribution to the insurgent cause of supplies and the rendering to it of assistance in many ways by a population that was supposedly and professedly peaceful.

BEST CONDITIONS WHERE MILITARY AUTHORITY PREVAILS.

Senator BEVERIDGE. There is another question in this connection. I want to ask you if it is not true that the provinces in which you described the conditions as being so favorable and excellent are the provinces over which our military operations were most thorough when they were being carried on there?

Mr. BARROWS. Yes; that is the case, as in Bulacan and Pampanga and Bataan, and these are the provinces which are now the most quiet.

Senator BEVERIDGE. Where the military operations conducted under Wheaton and Bell and others were very thorough; and those are the provinces in which peace and quiet and the establishment of the ordinary occupations of civilized life now exist in the satisfactory manner you have described?

Mr. BARROWS. *They are the provinces where the most progress has been made and is now making.* Samar, I understand, never had any active operations until lately.

Senator BEVERIDGE. So the effect of the military operations in these provinces was not bad, as I understand it, but good; and, so far as you were able to observe, you may state whether any feelings of bitterness or hatred engendered by the war were manifesting themselves among the people in the provinces through which you traveled.

MANNER OF CONDUCTING WAR.

Mr. BARROWS. Of course, I do not wish to assent to the proposition that war is a good thing.

Senator BEVERIDGE. No; I understand that.

Mr. BARROWS. But where you have war existing, it is, I think, better to go ahead and pursue it rigorously and finish it and bring in the people who are out, induce them to surrender, and get it over with as fast as possible.

TESTIMONY OF COL. ARTHUR L. WAGNER, ASSISTANT ADJUTANT-GENERAL, UNITED STATES ARMY, ON AMERICAN RECONCENTRATION IN THE PHILIPPINES.

The CHAIRMAN. Have you just returned from the Philippine Islands?

Colonel WAGNER. I left the Philippine Islands on the 31st of March and landed at San Francisco on the 27th of April.

The CHAIRMAN. How long were you in the Philippine Islands?

Colonel WAGNER. Nearly two years and a half.

The CHAIRMAN. You made a report before leaving there on the concentration camps?

Colonel WAGNER. Yes, sir.

Senator BEVERIDGE (acting chairman). You may proceed and state your observations concerning concentration camps that you examined.

PEOPLE SURPRISINGLY CONTENTED.

Colonel WAGNER. In compliance with verbal orders of the commanding general of the Department of North Philippines I proceeded from Manila on the gunboat *Napindan* to Calamba; sent overland to Santo Tomas and Tanauan. There was a concentration camp of natives at each of these places. The camp at Santo Tomas had about 8,000 natives. It was about 2 miles long by a mile wide. The natives in this camp were assembled according to the barrios from which they came, all the people from a given barrio being on the same street, thus assuring neighbors being together and keeping up the community as nearly as possible as it existed in ordinary times. I made careful inquiries of the officers on duty at Santo Tomas and also made inquiries from the natives that were in the camp. I could find no evidences of want, and *the people seemed to be surprisingly contented.* The streets were clean, they were scrupulously neat; care was taken to guard against fire, and the sanitary conditions of the camp seemed to be carefully looked after.

Senator BEVERIDGE. You speak of the streets. What did they live in?

Colonel WAGNER. They lived in huts which they had themselves constructed, of the nature of what we would usually call nipa shacks.

Senator BEVERIDGE. That is the same character of buildings as those which they lived in in their barrios?

MEDICAL ATTENTION IN CAMPS.

Colonel WAGNER. Practically the same, excepting that they were smaller. The medical officer stationed at Santo Tomas had general charge of the native camp. Under him there was a native doctor, or practicante, in each barrio. The food supply had not run short, and to the best of my recollection they had a supply that would have lasted until the 1st of May.

Senator BEVERIDGE. Perhaps to facilitate that at this point you spoke of sanitary conditions. Who supervised and directed the sanitation of the camp?

Colonel WAGNER. The medical officer on duty at Santo Tomas, under the general direction of the commanding officer at that station.

Senator BEVERIDGE. Was the sanitation of the camp as good as the sanitation of the barrios from which the people came?

Colonel WAGNER. I have no hesitation in saying that it was much better, because there was a medical officer in this case to give the matter his attention daily, whereas in the ordinary barrios people lived more as they pleased.

FOOD SUPPLIES.

Senator BEVERIDGE. Concerning food supplies, what was your observation in regard to that?

Colonel WAGNER. There seemed to be no immediate danger of want. The food supply at Santo Tomas was sufficient, to the best of my recollection, to last until the 1st of May; at any rate, until the date set forth in my report.

Senator BEVERIDGE. In what did it consist?

Colonel WAGNER. It consisted mainly of palay.

Senator BEVERIDGE. It is the native food?

Colonel WAGNER. It is the native food.

Senator BEVERIDGE. It is the kind of food they were accustomed to in their barrios?

Colonel WAGNER. It is.

The CHAIRMAN. What is palay?

Colonel WAGNER. It is unhusked rice. There were also a number of chickens in the different camps, although the chickens were becoming somewhat scarce. Many of the people in moving to these camps had left their chickens at their homes, and in some cases they were going wild, but there were a great many pigs.

Senator BEVERIDGE. Were the pigs killed and eaten by the natives?

Colonel WAGNER. They are killed and eaten by the natives; they were available for food.

"COMPLETE PERSONAL LIBERTY" IN THE CAMPS.

Senator BEVERIDGE. Concerning the liberty of the people within these so-called reconcentration camps, what have you to state about that, as to their personal freedom?

Colonel WAGNER. They were given complete personal liberty within the limits of what is known as the dead line, which varies in distance from 300 yards to 800 yards from the camp.

Senator BEVERIDGE. From the camp outside of the lines?

Colonel WAGNER. Outside the lines. They were allowed within those limits to go and come as they saw fit. They were required to retire to their quarters at 8 o'clock in the evening. They were allowed to go out beyond the dead line, provided they obtained passes from the commanding officer, and they were also allowed to go out beyond the dead line, accompanied by troops, for the purpose of hunting up supplies and palay.

OCCUPATION OF THE PEOPLE IN THE CAMPS.

Senator BEVERIDGE. What was the occupation of people within these large areas, called reconcentration camps?

Colonel WAGNER. The occupation of the women was practically the same as it was at their ordinary homes. As far as the men were concerned, if not engaged in parties hunting for these caches of rice, they had practically nothing to do, excepting those who were herding cattle. They were allowed, however, to cultivate the ground within the limits of the dead line, and also under the protection of military force to cultivate ground beyond these limits.

Natives were sent out under protection of troops to gather any standing crops that were still out; that is, crops that could be used for food. But how far this cultivation in either case was carried I do not know from my own observation.

Senator DIETRICH. Colonel, you used the words "military force." You meant by that more military protection, did you not, both to see that they did not get away, and again, that those that were there would be protected against the ladrones and insurgents who undertook, in many cases, to murder and torture friendly Filipinos?

Colonel WAGNER. Yes, sir; I would state, moreover, that this protection was further necessary for the reason that these ladrones in the islands were living on the communities and towns. They obtained their rice and their money from the towns.

CAMPS A PROTECTION TO FRIENDLY FILIPINOS.

Senator DIETRICH. And so these concentration camps were a protection to the friendly Filipinos themselves and for their benefit, really, more than for the benefit of the United States Army?

Colonel WAGNER. The purpose was twofold: First, to protect these people, who had been compelled by the ladrones to contribute food and money and who were constantly complaining to our authorities about the impositions to which they were subjected by these hostile people. Another reason was that we might get these people into these camps, where we could be sure of feeding them and at the same time sweeping up all the food supplies in the rest of the country, in order that these ladrones in the hills might be starved out.

Senator DIETRICH. But all these people in the islands would go out and gather their food and their belongings and bring them into these camps, and there they had absolute protection against everybody else?

Colonel WAGNER. *They were duly warned beforehand to bring all their property into these camps, and to come in themselves, and they were all informed that they would there be protected.*

RESULT OF "RECONCENTRATION."

Senator MCCOMAS. What has been the result in reference to these ladrones or insurrectos, or whatever they were?

Colonel WAGNER. The result has been this, according to my own observation: Last July I rode through the region mentioned from Calamba over to Batangas, and thence west to Balayan, through the region which we are considering. The condition of our military forces there might be compared with that of a blind giant. The troops were more than able to annihilate, to completely smash anything that could be brought against them in the shape of military force on the part of the insurgents; but it was almost impossible to get any information in regard to those people. The natives were afraid to give us any information because if they did they were boloed. There were instances known of natives being boloed in the market place in open day, where the deed was witnessed by hundreds of people. It was impossible to get anybody to testify in regard to the perpetrators.

Senator BEVERIDGE. Because of fear?

Colonel WAGNER. Because of fear. These ladrones would send in their agents to collect money from the people. They had a regular scale of taxation. They would charge certain people a certain amount and certain other people a certain other amount, and these people were compelled to pay through fear of assassination. We could give them no protection from anything of that sort. It became absolutely necessary, then, to separate our friends from our enemies, to put the one class where we could protect them from these ladrones and keep them in a position such that we knew everything outside of the limits was an enemy. In that case we could operate fully against——

Senator DIETRICH. Colonel, right there, then, this line that you term a dead line around these concentration camps was as much a line to serve notice upon these ladrones and these insurgents who would undertake to do violence to these people—that is, it was a dead line for those outside as much as it was a dead line for those inside, not to let those that were within escape?

Colonel WAGNER. It was, for the reason it was possible to observe everybody coming into as well as everybody going out of the camp. If a stranger came into the camp, he would be required to give an account of himself. Moreover, if this stranger was an assassin or a collector, it was a very easy matter for the headman of the barrio in the camp to report the matter to the commanding officer, and the man could be seized at once.

Senator MCCOMAS. You started to say how it was before this measure was adopted, and then you were going on to say how it was afterwards.

Colonel WAGNER. I was going to say the result has been that Malvar, who before could not be caught, who practically was invisible, was at last run down and surrendered. The result is that these hostile parties have disappeared from the provinces of Batangas and Laguna, and I understand that those provinces are to revert to civil government on the 4th of July.

PEOPLE NOW RETURNED TO THEIR HOMES.

Senator MCCOMAS. Then these people will go back to their homes?

Colonel WAGNER. They have already gone back.

Senator MCCOMAS. When did they go back?

Colonel WAGNER. They went back soon after I left the Philippines.

Senator BEVERIDGE. After Malvar was captured?

Colonel WAGNER. I think so.

Senator MCCOMAS. Then there are no more of these camps?

Colonel WAGNER. I understand not.

Senator MCCOMAS. The incident has been closed?

Colonel WAGNER. So I understand.

Senator DIETRICH. Then the result has been that by bringing all these people within these concentration camps, where they could bring their food supplies, and thereby take it away from the insurgents and ladrones, and also where they would be protected from this levy of money that was made upon them by insurgents and ladrones, you think it would have the effect of stopping this cruel warfare that is going on much sooner than otherwise would have been the case; and it has otherwise protected the lives and property of the natives?

Colonel WAGNER. I do; I think so. Moreover, I would say that I do not see how we could have stamped out the trouble there otherwise. It was a

very embarrassing situation. As I have said, the island was practically in the possession of a blind giant; strong, but unable to see where to strike.

SO-CALLED "DEAD LINE" A LIFE LINE.

Senator BEVERIDGE. Referring to what you have said about people being boloed in the market places of their towns, would you say that this so-called dead line was in reality for them a life line?

Colonel WAGNER. In that respect it was.

Senator BEVERIDGE. Did the people themselves who were peaceably disposed object to coming in to the reconcentration camps? You spoke of their content.

Colonel WAGNER. Whether there was objection or not, I could not say from my own knowledge; I can only state the conditions that I saw there.

Senator BEVERIDGE. And the condition of content you speak of——

Colonel WAGNER. I would state also that that condition of content was a condition of the poor people rather than of the wealthy. As I stated in my report, it was a matter of much greater hardship to the wealthy than to the poor. When this rice that was cached was seized, a loss fell on the wealthy people who owned the rice. Generally half of the rice found was given to the native who discovered it; so that he was so much better off. The rich man suffered accordingly. The rich were the people who had been sustaining the war. Moreover, there is a very strong caste feeling among the natives, and I was informed that it was very distasteful to the people of the upper class to be crowded into the same barrio with the poor people.

Senator BEVERIDGE. Were you in Cuba?

Colonel WAGNER. I was.

WEYLER'S CAMPS COMPARED TO OURS.

Senator BEVERIDGE. Do you know anything about the Weyler concentration camps in Cuba?

Colonel WAGNER. I do not; my service in Cuba was limited to service during the Santiago campaign.

Senator BEVERIDGE. Do you know what was reported concerning those concentration camps?

Colonel WAGNER. I do.

Senator BEVERIDGE. And what is generally understood concerning those concentration camps?

Colonel WAGNER. I do.

Senator BEVERIDGE. What have you to say as to any similarity or dissimilarity between the so-called reconcentration camps of the Americans in the Philippine Islands and the reconcentration camps of Weyler in Cuba? Were they alike or unlike, or what was the comparative condition?

Colonel WAGNER. As near as I can determine, there is only one point of similarity between the two, namely, the people were brought within a certain region and compelled to stay there.

Senator BEVERIDGE. *What were the points of dissimilarity?*

Colonel WAGNER. *The points of dissimilarity were that the Spaniards starved the people they brought in and we fed them.*

Senator BEVERIDGE. And as to medical care and sanitation?

Colonel WAGNER. I have been unable to learn that the Spaniards gave any medical care to the reconcentrados at all.

Senator BEVERIDGE. And you have said we did?

Colonel WAGNER. Yes, sir.

Senator BEVERIDGE. It is your understanding of the Weyler reconcentration camps, is it not, that not only was sanitation neglected, but conditions of hideous filthiness and disease were encouraged; that is the popular understanding of it?

Colonel WAGNER. That is the popular understanding of it. Personally I know nothing about the Spanish——

Senator BEVERIDGE. I understand. What I am trying to drive at now is the comparison of those camps down there with ours—a comparison between our camps and the popular understanding of what the Weyler camps were.

WEYLER'S AND OUR RECONCENTRATION CAMPS IS COMPARISON OF "MERCY WITH CRUELTY."

Colonel WAGNER. There is no similarity at all. Comparing these camps of ours with the Spanish camps would simply be comparing mercy with cruelty.

Senator BEVERIDGE. I understand that these camps were in the province of Batangas.

Colonel WAGNER. Batangas and Laguna de Bay.

Senator BEVERIDGE. That is where the last remnants of the insurrection were at the time rife and where the operation of ladrones was and has been most active?

Colonel WAGNER. It was.

Senator BEVERIDGE. Those provinces, I believe, Colonel, are mountainous, are they not?

Colonel WAGNER. They are.

Senator BEVERIDGE. And well fitted for the operations of the ladrones?

Colonel WAGNER. Admirably so.

THESE PROVINCES IMMEMORIAL HAUNTS OF ROBBERS.

Senator BEVERIDGE. As a matter of fact, from time immemorial robber bands making robbery, stealing carabao, and the property of the people—their provisions—have had their fastnesses in these mountains, have they not?

Colonel WAGNER. They have, in those mountains, although in other parts of the islands also.

Senator BEVERIDGE. I understand, but I am speaking of these particular places now. Is it your understanding that those ladrones and robber bands have now been wiped away?

Colonel WAGNER. In those provinces; yes, sir.

Senator BEVERIDGE. That is what I am asking about, these provinces; and the people have all returned to their homes and fields?

Colonel WAGNER. So I am informed.

Senator MCCOMAS. If it be true that the insurrectos and also the robber bands have been wiped out in Laguna de Bay and Batangas and the people have been quieted in Samar, where is there now any insurrectionary force?

Colonel WAGNER. In regard to the island of Samar, I can not state, sir; I know nothing about that of my own knowledge; nothing further than what I read in official reports or in the newspapers.

Senator MCCOMAS. From your knowledge and information, where is there now any insurrectionary force in the Philippines?

Colonel WAGNER. There is no insurrectionary force worthy of the name. There may be small bodies of ladrones, and there doubtless are, in many parts of the islands.

Senator BEVERIDGE. That has always been the case.

Colonel WAGNER. That has always been the case.

Senator CULBERSON. Do you know of any other places which were burned than those mentioned?

Colonel WAGNER. I do not recall any now. There may have been others—there doubtless were—but those are the only two I remember.

Mr. BEVERIDGE. Mr. President, to sum up this testimony upon the question of reconcentration camps, it shows that they were probably the most humane devices that have ever been put in practice in the history of warfare. Compared with the war between France and Germany, compared with any war of ancient or modern times either in a civilized or uncivilized country, history presents no record of a war conducted with such humanity, with such compassion, and with such consideration for the people with whom we are dealing as does this war. Even if we should come to our own regrettable and fratricidal conflict, the practices that obtained in the treatment of prisoners are, Mr. President, not to be compared with what we have done in our reconcentration camps in the Philippines. Andersonville and Libby contrasted with the reconcentration camps in the Philippines present all the difference between midnight and noonday.

III.—EFFECT OF OUR ADMINISTRATION ON THE PEOPLE.

Now, Mr. President, what has been the result of this policy? What has been the effect of our vigorous military policy to insurgents and the treatment given to prisoners and peaceful people? What effect on the natives has this combined firmness and rigorous pursuit of armed foes, with our compassion, and kindness, and consideration of our Army to Filipino prisoners and people—our nurses to nurse them, and our doctors to attend them, and our medicines to cure them—what effect has all this had on the people? Governor Taft, Professor Barrows, and others have testified as to the feeling they found toward us and our Government among the people. But it is even better shown by the reports of the governors of the provinces. I have made a condensation of the reports of the governors of provinces, eliminating unnecessary detail, as some of them are very voluminous, but reaching these particular points; and upon these particular points, I believe, most of them are complete.

The reports referred to are as follows:

REPORTS OF PROVINCIAL GOVERNORS AND OTHERS ON GENERAL CONDITIONS IN PROVINCES IN WHICH THERE IS NO INSURRECTION.

PROVINCE OF ILOCOS NORTE.

LAOAG, ILOCOS NORTE, *December 17, 1901.*

CIVIL GOVERNOR, *Manila:*

The people of this province are humble, very timid, and obedient. The law is complied with in a peaceful manner. Violations of law so far occurred only through deceit and impositions on part of people of other provinces.

AGBAYANI, *Governor.*

PROVINCE OF RIZAL.

PASIG, RIZAL, *December 18, 1901.*

FERGUSSON, *Secretary, Manila:*

In almost all the towns the justice courts are already in operation. The court of first instance has been established since July 11, 1901. Peace in Rizal is complete. All inhabitants are in favor of the civil government and devoted to American sovereignty. Highwaymen, who formerly operated in various places in Morong, have been driven out. The census is almost completed, and, from present information, the number of persons estimated at 140,000. Municipal autonomy is executed with sufficient force.

Means to establish the land tax progressing satisfactorily, and it is not likely that it will offer any particular difficulty in the completion. Provincial accounts which showed in the months of July and August the province was in debt have shown a balance of $3,833.77 gold on December 1, 1901, after payment to the municipalities the portion due to them. Suffrage, according to municipal code, has been exercised satisfactorily. Agriculture, industry, and trade suffer the decay incident in the whole archipelago consequent upon the war and other causes. The scarcity of cattle for the purpose of draft is very noticeable as a result of the epidemic of epizootia. It will be necessary to establish a farmers' bank at once. Floods and locusts have caused much loss this year in the rice harvest. The province lacks proper public buildings. *General state of the roads demands much expense for repairs, but the peace and disposition of the province give promise of progressive prosperity.*

FLORES, *Governor.*

PROVINCE OF PAMPANGA.

OFFICE OF THE GOVERNOR,
Bacolor, P. I., December 17, 1901.

Hon. L. E. WRIGHT,
Acting Civil Governor of the Philippine Islands, Manila, P. I.

* * * * * * *

At the present time this province is in the most peaceable condition. Many of the natives are highly educated, and since the introduction of the public schools under the United States Government a great improvement is noticed among the lower classes.

The finances of the province, as shown by the report of the provincial treasurer, show a balance in hand of over $26,000 United States currency, with outstanding indebtedness of less than $3,000 United States currency.

Roads and bridges throughout the province are in fairly good condition, *and work in same is being pushed as rapidly as possible.*

The few remaining malefactors and bandits in this province are being constantly traced and captured by the insular police. I believe that this province is in better condition than ever before, and under the present system of government will continue to improve, as affording an opportunity and inspiration to develop its resources.

Very respectfully,

C. JOVEN,
Governor Province of Pampanga.

PROVINCE OF BULACAN.

OFFICE OF THE GOVERNOR,
Malolos, Bulacan, P. I., December 18, 1901.

The province of Bulacan, under my charge, presents, politically considered, a sublime idea of its sincere gratitude and loyalty to the Government of the United States of America in the Philippine Archipelago.

I am justified in this statement by that very revolutionary spirit shown by the province in past times, and the readiness with which the inhabitants recognized the laudable intentions of the Government of the great North American nation in regard to this country and the urgent need for becoming thoroughly penetrated with the transcendent importance of peace, being convinced that only under peace can the welfare and uplifting of the Philippines under American rule be effected.

In fact, scarcely a month had passed by since the establishment of civil

rule in this province *under the most liberal laws yet known in this country* when the most bitter of the revolutionary chiefs still in the mountains of Angat, Norzagary, and San Miguel de Mayumo, like the ex-Colonels Tecson and Morales and ex-General Torres, presented themselves before the authorities and took the oath of fealty and allegiance to American sovereignty.

From that time the province of Bulacan has been enjoying an unbroken peace, and its inhabitants, contented beyond measure with the establishment of civil rule in the Philippines, are doing all they can to strengthen that peace as a necessary basis for their happiness, thus showing their appreciation of the Government which now so wisely rules the destinies of this country.

In view of the facts above set forth, I do not hesitate to assure the stability of the peace now enjoyed by this province, *which gladly places in the hands of the great and noble North American nation the future of these islands.*

The local governments organized under the new municipal code are being carried on with a fair regularity, and the pueblos *are extremely contented* with the personality, liberty, and responsibility of their municipos, as in all democratic countries.

Briefly summing up, the province of Bulacan recognizes unconditionally the American sovereignty, and its provincial and local governments and its courts of justice are all exercising their functions without any trouble whatever.

JOSE SERAPIO,
Provincial Governor of Bulacan.

PROVINCE OF UNION.

SAN FERNANDO, *December 17, 1901.*

EXECUTIVE SECRETARY, *Manila:*

* * * The province is perfectly peaceful, and this condition has existed for over a year. *People are all at work in the fields and at their various professions.* Civil government is accepted on every side, and there is no possible reason to think that they will ever change in this feeling under the present form of government. The treasurer reports that each municipality will close the present year with a balance on hand and without a debt unpaid. The provincial treasury will have on hand approximately $10,000 gold, $6,000 of which will be appropriations for roads, bridges, buildings, etc.

Three large bridges are under course of construction, several thousand cubic feet of stone and soil are being placed on the road where needed, and a great deal planned by this department. Everything looks very bright for the new year, and not only myself but all the provincial officers are very sanguine as to our future. January 1 will see complete reorganization of municipal police. They will be uniformed alike throughout, thoroughly equipped, and perfectly efficient. The organization of the interprovincial mail service is working on schedule time cards. There are no ladrones in Union at present, and we believe we can keep them out.

ORTEGA, *Governor.*

PROVINCE OF ISABELA.

ILAGAN, ISABELA, *December 20, 1901.*

EXECUTIVE SECRETARY, *Manila:*

* * * *Province without single improved road, substantial bridge, or permanent public building.* All municipalities, except Ilagan and Tumina, without substantial balance in treasury. * * * No armed insurgents heard of in this province for six months. * * * Cagayan Valley completely tranquilized; no escorts now used by civil officers.

Municipal police require 100 revolvers, 3,000 cartridges, to arm force organized. Constabulary not yet organized fully nor ready for service. * * * *Troops recently evacuated six cities. Police and citizens on guard each night.* No disorder or crime yet reported. No post-office in province. Salaries denied by director posts. Need light-draft steamer for mail and transfer of police to quell disturbances in province. Nine cities without American teachers. Education not appreciated. No financial assistance for police or schools from insular government. Only industry cultivation tobacco; should have others. Friction between tobacco planters and tenants. People friendly to American Government. Province safe and quiet as any State of Union.

JOHNSTON,
Captain, Sixth Infantry, Governor.

PROVINCE OF ILOSCOS SUR.

OFFICE OF THE PROVINCIAL GOVERNOR,
Vigan, December 16, 1901.

Honorable CIVIL GOVERNOR OF THE PHILIPPINES.

SIR: * * * Since the surrender of the nationalistic general Tinio, with all his forces, who was carrying on the insurrection in this province, and of Father Aglipay, also with all his men, in that of Ilocos Norte, in the month of May last, this province under my command has been completely pacified, and from that time until the present all the pueblos have enjoyed the tranquillity and personal security of normal times before the outbreak of the insurrection against Spain.

As a consequence of this pacification, the natives, as well as the Americans, military and civil, inhabitants of this province, can now visit all the pueblos with entire freedom and safety without any fear whatever of even malefactors and road agents, which, fortunately, do not exist in this province. All the people are peacefully following their customary avocations to the extent that *no one any longer remembers the war*, save through the newspaper reports of engagements and skirmishes taking place in the provinces of Laguna and Batangas and others in the southern islands.

Very respectfully,

M. CRISOLOGO,
Provincial Governor.

PROVINCE OF AMBOS CAMARINES.

NUEVA CACERES, CAMARINES SUR, *December 19, 1901.*

EXECUTIVE SECRETARY, *Manila:*

* * * * * * *

Population about 250,000; 32 organized towns; authority been requested to organize remainder of former towns; province in perfect state of pacification. Two small bands insurgents surrendered last September; since then no insurgent or hostile element in province. This condition is permanent so far as people of province concerned. No doubt sentiment is for continued peace and confidence intentions American Government. *Travel on all roads and to most distant interior points perfectly safe. I recently spent two nights in interior town with my family, unguarded, where a year ago company of soldiers would have been necessary.* Crime rare, and scarcely any trouble from ladrones. Only trouble in this line from occasional depredations by mountain tribes, which can be stopped by additions to armament of police.

Military force been greatly reduced, and towns formerly occupied by large garrisons now have but small detachments or abandoned entirely. Further reductions can be made, and recommend that it be done and troops taken from all towns, and, if kept in province, be placed in quarters outside towns. Some complaint of arbitrary acts by military, such as arresting persons on suspicion without cause, ordering people about, and retaining property where needed and desired for use by owner. Some military commanders at outside places apparently not advised of existing laws as to authority of civil government and courts. Fair interest shown in recent municipal elections; no party lines except that candidates supposed to hold "Nationalista" views were defeated by large majority. *Thirty-two American teachers in province, covering 17 towns.* Good attendance and interest in schools. *Night schools for adults well attended*, and desire to learn English everywhere evident. *Twenty more teachers needed.*

Province has suffered heavily by loss from plague, but notwithstanding this rice crop yield is more than double that of last year. Recent heavy rain floods have seriously damaged this year's crops. Hemp districts prosperous and absorbing laborers from rice districts. People are industrious and working hard to repair damage from war, etc. *Am advising more diversified farming*, and expect good results. Commerce and trade active, and said to be *much more so than ever in Spanish time.* Much building in larger towns; INCREASING DEMAND FOR AMERICAN GOODS. While writing above, General Grant informs me that he has recommended the withdrawal of eight companies of troops from this province, and expects soon to recommend withdrawal of eight more.

JAMES ROSS,
Governor Ambos Camarines.

PROVINCE OF TARLAC.

TARLAC, TARLAC, P. I., *December 16, 1901.*

EXECUTIVE SECRETARY FOR THE PHILIPPINE ISLANDS,
Manila, P. I.:

* * * * * * *

There has been no interruption of the peace of the province since its organization under the provincial government act. The Philippine constabulary made several arrests in Moneada the first days of November for secretly meeting and conspiring to attack the troops. *The trial is now in progress.* * * * I was well received in towns in that part of the province recently visited, and expressions of desire for peace were numerous and seemingly earnest and sincere. I think this desire prevails.

Crimes of robbery, rape, homicide, larceny, and falsification have been committed, or at least alleged, and the perpetrators arrested by either the municipal police or the Philippine constabulary, both of which are working satisfactorily. There are not enough judges of first instance. The remark frequently made that there should be a judge continuously holding court here is true, in my opinion. Prisoners have to wait too long for trial.

The provincial government act and municipal code are working well. The amendments made from time to time have been timely and acceptable.

The crops are good this year.

Taxes are collected without difficulty, and the income exceeds expenditures thus far.

The supervisors of the various provinces interested have met to consider defense against river inundation.

WALLIS O. CLARK,
Captain, Twelfth Infantry, Provincial Governor.

PROVINCE OF ALBAY.

ALBAY, P. I., *December 9, 1901.*

Hon. WILLIAM H. TAFT,
Governor of the Philippine Archipelago, Manila, P. I.:

* * * A few days after the establishment of civil government here General Belarmino presented himself with his entire force, *and from that time to the present the peace of the province has not been disturbed.* * * * A few Tagalo leaders came into the province recently from Manila with the hope of renewing trouble in this province, but the people were so thoroughly opposed to any further disturbances of the peace that there was not the slightest trouble in apprehending them before they were able to accomplish anything. These leaders were at once apprehended by the constabulary, and are now confined in the prison of the province.

The constabulary have been and are doing excellent work, and their services have been highly commended upon by military officers of this province. Both the military and civil officers are in perfect accord, there being no friction whatever. *I am informed by the leading citizens that there was never a time in the history of the province when it was in so prosperous a condition as it is at present.* Every man in the province who desires to work has plenty to do, and it is very seldom one sees a beggar on the streets. The wages at present being paid in this province are greater than they have ever been, the average laborer making from 1 to 3 pesos per day. * * *

Highways, buildings, and bridges are being put in repair and built as rapidly as the material and labor can be had to construct them. The cities of Albay and Daraga, which were formerly destroyed by the insurgents, are being rebuilt as rapidly as it is possible to secure material for their reconstruction. The reconstruction of these towns is not delayed through any lack of finance, but through scarcity of material. If a million feet of lumber was landed in Legaspi I believe the entire amount could be sold in less than thirty days, which would be purchased by the inhabitants of the two towns above mentioned for the reconstruction of their homes and places of business.

Some idea of the enormous business being done here at present can be had from the fact that *in the town of Legaspi alone over $1,000,000 change hands every thirty days.* Business here is very much hampered through the lack of banking facilities, and all clearances are made through the banks at Manila. These great sums of money are brought down by the steamships, for which they charge three-fourths of 1 per cent for transportation; these sums are again returned to Manila at the same rate. With a bank at Legaspi you can readily understand how these clearances could be made here, and the sum of transportation alone would be good interest for an institution of that sort. Money loans in this province all the way from 10 to 20 per cent.

The organization of the provincial government is practically completed. * * * Justices of peace have been commissioned and the notaries appointed, and the court of first instance has held its first session.

Schools have been organized in all pueblos and a greater part of the barrios. The nineteen leading pueblos in the province now have American instructors, and the progress they are making is exceptionally gratifying.

Personally I have found the work of reconstruction extremely interesting.

* * * * * * *

Very truly, yours,

A. U. BETTS,
Provincial Governor.

PROVINCE OF ILOILO.

ILOILO, P. I., *December 20, 1901.*

To the CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS, *Manila.*

SIR: * * * That as regards peace and order it may be asserted that this province of Iloilo has no cause to envy any other province in the archipelago. The civil rule established here has satisfied the people and completed the work of pacification commenced by the military government. It may be asserted that the people, convinced of the advantages of this rule, *have forgotten all the past in order to think only of their advancement materially, morally, and politically.*

Highway robbery, which is the sequence to every war and famine, far from taking hold in this province, is decreasing, thanks to the active prosecution

of which it is the object on the part of the constabulary, who are doing very good service. It is to be hoped that, assailed on every side, the people of evil life will disappear. * * *

MARTIN DELGADO,
Provincial Governor.

PROVINCE OF CAVITE.

MENDEZ NUÑEZ, *December 17, 1901.*

Hon. LUKE E. WRIGHT,
Acting Civil Governor of the Philippine Islands, Manila:

* * * * * * *

During the trip I have been making up to date to the mountain towns of this province of Cavite, organizing municipalities, I feel that I ought to entertain no doubt of the desire for peace entertained by all its inhabitants.

In this trip I have taken steps to bring about the surrender of some small armed groups, the wake, as it were, of the revolutionary forces already surrendered, which, though they still continue under arms, have no political color, and the proof of this is that they devote themselves solely to holding up native traders to get their money. And from the steps I have taken I am in hopes that within a few days all these small armed parties, that are nothing more than highwaymen, will present themselves with all their arms.

I can also assure you of the peace and order in my province, and that the civil authorities, with the constabulary forces, will be sufficient to maintain and preserve them.

* * * * * * *

I have the honor to be, very respectfully,

MARIANO TRIAS,
Provincial Governor.

PROVINCE OF ZAMBALES.

IBA, ZAMBALES, P. I., *December 16, 1901.*

Hon. Mr. WRIGHT,
Acting Civil Governor of these islands:

* * * Ever since the ex-Nationalistic General Mascardo surrendered, there is no repetition of these sad events, and the whole province, as though by magic, is animated to make up with interest their losses by devoting themselves with greater energy and ardor than heretofore to labor, not only because it has returned to its normal and peaceful life, but also by reason of the content and enthusiasm it feels through the implanting of the civil rule and the establishment of several schools for the teaching of the English tongue in many pueblos of the province. The whole of the latter may now be traveled without any personal or material risk whatever, and without the protection of an armed force. *So true is this that the inhabitants of the pueblo of Macabebe, province of Pampanga, who, it is well known, are hated by the Nationalists, come and go from that province to this one freely, without anything happening to them on the road,* carrying to and selling in the different pueblos and barrios, as they did during the former domination, their native cloths, made in different places. The children of both sexes as never before devote themselves with ardor, application, and profit to the study of the English language.

Respectfully,

POTENCIANO LESACA,
Provincial Governor.

PROVINCE OF PANGASINAN.

LINGAYEN, *December 17, 1901.*

The ACTING CIVIL GOVERNOR OF THE PHILIPPINES.

* * * Since civil régime has been established the inhabitants enjoy perfect tranquillity and comfort, and their conditions are growing better each day under the new régime.

Peace is so well established that it never has been disturbed in the slightest. * * *

Very respectfully,

P. SISON,
Provincial Governor.

PROVINCE OF SORSOGON.

* * * * * * *

I personally have just returned from an overland trip, visiting all of the towns south of Sorsogon and passing through the wildest and roughest part of the country. *The trip was made without a guard* and in all the towns and barrios the spirit of the people seemed to be the best. * * * I can now begin to see some results of our work and instruction in this direction, and the municipal officers and some of the more intelligent of the people are beginning to realize that they have a further responsibility to their country and the government than remaining passively inactive and watching the Americans put down uprisings.

I believe I can state with confidence that the civil government is working as well as could be expected, and that the general conditions are good and that with a few modifications of the laws, looking to a stricter watch over the people, keeping the restless at work, and preventing the scattering and isolation of families in the remote portions of the mountains *where they become little better than savages,* that the province of Sorsogon will rapidly develop and will remain peaceful. Then, when roads are built and communication between all the towns is made easy, the ignorance of the people, which is pitiable, will disappear.

All things considered, the general conditions are all that can be expected.

Very respectfully,

J. G. LIVINGSTON,
Provincial Governor.

PROVINCE OF BATAN.

BALANGA, P. I., *December 16, 1901.*

The CIVIL GOVERNOR, *Manila, P. I.*

SIR: I have the honor to state that I have recently made an inspection of and visited all the towns in this province, and find the people entirely in accord with the government as established and expressing freely and unanimously their appreciation and approval of the forms of the government—municipal, provincial, and insular—now existing. The local governments of the municipalties are conducted in an intelligent, judicious, and praiseworthy manner. * * * The financial accounts are in a healthy condition; all the towns are accumulating money in the treasuries, some having $3,000 at the end of last month on hand, with the intention of building schoolhouses first and other public improvements next. Ordinances are prepared in precise and legal language, clearly expressing the meaning without superfluous words, which is a decided contrast and improvement over former methods of devoting several pages of writing when four lines would be sufficient.

English is being taught in all the towns of the province. The public schools are encouraged and aided by the people and the officials, with one exception, the attendance being larger than the limited number of teachers can instruct with best results.

In my opnion this province is free from any taint of insurrection and will always remain so. It has been without the aid of the military for many months, there being no garrison in the province, except one company at Mariveles, placed there on account of government property and port, and not for the preservation of the peace, as this town is entirely cut off by the mountains from the rest of the province, the province being controlled by 75 men of the insular constabulary, armed with only 30 revolvers and 30 carbines, and the municipal police of the different towns, very poorly armed. At the head of this force there are only two Americans, inspectors of constabulary, yet so well has the work been done that there is not an uncaptured ladrone in the province.

Land is being generally cultivated with good yields; farms and town improvements are constantly being made, and the people rapidly recovering from the losses from the wars.

Very respectfully,

J. H. GOLDMAN,
Provincial Governor.

PROVINCE OF NUEVA ECIJA.

The people of the pueblos display considerable interest in their local governments, *but the ignorance of the first principles of self-government is surprising.* Much tme and patience will be necessary, with constant instruction, before at all satisfactory results are obtained.

* * * * * * *

Very respectfully,

J. F. KREPS,
Provincial Governor.

PROVINCE OF LEYTE.

SIR: I have the honor to report that the peace conditions of this province are fairly satisfactory. * * * Prior to the first of this month there were twenty towns in this province garrisoned by American troops, but within the past two weeks nine of these towns have been evacuated, withdrawing 310 men. These towns are now protected by the constabulary and the municipal police.

Out of 50 towns in the province, 44 have been organized under the municipal code and are exhibiting very gratifying results in the management of their municipal affairs. The remaining 6 received orders to hold elections on the first Tuesday in this month, so I presume that all of them are now organized, but the returns have not yet reached this office.

* * * * * * *

That the great majority of the people are happy and contented with their present condition is evidenced by the renewed activity displayed in all branches of industry. Agricultural, commercial, and manufacturing industries are taking on new life throughout the province, while the people are rebuilding their towns and homes, *and are erecting, in many instances, substantial and comfortable buildings, instead of nipa shacks.*

One of the most gratifying and, to my mind, one of the most encouraging indications as demonstrating their appreciation of our institutions, as well as the popularity of the same, is the intense interest manifested among the masses to acquire a knowledge of the English language. During the current year the municipalities in this province have expended about 10,000 pesos in the construction and equipment of schoolhouses, which I think is quite a good showing for newly organized towns just recovering from the effects of a two or three years' war.

* * * * * * *

There are at present 36 American teachers on duty in the province, all of whom are doing excellent work. It affords me much pleasure to report that, with but one or two exceptions, there has been absolutely no friction between the padres and the schools, while quite a number of the padres have exhibited a desire to learn our language.

J. H. GRANT, *Governor.*

Mr. BEVERIDGE. At this point, Mr. President, I introduce the report of the division superintendent of instruction for Leyte, one of the most backward provinces, as an example of our general work:

REPORT OF SUPERINTENDENT OF EDUCATION OF LEYTE AND SAMAR.

DEPARTMENT OF PUBLIC INSTRUCTION,
DIVISION OF LEYTE AND SAMAR,
Tacloban, P. I., ——— —, —.

The division superintendent arrived at official headquarters June 14, 1901. Civil government in Leyte was then and one-half months old. Dependence on military transportation and expected transfers of troops delayed the preliminary examination of the field until July 3. Between that date and July 13 a circuit of the island was made and 14 prominent coast towns visited. Prior to that educational rallies had been held, with good results, in the capital and nearest large towns. The first conviction prompted by this survey was that educational work would be most economically begun by giving it a home in at least eight of the towns visited, through the construction and furnishing of a model schoolhouse and American teacher's residence. These would at once show the exalted estimate put upon education by States people; would serve as an object lesson to other towns, and immediately equip the towns in which they were placed. Events have justified this conviction. Existing schools were found badly situated, ill constructed, in ruinous and filthy state, and almost destitute of equipment. Native teachers were poorly paid, and therefore hard to find, and of scanty education at the best. The women had rarely been beyond the confines of their own town, and knew less than many of their pupils.

In remedying external conditions, empty treasuries, sluggish officials, indifferent workmen, fear of outlaws, and lack of sawmills are occasions of delay which tax ingenuity and patience. For this island 1 teacher came with the superintendent; 3 were received in July, 1 in August, 32 in September, 1 in October, and 2 in December. Losses, 1 by desertion, 1 by dismissal, 2 by transfer. Present force, 36. Of these, 23 are college graduates and the others have had a high-school and normal training. Most have had experience in teaching, many in supervising, and there are many specialists. Farmers, dairymen, carpenters, blacksmiths, civil engineers, electricians, machinists, physicians, experts in chemistry and microscopy are included among them, giving promise of social development in many directions.

They are all happily at work in day schools, and several are instructing night classes. And the genuine teacher of patient, helpful spirit is endearing himself to children and parents and contributing to their contentment under American rule. The work is not frictionless as has been hinted.

The American teachers in Leyte are distributed in 16 towns. Of these, 3 contain buildings of masonry, 8 have wooden buildings, and in two instances new ones; the schools of the remaining 5 are held in leased dwellings or warehouses. Except in the capital, the furniture provided by the municipalities thus far is of simple character, and the supply is scanty. Only in remote and rude country districts in the States could a parallel be found. The Filipino child, whose natural perceptions are quicker than those of the American child of the same age, because he is nearer the savage (who depends for safety and subsistence on the alertness of his eye and ear), is as susceptible as his white brother to attractive surroundings; and, with his native indisposition to effort, should have clean, neat, suitably furnished rooms to win him to the love of methodical study. Until there are such, the wisest and best-trained American teacher will find use for his utmost fertility in invention.

B. B. SHERMAN,
Division Superintendent of Schools.

Mr. BEVERIDGE. As an example of what we are doing toward the physical regeneration of the islands—roads, bridges, and the like—I submit the report of supervisor (civil engineer), province of Leyte:

TACLOBAN, P. I., *December 19, 1901.*

Hon. J. H. GRANT,
Governor, Tacloban, P. I.:

* * * * * * *

On my arrival in September there was already under contract an addition to the provincial building, at a price of $3,750 United States currency; a Government pier, at a price of $2,875 United States currency; a stable, at a price of $450 United States currency; a balcony around the present provincial building, at a price of $1,637.50.

Work has been carried on under all these contracts. * * * The buildings have been constructed in a substantial manner, of woods of a superior group, with iron roofs, etc. The pier has an approach with concrete sidewalks, will have a shed over the landing platform, and is well built throughout. It will afford landing and storage facilities for Government vessels—two things much needed at the present time. It is also intended to use the roof as a source of water supply for vessels, there being none available at this time.

Under act 244 of the Commission there has been purchased, at a price of $5,515 United States currency, a piece of land to be used as a plaza and park, and those buildings already constructed by the province stand upon this property. The prisoners are kept employed in constructing and repairing the roads and in grading on this tract, and considerable progress has been made in its development.

In regard to roads and bridges: In October I personally inspected the coast roads leading from Tacloban to Palo, Tanauen and Tolosa to Dulag, and the interior roads extending from Tanauen through Dagmi and Burauen to Dulag. The coast road above mentioned is in fair condition and passable for wagons, etc. The interior road, however, is practically impassable for anything except carabao, carabao carts, and horses, never having been properly shaped, graded, or drained.

In November I visited the larger towns on the south and west coasts, and found that the conditions there were much as outlined above—the coast roads fair and the interior roads very bad.

In general the roads of the province can be reconstructed with the materials to be found conveniently near, but timber for the bridges is hard to obtain on account of the lack of facilities for getting it out, all sawing, etc., having to be performed by hand. However, a steam sawmill is being set up at Tacloban, and when it is in shape will be of great assistance.

It is intended to first open these roads leading from the coast towns into the interior, in order to afford an outlet at the earliest possible time for the large quantities of hemp and other products. By thus opening up trade it is hoped to increase the revenues of the province for use on those roads of less commercial importance. * * *

* * * The roads newly constructed, and others where practicable, will be divided for maintenance into sections, with a laborer in charge of each. Most of the work to date has been preparatory, consisting of the purchase of tools, the inspection of various roads, a study of their conditions, and the means available for bettering them, as an aid in forming an intelligent opinion as to where the money available could be spent to the best advantage. I have found the officials and people of the towns interested in and anxious for good roads and bridges and other improvements, and willing to aid in any manner within their power, and I am confident that the province will have their hearty cooperation and support.

Respectfully submitted.

S. B. PATTERSON,
Provincial Supervisor of Leyte, P. I.

Now, let us resume the reports of governors.

PROVINCE OF CAPIZ.

CAPIZ, PANAY, P. I., *December 20, 1901.*

TO THE ACTING CIVIL GOVERNOR PHILIPPINE ISLANDS,
Manila:

* * * * * * *

By the month of September * * * the pueblos began to recover their normal condition, and now all evidence of their misfortune has disappeared. That which contributed to the prompt recovery was the present state of tranquillity and prosperity and the relatively large crop of rice. The northern monsoon has cleared the province of the fevers, and the loan of $25,000 gold from the central treasury has given work to hundreds of men. Trade is little by little returning to what it was during its best times, and the exportation of bags for sugar, vulgarly known as "bayones," in five months *has reached the figure of 1,000,000, which figure has very rarely been reached in the history of the province.* The ports of Capiz and Calubo, before disheartened, are now visited every week by several steamers from Manila and Iloilo.

So pronounced is the public spirit for the preservation of order and the maintenance of civil institutions that at the beginning of October last, shortly after the unhappy event at Balangiga, island of Samar, some bad patriots with perverse intentions spread the rumor that 40 revolutionists, well armed with rifles, from Samar, had disembarked, and that on the 1st of November the bolomen were going to cut the throats of all the Americans and Americanistas. These rumors found echo in the military, who took every kind of precautions, despite the fact that from reports received by this government the whole thing was false and intended only to alarm the people and see if the pueblos would become disturbed. The result was that all the pueblos unanimously were vigilant in their desire to maintain peace and disposed to sacrifice themselves in the interests of order, as was reported by the presidentes of the pueblos in reply to recommendations made by this government.

Very respectfully,

S. JUGO VIDAL,
Provincial Governor.

PROVINCE OF ABRA.

BANGUED, ABRA, *December 17, 1901.*

EXECUTIVE SECRETARY, *Manila:*

Following is synopsis of report forwarded to-day by mail: "Assumed command Abra March 27. The insurrection at that time being very active, *drastic measures were necessary*, in consequence of which the surrender of all under arms was accomplished before May 1. Since then peace has reigned throughout the province. Civil government was established September 1, since which time we have been busy reorganizing the several pueblos. *All men are hard at work planting and building. No ladrones;* very slight breaches of the peace. *Safe for all to travel anywhere.* Province is poor and needs assistance, money for roads being the first requirement. Industrial schools recommended; also sawmills, gristmills, etc. Schools in prosperous condition; the people seem contented and happy, and will remain so unless some hothead for personal reasons inaugurates strife. The people of Abra are a class of themselves."

BOWEN, *Provincial Governor.*

BOAC, MARINDUQUE, *December 25, 1901—4.45 p. m.*

CIVIL GOVERNOR, *Manila:*

Replying to your telegram 18th, received this date; letters as per request have been mailed. Marinduque is enjoying peace, happiness, and prosperity, so that American army officers and civilians travel through the province alone and unarmed, as they would in their own country. Marinduque is engaged in peaceful avocations, and sincerely loves America and has faith and confidence in the future.

PARAS, *Governor.*

8.05 A. M., DECEMBER 26.

TAGUEGARAO, CAGAYAN,
December 21, 1901—8.10 a. m.

CIVIL GOVERNOR, *Manila:*

Peaceable condition of province is general and thoroughly established, which can be understood by contemplating the enthusiastic reception made to me at all towns where I hold municipal elections. People are very favorable to establishment of civil government and very obedient to the United States.

_____,
Provincial Governor.

12.55 p. m.

MASBATE, ISLAND OF MASBATE, P. I.,
December 16, 1901.

Hon. LUKE E. WRIGHT,
Vice-Governor Philippine Archipelago, Manila, P. I.:

* * * * * * *

The province of Masbate is in a perfect state of peace. No crime of any character has been committed within its border for many months. The people are all hard at work trying to improve their condition. The police absolutely cover the territory and know all that is going on. Their reports are most encouraging.

* * * * * * *

Very respectfully,

GEORGE LANDER, *Supervisor,*

REPORT OF A DIVISION SUPERINTENDENT OF SCHOOLS.

MASBATE, ISLAND OF MASBATE, P. I.,
December 16, 1901.

Hon. LUKE E. WRIGHT,
Vice-Governor Philippine Archipelago, Manila, P. I.:

* * * * * * *

During the past thirty days, in the fulfillment of my duties as division superintendent of public schools, I have made a tour of the islands of Masbate and Ticao.

As an escort on the island of Ticao, I had with me 2 natives, members of the Philippine constabulary, and visited nearly every pueblo and barrio on the island, and found every place in a peaceful and fairly prosperous condition, so far as I could observe in the limited time at my disposal.

On the island of Ticao there are 4 American teachers, one of whom rides every day, without escort, a distance of 8 miles and return.

On the island of Masbate, as an escort, there accompanied me Mr. Joe Federle, a fourth-class inspector of the Philippine constabulary, and 4 natives. During this tour we encircled the entire island. Work in the development of natural resources seems to be at somewhat of a standstill, although in the southern part of Ticao and Masbate many hemp and cocoanut trees have been recently planted. Some considerable number were to be seen working, cutting timber.

On the island of Masbate there are 8 American teachers. The only two posts where American troops are stationed are at Masbate and Cataingan, in the south. The teachers, without exception, express themselves as feeling perfectly secure without the presence of even another American soldier or civilian in the towns.

* * * * * * *

Respectfully submitted.

H. G. SQUIER,
Division Superintendent of Schools.

REPORT OF CHIEF OF CONSTABULARY.

HEADQUARTERS PHILIPPINE CONSTABULARY,
Manila, December 15, 1901.

To the SECRETARY OF COMMERCE AND POLICE,
Manila, P. I.

* * * * * * *

On December 15 the constabulary had in round numbers 2,500 men. The great care exercised in recruiting this force accounts for the fact that this number is not larger, but it is indeed worthy of remark that up to the present time only two men have been lost by desertion.

* * * * * * *

From reports received from various parts of the islands there can be no question but that the better class of people are extremely tired of the struggle and ardently desire peace. *The recently enacted sedition law has had a potent value in bringing evil doers to a realizing sense of their allegiance to law and order.* It demonstrates to these people the forcefulness of civil government, enables the constabulary to reap the rewards of its labors, and gives to the insular judiciary ample opportunity to prove the great importance of its work in this period of reconstruction.

As our knowledge of the Filipinos and the islands is daily increasing, the danger of future uprisings and disorders is daily diminishing. With the system of acquiring information now possessed by the insular government, it is possible to destroy any seditious measures in their earliest stages once the present insurrection be suppressed and all guns surrendered or captured. Excusable ignorance of the situation in the past is responsible for what now remains of the insurrection. Our good intentions were often misconstrued for weakness, and it is a fact that the generous concessions made by the Government have at times been prejudicial to the desired ends.

* * * * * * *

As a proof of the improvement in the general situation the following is submitted:

DIMINUTION OF TROOPS.

On July 1, 1901, the Army was holding in the island of Luzon 420 posts with 36,274 troops: December 1, 1901, there were 293 posts held by 25,808 troops, a diminution of 30 per cent in posts and 29 per cent in troops in a period of five months. In the entire archipelago there were 491 posts and 49,937 troops on

July 1, 1901, and 372 posts with 37,340 troops December 15 of the same year. Excepting in Batangas, Laguna, and Samar, the number of military stations is being continually diminished. For example, orders have just been issued abolishing 7 military posts in the province of Leyte.

From the latest returns the constabulary is stationed at 71 posts in Luzon, with 1,778 men. In the entire archipelago there are, so far, 94 constabulary posts, with a total of 2,417 men. This number will be doubled within the next three months, and the number of posts will likewise be greatly increased.

* * * * * * *

Very respectfully,

HENRY T. ALLEN,
Chief Philippine Constabulary.

PROVINCE OF ILOCOS NORTE.

OFFICE OF THE GOVERNOR OF ILOCOS NORTE,
Lasag, P. I., December 16, 1901.

Report of Aguedo Agbayani, provincial governor.

1. The people of the province of Ilocos Norte are in general humble and extremely obedient and timid. By their humble character they are very submissive, and their obedience makes them execute without hesitation all orders when they know that they proceed from the constituted authorities, in view of the compliance with the laws. As a consequence of these natural tendencies the character of the people is essentially peaceful.

2. If certain cases have been seen in the province which seem to contradict the peaceful dispositions of the inhabitants, it is due to their small, or lack of, education and instruction, which prevents them from understanding the frauds and impositions practiced on them by people from other provinces, or to their lack of courage and extremely humble character, which prevents them from refusing to submit to their impositions.

AGUEDO AGBAYANI, *Governor.*

PROVINCE OF MARINDUQUE.

BOAC, MARINDUQUE, P. I., *December 20, 1901.*

Mr. WILLIAM H. TAFT,
Governor Philippine Islands, Manila, P. I.:

* * * * * * *

Frankly, the man or men who have spent ten days on this island and are not positive that the sores of war and dissatisfaction against the United States Government have all passed away and that there exists, instead, a feeling of confidence, admiration, and regard, as well as peace, business activity, and general prosperity, are seeing "spooks," ignorant of the true conditions, and wholly unable to read or comprehend the unmistakable evidence which is abundantly shown in every pueblo and barrio.

"SOUND OF HAMMER AND SAW."

My wife remarked the other day that she had never heard the sound of hammer and saw to such an extent as in Boac during the last few weeks. What is true of Boac is equally true of each of the other five municipalities.

Enlargement of tiendas, improvement of casas, erecting new ones, business, and an occasional fiesta is the order of the day.

Public schools, for both boys and girls, are in full blast, and every day I see, passing my office window, hundreds of bright and happy children, who frequently bid me "Good afternoon, Señor Tesorero."

As for the "common people," they are and have been since my arrival busily engaged in their different lines of agriculture and the gathering of hemp, an extraordinary amount of which has been exported from these ports in the last three months. On all roads are daily seen lines of pack ponies and carabao sleds loaded not as of yore with insurgent chow and ammunition, but with large bundles of beautiful white hemp for the Manila market, which, when disposed of, places the pesos in the pockets of the poorer classes.

When I meet them on the roads or see them at work in the rice fields, while on my rounds, I make it a point to say a pleasant word to each and inquire as to their health and condition, and I am glad to say I have found the families of most all of them happy, contented, and prosperous.

Taxes of all kinds—industrial, urbana, and cedula—are paid good naturedly and without complaint.

In fact, on Marinduque Old Glory waves over an island of peace, happiness, and prosperity, whose inhabitants are crowned with the blessings of Almighty God.

GOVERNOR ORGANIZING A CLUB FOR YOUNG MEN.

I am at present engaged in organizing a club for the advancement and amusement of the young men. The object is to instruct them in new American outdoor sports, such as baseball, tennis, football, etc., with the hope that by giving them many other kinds of pleasant games we will be able to gradually wean them from the cockpits and monte tables, as I firmly believe that many a young Filipino drifts into these places to spend his idle moments and satisfy his desire for pleasure simply because there is no nobler style of amusement open to him. The organization will be perfected in each municipality and friendly competition between the different towns will be fostered and encouraged. As yet this is in its infancy. but it will be full grown by the time you return; and I hope it will result beneficially to the youth of Marinduque, as well as set an example which can be advantageously followed by the young of other provinces.

Respectfully,

AMZI B. KELLY,
Provincial Treasurer, Boac, Marinduque, P. I.

PROVINCE OF ORIENTAL NEGROS.

[Translated report.]

OFFICE OF THE GOVERNOR OF ORIENTAL NEGROS,
Dumaguete, Negros, December 19, 1901.

The honorable CIVIL GOVERNOR OF THE PHILIPPINES,
Manila:

* * * * * * *

In spite of the difficulties experienced at first by the provincial treasury, to-day the financial status is as follows:

	Gold.
Assets	$45,441.59
Liabilities	27,708.66
Balance	17,732.93

HYGIENIC LIVING ONLY WHERE MILITARY ARE.

* * * * * * *

In spite of the different orders issued from this office requesting the municipal presidents to give particular attention to the question of hygiene, I have noted in my visits that the only pueblos attending to the rules of hygienic living *are those where a military detachment is stationed.* The lack of cleanly habits and the complete indifference of the municipalities to the public health have resulted in some pueblos of the north becoming subject to chronic attacks of smallpox, causing an appreciable havoc among the population; and this in spite of the efficacious and disinterested cooperation of the army doctor and his assistants, who, in the months of April, May, and June, worked energetically in the vaccination of the inhabitants in the infested districts. Due perhaps to the poor quality of the vaccine virus, it has not been possible to eradicate altogether the epidemic, a few cases still reporting from the pueblos of Bais and Jimalalno.

NATIVE LACK OF INTELLIGENCE.

* * * * * * *

Of the 24 presidents who are now at the head of the municipalities, only 10 have shown during the current term of office aptitude for the discharge of their duties. These have shown themselves earnest citizens of the American sovereignty, and have contributed in no small degree to the maintenance of public order. The others have shown a desire to perform their duties, but owing to their lack of intelligence they are obliged to act under the direction of their secretaries, or of some petty lawyer of the place, who as a rule, in this province, are apt to be very poor advisers; and they have placed some of the presidents in a questionable position in regard to the American sovereignty. Some of these presidents have learned only to write their names, so as to be able to sign, and are qualified electors on account of their social position.

* * * * * * *

The selection of justices of the peace for the different municipalities has been a very difficult task. In the majority of the pueblos of this province there are no fit persons available for the discharge of the duties of this office. Those who are fit for the post are usually in such a precarious position financially that they need all their time to attend to their private affairs in order to support themselves and their families, for what they would get from the fees of the court as justices of the peace is not enough to meet their daily wants. A justice has to keep at least one clerk, and the fees of the court are scarcely sufficient to pay the salary of this clerk and the cost of office supplies. For this reason the filling of the offices has been difficult.

I am compelled to state that most of the shortcomings of the justices have been due rather to ignorance than to bad faith. In every case attention has been called to the fault committed, and in my visits I have instructed them in the duties of their office, and have urged upon them the need for integrity in all their dealings as a means of gaining the confidence of the people

* * * * * * *

DEMETRIO LARENA,
Provincial Governor.

PROVINCE OF ANTIQUE.

PROVINCIAL GOVERNMENT OF ANTIQUE,
GOVERNOR'S OFFICE,
San Jose de Buenavista, Panay, P. I., December 19, 1901.

CIVIL GOVERNOR PHILIPPINE ISLANDS, *Manila, P. I.:*

* * * * * * *

The peace of the province has remained undisturbed since the surrender of Fullon in March last. Not a hostile shot has been fired at an American since that date, and on my recent tour of inspection there were practically no complaints against the municipal officers. *Everywhere the people expressed themselves as satisfied with the present rule.* These expressions seemed to be genuine, and there was no sullenness to indicate a mental reservation.

ELECTIONS PASSED OFF QUIETLY.

The recent elections passed off quietly, and the laws governing elections were very generally complied with. Municipal governments throughout the province are in operation, and their records on my recent inspection were much better kept than on my previous visit. Courts are established and are beginning to work. Justices of the peace are more or less ignorant of the law as yet, but seem anxious to learn. We recently distributed copies of the code of civil procedure, and I have no doubt the result will be beneficial.

The roads of the province are in much need of repair, they having been neglected for several years. A start has been made on their improvement. Several bridges are now being constructed—eight in all having been provided for—largely from the fund appropriated by the Civil Commission.

* * * * * * *

The province has been comparatively free from the operation of ladrones, although they have twice appeared and stolen carabao, which were recovered before they could be gotten out of the province. On the last raid the ladrones killed two men in the pueblo of San Remigio. The organization of the constabulary in the province is nearing completion, and it is thought that they will be able to so thoroughly police the province that detachments of American troops can soon be withdrawn from outlying points.

Schools are generally established, and marked progress is being made. On the whole I feel justified in reporting most favorably as to peace and general condition of the province of Antique.

Very respectfully,

W. A. HOLBROOK,
Captain, Fifth U. S. Cavalry, Civil Governor.

PROVINCE OF MASBATE.

OFFICE OF THE GOVERNOR OF MASBATE,
Masbate, December 23, 1901.

The honorable ACTING CIVIL GOVERNOR OF THE PHILIPPINES:

* * * * * * *

Perfect peace is enjoyed in the whole province, and the inhabitants are displaying an unusual activity in the fisheries, agricultural work, and timber cutting, the latter constituting their principal resource, as well as that of the municipal and provincial governments; it also furnishes an occupation to the needy classes, which helps considerably to preserve tranquillity and good order in the pueblos.

* * * * * * *

BONIFACIO SERRANO, *Governor.*

MINDORO.

BAGUIO, *December 26, 1901.*

FERGUSSON, *Executive Secretary, Manila:*

* * * Everything peaceful in this province. Just returned from tour over end province; myself and Spanish secretary only white men in the party; no danger; conditions promising; sentiments favorable to American.

WILLIAM F. PACK, *Governor.*

PROVINCE OF CAGAYAN.

PROVINCIAL GOVERNMENT OF CAGAYAN,
Tuguegarao, December 18, 1901.

The honorable CIVIL GOVERNOR OF THE PHILIPPINES:

* * * * * * *

The municipal elections which have just been held have allowed me to appreciate the general enthusiasm of the inhabitants of the province, except in the pueblos of the Bataan Islands, which can not be reached during the present season, for the establishment of civil régime and provincial governments. I was splendidly received in all the municipalities which I visited as the representative of the Government, for the purpose of organizing the pueblos under the municipal code.

DESIRE TO LEARN ENGLISH.

A sincere proof of the affection and the good will of the people toward the constituted government is their desire to learn English. In the municipalities which have American teachers the schools are assiduously visited by children and grown-up people, not only of the pueblo, but of the neighboring pueblos which have no American teachers, and the latter are begging the superintendent of instruction to provide such teachers.

Such is the general state of peace and tranquillity in the province. The inhabitants are busy with their usual occupations, which are mostly agricultural, although for the present the latter are not very active and the hopes are small, not so much on account of the destruction of the cattle and the carabaos by the rinderpest as of the inundations of the rivers, which have destroyed plantations of tobacco that had already been several times renewed.

* * * * * * *

Very respectfully,

M. GONZAGA, *Governor.*

Mr. President, the commanding general referred to in the next report is General Bell.

REPORT OF THE PROVINCIAL GOVERNOR OF ABRA.

BANGUED, ABRA, LUZON, P. I., *December 16, 1901.*

* * * * * * *

On March 27 I assumed command of the province under orders from Brig. Gen. J. Franklin Bell, U. S. Army, commanding first district of northern Luzon. My report for March, rendered April 1, will show the conditions at that time, viz:

AFTER SURRENDER PEOPLE WENT TO WORK.

Immediately after the surrender the people went to work planting. As there was general suffering for food the commanding general issued rice and salt in suitable quantities, sufficient to prevent starvation; *he also went about from place to place, and in this way caused a feeling of confidence and good fellowship*, which feeling has continued until the present time.

The men of the province are hard at work planting and building. Peace and quiet reigns throughout all sections.

INDUSTRIAL SCHOOLS AND ROADS.

This is a small province, having but 48,000 inhabitants all told, but the people are of a superior class and desire American rule and American ways. The province is poor, but there is no reason why it should not become rich and prosperous. *We need industrial schools, and especially men to teach the proper method of curing tobacco*, which is and will be the wealth of the province; *we need sawmills, gristmills, brick machines, and men to run them;* with them wealth will flow to us. Roads must be made. The only entrance into Abra is by river; a main road must be built up the river and roads from Pidigan to Pilar and Villavieja, and from Bangued to Tayun, Bucay, and San Jose; also Bangued to San Gregorio and La Paz. These roads will be the main arteries, and until they are built there can be but little commerce and traffic. Money spent in Abra will be money well invested.

SCHOOLS IN THE PROVINCE.

I must not close without reference to the schools and the interest taken in them. In Bangued we have 2 male American teachers and 2 female, besides 3 native teachers. In Pidigan we have only 1 male and 1 female American and 2 native teachers. In Tayum, 1 male American and 2 natives; in Bucay and Dolores, same as Tayum. The other towns have native teachers. Americans are requested by all the towns and by two of the Tinguiane barrios. Report of Mr. Chapman, the first American teacher in Abra, is inclosed.

In conclusion, I will say that in my opinion Abra is thoroughly pacified. The people are content, comparatively prosperous and happy. The general conditions are good, and I believe will remain so until some hot-head springs up, who, for personal reasons and private ends, may attempt to stir up strife.

No people are perfect, but these people of Abra approach it as far as lies in their power.

Very respectfully,

WM. H. C. BOWEN,
Major, Fifth Infantry, Provincial Governor.

The CIVIL GOVERNOR,
Malacaanan, Manila, P. I.

REPORT OF SUPERINTENDENT OF SCHOOLS IN THE PROVINCE OF ABRA.

BANGUED, ABRA, P. I., *December 16, 1901.*

* * * * * * *

When I was sent here by the educational department in April of this year I found myself to be the first American teacher upon the field. *Soldiers had been detailed as teachers at the various towns in the province where detachments were stationed*, but owing to the fact that active service was compelled to be carried on against the insurgent forces, then also active in this part, troops were kept constantly moving from place to place, which, notwithstanding the untiring efforts on the part of the military authorities, prevented in some cases what might be described as being visible accomplishments; however, it must be admitted that it was by such means that the base was formed from which the present progressive state has grown.

GENERAL BELL'S ENTHUSIASM FOR EDUCATION.

Without an exception every schoolhouse was practically without furniture and some with no floor and such a roof as would allow the rain to saturate almost the entire interior. But having on hand a considerable sum of money collected as fines from various criminals and desiring to spend it for some good purpose, *General Bell, with his vivacious enthusiam for education as well as whatever might be for the general welfare of the people, sent* Captain Heard, Third U. S. Cavalry, to make a thorough inspection of the schools in this province, requesting him to especially report upon the dimensions of each building, in order that he might know how much sheet iron would be required to roof them. This being acquired, the order was made to the States, from which the material is at present arriving.

In Bangued, during the time of the insurrection, many of the best buildings were burned. No building, other than what was then the presidencia, could be secured for use as a hospital; thus the president's office was transferred to one of the schoolrooms, and the two smallest of the four rooms were occupied by private persons, leaving me with but one room for school purposes. Alone in this room I continued for six months to perform the very difficult task of imparting a knowledge of the English language to about 200 native children. At the end of this time I was reenforced by eight American teachers in this province, three of whom were retained in this pueblo, the remaining five being distributed among the other most important towns of the province.

* * * * * * *

At first the people seemed to look upon the school as a thing of very little importance; and except in the larger towns, such as Manila, Iloilo, etc., fit only for the smaller ones to learn to read and write, and many were astonished when they learned that geography, history, arithmetic, and such other studies were going to be used in what they called "escuelas primarias," and that night schools would be opened for adults. But with patience, little by little, the curtain has been drawn until now a dawn of the real scene has no doubt become visible to many of them.

School books and supplies have been greatly needed throughout the province, and more especially since the arrival of the teachers. But for the first time we have recently been furnished with a list of same by the department, from which we can select and order such as we need.

I have been teaching for eight months, during which time two young men of my room, owing to their efficiency in the English language, have been appointed teachers in English; and at the end of the school year I expect to be able to recommend at least four more for such positions.

Bangued is a healthy place and beautifully situated for a high school, and, in my opinion, for the good of the province, it would be a step in the right direction to establish one here within the coming year.

Very respectfully,

W. E. CHAPMAN.

The CIVIL GOVERNOR OF ABRA,
Bangued, P. I.

REPORT OF THE GOVERNOR OF OCCIDENTAL NEGROS.

PROVINCIAL GOVERNMENT OF OCCIDENTAL NEGROS,
Bacolod, December 19, 1901.

Hon. CIVIL GOVERNOR OF THE PHILIPPINES:

* * * * * * *

ESTABLISHMENT OF CIVIL GOVERNMENT.

Civil government was established nine months ago, and although this is a short period in which to appreciate the character of a political epoch, one feels already among the people the first signs of an era of contentment and love for a régime which had been so long desired, which can not fail to lay for the future the stable foundations of a radical and deeply autonomous constitution.

If, while war was raging in other provinces, its contagious blasts were hardly felt here before they were extinguished by the prudence of the wise governors of Negros, and, above all, by the opinion of the people, which has shown unanimously that it is opposed to an irreconcilable policy; if, during the most critical moments of the revolution, Negros was considered by natives and foreigners as a paradise of tranquillity, it is useless to describe its present situation under the auspices of civil régime, which has always been the object of the wishes of all the inhabitants, who have never been induced to wander from the road which they have so happily followed. The only atmosphere here is one of peace, and hearts only beat for the prosperity of the province.

* * * * * * *

CONDITION OF PUBLIC ROADS.

The public roads are in a very bad condition, except in some few places. They have to cross 75 big and small rivers, with very few bridges, which can hardly resist the floods during the rainy season, so that communications are difficult. From Cadiz to San Carlos, 80 kilometers, there is only a trail, which is not cared for, and is dangerous in certain parts. From the latter pueblo there are a good many roads going south, which in some parts can only be used by foot passengers and cattle, and in others only during the dry season; there are about 40 kilometers of roads in good condition.

* * * * * * *

PUBLIC INSTRUCTION.

Public instruction is received with attention and enthusiasm by the people. As this branch is under the direction of the department of public instruction of Manila, I will only mention in this report the praiseworthy desire on the part of the inhabitants to acquire education, and to assimilate American ideas and customs. The classes of English are well attended, and Occidental Negros has sent more of its sons than any other province in the Visayas to the colleges and universities of the United States, thanks to the decided protection of the first military governor here, the always well-remembered General Smith.

* * * * * * *

ROBBER BANDS.

Small bands of robbers who declare they are revolutionists are to be found in the north of the province. They are composed of men of ill repute, and others who have been coerced through fear, gathered together and organized by two or three evil doers, who, fugitives from or tired of the war in other provinces, have sought refuge and rest in the forests of this island. Having to live and being suspicious of becoming law-abiding, or preferring a criminal life, they have remained in the mountains, where they have got together a few followers who wear insurgent insignia. With these they make their forays whenever they can do so with impunity, and, like the Babaylanes, kill those who fall into their hands, or force them to join them and pay a certain contribution.

Finally, the mere marauders limit themselves to robbing in bands, without attempting to hide behind any pretensions whatever.

* * * * * * *

God grant that the agriculture of Occidental Negros—the center of all her vital forces—may soon recover from its state of prostration, and guide the province to prosperity, which is the fervent wish of all her sons. Its irradiations would then be impressed upon all the social and economic movements of the province, by removing want from the public treasuries, and permitting them to communicate a powerful impulse to the progress of the pueblos. Then, when domestic tranquillity and public order are assured, agriculture is prosperous, commercial activity increases, industry grows, schools improve, and education becomes general, the inhabitants of Occidental Negros will bless eternally the sovereignty of the United States, which conducted them along the path of their progress and their liberties.

S. LOCSIN,
Provincial Governor of Occidental Negros.

REPORT OF THE GOVERNOR OF CEBU, JANUARY, 1902.

* * * * * * *

Pessimists prognosticated a fiasco. They opined that, given the sympathy shown by the pueblos to the revolutionary cause, the majority of them would have nothing to do with the new régime. But they were mistaken. In my visit to the island of Bantayan and in the south and opposite coast of the island I was received with enthusiasm, and as a consequence the establishment of municipal rule was also received with enthusiasm.

Upon coming into contact with the pueblos I became convinced that all or the majority of them were tired of the war and of the abuses and vexations to which they were subjected by the insurgents; *that they were anxious for peace, and submitted to the exigencies of the revolutionists only through fear.* I believe that if they had had some means of defense or had enjoyed some kind of protection, as for example that of a small detachment, it is

possible that many of them would have followed the example of Argao' Sibonga, Naga, and others; that is, they would have had no relations whatever with the insurgents.

* * * * * * *

ESTABLISHMENT OF SCHOOLS IN CEBU.

The municipality of Cebu has established three schools in San Nicolas: One for boys, with a teacher and 1 assistant, in the central portion of the city, with an average attendance of 74 pupils; another for girls, with 46 pupils, in charge of a teacher (female), in the same city; and another, also for girls, in an outlying district, under the charge of a female teacher. There are 10 police officers to maintain order in San Nicolas.

* * * * * * *

REPAIRED ROADS.

* * * * * * *

The conditions of the province would be immensely improved if all the roads in very bad coudition were repaired, but the provincial government has not yet sufficient funds to do this. The opening of wagon roads from one coast to another would bring benefits to both agriculture and commerce. It is partly due to the difficulty of transportation that Iloilo is the market for all the sugar of the opposite coast.

* * * * * * *

Such are the conditions of the province of Cebu. Absolute peace everywhere; nearly all the pueblos organized; bad condition of the roads, streets, squares, wharves, bridges, and wagonways; the pueblos impoverished by the war, the rinderpest, and the locust plague; the smallpox and leprosy causing havoc with the public health; many pueblos without public buildings and a deficient mail service. The steps which, in the opinion of the writer, are best calculated to improve the conditions of the province have been detailed above.

* * * * * * *

JULIO LLORENTE,
Governor, Province of Cebu.

REPORT OF THE GOVERNOR OF MASBATE.

JANUARY 10, 1902.

* * * * * * *

Peace is so completely established in the province that there is not so much as a gang of robbers in the whole territory. The provincial government and the municipalities are doing their work with regularity, and the people are deeply thankful for the benefits derived from the civil régime.

* * * * * * *

All the pueblos of the province are suffering from different sorts of fever, and the death rate is unusually heavy.

The exploitations of the forestry products are the life of the province, and commerce is prosperous as compared with former years.

In the pueblos which have teachers the study of English is progressing. The people have a strong desire to learn the language, and it will be necessary to send teachers to all the pueblos; there are only 6 teachers for 17 pueblos.

* * * * * * *

BONIFACIO SERRANO,
Provincial Governor.

REPORT OF THE GOVERNOR OF SORSOGON.

PROVINCE OF SORSOGON, PHILIPPINE ISLANDS,
OFFICE OF THE GOVERNOR,
Sorsogon, January 11, 1902.

* * * * * * *

The roads throughout the province are in a very bad condition, due to no repair work of any consequence having been done for three or four years, and to the incessant rains of this locality during nearly the entire year. I very strongly recommend that all persons (males and able-bodied) be required, for the coming year at least, to do at least one day's work per month on the public roads, same as prevailed in Spanish times.

* * * * * * *

AN IDLE PEOPLE.

The existing price of hemp in this province is so high that an industrious man earns, if he works well, $4 to $5 Mexican per day. The result is not satisfactory, as the wants of the native are few, *and having earned a few dollars he declines to work again until the money is gone*, consequently about two-thirds of the population is always idle—a condition most undesirable.

The natives of this section are pacific and desire to live in peace, but they are not industrious and it is impossible to secure labor for public or private works under $1.50 to $2 per day, and even at that rate but little can be procured. The labor question is a very serious one, and unless some means are found to induce the native to work, labor will eventually have to be imported.

Generally speaking, and aside from the idleness of the people, the province is in excellent condition and the civil government appears to be working well. The intelligent portion of the population, I believe, is in entire sympathy with it.

* * * * * * *

J. G. LIVINGSTON, *Governor.*

REPORT OF THE GOVERNOR OF ILOCOS NORTE, LUZON.

Annual report of Agueda Agbayani, governor of the province of Ilocos Norte, Luzon.

LAOAG, *January 11, 1902.*

SIR: As it was to be hoped, the establishment of the provincial government, with its provincial board, and the municipal governments, with their municipal councils, have been and are most favorably received by all the inhabitants, although they were far from knowing, when they intrusted to their municipal governments the absolute management of the pueblos, that such municipal governments must be composed of competent and intelligent men, worthy of the honor which is done them, and capable of performing the duties of their office, as the most powerful element for obtaining the prosperity and the happiness of the pueblos is now intelligence and not force.

POPULAR ELECTIONS CRITICIZED.

Popular election, which is an excellent system in civilized countries, where the rights of election and of vote are well known, where liberty is well understood, and the necessity for intelligence, and not force, recognized by the citizens, is rather premature in this province, where what happens is just the opposite. I will not say that popular election is a bad system in this province; on the contrary, it is excellent for the people to learn its advantages as soon as possible; *but for this purpose it would be better not to allow the people, for some time to come at least, to elect the municipal officials, such as the president and vice-president*, who ought to be appointed after proper investigation of their character, their capacity, and their legal competency, although the municipal councilors might be elected by popular vote as a trial and for the instruction of the people. My opinion is in favor of the adoption of legislative measures in that regard.

* * * * * * *

AGUEDO AGBAYANI,
Provincial Governor.

Annual report of Potenciano Lesaca, governor of the province of Zambales.

IBA, *January 13, 1902.*

When the civil régime was organized in this province under the happy auspices of the honorable Civil Commission, it could not be established in better conditions, and a most grateful impression was produced in the province which, thanks to the concessions already granted at that time to the people of the archipelago by the Civil Commission, could not do less than to foresee, in the new régime, the realization of its legitimate aspirations after a period which may be longer or shorter, according to circumstances. And the hopes of the inhabitants are the better founded when they see the favorable change which has been made in all the branches of the public administration after only a few months of civil government.

They see with the greatest satisfaction that the funds which they contribute, in the measure of their forces, toward the payment of the public expenses are never diverted from their legitimate object, and are convinced that the law in all its rigor would be applied to any official who would fail to comply with his duty in that regard.

They remark that, luckily for the province, the provincial officials are no longer what they used to be in former times, in consequence of the traditional system or for their own profit, when they were real despots, who tyrannized the unfortunate inhabitants, disposing of their persons and of their property in an arbitrary and cruel manner, *whereas the new officials simply work for the happiness and the welfare of the province, and faithfully perform the duties of their respective offices.*

They are truly happy to see that the courts of justice have been reorganized, with the peculiarity that they are now a sure and efficacious guaranty that the law shall be duly complied with and the property and the other individual rights respected, because justice is administered with good faith, rectitude, and impartiality, and is no longer, as in former times, an open market, in which, with incredible and scandalous cynicism, justice was bartered like merchandise and sold to the highest bidder.

This explains how, notwithstanding the financial crisis through which the inhabitants have passed and are still passing, and the loss of all, or of the greater part of their property in consequence of the war, and of the ravages of the rinderpest, there has never been the slightest trouble in the collection of the different contributions and taxes, which have always been punctually and exactly paid.

POTENCIANO LESACA,
Provincial Governor.

ANNUAL REPORT OF THE PROVINCIAL GOVERNOR OF AMBOS CAMARINES.

NUEVA CACERES, *January 14, 1902.*

* * * * * * *

I have during the period covered by this report made official visits to all the organized municipalities except a few, for which time and means of transportation have not yet sufficed. I am now making arrangements to continue the semiannual tour required by law, and expect to complete the same before the end of this month. In all towns visited I have found the local officials performing their duties in an honest and satisfactory manner, and no complaints of any importance have been received against any municipal officer.

Absolute peace prevails in all sections. It is certain that there is not an armed insurgent within the borders of the province, and the people are loyally supporting the government. During my recent official visits I have traveled to all parts of the province, and, accompanied by my family, have visited the most remote places unarmed and unguarded in perfect security, meeting with nothing but kindness, courtesy, and hospitality everywhere. *Travel on all roads is safe* and crime is rare. Some trouble has been experienced by people in remote barrios from depredations by mountain tribes, but these have not been of a serious nature, and will be entirely prevented as soon as the municipal police in the vicinity of the mountains are sufficiently armed and equipped.

It has for some time been evident to me, and the opinion has been strengthened by my recent tours of this province, that the people of Ambos Camarines are for permanent peace and have full confidence in the civil government now in force in the archipelago. *Very little is said in this locality as to the desire of the people as to the future form of government, the unanimous sentiment appearing to be to await the progress of events with full confidence* in the honor and justice of the American Government and people, believing that the future will be properly provided for and that their rights and interests will be safely guarded. I am sure that this view of the situation is shared by all fair and impartial observers; and I consider it unfortunate that there are many officers of the military establishment who are apparently not in sympathy with the existing order of affairs, and who seem to regard the present attitude of the people with suspicion, and claim to expect treachery and bad faith from persons who are honestly striving to the best of their powers to repair the damage wrought by the late insurrection, and who now clearly see that their interests and those of the country and the people generally can be served only with the maintenance of absolute peace and by keeping faith with our Government.

* * * * * * *

SCHOOLS.

A good start has been made in educational work. During the period covered by this report *32 American teachers have arrived in the province and are now conducting public schools in 17 towns.* The district superintendent informs me that he has reported fully to the general superintendent of public instruction concerning the affairs of his department. In all towns visited I have observed that where American teachers are engaged in work the schools are well attended. Night schools for adults also attract many, and a desire to learn English is everywhere evident.

* * * * * * *

FINANCES.

The province is in good financial condition, and the affairs of this department are admirably administered by Treasurer Braden and his efficient corps of assistants. The total receipts from all sources during the year ended December 31, 1901, including the loan of $2,500 under act No. 134, amounted to $44,907.53. Total disbursements, including repayment of said loan, amounted to $31,988.47½, leaving a balance on hand, unappropriated, in provincial treasury December 31, of $12,919.05½. These figures do not include the sum of $25,000 which was borrowed from the insular government under

the provisions of act No. 196, for the purpose of building and repairing roads. Out of this fund $1,021.25 had been expended December 31, and the additional amount of $10,000 appropriated. The reports of the supervisor will give the details of the expenditure of this fund and the work accomplished. I can state, however, that the work is progressing in a very satisfactory manner, and *full value for the money expended is being secured in the shape of better roads*; but after the funds arising from the loan are exhausted much necessary road and bridge work will still remain to be done, for which purpose I believe the provincial treasury will be able to supply the funds as required.

The provincial board endeavors to conduct the affairs of the province in the most economic manner possible, and I believe they have succeeded as well as could be expected. Compared with the cost of governing a community of equal population in the United States the expenses of this province during the past year seem very small, indeed.

* * * * * * *

All officials are performing their duties in an honest, faithful, and intelligent manner, and if this province has not been specially favored in the matter of native officials, then the others are indeed to be congratulated. All these men have displayed in their work the most commendable zeal, ability, and integrity, and I have had at all times their active assistance and most unqualified support. * * *

I am, very respectfully,

JAMES ROSS.

The CIVIL GOVERNOR OF THE PHILIPPINE ISLANDS,
Manila, P. I.

Mr. President, the strongest testimony on the result of American local administration in these islands is the financial condition of the provinces. I present a statement of this, which is the most eloquent tribute which could be paid to American management. It must be remembered that this financial situation exists, immediately following the suppression of insurrection and military occupation, and is the result of American control.

Balance in hands of provincial treasurers December 31, 1901, as shown by their accounts.

[United States currency.]

Province.	Amount in treasury.	Amount of loans by insular government included in this balance.
Abra	$501.02	----------
Albay	25,065.07	$2,500.00
Ambos Camarines	38,886.91	25,000.00
Bataan	3,015.58	2,500.00
Batangas	12,329.78	2,500.00
Bohol	16,521.23	2,500.00
Bulacan	8,973.24	----------
Iloilo	16,850.04	----------
Ilocos Norte	8,431.12	2,500.00
Ilocos Sur	10,347.94	2,500.00
Isabela	----------	2,500.00
Leyte	16,075.45	----------
Marinduque	1,122.75	2,500.00
Masbate	1,051.66	2,500.00
Occidental Negros	20,143.67	----------
Oriental Negros	17,742.23	----------
Pampanga	18,249.55	2,500.00
Rizal	2,880.35	2,500.00
Sorsogon	12,875.02	2,500.00
Surigao	4,311.20	2,000.00
Tarlac	10,110.76	----------
Tayabas	11,424.27	----------
Union	8,397.98	2,500.00
Zambales	5,749.33	2,500.00
December 16, 1901.		
Nueva Ecija	1,128.98	2,000.00
November 30, 1901.		
Antique	3,225.56	2,500.00
Cagayan	8,810.28	----------
Capiz	28,304.77	27,500.00
Cavite	4,838.89	2,500.00
Cebu	19,307.43	2,500.00
Misamis	3,116.43	2,500.00
Pangasinan	21,013.98	2,500.00
Romblon	2,745.43	----------
Total	364,515.02	104,000.00

In the foregoing statements the amounts due municipalities are deducted, only the amounts due the provinces being stated. In addition to the amounts given there are yet due to nearly all of the provinces refunds from the insular treasury on account of internal revenue and forestry collections made prior to the date of organization. These refunds are being made as rapidly as the respective amounts are ascertained.

Mr. President, we can not expect that these financial balances in the treasuries of the provinces will continue. Necessary improvements indicated by reports of the governors will take every cent now in the treasury and much more; but the above showing is conclusive as to the efficiency of our administration.

PETITIONS OF NATIVES THAT AMERICAN OFFICERS AND SOLDIERS REMAIN.

It is asserted that the natives are hostile to the continuance of our troops in their towns. This would be naturally so even among ourselves. But such has been the conduct of our officers and men that it does not appear to be true among the Filipinos. Proof of this are petitions from all over the islands that the officers and soldiers in various towns may be kept there. I herewith submit some of these petitions as an illustration of expression of natives on this subject:

DAVAO, MINDANAO, *January 25, 1901.*

SIR: We, the undersigned members of the municipal council of Davao, by ourselves and in the name of the municipality, do hereby request and state the following:

Having initiated in this district the means that lead to a better system of government, especially the municipality which we represent, we believe that for its continuation the commander of this district, Maj. Hunter Liggett, is indispensable, because he is the initiator of the said system, knows the country and circumstances of the inhabitants, and also has conscientiously studied their necessities.

Major Liggett is well liked and a very popular person in this town, especially among the savages who inhabit the woods. *He has impressed in the hearts of all the well meaning of the benevolent American nation in such a manner that the inhabitants fraternize with the Americans, and to-day they are very sorry when they learned that the soldiers were soon to be relieved.*

The opening of the roads, the formation of the municipal council, and the arranging of the numerous races of people that dwell in this district naturally need a commander as just, strict, and of the knowledge of Major Liggett.

It is unnecessary to remind you that while the work taken up by the Americans here remains unfinished it is necessary that white troops should remain here for its protection, and we hope that you will intercede for us to the proper authorities that the soldiers who are going to leave be replaced by others of equality; that is to say, whites and no others; these being preferable for their impartiality, which is necessary to exercise in a town of inferior races like these.

We earnestly request that you may consider what we have stated, as by doing so this town will grow and we will love the nation whose starry flag shelters to-day the town of Davao.

We remain, your true servants,

THE MUNICIPAL COUNCIL,
D. SNARO, *Presidente.*
TOMAS MONTEVERDE, *Vice-Presidente.*
T. PALMA GIL, *Recorder.*
JORJE SAAVEDRA, *Councilman.*

DINALUPIJAN, *June 22, 1901.*

SIR: The undersigned, being friends of peace and tranquillity, which they would like to see remain with the town in which they were born, beg to ask you that if it should be considered necessary to keep a garrison in this town that the commanding officer of the same may always be Capt. Clarence S. Nettles, who is at present in command of the garrison here, and who, besides showing remarkable talents, *has always been as kind to us as a father to his family.* All his acts were prompted by kindness, impartiality, and justice, and at all times he has been anxious to further the moral and material improvement of this town. For this reason he has gained the love and the esteem of all the residents, who are always anxious to obey and respect the orders issued by the established government.

Your obedient servants,

RAYMUNDO PAYUNO,
Municipal Presidente, etc.

MILITARY GOVERNOR OF THESE ISLANDS.

CABUYAO, *August 6, 1901.*

Petition of presidente and 48 prominent citizens of Cabuyao for retention on duty there of First Lieut. H. Clay Evans, acting commissary, it being feared his promotion will take him from their midst. He has gained through his efforts in cleaning and improving the town, providing band music, etc., and by his just treatment the plaudits of the natives

---

Honorable MAJOR-GENERAL OF THE PHILIPPINE ISLANDS, MANILA:

The inhabitants of the town of Bongabon, province of Nueva Ecija, the undersigned, with due respect before you, present themselves and depose: That there are rumors from the public that the commanding officer, Capt. A. A. Cabanniss, and his troops are going to be transferred to Humingen before the beginning of the rainy season, on account of the difficulties of rationing and clothing them, and that they will be relieved by a company of Ilocano soldiers.

For this reason the people of the town before you depose: That since the arrival at this town of the said captain, on November 11, 1900, last, and up to this date, *he has been in perfect harmony with the people of the town and the people with him* through his wise methods of ruling and the fine discipline of his men: *besides, he knows how to punish with justice anyone who commits any crime.* This is proof that he performed his duty with impartiality, and for this reason this town has greatly progressed in the short time of his presence here. *He established public schools in the town as well as in the barrios, had the streets cleaned, and repaired the houses, and his orders were well obeyed.*

PULILAN, PROVINCE OF BULACAN,
January 21, 1901.

The MAJOR-GENERAL COMMANDING THE PHILIPPINE ISLANDS:

The municipal officers of Pulilan, in the name and in behalf of the citizens of the same, with due respect, say:

Learning with regret that the soldiers that garrison this pueblo are to be moved to another point, while deferring with the greatest respect to your orders, we should fail in our loyalty unless we represented to you the necessity of these troops remaining here.

The officers now stationed in this pueblo, by their blameless conduct and uncommon amiability, *have merited, without soliciting it, the approbation and good will of the people, and their departure is the cause of great surprise as well as pain.* We also desire to represent that this pueblo is of great extent, and the officers now here are familiar with the country, and by their ability, notwithstanding the small number of soldiers, have been able to frustrate the intentions of those who wish to disturb the tranquillity of the neighborhood, supplying by their diligence, ability, and valor the small number of soldiers. These officers have already great confidence in their power to defend us from the attacks of those outside. We pray that it will not be necessary to remove these officers, in view of the critical situation in which we find ourselves and the peculiar state of this pueblo.

LUCAS DIZON, *Presidente* (16 others).

HERMOSA, *June 21, 1901.*

Major-General WHEATON,
Commanding General, Department Northern Luzon, Manila, P. I.:

We, the undersigned feminine citizens of Llana Hermosa (Bataan), with due respect, before your honor depose: That in view of the reliable news that

we have heard concerning our captain, commanding officer, and lieutenant of this post, that they will be transferred to another place; for this reason we beg to remind your honor that since the arrival here in this town of the said officers they put themselves to work at once without any loss of time on behalf of the pacification of the town under their control till their desired end was obtained.

Therefore we humbly request you, if you should think proper, to permit the said commanding officers to still remain in this town for the benefit of its citizens, and also in order that the agricultural work of the unfortunate farmers may continue. (Signed by the presidente, Mariano Nuguic, and 17 others.)

VILLASIS, *August 4, 1901.*

The GENERAL COMMANDING THIRD DISTRICT,
Department of Northern Luzon.

HONORABLE SIR: The undersigned, the president, the municipal council, and principal inhabitants of Villasis, representing the whole town, present themselves with due respect and state: That with great satisfaction the town authorities have been able to arrest certain persons, members of that illicit association which raised up the town of Cabaruan, and they wish to call your attention to the fact that should it prove true that the military detachment is to be removed, the town will be subject to the revenge of the friends of those who have been arrested and who are now prisoners. This is the more probable, considering the reduced number of the local police and the system of armament.

We therefore wish to request that our town may be garrisoned by one company, if possible.

(Thirty-one signatures follow.)

BINAN, LAGUNA PROVINCE, P. I., *September 25, 1901.*

Since Captain Hunter has had command of the forces in this town, peace reigns, and the neighborhood enjoys an enviable tranquillity at the same time that it enjoys the benefits of civil government.

Such are the motives that move the inhabitants of Binan to ask that Captain Hunter be not now relieved from this garrison, and we do not doubt that the military governor will take them into account before confirming the announced relief.

Very respectfully, ——— ———.

(Follow signatures of president, vice-president, and counselors.)

General CHAFFEE,
Military Governor of the Philippine Islands.

APALIT, PROVINCE OF PAMPANGA, P. I.,
October 7, 1900.

First. That Captain Butler and Lieutenant Pond have captured the guns that were used by the ladrones that pillaged in the immediate vicinity of this pueblo, and at the same time the principal organizers of the bands of brigands or thieves were apprehended by these officers, whose activities obtained the extinguishment of the actions of the bandits and assassins that frequently entered the barrios and places at some distance from the pueblo, and at this time the inhabitants enjoy tranquillity and freedom from injury consequent, without doubt, upon the brilliant services of these untiring and active officers.

Second. That these gentlemen have learned to obtain the good will of the inhabitants of the pueblo, have attended with justice to the smallest complaints that have been presented to them, have given good example to the troops that they command, correcting with rectitude whatever abuses their subordinates may have committed, and have never permitted the natives under their jurisdiction to be injured by anyone, defending them with all the rigor of the law.

Third. These officers, especially Lieutenant Pond, in his capacity as provost judge of the pueblo, took the most energetic interest in the pueblo, with the purpose of increasing the energies of the pueblo for its benefit, establishing primary education in all the barrios, and at the instance of Captain Butler there has been erected a public school for both sexes, paid for by the wealthier and other inhabitants, in which matter these officers have been of the greatest direct benefit to the common well-being of the pueblo.

We therefore beg that because of the strong reasons on which we base our petition that Captain Butler, First Lieutenant Pond, and all their company be continued as the garrison of Apalit.

MACARIO ARUEDO.
(And 15 others.)

ALIAGA, *March 20, 1901.*

His Excellency the GOVERNOR-GENERAL:

The undersigned, alcalde, treasurer, and municipal counselors of the pueblo of Aliaga, have the honor to say that they have heard that Lieut. Frank A. Jernigan, commanding the detachment here, was to be transferred to another post. As he has always treated the people right, etc., we have the honor to request that he be allowed to remain here.

(The signatures follow.)

Considering the great benefits to this pueblo that followed the rapid pacification of the country, we earnestly supplicate that in view of the foregoing that Capt. Robert Alexander be permitted to continue his valuable services to the pueblo for the complete pacification of the same and the prosperity of this province.

ELEGIO RICALVE, *Municipal Presidente.*
(And 65 others.)

GUINAN, SAMAR, *December 15, 1901.*

SIR: We, the undersigned, presidente and municipal counselors of this pueblo, in the name of and representing the people thereof, respectfully state a profound regret is being caused in the people in the notice that is beginning to spread concerning the departure of Company H, First United States Infantry, now stationed here.

We most earnestly beg you to suspend the transfer of this company and that it be permitted to remain in this pueblo. It is skilled in the military operations in these parts, and has our entire confidence in being energetic and observing, *and from the highest officer to the last private has so conducted itself as to merit our regard for their efforts and labors.*

APOLINARIO MALABASAY.
(And 21 others.)

[Translation.]

BULACAN, *January 3, 1902.*

To the United States military governor in the Philippines:

The undersigned, members of the municipal council of Bulacan, state that they have heard a rumor that the American garrison stationed in their town is soon to be relieved, and desire to state that Provost-Marshal Day has won the esteem of everybody by his fine qualities, the discipline which he maintained among his command, *his energetic work in pursuing evil doers, and his activity in the construction of seven bridges, embankments, and other public works.*

The undersigned respectfully request that their loyal town be not deprived of such a good and popular officer.

CARLOS MORELOS, ETC.

MANILA, P. I., *January, 7, 1901.*

Major-General BATES,
Commanding Department of Southern Luzon:

The subscribers, the alcalde and municipal counselors of the pueblo of Pateros, province of Manila, most respectfully state—

That it has come to our knowledge that the company stationed at Taguig, commanded by Captain Parke, will be relieved during this week to be stationed in another pueblo, we most respectfully supplicate that if convenient the order referred to be suspended, not only because of its being of disadvantage to the inhabitants, but also that *Captain Parke is very kind to the people* and knows them very well.

NAZARIO TAASON.
(And 9 others.)

PUEBLO OF LOBOE, PROVINCE OF BATANGAS, P. I.,
August 15, 1901.

The COMMANDING OFFICER, *Batangas, P. I.:*

The undersigned, members of the municipal committee, the parish priest, and other inhabitants of the same pueblo, with greatest consideration and respect, present to you and say:

That as peaceful inhabitants and lovers of complete tranquillity, not only of this pueblo, but of all the Philippine Archipelago, we most earnestly pray that you will be pleased to remain permanently in this pueblo, the present garrison, for because of them we enjoy this tranquillity.

PABLO DIZON,
Parish Priest.
(And 10 others.)

ZAMBOANGA, *April 26, 1900.*

The MAJOR-GENERAL,
First Delegate of the American Government on the Archipelago:

The mayors, justices of the peace, persons of signification, and landowners of this province, by themselves and representation of the towns administered by them, to you, with the greatest submission and respect, expose: That having had notice that the colonel military governor of this town has been relieved by the commander of troops of occupation of the office so honorably fulfilled by him, and in view of his worthy behavior toward the people *because of the works done by him in so short a space of time*, as well as because of his affable and familiar manners, we humbly request of you to deign reorder him back to this town to take charge again of the office he was so efficaciously fulfilling.

Grace which we do not doubt to reach of the magnanimous heart of you whose life may God keep many years for the good of America and this archipelago.

I. MIDEL, *Presidente.*
DATO MANDI.
(And the 4 mayors, the 4 justices of the peace, 50 principals.)

GENERALS CHAFFEE AND BELL.

Much has been said, Mr. President, concerning General Bell, a man whom I personally know, a man who is my friend. I almost felt false to my friend, when I heard the unworthy attacks upon him, that I did not answer them instantly. But I believed that his own brilliant record would be his best defense, for, Mr. President, General Bell is one of the noblest officers who ever honored the American uniform.

I can not turn at the moment to the correct report, but what I was about to read was a statement of the governor of a province and superintendent of instruction there that General Bell, to use his language, "with his vivacious enthusiasm for the education" of the people, had personally attended to it in addition to his military duties.

Yes, here it is. The governor of Abra speaks of the harsh measures he advised General Bell to take. General Bell followed his advice. The insurrection was suppressed. Thereafter the governor went through the province practically without escort. Then what followed? Let the American superintendent of education for that province tell:

Without an exception every schoolhouse was practically without furniture and some with no floor and such a roof as would allow the rain to saturate almost the entire interior. But having on hand a considerable sum of money collected as fines from various criminals, and desiring to spend it for some good purpose, *General Bell, with his vivacious enthusiasm for education as well as whatever might be for the general welfare of the people*, sent Captain Heard, Third United States Cavalry, to make a thorough inspection of the schools in this province, requesting him to especially report upon the dimensions of each building, in order that he might know how much sheet iron would be required to roof them. This being acquired, the order was made to the States, from which the material is at present arriving.

General Bell is no exception. Whoever has toiled and fought and suffered to suppress this insurrection, which Governor Taft declares is "a crime against civilization," has been incessantly assailed on this floor. The commanding general, General Chaffee, with whose friendship I am honored, also has been the focus of this fire. But it has only served to bring into bolder relief the character and career of this superb soldier. Since boyhood he has served the flag. He fought to save the Union. Daily for years thereafter he risked his life protecting our ever broadening frontier. And now he gives his final energies to upbuilding American sovereignty over the outposts of our dominions beyond the sea. He is all that a soldier and gentleman should be. He is one of the great administrators developed by our new duties and responsibilities. Ever brave, ever calm, ever gentle, ever just,

and, above all, ever loyal, Chaffee is a pride to the Republic, and Chaffee is as firmly intrenched in the hearts of the American people as his place in history is secure.

IV.—FILIPINO SELF-GOVERNMENT AND EFFECT OF AMERICAN WITHDRAWAL.

Mr. President, is it to be argued from these reports of the conditions in the Philippine Islands that every one of them (except the report of Major Gardener, which is left out for the reason that it has been presented by other Senators, and for other reasons, which make it most unfair that it should be offered at all), showing that the conditions there are satisfactory to a degree that is almost beyond belief—is it to be argued from that that those people are therefore capable of self-government?

Mr. President, I have always observed that the people who remain in their offices and studies and see visions and dream dreams and formulate theories upon them are not as apt to be correct in their statements as those who go upon the ground and examine the actual conditions for themselves. Therefore I present the beginning of the report of the Schurman Commission, written by Professor Schurman himself, at a time when he was taking part in this grand and noble work, and at a time when he himself was one of the active and constructive agents of this movement of advancing civilization. It is more valuable than what he says in his present altered attitude. He who now says that he is a believer in the capacity of the Philippine people for self-government; he who now declares that American authority should be withdrawn, officially said to the American people when he was fresh from the Philippines that—

FIRST REPORT OF SCHURMAN COMMISSION ON CAPACITY OF FILIPINOS FOR SELF-GOVERNMENT AND EFFECT OF AMERICAN WITHDRAWAL.

The most striking and perhaps the most significant fact in the entire situation is the multiplicity of tribes inhabiting the archipelago, the diversity of their languages (which are mutually unintelligible), and the multifarious phases of civilization—ranging all the way from the highest to the lowest—exhibited by the natives of the several provinces and islands. In spite of the general use of the Spanish language by the educated classes and the considerable similarity of economic and social conditions prevalent in Luzon and the Visayan Islands, the masses of the people are without a common speech and they lack the sentiment of nationality. The Filipinos are not a nation, but a variegated assemblage of different tribes and peoples, and their loyalty is still of the tribal type.

Their lack of education and political experience, combined with their racial and linguistic diversities, disqualify them, in spite of their mental gifts and domestic virtues, to undertake the task of governing the archipelago at the present time. *The most that can be expected of them is to cooperate with the Americans in the administration of general affairs, from Manila as a center, and to undertake, subject to American control or guidance (as may be found necessary), the administration of provincial and municipal affairs.* Fortunately, there are educated Filipinos, though they do not constitute a large proportion of the entire population, and their support and services will be of incalculable value in inaugurating and maintaining the new government. As education advances and experience ripens, the natives may be intrusted with a larger and more independent share of government—self-government, as the American ideal, being constantly kept in view as the goal. In this way American sovereignty over the archipelago will prove a great political boon to the people.

And listen to the following final conclusion of Professor Schurman. No orator in the heat of campaign has put the sad effect of American withdrawal in such fervid and ultimate terms as did Schurman, when fresh from the field. He says:

Should our power by any fatality be withdrawn, the Commission believe that the government of the Philippines would speedily lapse into anarchy, which would excuse, if it did not necessitate, the intervention of other powers and the eventual division of the islands among them. Only through American occupation, therefore, is the idea of a free, self-governing, and united Philippine commonwealth at all conceivable. And the indispensable need from the Filipino point of view of maintaining American sovereignty over the archipelago is recognized by all intelligent Filipinos and even by those insurgents who desire an American protectorate. The latter, it is true, would take the revenues and leave us the responsibilities. *Nevertheless, they recognize the indubitable fact that the Filipinos can not stand alone.* Thus the welfare of the Filipinos coincides with the dictates of national honor in forbidding our abandonment of the archipelago. We can not from any point of view escape the responsibilities of government which our sovereignty entails; and the Commission is strongly persuaded that the performance of our national duty will prove the greatest blessing to the peoples of the Philippine Islands.

DIARY OF AGUINALDO'S STAFF OFFICER.

Those who claim that the Filipinos are a single people are confronted with this extract from the diary of a member of Aguinaldo's staff, written during Aguinaldo's last flight. They had reached a point in the Igorrote country on December 16, and the writer of this diary, speaking of the situation, says:

Our situation here in Banane is very dangerous, because not only are enemies the Americans who are in front of us and behind us, but the very Igorrotes who surround us, including those of Banane, are also our enemies, only waiting for the opportunity to cut off our heads, just as happened to Captain Villareal's soldiers, who, sent on in advance to the settlements, were attacked by the Igorrotes of Pagayapaig, and as a result we had to lament the loss of three guns captured by the Igorrotes, besides three soldiers and a woman wounded.

Following that, I desire to present the testimony of Governor Taft, the testimony of General MacArthur, the testimony of General Hughes, the testimony of Professor Barrows, and of others, who have exhaustively examined the situation upon the spot. These are not reports of a three weeks' holiday trip, as was the case of Officer Sargent, upon whose testimony all of the eloquent argument of the senior Senator from Massachusetts [Mr. HOAR] was based. No, these are the mature and deliberate statements of men who have studied the conditions at first hand, not for weeks, but for months and for years. Moreover, some of these, like Governor Taft, went there opposed to the policy of the Government, and, after having examined the policy in its effect upon those people, returned to this country its most earnest and valuable supporters.

TESTIMONY OF GOVERNOR TAFT AS TO CAPACITY OF FILIPINOS FOR SELF-GOVERNMENT AND EFFECT OF AMERICAN WITHDRAWAL.

Senator CARMACK. You made a close and careful study of the conditions in the islands and the character of the people. I wish to ask you what is your opinion of the proposal that the Philippine Islands shall be made an integral part of the United States—leaving out for the present the question of statehood—giving them equal constitutional rights, and full rights of citizenship to the people. What is your opinion of that proposal?

Governor TAFT. I had expected to treat of that subject generally, but I have no objection to answering the question now.

The condition of the people of the Philippine Islands to-day is such that *the extension of the constitutional restrictions which apply in a State would very much interfere with the establishment of a stable and successful government.*

A government ought to be established under American guidance which shall form a stable government, by which and under which the Filipinos shall gradually improve their knowledge of what is individual liberty and what is a constitutional government, and subsequently the time will come when the United States and the Filipino people together can agree upon what their relations shall be.

Whether a colony—I mean a quasi-independent colony, as Australia and Canada are to England—an independent state, or a State of the Union, is a question so far in the future, dependent upon the success of the operation of the stable government, that I have not myself reached a conclusion on the subject.

QUESTION OF STATEHOOD.

Senator CARMACK. You think, then, it is an open question whether the people of the Philippine Islands—islands populated with eight or ten million Asiatics—should be admitted to the full rights of American citizenship or whether or not an archipelago so populated should be admitted to statehood in the Union? You think it is an open question?

Governor TAFT. I think it is a question that I would not answer two or three generations before it will arise. I think the great evil to-day is the discussion of something that is utterly impossible of settlement to-day. The thing the Filipino people need to-day is a stable government under the guidance of American control, teaching them what individual liberty is and training them to a knowledge of self-government, and when they have that, the question of what relations shall then exist between the islands and this country may be settled between them and the citizens of the United States.

But to attempt to decide in advance something that it is utterly impossible wisely to decide now, it seems to me, with deference to those who differ with me, very unreasonable.

Senator CARMACK. I was speaking of it from the standpoint of the people of the United States, as to whether you thought it was a question of possibility——

Governor TAFT. *What the people of the United States may think, or what they ought to think, fifty or a hundred years from now I do not venture to say.*

Senator PATTERSON. It is a century problem?

Governor TAFT. *It is quite possible, as we say in our report, that it may take a generation, or two generations;* but no matter how long it is, it is in my judgment the duty of the United States to continue a government there which shall teach those people individual liberty, which shall lift them up to a point of civilization of which I believe they are capable, and which shall make them rise to call the name of the United States blessed.

I have thought over this subject a great deal; we have become intensely interested in the problem, and of course motives, the charge of which we can not avoid, are given to us in reaching such a conclusion; but if I ever was convinced of anything in my life it is that the problem which the United States there has is a great problem worthy of its solution, and which, when solved by establishing a stable government there under the guidance of American control, will redound to the honor and the benefit of this country, and I am proud to have to do with that work.

Senator CARMACK. You say the great trouble in all this matter has been that we are thinking about what may happen a generation or two generations from now. If the possession of the Philippine Islands by the United States involves the possibility of an archipelago 7,000 miles away, inhabited by people of an Asiatic race, becoming a State of the Union fifty or a hundred years from now, do you not think it is a question which deserves consideration now? Do you not think we ought to consider what may happen fifty years from now?

Governor TAFT. *No, sir; and I will say why. Nothing that can to-day be said to the Filipino people in the nature of a promise as to the form of government which may take place, after an established stable government shall be formed, could be otherwise than misleading to them and confusing in establishing that government.*

It would at once begin the agitation among those who desire that separation to have that separation, because, in their opinion, they are fitted for it at once. It would drive away from the support of the stable government that conservative element who are strongly in favor of American guidance and control, because they would anticipate an early change.

They would think they would early be left without the support which the presence of the American Government necessarily gives, and the promise of something in the future, instead of helping to establish, would render unstable any government which was attempted to be established.

EFFECT OF COLONIAL ESTABLISHMENT.

Senator PATTERSON. Then this statement by the Federal party, of which three members of the United States Commission are active members, is false?

"To make of the Philippines a colony of the United States or to grant independence to the Philippines would be to hand the islands over to disorder and to anarchy, to destruction and to chaos."

Governor TAFT. True as of what date?

Senator PATTERSON. As of the date of the petition?

Governor TAFT. True as of now. It is just as true as gospel.

Senator PATTERSON. It is just as true as gospel that to make the Philippines a colony of the United States is to hand the islands over to disorder and to anarchy——

Governor TAFT. No.

Senator PATTERSON. To destruction and chaos?

Governor TAFT. No.

Senator PATTERSON. That is exactly what this party states to the Congress of the United States.

Governor TAFT. *To give them independence now, it is true.*

* * * * * * *

Governor TAFT. I doubt if the people can establish a stable government I assume that this is without the aid of American guidance and control. If it is with the aid of American guidance and control, then the time taken must be *indefinitely in the future.*

Senator MCCOMAS. Generations, probably?

Governor TAFT. Yes, sir.

Senator MCCOMAS. That was to be my next question—how many years we must continue to occupy and govern the archipelago until the people had established a stable government. You have said many generations.

Governor TAFT. Yes, sir; I think if it means what it may be inferred to mean, it means that the generals of the insurrecto forces shall call together a number of delegates and shall go through the form of making a government, and then when that government has its offices filled, at once the transfer of sovereignty shall take place.

There would result after that—it might last six months, it might last a year, but there would result anarchy and interference with the rights of individuals and interference with the rights of vested interests in which foreign governments are concerned, which would require the United States at once to step back and begin over the work which it had been doing, and it would find itself where it was two years ago.

EXPERIENCE OF THE AGUINALDO GOVERNMENT.

I make that statement, first, on the experience of the Aguinaldo government. For eight months Aguinaldo had a government in Luzon. It consisted of the congress at Malolos, the members of which were appointed by him, many of them distinguished lawyers and educated men, from Manila largely.

Thereupon he appointed governors for various provinces, and the outrages that were committed by those governors in the conduct of government and the collection of taxes, the corruption which existed through the territory over which he had control, leave no doubt as to what the result would be, that a similar government would be established—and I assume that is what this substitute means—within a short period of time, and would be followed by the withdrawal of American sovereignty.

Secondly, the local control which the educated people of each province have over the ignorant people there would enable disappointed politicians in any particular province to set up a little force by itself, and that inevitably, in the course of one or two years, would produce the state of anarchy of which I have spoken.

The CHAIRMAN. Do you think, in this connection, we having withdrawn and a state of anarchy having arisen, it would probably lead to the partition of the islands among other powers?

Governor TAFT. Of course that is a question——

The CHAIRMAN. It is a mere question of opinion.

INTEREST FOREIGNERS TAKE IN THE ISLANDS.

Governor TAFT. It is a question of opinion as to the interest which foreigners take in the islands. They are called among foreigners whom I know in Manila the gems of the Orient. The interest that Japan has taken in the islands the records of the military department will show. The interest that other governments would take in the islands may be judged of by reference to the foreign capital invested there. The Germans have a great deal of capital. The English have a good deal.

Senator MCCOMAS. You have comprehended in your answer other questions which I had contemplated asking. Could we in any way, at any time, in your opinion, obtain sufficient guaranties for the safety of the inhabitants who have adhered to the United States?

Governor TAFT. I think it would be exceedingly difficult. If I may be permitted——

EFFECT OF AMERICAN WITHDRAWAL.

Senator MCCOMAS. What would happen to them if we withdrew in this fashion?

Governor TAFT. *The personal hostility between leading Filipinos at times has been so great as to lead to bloody measures. How far they would be carried here I have no idea. That is conjectural.*

I should like to say, if I may, although I had not expected to come to this part of the discussion now, that it is a very logical and reasonable proposition on its face to say, will not the insurrection come to an end; will not there be general peace and tranquillity if you promise to give these people independence when they shall be fitted for it? That proposition, put in that way, seems to have a great deal of force.

Practically the effect of such a promise would be exactly the opposite from that which the argument presupposes. The promise to give them independence when they are fit for it would be accepted by them as a promise to give them independence certainly during the lifetime of the present generation. It would at once bring into a discussion of every issue the question whether now were not the people ready for independence. It would drive out capital; prevent capital from coming there; and upon the investment of capital, the building of railroads, the enlargement of vision of the Filipino people much of our hope of progress must depend.

In addition to that, by reason of the constant agitation as to the granting of this independence in a year or two years or three years or a decade, it would at once discourage the sincere efforts of the educated Filipinos who are with us to-day in building up a stable government. For these reasons I think such a promise as that would be a great mistake.

Senator MCCOMAS. If we later, according to the proposition you have in your hand, leave the control and sovereignty to the inhabitants, to which tribes could we safely intrust it, and would not we for many years necessarily continue a de facto sovereignty as does England over Egypt or Austria over Bosnia? Could you, in deciding the question of leaving the sovereignty of the islands, determine now, from your several years' experience there, to which inhabitants you would leave it, with their rivalries and confusions of tongues?

Governor TAFT. Of course, if you left the islands to anybody you would leave them, I assume, to some sort of a committee or parliament, appointed or selected, who would be dominated probably by those whose violent methods have continued the guerrilla warfare; and that such a body could be created by proclamation within a reasonable time I have no doubt. *But that it would not constitute a stable government, that it would give rise to anarchy and division between the tribes and between individuals of power and force, I have no doubt.*

EFFECT OF A GOVERNMENT OF THE TAGALOGS.

Senator MCCOMAS. What would be the effect of such a government of the Tagalogs over the other tribes and people there in respect of the inhabitants themselves?

Governor TAFT. It would probably lead to a division between the Visayans and the Tagalogs, as disappointed officeholders or persons disappointed in the policy agreed upon by Manila might lead them on.

IMPOSSIBLE FOR FILIPINOS TO GOVERN MOROS.

The CHAIRMAN. Would the Moros submit to such government?

Governor TAFT. So far as the Moros are concerned they are entirely out of this question. It is utterly impossible for the Filipinos to govern the Moros.

HOW MOROS COULD BE GOVERNED.

Senator CARMACK. Would it be possible for us to govern them?

Governor TAFT. It is possible for us to govern them as we govern the Indian tribes. They are nowhere near so amenable to education, to complete self-government by way of partial self-government, as are the Christian Filipinos. The Moros have no desire for popular government. They are arranged in tribes, real tribes as distinguished from the linguistic tribes of Christian Filipinos. They are arranged in real tribes, in the sense that every Moro is under a dato's control, and he does not desire to be governed except through a dato.

Senator MCCOMAS. A clan?

Governor TAFT. By way of a clan.

Senator RAWLINS. You think it would be unsafe to accord them independence at present?

Governor TAFT. Yes, sir.

Senator RAWLINS. Because they have not the habit of self-government.

Governor TAFT. Yes, sir.

Senator RAWLINS. The Filipinos, desiring some definitive policy declared with reference to them, if we fail to do that and proceed to deal with them and legislate for them as if they were a dependent colony, to be treated like other subject colonies, would it not be a constant source of trouble?

WHAT THE FILIPINOS DESIRE.

Governor TAFT. I think not, if you show by your legislation, as I hope you may, that you are really extending to them the means of self-government. What they desire definitively, as I understand it, is a declaration that Congress expects to establish a civil government, and to say what kind of a civil government it is. They also point out that they would like to know where the Filipinos stand with reference to the rights under the Constitution and with reference to the United States in the relation of the islands to the United States.

I think it would be well to reiterate, in a law like this, the rights set forth in the President's instructions to the Commission, which include everything secured by the bill of rights except the right to bear arms and the right to a trial by jury. I see no objection—although, of course, it follows without such a statement, because of the relation that the treaty establishes—to a declaration that the citizens or residents of those islands, owing allegiance to the United States, shall have the same protection with respect to foreign countries that a citizen of the United States has.

OBJECTION TO EXTENDING CONSTITUTIONAL RIGHTS TO FILIPINOS.

My objection to extending those personal rights contained in the Constitution is chiefly based on the fact that I do not think they are ready for trial by jury. I do not think that, educated in an entirely different system of law and having the defects which I have already pointed out, they are ready for trial by jury, and then I do not think that the Filipinos themselves would ask to have the right to bear arms. The right to bear arms conferred upon a people in which ladronism is so chronic would lead to oppression of the Filipinos, and the Filipinos would be the last to desire to have it. If there is in the law a declaration of the rights I have mentioned, I should think it would help us.

* * * * * * *

EFFECT UPON THE FILIPINOS OF CESSATION OF AGITATION HERE.

Senator BEVERIDGE. What would be the effect upon the people and conditions there if agitation here upon this question should cease, or any encouragement to those in insurrection should cease, and the people of the islands should be given to understand that just such a government as you describe, and just such a course of action as you have indicated, will be firmly and unalterably pursued?

MEANING OF TERM "INDEPENDENCE" TO FILIPINOS.

Senator ALLISON. There are Filipino people, and I suppose very intelligent people, from what I hear, who want independence. Do they mean by "independence" that they shall establish there a government of their own, which shall be responsible for domestic tranquillity and also take care of all their relations with the governments of the world, and that they shall be cut loose entirely from the friendship and protection of the United States? Is that the kind of independence they are talking about, or is it an independence that shall rest upon some stronger power to help them maintain themselves? I should like to know just what is the idea of the intelligent people and also of the other 90 per cent when they talk about independence.

Governor TAFT. It is very difficult to answer that question with exactness. The term "independence," when used by the insurgents, was supposed to indicate something very good, without any definition of what it was; so that many of the troops, as Professor Worcester tells me, for I am not myself an authority on that question, in cheering said "dependencia" instead of "independencia." On the other hand, there are intelligent people who use the expression "independence" in an oratorical way without having thought out what the giving of it involves.

* * * * * * *

Senator ALLISON. You said, in response to questions by Mr. Rawlins and Mr. Culberson, that you do not regard the people as now prepared for independence?

Governor TAFT. I do not.

Senator ALLISON. When you speak of that, do you mean that they are not prepared to maintain a national government of their own, without any control by any other nation, strong or weak?

Governor TAFT. I do.

Senator ALLISON. Or do you mean also that they are not able to protect domestic order throughout the islands by means of their own government, whatever it may be, without the aid of some other government?

Governor TAFT. *I mean both. I mean that they are neither able to maintain a national government which would be stable, nor are they able to maintain a government, looking at it from the domestic point of view, which would be stable enough to protect life and property.*

WHAT THE COMMISSION IS PREPARING THE FILIPINOS FOR.

Senator ALLISON. Now, is it for that kind of a government that you are preparing them? Are you preparing them so that that alternative may at some time be presented to them, or the other alternative of which Mr. Rawlins speaks?

Governor TAFT. We are preparing them, or we hope we are preparing them, for a government in which the rights of the minority will be respected under the rule of the majority, an idea, permit me to say, which as yet obtains in the minds of a very few of them. We hope to prepare them for a condition where they will be able to maintain a stable government to protect life, liberty, and property, and if they desire ultimately—it is in the distant future—to maintain a national government of their own.

Senator ALLISON. If they want it?

Governor TAFT. If they desire it.

Senator BEVERIDGE. You are preparing them for the best of which they may be found capable?

Governor TAFT. That is what we are trying to do.

EFFECT OF TURNING OVER THE GOVERNMENT TO NATIVE LEADERS.

Governor TAFT. I wish to impress the fact, that were the government turned over to those who profess to be the leaders in the insurrection to-day, among the irreconcilables or intransigentes, though not in arms, *the idea of civil liberty would be the last idea which would be practically carried into effect.*

Senator ALLISON. That is, liberty regulated by law?

Governor TAFT. Yes, sir.

Senator ALLISON. Established by law?

Governor TAFT. *Yes, sir. The tendency of all governments under them would be toward absolutism*, an oligarchy which would mean that the presidente of the village would control absolutely the village; the governor would control the province, and the head of the government would control the governors. The idea of elevation and protection to that indifferent mass of 90 per cent would be possibly professed, but would fall far short of actual realization; and, therefore, offering to them independence now is offering to them—that is, to 90 per cent of the people to whom I have referred—a condition of things which would be as far from enjoyment of free institutions as it is possible to imagine.

TESTIMONY OF GENERAL MACARTHUR ON CAPACITY OF FILIPINOS FOR SELF-GOVERNMENT AND EFFECT OF AMERICAN WITHDRAWAL.

Questions by Senator BEVERIDGE. What, in your judgment, would be the effect if a Filipino government of any kind were established, American authority and sovereignty entirely withdrawn, and they left to themselves?

AMERICAN WITHDRAWAL MEANS "ABSOLUTE CHAOS."

General MACARTHUR. *To answer that briefly and concisely, I should say absolute chaos.* I should like, however, at the next session, to elaborate my views. I should like to explain how I reach that conclusion, briefly.

* * * * * * *

The Filipino people certainly have rudimentary republican ideas and aspirations, and are therefore in an essentially plastic condition, which, under the tuitionary control of the United States, in my opinion, would admit of rapid molding of the body politic into a consistent, self-supporting commonwealth. On the other hand, while the existence of elementary republicanism is apparent to the sympathetic investigator, it is equally apparent that even the most advanced thinkers among the Filipinos have no conception whatever of the practical mechanical methods whereby the results they are all anxious to attain can be successfully accomplished.

"FAILURE OF REPUBLICANISM IN THE EAST IF WE WITHDRAW."

American withdrawal from the islands, therefore, would, in my opinion, result in permanent failure of republicanism in the East and the devastation of the archipelago by internecine and fratricidal war, which would continue indefinitely until suppressed by some external force. That such force would be applied there can be no doubt.

The incalculable and indescribable value of the archipelago, strategically and commercially, has attracted the attention of constructive statesmen throughout the world. Many nations are looking in that direction with longing eyes. The islands in case of our withdrawal would unquestionably become the theater of gigantic political and warlike operations. The inevitable collision which would result from such an American policy could not be confined. It would resound on all the shores of the Pacific and affect the commerce of the world. It would bring the powers of the world face to face and prematurely initiate a struggle for supremacy in the East from the consequence of which America could only protect herself by participation in the general conflict which would result directly from her own efforts to escape from the pressure of circumstances which are carrying her to a magnificent destiny. We would thus not only sacrifice the Filipino people, but would bring upon ourselves staggering responsibilities, in respect of which the present problems in the Philippines would appear as mere child's play.

In the belief that history never goes backward, a broad generalization is reached to the effect that enlightened self-interest, sound economy, and pure morals agree in their judgments, and corroborate each other, and suggest that we must retain the archipelago as a tuitionary annex; that there we must plant our institutions; there we must contest for commercial power, and perhaps combat for political supremacy.

To overcome the inherent difficulties of the situation will, of course, require the most profound efforts of constructive statesmanship, but the event of introducing our civilization, our institutions, and our commerce into Asia is fraught with such gigantic consequences that it is calculated to fix the attention of the most careless observer and to warm the fancy of the most indifferent.

That is the general basis upon which I reach the conclusion that chaos would result in the Philippine Islands if we left them.

AGUINALDO SAID IMPOSSIBLE FOR FILIPINOS TO ESTABLISH INDEPENDENCE.

General MACARTHUR. I might say in that connection of self-government that in one of the last interviews I had with Aguinaldo—and my intercourse with him was exceedingly agreeable and very much to his credit—he told me that he was satisfied that he had been misinformed as to the character of the American people and the purpose of the American Government, and *that he was also satisfied that it would be impossible at this stage of their evolution for his own people to establish a stable, independent government.* Now, that is entitled to just as much credence as gentlemen choose to give it. It was a voluntary statement on Aguinaldo's part, however.

TESTIMONY OF GENERAL HUGHES AS TO CAPACITY OF FILIPINOS FOR SELF-GOVERNMENT AND EFFECT OF AMERICAN WITHDRAWAL.

VISAYANS' CAPACITY FOR CIVIL GOVERNMENT.

The CHAIRMAN. What do you think of their capacity for civil government?

General HUGHES. My personal opinion is that it will be a long time before they are qualified to run a civil government of their own. I understand your question to relate purely to the Visayans?

The CHAIRMAN. That is what I mean.

General HUGHES. *I should say not inside of two generations.* The people have no earthly idea of equity. They simply know their own wishes, and they have no regard for the wishes of others.

The CHAIRMAN. If left to themselves what sort of government, in your opinion, would they establish?

General HUGHES. They would try, undoubtedly, to establish a republic of some kind, and they would do it. The ordinary Tao of the Visayans is one of the most gullible creatures the world contains. He will believe anything he is told by his acknowledged superior, no difference how absurd the statement is, and there is the great strength that their leaders have over them—the enormous lies that are published to them as to their plans and what is going to take place. They gull them right along.

The latest I got hold of from Lukban to his people was that a German fleet would be in those waters at such a date to blow the Americans out, and that they would then secure their independence. That was the last one I heard.

VISAYAN CONCEPTION OF INDEPENDENCE.

Senator CULBERSON. Do you mean by that to suggest that the Visayans desire independence?

General HUGHES. These people of whom I speak—the Taos—do not know what independence means. *They probably think it is something to eat. They have no more idea what it means than a shepherd dog.*

"WE WILL TAKE OFF HIS HEAD."

The CHAIRMAN. Are they pretty generally hostile, or are there among them many friendly to us?

General HUGHES. You will find a very great deal of good will in all the provinces where absolute peace has been established.

The CHAIRMAN. Do you think if they were left to themselves they would submit to a Tagalo government in Luzon?

General HUGHES. I think probably they would submit for a while, until some of their leaders did not get what they wanted. Then they would probably take the course as to which one of their great advocates remarked on one occasion. They were discussing what could be done as a republic, and he and his friends had their ideas, and they said they would do so and so. A man who was discussing the matter with them suggested that there might be a good deal of opposition to that. "*No,*" *said he,* "*if anybody opposes it we will take off his head. That is all.*"

The CHAIRMAN. You think the tendency would be to break up into separate republics?

General HUGHES. I do not think it would live long enough to break up into different republics. I think the islands would be taken possession of by somebody else.

The CHAIRMAN. You think the islands would be taken possession of by some other power?

General HUGHES. Yes, sir.

TESTIMONY OF PROFESSOR BARROWS AS TO CAPACITY OF FILIPINOS FOR SELF-GOVERNMENT AND EFFECT OF AMERICAN WITHDRAWAL.

Senator BEVERIDGE. Just one other question, and then I shall have no more. I have been impressed by your clearly acute observations of these people and their conditions, and that, too, from a favorable point of view to them. What have you to say about the present or the immediately near capacity of those people for self-government, as that term is understood in America? Are they capable of such at the present time?

Mr. BARROWS. That is the whole question, I suppose, Senator. I would say this, in speaking upon it for a moment or two, I think the last twenty-five or thirty years in the Philippine Islands, which are the years that have seen the introduction of the Filipino to superior education and to superior advantages, have been very encouraging as revealing his aptitude and intelligence.

* * * * * * *

But this, of course, is to be remembered, that political self-control and political experience sufficient to govern a great population, and including a great number of tribes lower than the Christianized Filipino is himself, is about the last thing that a man or a race attains. I look forward with some confidence to a time in the near future when the Filipino will be making researches in science and will be making contributions along different lines, much as the Japanese are. * * *

Now, Mr. President, to call the attention of opposition Senators to Professor Barrows's conclusion. He continues:

But I do not see any immediate prospect, and I never expect to live to see the day when he can govern.

Senator BEVERIDGE. Just a question cognate to that. What would you say would be the result on the islands and the people themselves if a system of self-government was put upon them and they were left to themselves?

Senator ALLISON. Do you mean locally or nationally?

Senator BEVERIDGE. Locally or nationally.

The CHAIRMAN. The whole thing.

Senator DIETRICH. With absolute independence.

Senator BEVERIDGE. What would be the effect of that? You may couple it, if you please, with the proposition upon our part that as to the external world we will protect them; I mean to say by our navies, etc. What would be the effect upon the people of the islands?

EFFECT OF AMERICAN ABANDONMENT OF ISLANDS.

Mr. BARROWS. The Filipino has no tribal allegiance, no chieftains, no customs of adherence to that kind of thing upon which to fall back. The only political experience he has is that of the management of these little municipalities, his little locality; and for all we can see, if we should retire the islands would simply break up into little bits of groups. A little leader would start up here, and another there, and another here, and the people would fall back in their political grade. They would lapse downward.

Senator BEVERIDGE. What would be the effect upon their social and industrial conditions?

Mr. BARROWS. Their culture would have to sink with it.

Senator BEVERIDGE. Retrograde?

Mr. BARROWS. Retrograde.

Senator BEVERIDGE. What would be the industrial conditions as the result of such action?

Mr. BARROWS. It would interfere with commerce. It would destroy everything except small native bartering.

Senator BEVERIDGE. I understand you to say that you never expect to live to see the day when the Filipinos would be capable, as a people, of self-government, as we understand it. Is that understanding of your answer correct?

The CHAIRMAN. Do you mean internationally?

FILIPINO NOT BORN WHO CAN GOVERN.

Mr. BARROWS. *I do not think the Filipino is yet born who will control, to say nothing of governing justly, the Philippine Islands.*

That, Mr. President, from as friendly a man to the Filipinos as can be found, is conclusive, is it not? Yet Senators talk of independence, self-government, legislatures, and the like.

TESTIMONY OF GENERAL OTIS AS TO CAPACITY OF FILIPINOS FOR SELF-GOVERNMENT AND EFFECT OF AMERICAN WITHDRAWAL.

Senator BEVERIDGE. What have you to say as to the capacity of those people as a whole, if left to themselves, for self-government?

General OTIS. They are not fitted for self-government.

Senator BEVERIDGE. How soon will they be, General?

General OTIS. I could not answer that question. It depends upon education.

Senator BEVERIDGE. A considerable length of time, you think?

General OTIS. In the case of several of their officers who surrendered their troops—one very able man, especially, expressed himself in this way. He said: "I know that we are not ready for self-government. It has been a failure."

Senator BEVERIDGE. I will ask you, General, what your opinion is as to the conditions that would result if the American authority were withdrawn and the islands were turned over to the natives.

"ANARCHY OR A MILITARY DESPOTISM."

General OTIS. *It would be anarchy or a military despotism, and they all understand it.* There is not a Filipino or anybody else over there who desires self-government.

When Mabini came in I said to him, "You know the United States is essential to the welfare and integrity of the island." He said, "I know it." I said, "What are you fighting for?" He replied, "We are fighting in order to make the best terms possible."

Aguinaldo himself never wanted self-government without outside protection. You understand that they know very well that other nations would divide up those islands if we let them go. We had long conferences before the war broke out. General Torres, a very able man, who was at the head of Aguinaldo's commission, was one of those with whom we were in conference; but all they said was this: They wanted the protection of the United States, and they wanted to control the internal affairs of the island, and they would turn over to us the custom-houses in payment for the protection which we would give them on the outside.

TESTIMONY OF CAPT. LEE WRIGHT HALL AS TO CAPACITY OF FILIPINOS FOR SELF-GOVERNMENT AND EFFECT OF AMERICAN WITHDRAWAL.

Questions by the CHAIRMAN:

Q. What, in your judgment, would be the effect of our leaving the islands to themselves?

A. I don't know what would be the effect. Unless somebody took them up, there is no telling what would come. *It would be chaos, that is all.*

Q. Chaos unless somebody took possession?

A. Yes; which they would do.

STATEMENT OF DR. HAZLETT, REPRESENTING WOMAN'S CHRISTIAN TEMPERANCE UNION, AS TO CAPACITY OF FILIPINOS FOR SELF-GOVERNMENT AND EFFECT OF AMERICAN WITHDRAWAL.

WASHINGTON, D. C., *April 21, 1902.*

The CHAIRMAN. I have some papers here from the War Department. They send a copy of a report from Mr. Lester Hazlett, who was sent out by the Woman's Christian Temperance Union. * * *

A VIEW OF THE MORAL CONDITIONS EXISTING IN THE PHILIPPINES.

[By A. Lester Hazlett, A. M., Ph. D.]

I went to the islands an ardent antiexpansionist; I returned a firm believer in the policy of the Administration. I frankly confess that I had a wrong idea of conditions in the archipelago. I believed the people ready for self-government; now I know that while some of them are, the great mass of the people are not capable of it; but they will be, and that, perhaps, before a generation shall have passed. The Filipino is fully as bright as the Japanese. They learn quickly, and are extremely anxious to acquire. God has given us a wonderful opportunity, for which I am sure He will hold us strictly accountable. To refuse to accept this heaven-bestowed privilege to elevate to a like plane with ourselves a people ready to learn and anxious to secure all that is requisite for the building of a nation is to prove unworthy of so high an honor.

I went to Manila with the thought that Admiral Dewey should have sailed away after the destruction of the Spanish fleet, but am now convinced that future generations of Americans, and Filipinos as well, will arise to bless and honor him because he did not.

PROTECTORATE IMPOSSIBLE.

A protectorate could not have fulfilled the end of our responsibility, and to dispose of the islands at this time, by sale or otherwise, would be not only ignoble, but to prove unworthy of the trust reposed in us by the God of nations. I desire to be understood as saying that I do not believe the Filipino is ready for absolute self-government. The form of civil government that has recently been inaugurated, in which leading men of that people are employed in bearing a part of the burden, is making a good impression. When I speak of the Filipino as incapable of self-government, I speak of the people as a whole. I have had the pleasure of meeting and have been entertained by the best people of the islands—those who have received the highest culture.

But, ah! how few in the midst of the swarming thousands are those who think clearly and are intelligent, even to a degree. Those who are superior form but an insignificant minority; the mass of the people have been kept in ignorance; they do not even know the meaning of "independentia." *At least 6,000,000 of the people are but children*, who must sit at our feet and learn those lessons of self-government which I believe, more than any other nation, we are capable of imparting. I have faith in my country; I am sure we will not leave this interesting people to war among themselves or fall an easy prey to designing demagogues, but will give them such a form of government as shall be commensurate with their needs and fitness to receive.

WILL IT PAY?

Will it pay to hold the Philippines? We have no right to ask that question in the attempt to solve so great a problem, for this is not a matter of dollars with the American people, but one of justice. We can not now desert them and be guiltless. Anarchy would immediately result. *By our present course we will have saved a people from themselves; in this case, their own worst enemy.*

But it will pay to retain the islands from a mercenary standpoint. *In the years to come they will reimburse us many times over.* The natural resources are wonderful. I have seen veritable gold mines on top of the earth in the immense forests of precious woods; here are large bodies of ore—gold, silver, iron, copper, etc., and cropping out of the ground near Cavite, and also close to the sea in southern Luzon may be seen veins of coal of fair quality, at least sufficiently good for smelting purposes. The rubber industry of the southern group is waiting to be developed into vast possibilities, some of the finest rubber in the world being found there.

It has been argued that in our expansion we will expose ourselves to that national death that overtook the Roman Empire. The Scriptures assert that "it is given unto men once to die." This may just as truly be said of nations; we shall hardly escape the general fate of other peoples. *The nations that were not aggressive have just as surely perished as has that wonderfully aggressive state whose seat of power was beside the Tiber;* but she has also enriched the world, while they have not; she has, after all, made life more tolerable for man.

Her institutions of art and literature, her code of civil jurisprudence have made her to be honored and remembered. So that it is better that we take our place in the forepart of the twentieth century onward movement for the elevating and strengthening of the weak and the advancement of a higher, truer civilization, so that, departing in God's own time, we shall leave behind us a name "to have lived."

I also present the testimony of Bishop James Thoburn, of the Methodist Episcopal Church, who spent forty-five years in the Orient and fifteen years among the Malays of the Straits Settlements, and made two visits to the Philippine Islands.

TESTIMONY OF BISHOP JAMES THOBURN, OF THE METHODIST EPISCOPAL CHURCH, AS TO CAPACITY OF FILIPINOS FOR SELF-GOVERNMENT AND EFFECT OF AMERICAN WITHDRAWAL.

Questions by the CHAIRMAN. Bishop Thoburn, the committee have asked you to be kind enough to come before them, as they heard you have been in the Philippine Islands. Is that true?

Bishop THOBURN. Yes; I have been there.

The CHAIRMAN. And when were you there?

Bishop THOBURN. I might say I have charge of a mission, and am superintendent of a mission at Singapore. That is the headquarters of the mission. I go there once a year.

Senator BEVERIDGE. You are bishop of a Methodist Church?

Bishop THOBURN. For India and Malaisia; yes. But I have been in the Philippine Islands myself only twice—the first time in March, 1898, and the second time in March, 1900. At that time I could only go into the immediate vicinity of Manila. We were not allowed to go out into the islands.

The CHAIRMAN. That was while the war was still in progress?

Bishop THOBURN. Yes.

The CHAIRMAN. There were very few provinces pacified then?

Bishop THOBURN. But there is a government prohibition, and we are not allowed to go out even at our own risk, because the authorities did not want us to make trouble for them.

The CHAIRMAN. How long were you in Manila at that time?

Bishop THOBURN. Two weeks.

The CHAIRMAN. Did you make any inquiries as to the state of affairs there, and the condition of the natives, and so on?

Bishop THOBURN. Certainly, as far as I could.

The CHAIRMAN. Would you kindly state to the committee what your impressions are and the result of your inquiry?

Bishop THOBURN. In what special direction?

The CHAIRMAN. In any direction, as what it is best for us to do there; what the capacity of the natives for self-government seems to be; anything in that direction.

"WE CAN NOT LEAVE."

Bishop THOBURN. I certainly think that we find ourselves there very unexpectedly and that we can not leave.

Senator DUBOIS. If you will pardon me, would it not be better for the Bishop to tell what he knows from observation as to the intelligence and moral capacity of the natives?

The CHAIRMAN. Certainly; any line that is desirable.

Bishop THOBURN If you will give me questions, I will be very glad to answer them.

Senator DUBOIS. I would like to have your judgment as to the moral and intellectual capacity of the natives.

Bishop THOBURN. The natives are very much, in many respects, like our American Indians, it strikes me. They have no cohesion whatever among themselves. Wherever I meet the Malays I find they live to themselves; they go off into tribes and clans, and the biggest man is called a sultan, and his jurisdiction is limited.

The CHAIRMAN. You are familiar with the Malays of the Straits Settlements?

Bishop THOBURN. Of the Malay Peninsula; yes, sir. I have been up and down the peninsula. They are bright fellows, but I should say not profound. They learn a thing on the surface very readily. I am afraid they are a treacherous people.

Senator DUBOIS. I do not want to disturb you at all, but you compared them a moment ago with the North American Indians.

Bishop THOBURN. In that one respect.

Senator DUBOIS. In that they went——

Senator BEVERIDGE. In that they lack cohesion.

Senator DUBOIS. They went off in tribes and clans, and some one is the head of the tribe. In respect to their intellectual capacity, would that comparison with the North American Indian still hold?

Bishop THOBURN. They are bright fellows.

Senator DUBOIS. Would the comparison with the North American Indian still hold?

Bishop THOBURN. They are brighter than the North American Indians.

Senator BEVERIDGE. Your comparison with the North American Indian was with reference to their lack of cohesion?

Bishop THOBURN. Yes, sir.

"THIRTY-SIX DIFFERENT LANGUAGES."

The CHAIRMAN. They are of the same race of the Malays of the peninsula, are they not?

Bishop THOBURN. They are known to one of our missionaries who has looked the matter up. He has found 36 different languages, and each language represents a tribe or is called a little state, and these people are undoubtedly Malays belonging to the general family. Their straight hair shows that, and many of their features and their language.

The CHAIRMAN. Of the same stock?

Bishop THOBURN. Of the same stock. I had this man look this up carefully, and he gave me a great list of words which are identical in those different languages.

Senator BEVERIDGE. You are familiar with the Malays in those different settlements?

Bishop THOBURN. Yes.

Senator BEVERIDGE. You have examined those questions and have gone among them for years?

Bishop THOBURN. Yes, and I have known them for forty years. There is a settlement of them in Calcutta.

Senator BEVERIDGE. From your decades of experience with the Malays of the different states and your two trips to the Philippines and the ethnological status which you have had prosecuted you identify these people as all of the same general family?

Bishop THOBURN. I do.

NOT CAPABLE OF SELF-GOVERNMENT.

Senator BEVERIDGE. What, Bishop, is your opinion as to the capacity of the Malay for self-government in the large or general sense?

Bishop THOBURN. *Well, I think he is very defective in that point; indeed, very defective.*

Senator BEVERIDGE. Do you attribute that to the point in which you compared him to the American Indian, to wit, the lack of cohesion?

Bishop THOBURN. Largely that; and he is a restless man. I ought to say the Malays are in three different classes: There are the agriculturists, and the business men—the traders—and the seafaring men, including the fishermen. These seafaring men have been pirates from time immemorial. In fact, in my day the English have sent an expedition against them on account of there being piracy off the coast of the peninsula. This roving nature is deep in that class of them, and they dominate the agriculturists, who are quieter men.

Senator BEVERIDGE. Is piracy now wiped out?
Bishop THOBURN. It is wiped out there, but it is not wiped out, I believe, in the big island of Mindanao.
Senator BEVERIDGE. Is it wiped out in the Straits Settlements?
Bishop THOBURN. Completely.
Senator BEVERIDGE. And it has existed there within your time?
Bishop THOBURN. It has existed there within my time; yes.

HISTORY OF MALAYS IN STRAITS SETTLEMENTS.

Senator BEVERIDGE. As a matter of history it is true, is it not, that piracy was very rife in the Straits Settlements about sixty years ago?
Bishop THOBURN. Certainly.
Senator BEVERIDGE. Singapore is not much older than sixty years, is it not, as a city——
Bishop THOBURN. *It is a new town, and was founded, almost in opposition to the wishes of the English Government, by people who saw that that was the only way to settle that country.*
Senator BEVERIDGE. *And it is now a flourishing place?*
Bishop THOBURN. *It is the most flourishing in that part of the world.*
Senator BEVERIDGE. *And you say piracy has been wiped out during your time?*
Bishop THOBURN. *Yes.*
Senator BEVERIDGE. *And a state of peace and prosperity exists?*
Bishop THOBURN. *It is the most prosperous region in the East.*
Senator BEVERIDGE. Do people submit to the English domination there?
Bishop THOBURN. Absolutely.
Senator BEVERIDGE. And there is no difficulty?
Bishop THOBURN. There is no difficulty.
Senator BEVERIDGE. At first there was sharp fighting?
Bishop THOBURN. Yes; they had to take several regiments there from Calcutta. They took them there in 1875.
Senator BEVERIDGE. There is nothing there of that kind now?
Bishop THOBURN. No, sir.
Senator BEVERIDGE. The number of soldiers with which England holds the Straits Settlements in Singapore is comparativly small now?
Bishop THOBURN. Yes; the soldiers are held not on account of the Malays, but on account of the European governments. That is a key to the situation.
Senator BEVERIDGE. You say piracy has not been entirely exterminated in the island of Mindanao?
Bishop THOBURN. As a matter of information, yes.
Senator BEVERIDGE. And you know it has existed in the islands within the lifetime of men now living?
Bishop THOBURN. I have no doubt it exists where there is no military power to restrain them now.

A CRIME TO ATTEMPT WITHDRAWAL.

Senator BEVERIDGE. What would you say would be the result in the Philippines if a native government was set up there and American authority and power were withdrawn?
Bishop THOBURN. Over the whole of the islands?
Senator BEVERIDGE. Yes.
Bishop THOBURN. *I think it would be a crime to attempt it. It would bring an awful state of things on the whole islands, because it would throw them into utter anarchy.*
Senator BEVERIDGE. What would you say, from your point of view, in your field of labor over there, which includes Malaisia, is the duty of the American Government in reference to continued occupation and government of the Philippine Archipelago?
Bishop THOBURN. Well, we are there, and I think we ought to do our duty the best we can—if you will allow me to speak as a missionary, I would say—in the field God has put us. We did not seek it.
Senator BEVERIDGE. You think it is the duty of the American Government to continue?
Bishop THOBURN. I certainly do. I think it would be assuming a very grave responsibility to lift our hand from that place. I think it would put back the civilization of the big island of Mindanao two hundred years for us to let them go to their own ways.

* * * * * * *

I have been in the East for forty-three years. I have been going there since 1885—to Singapore and Penang and what we call the Straits Settlements, which include the Malay Peninsula. I have been there a great deal and been among the Malay people a great deal.

* * * * * * *

Senator CULBERSON. Coming back to my question, I would like you to be kind enough if you would give me your views about it—whether you believe the American people ought to absorb and take into the body politic of the American Government a race incapable of self-government.

"NOT IN TEN OR FIFTY YEARS."

Bishop THOBURN. If you mean by that they ought to take them in as I am in, so that when I come here I become a citizen and a voting citizen, I should say no; but if you take them in in the other sense, I would say yes.
Senator CULBERSON. The other sense is that they would be held as a subject race?
Bishop THOBURN. *A subject race under fixed rights that are assured to them.*
Senator CULBERSON. Do you believe that the American Constitution ought to be extended over the Philippines?

* * * * * * *

Bishop THOBURN. You mean in the sense——
Senator CULBERSON. I mean in the broad sense; the Constitution, with its benefits.
Bishop THOBURN. According to my meaning they have already done it. We are ready to defend the Filipinos against the world now.
Senator CULBERSON. Do you think that is all there is in the Constitution for them, that we shall defend them against the world?
Bishop THOBURN. No, sir; I think we ought to help them in every way and teach them how to govern themselves, and in order to do that we have a very great task before us. *But we can not do it in ten years, nor in fifty years.* In the history of the world you will not find that any nation has ever been developed at that rate. But I think that is the mission that Providence has given us.

AMERICANS NOW "GOING TOO FAST."

Senator BEVERIDGE. What do you think about the progress we have already made?
Bishop THOBURN. *We are going too fast; if anything, we are going too fast. We are not going too slow, that is certain.*
Senator CULBERSON. You do not believe, I think you said, that we ought to take the Filipino people into our Government as you are in it; in other words, they ought to be held as a subject race?
Bishop THOBURN. I do not like your term "subject race." A protected race, I would say.
Senator CULBERSON. A protected race. You think, then, we ought to establish a protectorate over the Philippines?
Bishop THOBURN. I like the word "protectorate."
Senator CULBERSON. Not constitute that country an integral part of the United States or the people a part of the citizenship of the United States, but simply extend an American protectorate over those people?
Bishop THOBURN. That is my idea, although I might define it a little differently.
The CHAIRMAN. What do you mean by a protectorate?
Bishop THOBURN. A protectorate in the sense—I am a Britisher to some extent, having lived over there so long—in the sense we use it in the English possessions.
Senator BEVERIDGE. In the administration of the government?
Bishop THOBURN. In the administration of the government.
Senator CULBERSON. You want the United States to adopt the English policy in governing the Malay people?
Bishop THOBURN. *I would have them adopt the spirit of the English policy and according to American ideals. I should have them do it a little better, perhaps.* But I think, if you will allow me to say it, that that is the tendency of the world to-day; that all outlying uncivilized or half-civilized countries are going to come under English jurisdiction within the next one hundred years.
Senator BEVERIDGE. Or American jurisdiction?
Bishop THOBURN. Or American jurisdiction.
Senator CULBERSON. Passing from the matter of government to another phase of the question, do you believe the Filipinos are equal as a race to the American people—the Anglo-Saxons?
Bishop THOBURN. Do you mean in capacity or in rights?
Senator CULBERSON. I mean in capacity.
Bishop THOBURN. No; they are not.
Senator CULBERSON. In intellectual and moral capacity?
Bishop THOBURN. No; they are not.

* * * * * * * *

Senator BEVERIDGE. You said fifty years a minute ago; that we could not do it in fifty years.

THREE GENERATIONS BEFORE FILIPINOS CAN GOVERN THEMSELVES.

Bishop THOBURN. *I should say three generations; that three generations might be able to do it.* But, in the first place, the present generation will never get rid of their old instincts and ideals; the second generation will be educated half and half; they will still have a great deal of the old ideal—that is, I am taking it as things have gone in the past—and the third generation will be altogether new.
Senator BEVERIDGE. They may be ready for business?
Bishop THOBURN. Ready for business.
Senator CULBERSON. How many years will that be?
Bishop THOBURN. *Seventy-five years at least.* A generation is supposed to be thirty-three years. Out there it is shorter.

* * * * * * *

Bishop THOBURN. *The present generation in India do not know that the English Government was engaged in conquest. They have never seen war. We have in India 300,000,000 people living in absolute peace. They have not had an opportunity of seeing war for forty-five years.*
Senator BEVERIDGE. *And is not this—this long period you speak of—the first time in the history of India that that has been so?*
Bishop THOBURN. *Yes; that is something worth studying.*

* * * * * * *

FILIPINO FEELING NOW MORE FRIENDLY THAN BEFORE WAR.

Senator CARMACK. Very well; I am done with it. I want to ask you this question: Do you think the people of the Philippine Islands are better disposed now to receive mission work from the United States than they were at the end of the war with Spain?
Bishop THOBURN. I think they are.
Senator CARMACK. You think their temper and disposition more favorable to the reception of Christian missions at the hands of the United States than at the close of the Spanish war?
Bishop THOBURN. I think so, undoubtedly.
Senator CARMACK. You think they feel more kindly to the American people now than they did before this American war began?
Bishop THOBURN. I think so.
Senator CARMACK. You think that at the time when the power of Spain was first broken, when the Americans, say, first landed in Manila or when they destroyed the Spanish fleet, do you think the feelings of the Filipinos at that time were less kindly toward the Americans than they are to-day?
Bishop THOBURN. I certainly do.
Senator CARMACK. You think that the people there now are very kindly disposed toward Americans?
Bishop THOBURN. I can only judge from what we see in our mission work. We can not furnish preachers enough to preach to the audiences who wish to hear our preaching; we can not half meet the demand. When I was there at first it would have been difficult to have collected an audience of 100. Now we are preaching to 12,000 people in Manila and vicinity every Sunday. Then in the provinces outside we can not meet the demand at all; nor can we meet the demands for schools.

FILIPINO MASSES—"QUIETNESS AND PEACE."

Senator CARMACK. You think, then, the opinion, if it prevails anywhere, that the overwhelming majority of the people of the Philippine Islands are at heart hostile to the people of the United States is a mistaken notion?
Bishop THOBURN. Yes; I think it is, among the quiet people.
Senator CARMACK. Do you think that the large majority of the people are really intensely loyal to the Government of the United States?
Bishop THOBURN. I do not know that I would say intensely loyal; that is a pretty strong phrase.
Senator CARMACK. Entirely content, then?
Bishop THOBURN. *I was about to say that I think they want quietness and above all things peace, and they are thankful to have it come in this shape. I do not know whether they have thought out the problem much about the future. I am speaking of the rank and file of the people.*
Senator DUBOIS. When you speak, Bishop, of your preaching to 12,000 every Sunday, I think you said——
Bishop THOBURN. Yes; that is, the audiences average that.
Senator DUBOIS. Does that include the missionaries of all denominations, or simply your own?
Bishop THOBURN. Simply our own.
Senator DUBOIS. Just the Methodist?
Bishop THOBURN. Yes, sir.
Senator BEVERIDGE. In Manila?
Bishop THOBURN. And vicinity.
Senator DUBOIS. I did not know whether he meant just his own church.
Bishop THOBURN. My own church. There are three or four missions there.

PEOPLE WANT PEACE.

Senator CARMACK. You think, then, the temper of the majority of the people in Manila is toward quietude; that there is no deep-seated feeling of hostility toward the United States?
Bishop THOBURN. If so, it is very successfully concealed. *I think what they want is quietness—peace. They want to get settled in their work.*

Senator CARMACK. Do you regard them as a treacherous people or otherwise—a people that profess to be friendly when they are really hostile?

Bishop THOBURN. I do not like to speak broadly in reply to that question, but I am afraid I will have to say I do.

Senator CARMACK. Speaking of the broad principle, I believe you said that you do not think it would be wise for us to incorporate the Filipinos into the body of our citizenship.

Bishop THOBURN. I have hesitated over that question a good deal to know exactly what you mean by that. That is, in the sense to say I am in the citizenship, I do not think it would be.

Senator CARMACK. You think they should be governed as a dependency, somewhat after the Crown colonies of Great Britain?

Bishop THOBURN. Speaking broadly, I do.

Senator CARMACK. Do you think the Filipinos will be satisfied with that form of government?

Bishop THOBURN. Provided you hold out before them continually and practically the idea they are going to have broader privileges as time passes.

Senator CARMACK. What do you mean by broader privileges? Do you believe they will be satisfied with a vague and indefinite statement as to broader privileges?

Bishop THOBURN. I would give them a larger share in the government. *I think you have gone a little too fast.*

INDEPENDENCE MEANS CIVIL WAR—WHAT AGUINALDO SAID.

Senator MCCOMAS. I would like to ask you one question. I want to read you from page 2017 of the testimony in this committee an extract from the diary of Dr. Villa, who was chief of staff to Aguinaldo. In this diary, under March 2, 1900, he says this:

"After luncheon and during the hour of rest the honorable president"—

That is Aguinaldo—

"had a conversation with B. and V. about our situation and the present war against the Americans, saying that even though greater sufferings should come than those we now have, he would endure and accept them with pleasure until the realization of the independence of our country. *He fears there will be a civil war afterwards.*"

I want to know from you whether you agree in that opinion of Aguinaldo and in the fear that there would be a civil war, as he indicates, after the independence to which he aspires.

Bishop THOBURN. *I am very sure there would be a civil war if independence is given them.*

Senator MCCOMAS. And if he had succeeded, would there or would there not have been a civil war, as he feared, in the Philippines?

Bishop THOBURN. I think so.

Senator MCCOMAS. Not only a civil war in Luzon, but in all the main islands?

Bishop THOBURN. *All over the islands.*

Senator MCCOMAS. Not easily ended, and the people not easily pacified?

Bishop THOBURN. No.

Senator CARMACK. I will ask you if you do not think there were grave apprehensions of a civil war in the United States immediately following the Revolutionary war?

Bishop THOBURN. There may have been.

Senator BEVERIDGE. There was grave danger, and it was only prevented by the peculiar cohesive qualities of our people.

On the line on which Senator CARMACK was questioning you, I think you stated yesterday that you have considerable personal familiarity with India?

Bishop THOBURN. Yes; I have.

Senator BEVERIDGE. Would you, as a person interested in civilization, be willing to see England withdraw from India?

Bishop THOBURN. I should be very sorry.

IF ENGLAND SHOULD WITHDRAW FROM INDIA.

Senator BEVERIDGE. What do you think, Bishop, would occur if England were to withdraw from India, and all other control except the chiefs, the people themselves, withdrawn, and they left to themselves?

Bishop THOBURN. We would have a state of chaos.

Senator BEVERIDGE. Are you familiar with the Straits Settlements?

Bishop THOBURN. Very.

Senator BEVERIDGE. Would you be willing, as a person interested in civilization, to see England withdraw from Singapore and the Straits?

Bishop THOBURN. I should be extremely sorry.

Senator BEVERIDGE. I think you testified yesterday that under England's control of the Malay Straits Settlements there is industry, prosperity, and law and order?

Bishop THOBURN. Perfectly.

Senator BEVERIDGE. The city of Singapore is a great and flourishing port, is it not?

Bishop THOBURN. It is one of the most wonderful cities in the world.

Senator BEVERIDGE. The commerce of the world converges there, does it not?

Bishop THOBURN. Every European vessel going to China must pass it.

Senator BEVERIDGE. It is one of the great commercial focusing points of the world?

Bishop THOBURN. If I may use the expression, it is the great nerve center of commerce.

SINGAPORE A JUNGLE SEVENTY YEARS AGO.

Senator BEVERIDGE. *Not more than sixty or seventy years ago the island where Singapore now stands was a jungle, and the Malay Straits Settlements, now peaceful, were infested by pirates, were they not?*

Bishop THOBURN. *Pirates and tigers.*

Senator BEVERIDGE. You have been in Hongkong?

Bishop THOBURN. Yes.

Senator BEVERIDGE. What kind of a city is Hongkong?

Bishop THOBURN. It is a hustling city.

Senator BEVERIDGE. Is it substantial?

Bishop THOBURN. It is a substantial, prosperous, rich, and thriving city.

Senator BEVERIDGE. Personal rights in the sense of the individual liberty of people being protected, Chinese and others, exists there?

Bishop THOBURN. Certainly.

Senator BEVERIDGE. In the highest form?

GOVERNMENT OF HONGKONG.

Bishop THOBURN. *In the highest form. There is more protection to a poor man there than in Chicago.*

Senator BEVERIDGE. Are the courts open to all, Chinese included?

Bishop THOBURN. Everybody.

Senator BEVERIDGE. And schools there are attended by Chinese children?

Bishop THOBURN. Yes; attended by Chinese, and I have employed some of the graduates.

Senator BEVERIDGE. Would you state, if you know, the condition of the rocky mountain on which Hongkong stands, less than two generations ago?

Bishop THOBURN. That I could not say.

Senator BEVERIDGE. You do not know about its history?

Bishop THOBURN. No.

Senator BEVERIDGE. I can state for the benefit of the Senator from Texas—if the Senator reads books I can certainly make statements—that the place where this English city now stands was a barren mountain with a miserable little Chinese fishing village at its base.

* * * * * * *

Senator BEVERIDGE. You spoke yesterday of the question of self-government, that a lack of cohesion was one of their characteristics.

Bishop THOBURN. Yes, sir.

Senator BEVERIDGE. That lack of cohesion is common everywhere among them?

Bishop THOBURN. Yes.

* * * * * * *

Senator CARMACK. You say that personal rights are more secure in Hongkong than in the city of Chicago, you think?

Bishop THOBURN. I think so.

Senator CARMACK. Is that due, do you think, to the government?

Bishop THOBURN. I think it is due largely to the fact that the government is not only not like the government of Chicago, but they have a stronger arm.

Senator CARMACK. Do you think the difference in the security of personal rights in Chicago and Hongkong is due to the difference in the form of government?

Bishop THOBURN. I say it is due to the difference in the administrators of the government.

* * * * * * *

Senator BEVERIDGE. In answer to Senator CARMACK you speak of the difference, that there was something of the stronger hand there.

Bishop THOBURN. Yes.

Senator BEVERIDGE. That strong hand is exercised impartially and promptly for the administration of justice to the humblest and poorest, is it not?

Bishop THOBURN. I think it is.

Senator DIETRICH. Is it your understanding that Aguinaldo and his followers, who were almost exclusively Tagalos, were the Tagalos who were very bitter against the Catholic Church?

Bishop THOBURN. Were they the ones?

Senator DIETRICH. Yes.

Bishop THOBURN. They were bitter, but they are not by any means the only ones.

Senator DIETRICH. Do you believe that Aguinaldo and that portion of the Tagalo tribe could have subjugated the Macabebes, the Visayans, the Pampangans, the Moros, and all the balance of the islands?

Senator BEVERIDGE. And the Igorrotes?

Senator DIETRICH. And the Igorrotes, to his rule, and could have made out of them an independent, prosperous republic or country?

AGUINALDO COULD NOT HAVE ESTABLISHED INDEPENDENCE.

Bishop THOBURN. No. I expressed myself yesterday on that. He certainly could not have done it.

Senator DIETRICH. He certainly would have had to fight the power of the Catholic Church.

Bishop THOBURN. Yes; and he would have had to take up all these different races that have been named, and he would have commenced with the Macabebes. I do not say that Aguinaldo himself meant that, but it would have been inevitable.

Senator DIETRICH. It would have been impossible for him, under that situation, you believe, to have brought about an independent government?

Bishop THOBURN. Utterly impossible.

Senator CULBERSON. I ask this from your statement made yesterday that you think the Government of the United States ought to hold the Philippines. Do you believe that a whole people like the Filipinos ought to be subjugated by another government than their own without their consent, by force?

Bishop THOBURN. It depends upon circumstances.

* * * * * * *

Senator CULBERSON. I ask if the fundamental doctrine of the church is not moral suasion rather than physical force in accomplishing any purpose?

Bishop THOBURN. In reference to Christian work, undoubtedly it is moral suasion; but the doctrine of the Bible, as I understand it, is that we ought to uphold the civil government, and your question applies to the civil government, which the responsibility of the church can never assume.

"WE ALWAYS UPHOLD THE CIVIL GOVERNMENT."

Senator CULBERSON. *You think it would be the duty of the church to uphold the civil government regardless of the justice of the acts to perform?*

Bishop THOBURN. *Certainly; it is our duty always to be obedient to the powers that be, to pay our taxes like other people, pray for the President or the King, or whoever is in authority. We always uphold the civil government.*

Senator CULBERSON. Does that necessarily mean that you should indorse the government?

Bishop THOBURN. No; that does not make us responsible; it does not belong to us at all; it belongs to the civil authorities.

Senator CULBERSON. I will ask you then, aside from your sacred calling, if you believe as a citizen that a whole people like the Filipinos should be subjected to a different government than that which they desire, without their consent and by force?

Bishop THOBURN. *We have acted on the theory for a hundred years, with regard to the American Indians, that no matter what they wish or what government they desire we will hold them by force.*

Senator CULBERSON. You think we ought to apply the doctrine which we have applied to the Indian to the Filipino?

Bishop THOBURN. There is a stronger claim in the case of the Filipinos. They have fallen to us by what we call the fortunes of war, and we have a responsibility that we can not shake off without incurring a liability to greater evils, as I explained yesterday.

This is not all. These are Americans; and it might be said that they are partial witnesses. I have here the testimony of two witnesses who are not partial, one of them a man who has spent eight or ten years in these islands, and who first gave to the world any authentic information concerning the characteristics of the Philippine people. That is Mr. John Foreman in his book entitled "The Philippine Islands." I desire to print excerpts from that book, giving his judgment at the beginning of this difficulty as to the quality, character, and characteristics, good and bad, of those people.

V.—FOREIGN TESTIMONY ON FILIPINO CHARACTER AND THE SITUATION.

EXTRACTS FROM "THE PHILIPPINE ISLANDS."

[By John Foreman.]

Several writers have essayed to correctly depict the Philippine native character, but with only partial success. Dealing with such an anomalism, the most eminent physiognomists would surely differ in their speculations

regarding the Philippine native of the present day. That Catonian figure, with placid countenance and solemn gravity of feature, would readily deceive anyone as to the true mental organism within.

The late parish priest of Alaminos, in Batangas province—a Spanish Franciscan friar, who spent half his life in the colony—left a brief manuscript essay on the native character. I have read it. In his opinion, the native is an incomprehensible phenomenon, the mainspring of whose line of thought and the guiding motive of whose actions have never yet been, and perhaps never will be, discovered. A native will serve a master satisfactorily for years, and then suddenly abscond, or commit some such hideous crime as conniving with a brigand band to murder the family and pillage the house.

"GENEROSITY REGARDED AS WEAKNESS."

He is fond of gambling, profligate, lavish in his promises, but lache in the extreme as to their fulfillment. He will never come frankly and openly forward to make a clean breast of a fault committed or even a pardonable accident, but will hide it until it is found out. *In common with many other non-European races, an act of generosity or a voluntary concession of justice is regarded as a sign of weakness.* Hence it is that the experienced European is often compelled to be more harsh than his own nature dictates.

"GIVE AN INCH, HE WILL TAKE AN ELL."

Even the best class of natives neither appreciate, nor feel grateful for, nor even seem to understand a spontaneous gift. Apparently, they only comprehend the favor when one yields to their asking. The lowest classes never give to each other, unsolicited, a cent's worth. *If an European makes voluntary gratuities to the natives he is considered a fool; they entertain a contempt for him, which develops into intolerable impertinence.* The saying "Give him an inch and he will take an ell" can truly be applied to the Filipinos. They are void of all feeling of magnanimity, and do not understand chivalry toward the weak or the fallen foe.

FILIPINOS CAN COPY BUT NOT INVENT.

The Filipino, like most Orientals, is a good imitator, but having no initiative genius he is not efficient in anything. If you give him a model he will copy it any number of times, but you can not get him to make two copies so much alike that the one is undistinguishable from the other. He has no attachment for any occupation in particular. To-day he will be at the plow; to-morrow a coachman, a collector of accounts, a valet, a sailor, and so on; or he will suddenly renounce social trammels in pursuit of lawless vagabondage. I once traveled with a Colonel Marques, acting governor of Cebu, whose valet was an ex-law student.

The native is indolent in the extreme, and never tired of sitting still, gazing at nothing in particular. If familiarity be permitted with a native, there is no limit to his audacity. The Tagalog is docile, but keenly resents an injustice.

NATIVE IS SUPERSTITIOUS.

Native superstition and facile credulity are easily imposed upon. A report emitted in jest or in earnest travels with alarming rapidity, and the consequences have not unfrequently been serious. He rarely sees a joke, and still more rarely makes one. He never reveals anger, but he will with the most profound calmness avenge himself, awaiting patiently the opportunity to use his bohie knife with effect. Mutilation of a vanquished enemy is common among these islanders.

FILLIPINO "AVERSE TO SOCIAL ORDER."

The native is so contumacious to all bidding, so averse to social order, that he can only be ruled by coercion or by the demonstration of force. Men and women alike find exaggerated enjoyment in litigation, which may keep up for years. *Among themselves they are tyrannical.* They have no real sentiment, honor, or magnanimity, and apart from their hospitality, in which they (especially the Tagalogs) far excel the European, all their actions appear to be only guided by fear or interest or both.

FILIPINO HAS MANY OTHER EXCELLENT QUALITIES.

But the Filipino has many excellent qualities which go far to make amends for his shortcomings. He is patient and forbearing in the extreme, remarkably sober, plodding, anxious only about providing for his immediate wants, and seldom feels the canker of ambitious thoughts. In his person and his dwelling he may serve as a pattern of cleanliness to all other races in the tropical East. *He has little thought beyond the morrow, and therefore he never racks his brains about events of the far future in the political world or any other sphere.* He indifferently leaves everything to happen as it may, with surprising resignation.

The Tagalog in particular has a genial, sociable nature. The native, in general, will go without food for many hours at a time without grumbling; and fish, rice, betel nut, and tobacco are his chief wants. He is never long in a great dilemma. If his hut is about to fall, he makes it fast with bamboo and rattan cane. If a vehicle breaks down, a harness snaps, or his canoe leaks or upsets, he has always his remedy at hand. He bears misfortune of all kinds with the greatest indifference and without the least apparent emotion. *Under the eye of his master he is the most tractable of all beings.* He never, like the Chinese, insists upon doing things his own way, but tries to do just as he is told, whether it be right or wrong.

A native enters your service as a coachman, and if you wish him to paddle a boat, cook a meal, fix a lock, or do any other kind of labor possible to him, he is quite agreeable. He knows the duties of no occupation with efficiency, and he is perfectly willing to be a "jack-at-all-trades." Another good feature is that he rarely, if ever, repudiates a debt, although he may never pay it. So long as he gets his food and fair treatment, and his stipulated wages paid in advance, he is content to act as a general utility man. If not pressed too hard he will follow his superior like a faithful dog. *If treated with kindness, according to European notions, he is lost.* Lodging he will find for himself. The native never looks ahead; he is never anxious about the future; *but, if left to himself, he will do all sorts of imprudent things, from sheer want of reflection on the consequences, when, as he puts it, "his head is hot" from excitement due to any cause.*

FILIPINOS HAVE NO IDEA OF ORGANIZATION.

The native has no idea of organization on a large scale, hence a successful revolution is not possible if confined to the pure indigenous population *unaided by others, such as creoles and foreigners.* He is brave, and fears no consequences when with or against his equals, or if led by his superiors, but a conviction of superiority—moral or physical—in the adversary depresses him. An excess of audacity calms and overawes him rather than irritates him.

MUSICIANS, BUT NOT COMPOSERS.

The native has an inherent passion for music. Musicians are to be found in every village, and even among the poorest classes. There was scarcely a parish without its orchestra, and this natural taste was laudably encouraged by the priests. *There are no native composers—they are but imitators.* There is an absence of sentimental feeling in the execution of set music (which is all European), and this is the only drawback to their becoming fine instrumentalists. For the same reason classical music is very little in vogue among Philippine people, who prefer dance pieces and ballad accompaniments. In fact, a native musical performance is so void of soul and true conception of harmony that at a feast it is not an uncommon thing to hear three bands playing close to each other at the same time; and the mob assembled seemed to enjoy the confusion of the melody. There are no Philippine vocalists of repute.

SUPERSTITION—"ANTING-ANTING."

The most ignorant classes superstitiously believe that certain persons are possessed of a diabolical influence called *anting-anting*, which preserves them from all harm. They believe that the body of a man so affected is even refractory to the effects of bullet or steel. Brigands are often captured wearing medallions of the Virgin Mary or the saints as a device of the *anting-anting*. In Maragondon, Cavite Province, the son of a friend of mine was enabled to go into any remote places with impunity, because he was generally supposed to be possessed of this charm. Some highwaymen, too, have a curious notion that they can escape punishment for a crime committed in Easter week, because the thief on the cross was pardoned his sins.

MARAUDERS HAUNTS—PIRATES.

Within a half day's journey from Manila there are several well-known marauders, haunts, such as San Mateo, Imus, Silan, Indan, the mouths of the Hagonoy River, which empties itself into the bay, etc. In 1881 I was the only European among 20 to 25 passengers in a canoe going to Balanga, on the west shore of Manila Bay, when about midday a canoe, painted black and without the usual outriggers, bore down upon us, and suddenly two gunshots were fired, while we were called upon to surrender. The pirates numbered 8; they had their faces bedaubed white and their canoe ballasted with stones. There was great commotion in our craft; the men shouted and the women got into a heap over me, reciting Ave Marias, and calling upon all the saints to succor them.

Just as I extricated myself and looked out from under the palm-leaf awning, the pirates flung a stone which severely cut our pilot's face. They came very close, brandishing knives, but our crew managed to keep them from boarding us by pushing off their canoe with the paddles.

When the enemy came within range of my revolver, one of their party, who was standing up waving a bohie knife, suddenly collapsed into a heap. This seemed to discourage the rest, who gave up the pursuit, and we went on to Balanga.

I follow the extracts from Mr. Foreman's book with testimony upon that subject from a foreign and impartial observer, perhaps the very greatest oriental authority in the world—Mr. Archibald Colquhoun. Mr. Colquhoun has spent years in the Orient and written many books on oriental subjects. He was British commissioner to Burma, correspondent of the London Times at Pekin, and is concededly better informed than any other living man on Eastern character, government, and conditions. The book from which these extracts are taken is just out of press and is the latest and most authoritative statement of Philippine conditions by an impartial observer.

[Extracts from "The Mastery of the Pacific," by Archibald Colquhoun.]

In all discussions as to Filipino character it is this point to which everything is focused, the capacity for self-government, for that signifies many qualities, and on it practically hangs the future of the race. Masses of evidence have been collected on the subject, much of it very contradictory, and it is difficult to decide where doctors disagree. *But if one considers the different races which have been blended in these islands, and, while remembering their recognized racial characteristics*, makes due allowances for the modifications produced by so great an admixture of blood, we shall be able to account for many contradictions. *It is important always to remember that the people of the Philippines are not homogeneous; but, while there are wide differences of speech and disposition in the inhabitants of many of the islands, a very large proportion are permeated with a Malay element.* Such islands, indeed, are populated with almost pure Malays. Of the other native races, the Indonesian tribes are found in the mountains, whither they had been driven by the advancing tide of Malays; and the Negritos, the original inhabitants, are an inconsiderable and vanishing race, of no political importance.

CHARACTERISTICS OF MALAYS—"NO MALAY NATION."

What, then, are the characteristics and possibilities of the Malays, as shown hitherto in their relations with Europeans?

* * * * * * *

Other deficiencies in their mental and moral equipment are a lack of organizing power. *No Malay nation has ever emerged from the hordes of that race which have spread over the islands of the Pacific.* Wherever they are found they have certain marked characteristics, and of these the most remarkable is their lack of that spirit which goes to form a homogeneous people—to weld them together. The Malay is always provincial; more, he rarely rises outside the interests of his own town or village. He is never honest, as we count that virtue, never truthful, and never industrious or persevering. This is his dark side, but it is with that we are concerned. The two points which are most inimical to progress are, as already indicated, *the lack of unity and the lack of persistence.* The Malay is the laziest of Orientals, and the Filipino is the least lazy of Malays. The Malay, in short, is a creature of limitations.

FILIPINOS SO "HETEROGENEOUS AS TO DEFY ANALYSIS."

On this stock has been grafted many shoots, and the result in the Philippines is a population so heterogeneous as almost to defy analysis, since it is impossible to trace the infinite gradations of color, or to decide in what proportion the half-caste blood is mixed. The principal elements in this mixture are Spanish and Chinese. The Chinese mestizos, or half-breeds, have the reputation of being amongst the most brainy and also the most *difficile* of the natives, and a very large proportion of the insurgents belonged to this class. The Chinese character is so involved and so impossible to generalize that it is difficult to suggest the possible modifications it would make on the Malay; but when we remember the strong conservatism of the Chinese, and their intense superstition, we can not be surprised at the prominence of these two qualities in the Filipino descendants.

Some of the traditions current in the Philippines—for instance, the idea that mines could not be opened without the application to the "veins" of an unguent composed of old women's eyes, and a report, as late as 1830, that children were seized that their blood might water the gold and silver mines of Spain, a report which occasioned considerable disturbances—these are characteristically Chinese. The Chinese indifference to human suffering and cheap estimate of human life have also made their mark, being only exaggerated forms of ideas common to all Orientals. The artistic and creative qualities of the Chinese are those which have left least impression, for reasons to be suggested later on.

FILIPINO "GLIBNESS."

The Spaniards have, of course, exercised a double influence, not only that of intermarriage, but through their position as the governing and civilizing element. The faults and peculiarities of Latin races are exaggerated and

burlesqued, and a thin veneer of Western culture is spread over the passions and emotions of these Orientals. The Filipinos have in particular assimilated certain qualities which appeal to their sense of color—to their love of show. The glibness of the delegates who attended the United States commissions was remarkable, when one considered that in many cases they were drawn from humble pueblos—mere villages—and that their education must have been of the most elementary character.

These wordy speeches, when translated or put into cold print, contained but the smallest degree of matter, but their delivery and the promptness of replies to questions are characteristic of the eloquent, wordy, frothy Latin races, among whom every lounger at the village hostelry is at once an orator and a politician—great in words, but not in deeds, for his patriotism seldom gets beyond the taking stage. Whatever may be lacking in the new government, there will inevitably be plenty of discussion.

BAD INFLUENCE OF SPAIN ON MALAY CHARACTER.

It is the well-known tendency of the Latin races to be "intoxicated with the exuberance of their own verbosity," and when their dangerous facility of speech is transmitted to a people who have, by reason of their race and history, even less mental ballast, it is to be feared that with increased liberty will arise a class of windy politicians whose influence will be inimical to peace and tranquillity, since a grievance is necessary to point their periods.

The intellectual subtlety of the Latin has also been curiously grafted onto the simplicity—which is not stupidity—of the Malay. The result is a peculiar leaning toward abstract ideas, a love of the purely theoretical side of learning, with a corresponding inability to apply those theories, which are to them things apart from real life—things they have learned or read, and not evolved from life itself.

FILIPINOS "WOULDN'T KNOW 'INDIVIDUAL RIGHTS' IF THEY MET HIM IN THE STREET."

They begin with the abstract and fail to work down to the concrete, instead of taking the concrete, and so, through circles of thought, reaching the abstract. Their knowledge of rhetoric, logic, and philosophy is of little use to them, therefore; and even as an intellectual exercise it fails of its purpose, because it has no sure end or aim.

A witty American, who, being a fluent Spanish scholar, had conversed with hundreds of the better educated Filipinos, said of them: "They will write you essays on individual rights until you are tired, *but if they met Individual Rights in the street they wouldn't know him from Adam.* This is the inevitable result of Spanish influence. No race is less fit to amalgamate with or govern such people as the Filipinos than a decadent Latin one, whose shallows have a brilliance attractive to a child-like, color-loving race; whose faults are principally the result of a lack of mental and moral rigidity, therefore equally congenial to people who know nothing of discipline; and whose virtues are the result of a long period of civilization and culture, and can not be acquired ready-made by even the quickest and most adaptive of natives.

It is curious that the chief glory of Spain, her preeminence in painting and sculpture, has found no echo in these islands; but the fact emphasizes what has been said as to the predominance of the Malay element. The Malays have not produced artists in any of the countries to which they have spread, and though at times they produce pretty decorative work, it has little individuality and is usually copied from Chinese, Hindoos, or whatever race has come in contact with them. Despite the wonderful carvings of the Hindoo temples in Java, where the Malays reached their highest point of indigenous civilization, there is no such thing as native carving to be seen in that island. They had not even the desire to emulate what their Hindoo conquerers had done.

THE MALAY HAS NO CREATIVE ABILITY.

The artistic element in Spanish civilization seems to have been incommunicable, at any rate so far as creation is concerned. This want of originality is so marked a feature of Filipino character that it is as though we ran our heads against a dead wall in Malay characteristics. The Malay has no creative ability. Ages ago he evolved his idea of a house, and that house can be seen now in any of the islands to which he has penetrated—*always the same.* The sameness of his musical instruments, his ornaments, his weapons, is remarkable, especially when we consider the wide range of Malay invasion and the lack of communication between the different islands over which that invasion spread.

The modifications induced in the race by a variety of climate and conditions have not affected the elemental characteristics of the Malay at all, and of these the most striking is the lack of initiative, the absence of that quality which marks certain men out and makes them heroes and leaders. The Malay race, it has been said with a good deal of justice, has only produced one man whose ability deserves, and has acquired, a world-wide celebrity—Rizal. The insurgent leaders, especially Aguinaldo, have acquired notoriety, but not fame. This state of affairs can not be wholly fortuitous, nor can it be attributed to deficiencies of opportunity or to unfavorable circumstances, since these were ever the hotbed of genius. We are compelled to acknowledge the limitations of the Malay, and to suspect that wherever his race is predominant it will be rare indeed to find an individual triumphing over these trammels.

To this universal mediocrity is no doubt due the very slight degree of civilization ever attained by the Malays without outside influence, and also their political inefficiency. *Great intellectual or moral achievements may require for their consummation a certain preparedness on the part of the majority of the people they affect, but all such need to be initiated by some master mind.* Luther had been compared to the match that fired the mine, but without him who can doubt that the Reformation would have been delayed and might have been stultified?

The occidental races are rich in individuals of superior power, courage, and attainments. Anglo-Saxons, in particular, owe the luster of their history largely to the great deeds of single men, often private individuals—not so the Orientals. There have been heroes in the past, but most belong to the age of myth, and for many centuries China, one of the greatest and most civilized of oriental countries, has been waiting in vain for a God-sent leader.

There are few, even among the Filipinos themselves, who really deny the elementary propositions set forth, but there are a great many, including a number of Americans, who believe that education will remedy these characteristic defects in Filipino evolution.

CAN EDUCATION REMEDY THE DEFECTS?

The question is, whether this power of initiative, which involves not only ability, courage, and frequently self-devotion, but also a peculiar tenacity of purpose, is a quality that can be inculcated, or whether it is innate. We can not argue from previous experience, for nowhere are the conditions precisely similar; but it must be remembered that one of the chief ingredients in the character of men who have made history is their independence of outside conditions. * * * This is, of course, no argument against the best and highest education—*only a warning that we must not expect too much from it.*

OUR "GREAT EXPERIMENT."

The United States have resolved to make a great experiment in the Philippines. * * * To fit that coming generation for its future, education of the most advanced and up-to-date type is to be introduced into the islands at one coup, and by the salutary effects of training, the evil tendencies of the Filipino race—half hereditary, half the results of misgovernment—are to be reduced to a minimum.

A BEAUTIFUL THEORY.

It is a beautiful theory and a beautiful scheme, but unfortunately it involves an entire subversion of the laws of nature. To educate a nation is a grand and noble aim, BUT IT CAN NOT BE ACCOMPLISHED IN ONE GENERATION OR EVEN IN TWO. And here the task is complicated by the fact that THE FILIPINOS ARE NOT A NATION. "The United States," said a prominent American, "has fought her way through centuries of progress toward the goal of universal suffrage and democratic government," but he forgot to add that long before the United States began that fight the ancestors of Americans were *struggling slowly but surely through the mists of bygone ages toward freedom and liberty of thought and action.*

It is the results of these centuries of struggle and progress that they propose to thrust at once ready-made on the half-fledged Filipino.

THE FILIPINO "A HALF-CIVILIZED CHILD."

If the little brown brother were altogether simple and amenable the danger would be less, though still considerable; but he is neither. He is a half-civilized, clever, irresponsible child who has warped ideas as to right and wrong. IF UNNATURALLY STIMULATED HE MAY GROW UP INTO A FRANKENSTEIN.

The proper education of the Filipino, if not unduly hurried, will prove in the long run an untold benefit to the race. *Those, however, who initiate it can not hope to live to see its happiest effects.* In mere knowledge a very few years will probably make an enormous difference and will turn the mass of Filipinos, who have hitherto learned little more than the catechism, into a horde of precocious youngsters with all the text-book facts at their finger tips. *But true education which affects the character, which teaches a man to think for himself, to discern between true and untrue, to seek in everything the highest—the education, in fact, of a nation up to the standards of true citizenship*—THIS CAN NOT BE CRAMMED IN A FEW YEARS.

THE FILIPINO HAS SO MUCH TO UNLEARN.

The Filipinos labor under one tremendous disadvantage—they have so much to unlearn. The system under which they have lived for nearly three centuries has confirmed them in habits of mind which can not be eradicated at once. Nominally, fairly good provision was made for primary instruction, but, like many others, it was never carried into force. The proportion was something like 1 teacher to each 4,000, and there were no proper schoolhouses, no furniture, no text-books. The schools met in the teacher's house, or sometimes even in the stables or coach house of the conventos, and the teachers, wretchedly paid and badly treated, were often quite unfit for their tasks.

OUR EDUCATIONAL WORK.

From all this to a modern scientific, practical education is a long step, but the United States are sparing neither time nor money, and the reforms instituted are to be drastic and instantaneous. School-teachers of both sexes are being brought from the States, and normal colleges for training native teachers in modern methods established, for the first essential is to provide a staff of thoroughly competent assistants. Education will, of course, be entirely nonreligious and will be as practicable as possible, while special schools for technical training will be established. Attendance at primary schools will be compulsory between the ages of 6 and 12. Ultimately it is hoped to affiliate the colleges with those of the United States, and then the whole scheme of education will be complete and thorough.

"NO FILIPINO TONGUE AS THERE IS NO FILIPINO NATION."

The Filipino showed from the first the greatest desire to benefit by the more enlightened instruction given in the schools, frequently by military schoolmasters, after the American occupation, and the night schools opened in Manila have been crowded by men and women anxious to learn the English language. The intention is to make this the school language and ultimately the universal medium throughout the islands. This is a most important step and one fraught with many consequences, and it is to be hoped that its first result will be to bind the Filipinos more closely together. Hitherto, although Spanish was nominally to be learned in all the schools, *many of the country people could speak nothing but their own dialect, which in many cases was unintelligible to those dwelling in the next island.*

The measure is certain, however, to meet with a great deal of criticism in various quarters, but those who decry it can not suggest any other language which could with equal advantage be made a universal medium, and they can not deny that some such medium is absolutely necessary. THERE IS NO FILIPINO TONGUE AS THERE IS NO FILIPINO NATION, and as the aim of all well-wishers of the little brown brothers is to break down the barriers that have hitherto hedged them in and weld them into an organized and civilized nation, it must be conceded that in spreading the great lingua franca already spoken all over the East to the remotest corner of the archipelago, the United States are conferring upon them a strong weapon and a useful tool.

OUR DANGER IS OUR "DESIRE TO HAVE EVERYTHING DONE RATHER SOONER THAN IMMEDIATELY."

It is an ungracious task to find fault with a scheme so generous as that of the United States for the education of the Filipinos. The writer is inclined to think that they themselves are largely attracted to the United States by the prospect of these educational advantages, and that they will take every opportunity of profiting by them. The Filipinos are not at all apathetic or stupid, and they are as eager as children to try a new method or hear fresh ideas. *The danger lies in their cleverness and sharpness, and in the desire of the Americans to have everything done rather sooner than immediately.*

"GO SLOW! DON'T HURRY!"

With the spread of education it will be necessary to open certain posts to Filipinos, *which must be done with extreme caution; but, indeed, the writer finds throughout this dissertation that he is constantly obliged to reiterate that warning:* GO SLOW! DON'T HURRY! *Let things work out gradually. It is the best advice that can be given,* FOR THERE IS NO SHORT CUT TO SUCCESS.

FILIPINO RELIGIOUS CONCEPTIONS.

The Filipino's Christianity is a thing about which his best friends disagree. Some say it is deep and sincere, others that it is a mere matter of outward show and superstition.

* * * * * * *

A great many old pagan beliefs and customs are said to survive, even after centuries of Christianity, and these have a hold on the people that their religion could never obtain.

"AMERICAN PRIESTS ARE SAINTS."

It remains to be seen what can be effected by the personal influence and example of disinterested men, for much, both in the erroneous conceptions and indifference of the Filipinos, was owing to the defects of the old system of religious teaching and to the tyranny of the friars. *The people have been much struck already with the conduct of the American priests* who accompanied

the Army. "That is a saint—no priest," they said of one. "*He goes to any one who sends for him, ministers to sick and dying and asks no fee.*" The poor Filipino might certainly be forgiven if he failed to appreciate the ethical side of religion when he knew that the man who was for him the mouthpiece of the Christian's God would mulct him to the last penny for every rite performed. When marriage, baptism, and burial were made opportunities for extortion, it must have been difficult to realize their spiritual significance.

The sudden break between church and state will inevitably affect the Filipino deeply, and many thoughtful people are inclined to believe that, suddenly released from all religious trammels save those he voluntarily assumes, he will relapse into a state of heathenism. *The well-known tendency of the Malay is to revert—to return to his former state.*

BRITISH REGENERATION OF SARAWAK.

The Malay states, before the advent of the British, *were split up into innumerable tribes, many at war with each other, and there was neither peace nor safety in the land. Tyranny and corruption were rife.* Practically the same state of affairs existed in the Philippines when the Spaniards landed, and has continued in the Moro islands until the present day. The chief Malay states of Borneo (Brunei and Sarawak) afford an interesting illustration of what happened in a native-governed state, even when aided by foreign advice, and in a state with a white ruler, absolute and beneficent.

The former, originally the seat of all power in Borneo, to which it gave its name, is now effete, corrupt, with no influence; to quote the forcible words of one who knows it well (Hugh Clifford), it "smells of decay." *Sarawak, on the contrary,* since the time when the noble and courageous James Brooke first took it in hand; with no particular liking for the job, but simply because he felt that he—perhaps he alone—could rescue the people from their condition of warfare, feuds, and barbarism, *has become a model state.* Modern education, agricultural improvements, and all the blessings of peace and prosperity have been assured to its people, and the country is financially as well as politically flourishing.

WE HAVE "ACCOMPLISHED MUCH ALREADY."

It will be seen that the United States are only on the threshold of the difficulties that await them in their new phase of oriental expansion. There seems to be a somewhat general impression in Great Britain, and in English-speaking communities abroad, that Americans have hitherto met with little success in dealing with the Philippines. With this view the writer can not agree. There have been plenty of mistakes, but when we consider the circumstances under which the United States have embarked on the undertaking—the novelty, the absence of any special machinery, and the peculiar local conditions—it must be allowed by an impartial critic that much has already been accomplished. The man on the spot, particularly, has acquitted himself on the whole very well, and whatever there has been of failure has been chiefly due to the politicians and sentimentalists at home. The revival of the insurrection which took place in the autumn of 1901 was largely due to the demand that troops should be sent home and the Philippines made over (theoretically) to peaceful self-government.

ORIENTAL STUDENTS "HAVE MISGIVINGS."

Those who know the Filipinos best, those who, like the writer, have had experience of Orientals and how to deal with them, have considerable misgivings as to the result of this great experiment of self-government unless kept under due guidance and check. If we were to judge the Filipinos merely by professions, by phrases, by words, much might be expected from them, but our anticipations of the future must be based on their essential character and the performances of the past. Jealousies, intrigues, corruption, the ingrained conviction that every officeholder is justified in squeezing all he can—the man who did not would, in their opinion, have something uncanny about him—these are not promising features of the experiment. *It will take them some time to believe that the Americans, or anyone, can be honest, for they had seen nothing else in their Spanish officials but squeezing to the utmost limit.*

"THE NEEDFUL THING."

The needful thing is a firm, consistent policy to be framed and carried through by the men on the spot, who are, at all events, aware of the difficulties in the path. It would have been far better to have from the outset a definite system of control. When the civil government was being discussed and explained in the various islands, *there was a tendency to defer too much (outwardly) to the opinion of local Filipinos. It would have been better to say frankly, once for all: We have come to give you the government we think best for you, a government that will be just and liberal, but a government that must be obeyed.*

"KEEP A TIGHT HOLD."

Let America make up her mind broadly as to her future relations to the archipelago, and then let her put her faith in the men who have already devoted so much of their time to the problem. To send another commission would be merely to increase the number of smatterers. The best authority on the Philippines at present can be little more, but he knows something, and he is improving every day he spends in the islands.

In Judge Taft America has a man thoroughly capable of facing the situation if supported from home. He can not perform miracles, and he is bound to make mistakes, but he is open to conviction, and that is an important thing. *If given anything like a free hand, and not bothered and harassed by Congressmen or reports from politicians who have taken a run out to Manila and found mares' nests, he will do very well.* The IDEAL TREATMENT, ONE WHICH WOULD HAVE SAVED TROUBLE, EXPENSE, AND FAILURE, WOULD HAVE BEEN A TEMPORARY MILITARY GOVERNMENT GRADUALLY MERGING INTO PURELY CIVIL ADMINISTRATION. This is apparently judged out of the question, owing to the sentimental objections of the electorate in the States, which is so anxious not to hurt the feelings of the "little brown brother." This being the case, and a system having been inaugurated of quasi independence, the advice of an onlooker who has seen a good deal of government in oriental countries is to interfere as litle as possible with the customs, prejudices, and religion of the Filipinos, AND TO KEEP A TIGHT HOLD.

"AVOID ANY SIGN OF CHANGE."

The selection of the first governor-general has been a fortunate one. Judge Taft, who has won golden opinions from every side, is peculiarly the stamp of man to deal successfully with the Philippines. To recall such a man, even for the purpose of consulting him, seems to be a most unwise step, for the chief thing to impress the Filipino, and—what is more important—the chief means of evolving order out of chaos, of making the Philippines a prosperous country, IS TO AVOID ANY SIGN OF CHANGE, *and especially of interference with the man at the helm;* swapping horses while you are crossing the stream is always false policy.

VI.—SUMMARY.

Thus, Mr. President, we see as to the lines of debate upon which the opposition to the bill have conducted their attacks:

First, as to the misconduct of the Army, it is false;

Second, that the contention that the situation in the provinces is serously disturbed is false;

Third, that the assertion that the people are a consolidated people capable of self-government is not true;

And, finally, I have submitted the testimony of two impartial foreign observers, one made at the beginning and the other at the close of our connection with the Philippine Islands, up to the present time, upon what really are the characteristics of those people and their capacity for self-government, and as to what would be the effect of our withdrawal.

ENGLAND IN INDIA.

Mr. President, I wish to conclude this testimony by inserting an extract from an article by Bishop Hurst, of the Methodist Episcopal Church of this country, upon the work of England in India. I do this because during the course of the discussion there has been considerable reference to the work of England in India, and it has been asserted here upon the floor of the Senate that that work has been ruinous to the people of that country, instead of being, as it has been, beneficial, helpful, and uplifting.

[Bishop John F. Hurst, LL.D., in the Chautauquan, January, 1890, on "What England Has Done for India."]

English rule over India is not a case of hard conquest and commercial advantage. We think of Clive's terrible deeds and Burke's pictures of the crimes of Warren Hastings. We go still further back and reflect on the vicious parts of the policy of the East India Company during its long history. But there is a broader view, which we are compelled to take, if we would justly compare the India of to-day with what it was two centuries and a half ago.

BRITISH RULE HAS PRODUCED "INCALCULABLE ADVANTAGES."

Even after discounting the wrongdoing of every English officer and administrator in India, and the connivance of the Government at idolatrous practices, there still remain incalculable advantages to the country, which must be placed to the credit and honor of the Anglo-Saxon in India. These advantages can not be attributed to the natural development of the natives, to the pressure of European ideas, and to the general force of our modern civilization. *They are the direct result of the conquest of the country by England and of her subsequent rule over it.* * * * The old causes of internal separation are constantly disappearing. The Indian is beginning to feel, for the first time, that he is not the member of a tribe but of a race; that he is not a soldier in sept, but a rightful man of the broad soil; that he is not the slave of a rajah, but the citizen of a nation.

CRIME RAPIDLY DECREASING.

Crime is now rapidly decreasing. * * * *All India is now a neighborhood.* The arrival of the Peninsular and Oriental steamer is anticipated almost to an hour. The Europeans all over the country know about when to expect their mail from friends at home. Quick transportation is now the rule. * * *

NATIVE RULERS HAD NO THOUGHT FOR THE MILLIONS.

Sanitary measures have been adopted. Before the English supremacy there was no attention paid to the laws of health. The rulers and nobles had vast wealth, and could live with all the comforts which they might choose. *For the life of the millions there seems to have been no thought.* * * * When the English entered upon the rule of the country *they looked after the sanitary condition of the humblest, and the increased longevity is the proof of the success of their efforts.*

The sanitary department is one of the distinct parts of the administration of the government. A sanitary commissioner is attached to each local government, and under him are several grades of medical officers. Above all these there is a general sanitary commissioner connected with the general government, and to him sanitary report must come from all parts of the empire. * * *

The English, when they found themselves permanent occupants and rulers of the country, had to deal with a great mass of people whose chief occupation had been to find rice enough to keep themselves alive. The national life being one of warfare and perpetual alarm, and but scanty efforts being made even during the splendid reign of the Moguls toward popular education, it could not be expected that any intelligent care could be bestowed on the treatment of disease. *Whenever a plague invaded the country it had to run its race.* The people were at its mercy. Many thousands were swept away by it. * * *

DEVELOPMENT OF INDUSTRY.

In order to mitigate the ravages of fever the Government has taken special pains to introduce quinine throughout the country. * * * Many of the early industries which existed when England took possession of the country have been developed within the last few decades to remarkable proportions. The cotton of India being found inferior to that of the United States, the Government has introduced American cotton plants and American laborers, and already India is becoming one of the great cotton-producing countries of the world. She is rapidly learning the art of converting the fiber into woven fabric. * * *

The development of the natural resources of India by the English has been remarkable. *Millions of arable acreage have been added to the productive power of the soil.* * * * The earth itself has been penetrated and been made to yield its hidden wealth for the enrichment of the masses.

IMPOSSIBLE TO ENUMERATE ADVANTAGES.

But it is impossible to enumerate all the direct and much more the indirect advantages which have accrued to India from English rule and administration, compared with her distinguished and helpless condition at the beginning of the last century.

England has never achieved grander victories at Waterloo or Quebec than those which belong to her quiet and peaceful administration of India.

Mr. President, I have nothing more to say. I have witnessed this debate with profound interest. I do not think the broader considerations involved in this policy of American advance have been comprehensively discussed. This is no new movement in which we are engaged. It is as old as our steady progress toward national power—yes, as old as the varying movements of civilization itself. You gentlemen can not stop it; we can not stop it; the Administration can not stop it; all of us could not stop it. It is a movement of a people. We are placed where we

are by elemental considerations and conditions. The Pacific is on our west.

The Republic has the greatest Pacific coast line of any power, and only four or five thousand miles away is Asia, the cradle of the race. Every student in this or in any other country, of present conditions or approaching conditions, knows that the next great world drama will be upon the waters of the Pacific and upon Asia's ancient shores. It is a play of human forces which springs from the elements of an inevitable situation.

Mr. President, the mastery of that great ocean in the future is to be ours. This is not the dream of this day only. It has been the vision of every great statesman, of every great scientist who has ever given any attention to the subject. It was the dream of William H. Seward, of Lewis Cass, of the far-seeing Humboldt. That dream will come true. The mastery of that great ocean, with the advancement of civilization which it involves, will be ours. To oppose this movement is as if a babe were to paddle against the pouring currents of the Gulf Stream; and in the eyes of history it will be just as ridiculous.

In the long sweep and historical survey of this large business, considerations appear of almost infinite consequence. Even the practical and immediate questions are of serious moment. One question is whether in the near future the door of China shall be opened or closed—whether that Empire shall be partitioned or whether it shall not be partitioned. Whichever policy prevails, the United States must dominate that vast circumstance. But how? Certainly not by retreat from the very position of control and command. Everybody knows that if we had not had our troops in the Philippines when we did, and so had not been able to throw our forces into Pekin when we did, the actual partition of that great Empire would have been an accomplished fact, not only in substance, but in name.

As the owner of the Philippines we can keep the Orient's door open to our merchants and producers, even if those doors should be closed to others, and this, too, by negotiation instead of war. If it is decided that our interests require the open door for all nations equally, again the possession of this archipelago is a factor of determining power to that end.

If it is to proceed, then we should control it. If it is not to proceed, we also must control it. Our prestige is involved. It is a national, an ethnical, a world movement in which we are swept along. No party and no administration can or should prevent it. Senators in opposition may debate against this policy, but the master debater who will continuously answer them is Events.

Subsidiary Silver Coinage.

SPEECH

OF

HON. EZEKIEL S. CANDLER, JR.,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 29, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 12704) to increase the subsidiary silver coinage—

Mr. CANDLER said:

Mr. CHAIRMAN: This bill under consideration is as follows:

Be it enacted, etc., That the Secretary of the Treasury is hereby authorized to coin the silver bullion in the Treasury purchased under the act of July 14, 1890, into such denominations of subsidiary silver coin as he may deem necessary to meet public requirements, and thereafter, as public necessities may demand, to recoin silver dollars into subsidiary coin; and so much of any act as fixes a limit to the aggregate of subsidiary silver coin outstanding, and so much of any act as directs the coinage of any portion of the bullion purchased under the act of July 14, 1890, into standard silver dollars, is hereby repealed.

If enacted into law, it is its purpose to attempt thereby to drive the last nail into the coffin lid of silver. Its author, my distinguished friend from Connecticut [Mr. HILL], states frankly that the object of this measure is to stop the coinage of silver dollars and to prevent silver being in any sense of the word redemption money, and to further and more strongly fasten upon this country the single gold standard, and in order to effectually do so this bill provides for the repeal of the law authorizing the coinage of silver dollars and to coin the bullion now in the Treasury only into small coins—subsidiary coins—and when the bullion is exhausted, then to recoin the present silver dollars into subsidiary coins. It is boldly asserted by Mr. HILL, its author, and the gold-standard advocates and the gold-standard press, that this should be done and that this bill ought to pass because it would greatly strengthen the gold standard and fix it upon this country so strongly as to render it practically impossible for those who believe in silver coinage to break its tightening bands and again restore silver to its constitutional right of free coinage at the mints of this Republic.

On its face this seems to be at a glance a harmless little bill; but upon reflection and study it is one far reaching in its consequence and results. My friend, in seeking to have this bill enacted into law, aspires to become the priest to perform the last sad rites at the final destruction, death, and burial of silver—the greatest friend the plain people of this country have ever had in a circulating medium. It has always been the money of the people, and they love it, and though they have made a heroic fight to maintain it and to keep it, it does look as if the money sharks and the bondholders and those who believe in a contracted currency are about to triumph over the people and retire the "dollar of our dads."

Some people say and profess to believe that the silver question is settled. I do not believe "anything is ever settled until it is settled right," and I do not believe the silver question will ever be settled right until silver is again given the same and equal rights of free coinage with gold at the mints of this country, and I am going to "stand in the last ditch," fighting for its full and free restoration and rehabilitation, just as it existed prior to the passage of the law which demonetized it in 1873. I am for free coinage of both silver and gold as provided in the Constitution, because I honestly and sincerely believe it is for the best interest of the country and for the good of all the people. We had it continuously and uninterruptedly from the time of the opening of our first mint, in 1792, up to 1873, and it never bankrupted the country or destroyed the Republic, and we would have had it until to-day had the matter been left all the time to the untrammeled will of the masses of the people.

The people of this great country are by tradition and in principle bimetallists. The bondholders, the money sharks, and the money lenders are monometallists, and are crying aloud for a contracted money system and for the gold standard. I assert—and I challenge successful contradiction—that we have never had in this country free and unlimited or limited coinage of silver but what values of property have increased, and every stab that silver has received has been quickly followed by decreasing and falling prices.

Why? Because when you increase the circulating medium, or in other words, when you give the people more money they get better prices for their property, and when you decrease the volume of money and contract the currency the purchasing power of money is greater and it takes more property to buy money and you necessarily have falling and lower prices. When there is plenty of money in circulation property is higher and money is cheaper, and the people can get more money for their products; but when money is scarce money is dearer and it takes more property to buy it, and hence property gets cheaper. My State is an agricultural State and the people of my district, in a large measure, are farmers, who earn their living by the "sweat of the brow," who toil from early morn till the stars appear in the evening to produce something to sell, and they want the free coinage of silver and the free coinage of gold and the United States greenback currency and the silver and gold certificates; in fact, they favor all the kinds of money upon which "Uncle Sam" will place his "hand and seal" and by his stamp stand sponsor for its value, except national-bank notes.

They do not believe in them, because they believe the Government ought to issue the paper money for the people and not pay to national banks 2 per cent interest on the bonds, which are the basis of their circulation, and only charge them one-half of 1 per cent on their circulation, and thus virtually pay the national banks 1½ per cent to issue paper money which the Government has the power to issue and ought to issue itself. In other words, they do not believe the Government should delegate to national banks the issuance of the paper money for the country, and especially so when the banks receive a premium for doing so.

I want to see the day come when this Government will go entirely out of the banking business and only do that which it ought to do under the provisions of the Constitution—provide the people with gold and silver through the medium of the free coinage of each, and then such other money redeemable in gold or silver, either at the option of the Government, as will meet their convenience and the increase in population and the consequent demands of increased business. When that time comes, then you will have prosperity among the masses of the people and not until then. This bill in so many words provides that—

So much of any act as directs the coinage of any portion of the bullion purchased under the act of July 14, 1890, into standard silver dollars, is hereby repealed.

If enacted into law that would leave us without a vestige of law authorizing the coinage of a single silver dollar and put us

absolutely on a monometallic gold basis. It is bad enough now, and I appeal to the majority in this House not to further shackle the people by taking away from them the last letter and line of silver legislation. Leave them at least this small crumb, if no more. You are flush now with the increase in gold production, but what guaranty have you that it will continue? The history of the world shows that silver and gold for over four hundred years have about kept even pace, the one with the other. Sometimes one and sometimes the other has pressed ahead in production, but they have during all these years kept practically together, like twin sisters, beautifully serving the people.

I believe that the great Giver of all good gifts hath ordained that they shall serve the people and therefore has thus permitted and directed their production from the earth in practically equal quantities through the ages now passed and gone, and I believe the time will yet come when silver will be restored to its constitutional status and that He will continue to supply these two metals in practically equal quantities in the years yet to come. In proof of the above I give a detailed statement of the "Production of gold and silver in the world" since the discovery of America in 1492 up to and including the year 1900, taken from the report of the Director of the Mint for 1901.

Production of gold and silver in the world since the discovery of America.

1900	172,838,870	223,468,200	172,838,870	223,468,200
Total			8,827,018,635	11,412,704,900

The official statistics show that the production of these metals in 408 years in coinage value has been for gold $10,067,833,300 and for silver $11,412,704,900. Is it not a most remarkable fact that they have during all the years remained practically together?

Another wonderful fact is revealed when you examine the commercial ratio of silver and gold. I call your attention to the statistics on that point from 1687 up to and including the year 1900, also taken from Report of Director of the Mint for 1901.

Commercial ratio of silver to gold each year since 1687.

Years.	Ratio.	Years.	Ratio.	Years.	Ratio.	Years.	Ratio.	Years.	Ratio.	Years.	Ratio.
1687	14.94	1723	15.20	1759	14.15	1795	15.55	1831	15.72	1867	15.57
1688	14.94	1724	15.11	1760	14.14	1796	15.65	1832	15.73	1868	15.59
1689	15.02	1725	15.11	1761	14.54	1797	15.41	1833	15.93	1869	15.60
1690	15.02	1726	15.15	1762	15.27	1798	15.59	1834	15.73	1870	15.57
1691	14.98	1727	15.24	1763	14.99	1799	15.74	1835	15.80	1871	15.57
1692	14.92	1728	15.11	1764	14.70	1800	15.68	1836	15.72	1872	15.63
1693	14.83	1729	14.92	1765	14.83	1801	15.46	1837	15.83	1873	15.93
1694	14.87	1730	14.81	1766	14.80	1802	15.26	1838	15.85	1874	16.16
1695	15.02	1731	14.94	1767	14.85	1803	15.41	1839	15.62	1875	16.64
1696	15.00	1732	15.03	1768	14.80	1804	15.41	1840	15.62	1876	17.75
1697	15.20	1733	15.18	1769	14.72	1805	15.79	1841	15.70	1877	17.20
1698	15.07	1734	15.39	1770	14.62	1806	15.52	1842	15.87	1878	17.92
1699	14.94	1735	15.41	1771	14.66	1807	15.43	1843	15.96	1879	18.39
1700	14.81	1736	15.18	1772	14.52	1808	16.08	1844	15.85	1880	18.05
1701	15.07	1737	15.02	1773	14.62	1809	15.96	1845	15.92	1881	18.25
1702	15.52	1738	14.91	1774	14.62	1810	15.77	1846	15.90	1882	18.20
1703	15.17	1739	14.91	1775	14.72	1811	15.53	1847	15.80	1883	18.64
1704	15.22	1740	14.94	1776	14.55	1812	16.11	1848	15.85	1884	18.61
1705	15.11	1741	14.92	1777	14.54	1813	16.25	1849	15.78	1885	19.41
1706	15.27	1742	14.85	1778	14.68	1814	15.04	1850	15.70	1886	20.78
1707	15.44	1743	14.85	1779	14.80	1815	15.26	1851	15.46	1887	21.10
1708	15.41	1744	14.87	1780	14.72	1816	15.28	1852	15.59	1888	22.00
1709	15.31	1745	14.98	1781	14.78	1817	15.11	1853	15.33	1889	22.10
1710	15.22	1746	15.13	1782	14.42	1818	15.35	1854	15.33	1890	19.75
1711	15.29	1747	15.26	1783	14.48	1819	15.33	1855	15.38	1891	20.92
1712	15.31	1748	15.11	1784	14.70	1820	15.62	1856	15.38	1892	23.72
1713	15.24	1749	14.80	1785	14.92	1821	15.95	1857	15.27	1893	26.49
1714	15.13	1750	14.55	1786	14.96	1822	15.80	1858	15.38	1894	32.56
1715	15.11	1751	14.39	1787	14.92	1823	15.84	1859	15.19	1895	31.60
1716	15.09	1752	14.54	1788	14.65	1824	15.82	1860	15.29	1896	30.59
1717	15.13	1753	14.54	1789	14.75	1825	15.70	1861	15.50	1897	34.20
1718	15.11	1754	14.48	1790	15.04	1826	15.76	1862	15.35	1898	35.03
1719	15.09	1755	14.68	1791	15.05	1827	15.74	1863	15.37	1899	34.36
1720	15.04	1756	14.94	1792	15.17	1828	15.78	1864	15.37	1900	33.33
1721	15.05	1757	14.87	1793	15.00	1829	15.78	1865	15.44		
1722	15.17	1758	14.85	1794	15.37	1830	15.82	1866	15.43		

These statistics conclusively show that the commercial ratio between gold and silver was, practically speaking, the same up to 1873, and was actually under the coinage ratio in 1873, the date of the demonetization of silver. Since that date, and only since that date, has its commercial value exceeded very much its coinage value. The fact is that the silver dollar, when silver was demonetized, was worth 3 per cent premium, and it has never been at a discount, and if let alone or restored to free coinage would never go to a discount. But one of the reasons given why we should not have the free coinage of silver is that silver dollars might go to a discount. They have stood the test of ages, the storms and the tempests and the panics, and have never gone to a discount, and there is nothing now to fear in that direction. Why?

The reason they can never go to a discount is because they can be applied to so many uses. They can be utilized according to law for the payment of all dues to the National Government, which aggregate over $700,000,000 per annum; of all State, county, and city taxes, which aggregate more than $500,000,000 each year; of the $10,000,000,000 of notes and bonds payable in lawful money; of the $8,000,000,000 of deposits payable by banks; of the $6,000,000,000 of thirty, sixty, and ninety day paper payable to banks; of the $10,000,000,000 to $15,000,000,000 of thirty, sixty, and ninety day accounts always outstanding; of premiums upon life-insurance policies, which aggregate $350,000,000 each year; of losses by life and fire insurance companies, which amount to over $300,000,000 per annum; of installments upon shares in building associations,

which equal nearly $500,000,000; of amounts due on contracts for construction of buildings, railroads, ships, canals, and other improvements in the United States, aggregating at least several billions of dollars.

Who would part with a silver dollar at a discount when it could be applied to so many purposes at par? All of these uses constitute demands which, according to the Gresham law, would fall upon silver dollars alone and would make it absolutely impossible for them to go to a discount. These demands are so enormous compared to the amount of silver money in existence, and the fact that they are continually increasing and that such demands will always command the use of all available silver money will forever prevent any possibility of them going to a discount. No greater truth, in my judgment, was ever uttered upon this floor than that expressed by Mr. Carlisle in his famous speech of February 27, 1878, when he said:

I know that the world's stock of the precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate, indeed, if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age.

The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money in the world. With an ample currency an industrious and frugal people will speedily rebuild their works of internal improvement and repair losses of property, but no amount of industry or economy on the part of the people can create money. When the Government creates it or authorizes it the citizen may acquire it, but he can do nothing more.

I am in favor of every practicable and constitutional measure that will have a tendency to defeat or retard the perpetration of this great crime.

This bill under consideration if passed would be the climax and the "consummation of the scheme" to permanently strike down and destroy the silver dollar and place us absolutely, unequivocally, and solely on a monometallic basis and make gold stand sponsor for all the money of every kind at the Treasury.

The debts of the world, which in the aggregate are perfectly enormous, have largely been contracted and based on being paid in gold and silver, both or either, to be used on a perfect equality as to coinage and full legal-tender power. The change to gold alone is a gross breach of contract. The monetary revolution of 1873 was intended to deny to the debtor this legal right, and the legislation of March 14, 1900, was based on the further discarding of silver, and this bill under consideration now proposes the absolute destruction of the silver dollar. So step by step have the enemies of silver proceeded, and this step farther they desire now to take.

I warn you to consider well, and investigate earnestly and sincerely before you take it. Measure the consequences and results before you act. The legislation of 1873 was a monstrous piece of injustice, but many of those most prominent in enacting that financial law of 1873 afterwards stood up in their places in Congress and frankly acknowledged their ignorance and neglect, and did something in 1878 and 1890 which they thought would be effective to relieve us of the mischief. But here we have another effort in Congress to ignore the experiences of 1873–1878 and 1890, and enact a law which would put the climax on the law of 1873.

To those who are willing to give but little special attention to the range of average prices for a long series of years I know of nothing that can give more information with less study than the Sauerbeck table of prices, of which I annex the following condensed abstract, in which is considered the average prices of 45 of the leading articles of commerce, such as cereals, meat, sugar, tea, coffee, and textile goods, and some other articles:

Year.	Price.	Year.	Price.	Year.	Price.	Year.	Price.
1846	89	1860	99	1874	102	1888	70
1847	95	1861	98	1875	96	1889	72
1848	78	1862	101	1876	95	1890	72
1849	74	1863	103	1877	94	1891	72
1850	77	1864	105	1878	87	1892	68
1851	75	1865	101	1879	83	1893	68
1852	78	1866	102	1880	88	1894	63
1853	95	1867	100	1881	85	1895	62
1854	102	1868	99	1882	84	1896	61
1855	101	1869	98	1883	82	1897	62
1856	101	1870	96	1884	76	1898	64
1857	105	1871	100	1885	72	1899	68
1858	91	1872	109	1886	69	1900	75
1859	94	1873	111	1887	68	1901	70

NOTE.—Average for eleven years 1867–1877 is 100.

Please note the year 1873, which records the average price at 111, and compare it with 1896 at 61. This is a fall of 50 points, or over 45 per cent.

If such legislation as the bill under consideration is enacted into law, it will greatly increase the demand for gold, and the demand will become greater than the supply, and falling prices will necessarily follow, with all the consequent distressing results. How much money of all kinds is there in the world to-day? On pages 42 and 43 of the report of the Director of the Mint for 1901 I find a table showing the stocks of money in the world, and by that table there is to-day:

Gold	$4,906,700,000
Silver	3,841,100,000
Paper	3,033,400,000
Total	11,781,200,000

It is estimated that there are 1,332,500,000 people in the world. Therefore the per capita in gold would be $3.71; in silver, $2.90, and in paper, $2.29; total per capita, $8.90. The debts of the world are approximately $31,000,000,000, and there is in round numbers only $4,000,000,000 in gold in the world. Stop the coinage of silver dollars and make gold the only redemption money and you virtually make all debts payable in gold. A statement recently issued by the Treasury Bureau of Statistics shows that the national debts of the world have increased in a little over a century as follows:

1793	$2,433,250,000
1820	7,299,750,000
1848	8,419,045,000
1862	13,382,875,000
1872	22,410,232,000
1882	26,249,901,000
1901	31,493,749,000

Within the lifetime of men of middle age these debts have tripled. They amount to nearly eight times as much as the entire stock of gold money in the world. When the world owes thirty-one billions of dollars, and the nations make it all payable in gold and there is only $4,000,000,000 in gold with which to pay it, how will the world ever pay its debts? In the United States to-day there is:

Gold	$1,110,800,000
Silver	655,800,000
Paper	428,400,000
Total	2,195,000,000

The total debts of the Government, the States, counties, municipalities, and citizens run up into several billion dollars. Make gold the only redemption money and you virtually make all debts in the United States payable in gold. When the debts amount to several billions and you make it payable in gold and you only have $1,000,000,000 in gold to pay with, how are these debts to be paid? There is in the United States only per capita $14.41 in gold, $8.51 in silver, and $5.56 in paper. Instead of contracting the currency, let us increase the volume of the money of the people. I favor more money, more subsidiary coinage.

I would cheerfully vote for the gentleman's bill if it was as follows:

Be it enacted, etc., That the Secretary of the Treasury is hereby authorized to coin the silver bullion in the Treasury purchased under the act of July 14, 1890, into standard silver dollars and such denominations of subsidiary silver coin as he may deem necessary to meet public requirements, the same to be full legal tender for payment of all debts, public and private; and so much of any act as limits the aggregate of subsidiary coin outstanding is hereby repealed.

That, if enacted into law, would increase to some extent the volume of money, and hence I would gladly vote for it if it stopped there. But I am intensely opposed to the pending bill because it does not stop there, but provides further "to recoin silver dollars into subsidiary coin," and to repeal the "act which directs the coinage of any portion of the bullion purchased under the act of July 14, 1890, into standard silver dollars." This latter part of the bill would stop the coinage of silver dollars and contract the money of the people, and hence I oppose it.

Instead of striking another blow to silver and contracting the currency by the retirement of the silver dollars I appeal to you to restore it to its right of free coinage at the mint, and increase the volume of money by coining more silver dollars and more small coins. Instead of making it subservient to gold, put it back equal with gold. Why should this, the greatest silver-producing country in the world, strike another blow at one of its greatest resources? As it is impossible for silver dollars to go to a discount why stop absolutely the coinage of the silver dollar, and probably produce a period of falling prices, with attendant panics and consequent distress? You boast of great prosperity. I deny that we have great prosperity among the masses. Out of the 12,000,000 families in America, the income of 4,000,000 of them is not exceeding $400 each per year, and the incomes of many families are much less than that, and the incomes of nearly 80 per cent of the entire number are less than $1,000 per year. Does that look like great prosperity among the people? [Applause.]

It is true that the steel trust made clear $56,000,000 during its first year's business, and that Pierpont Morgan received $11,000,000

for his services in financiering its business, and it is further true that the beef trust and the other great trusts are reaping rich harvests and grinding and oppressing the people and accumulating vast fortunes and making it harder for small business enterprises and individual citizens to succeed in business; but the boasted prosperity under Republican administration and Republican policies is confined to the money lenders, the Wall street plutocrats, the great trusts, the bloated corporations, the bondholders, the favored classes, and the favored few, and there is no great prosperity among the masses of the people. [Great applause.]

I am against trusts, and I hope the day will come when the Representatives of the American people will rise in their manhood and integrity and strike the trusts and the monopolies a deathblow and give the individual citizen a fair chance in the "race for life." You Republicans have the majority, and you have the power to do it now. Will you exercise it? I appeal to every Representative on this floor, regardless of political affiliation, to oppose this proposed legislation, which proposes the repeal of the last line of law authorizing the coinage of the silver dollar, and goes further and proposes the melting down of the present silver dollars into bullion and the recoinage of them into subsidiary coins—proposes a gold-dollar money trust.

Rise above partisan feeling, and do that which will build up rather than destroy. [Applause.] Let us defeat this bill, and then let us come to the further relief of the people by amending the interstate-commerce law so that the Interstate Commerce Commissioners can enforce their orders, decrees, and judgments; and then they can protect the people from unjust discriminations and burdensome and oppressive freight rates imposed and enforced by the gigantic railroad trusts and combines and monopolies; and let us take steps to prevent these railroad trusts from gobbling up all competing lines and from destroying all competition and from fixing rates to suit themselves, regardless of the rights of the people. These great railroad combines, by their system of rebates and schemes in the interest of the great trusts and monopolies, are helping to build up the other trusts along with themselves, and the trusts are crushing out individual efforts and small business enterprises and oppressing the masses of the people.

You Republicans now have absolute control of every branch of the Government, and you have the power to correct all this. Will you do it or will you even help us to do it? I appeal to the membership of this House to increase rather than decrease the people's money, and to reduce the unrighteous and burdensome taxation now in force by a just revision and reduction of the tariff taxes, and to take the hands of the trusts from the throats of the people by placing all trust-made articles on the free list, and to make it impossible, by amending the interstate-commerce law, for the great railroad combines to disregard and trample under foot the rights of the people, and pass a law forbidding them buying up interstate competing lines or the stock of such competing lines, and the dawn of a brighter day will appear in this great country.

We can do it if you Republicans will help us, and we ought to do it, and I plead that it be done in the interest of the people. They are long suffering and forbearing, but when aroused they know their rights and they will demand them, and woe to the man or party who denies them relief. As a plain, old-fashioned Jeffersonian Democrat and humble representative of the people, I present these momentous questions to you and beg your candid consideration, reminding you that to the people you must give an account for your disposition of them. [Applause.]

On February 26 I introduced a bill in this House to amend, and, in my judgment, greatly strengthen and make effective, the Sherman antitrust law, and which, if passed, would give a citizen the right, without consulting the Attorney-General of the United States, to bring suits for the suppression of trusts. That law, after defining a trust and making it unlawful to make any contract or combination or to enter into a conspiracy in restraint of trade or commerce, and after making it unlawful to monopolize or to attempt to monopolize or combine, or conspire with another to monopolize or combine, any part of the trade or commerce among the several States or with foreign nations, and after declaring all such contracts to be illegal and void, provides in section 4 of that act:

> The several circuit courts of the United States are hereby invested with jurisdiction to prevent and restrain violations of this act, and it shall be the duty of the several district attorneys of the United States in their respective districts, under the direction of the Attorney-General, to institute proceedings in equity to prevent and restrain such violations.

Now, my bill proposes to amend that section as follows:

> *Be it enacted, etc.*, That section 4 of an act entitled "An act to protect trade and commerce against unlawful restraints and monopolies," approved July 2, 1890, be amended by adding after the word "violations," in the sixth line of said section, the words "or any citizen or citizens of the United States or the Territories or the District of Columbia may institute proceedings in equity to prevent and restrain such violations, and in case said proceedings so instituted shall be carried to a successful conclusion a reasonable attorney's fee shall be allowed by the court, to be taxed as part of the costs, and said citizen or citizens so instituting said proceedings and carrying same to a successful conclusion shall recover all costs, including said reasonable attorney's fee."

Now, if this bill should pass and become a law that section in the Sherman antitrust law as amended would then read as follows:

> The several circuit courts of the United States are hereby invested with jurisdiction to prevent and restrain violations of this act, and it shall be the duty of the several district attorneys of the United States, in their respective districts, under the direction of the Attorney-General, to institute proceedings in equity to prevent and restrain such violations, or any citizen or citizens of the United States or the Territories or the District of Columbia may institute proceedings in equity to prevent and restrain such violations, and in case said proceedings so instituted shall be carried to a successful conclusion a reasonable attorney's fee shall be allowed by the court, to be taxed as part of the costs, and said citizen or citizens so instituting said proceedings and carrying same to a successful conclusion shall recover all costs, including said reasonable attorney's fee.

You will readily see that if my bill should become the law the arbitrary and sole power now vested by the law in the Attorney-General to direct when any suit should be brought to enforce this antitrust law would no longer exist, but in addition to that power any citizen who desired could put the machinery of the law provided for the suppression of trusts into motion, and if he carried it to a successful conclusion he would not only suppress the trust but recover all costs, including a reasonable attorney's fee. He would not only do the public a great service, but be made whole by recovering all costs and his attorney's fee. As the law stands now it is practically inoperative because the Attorney-General has directed few suits to be brought, and no suit can be brought unless he first directs it.

I am opposed to this one-man power. It is contrary to the fundamental principles of our Government. Pass my bill and vest this power in the people, where it rightly and justly belongs. If you do that, when a suit is directed to be brought to suppress a trust, you will not find Pierpont Morgan and a few trust magnates running to the people in the dead hours of the night or in the daytime, either, for that matter, to get the suit stopped, like, it is said, they recently ran to President Roosevelt in the nighttime, when the people were asleep, to get him to revoke an order which, it is alleged, he gave to the Attorney-General to bring suit to prevent the forming of a great railroad combine in the West, because Morgan and his crowd would have no hopes of controlling the people, and I am glad that in this instance they failed to control President Roosevelt.

I appeal to the committee to report this bill, for if passed it will give the people themselves the right to enforce this law for the suppression of trusts and combines and monopolies, and I say to you that it is the people we are here to serve, and it is their interest we should guard and protect, and by the help and grace of God I am going to stand by them and uphold their banner to the fullest extent of my ability, and it is in their interest I have introduced this proposed amendment, and I plead for its report and passage. I am opposed to the "money trust" proposed by the bill now under consideration, and I appeal to you to defeat it, and I also appeal to you to give the people relief from the other great trusts which, in my judgment, threaten this Republic and our free institutions. [Applause.]

As the Representatives of the American people the trusts deserve and should receive no consideration at our hands. They grant the people no quarter, and they should be granted none by the people's representatives. They are selling their goods cheaper to foreigners than to home folks. They are therefore more considerate of and kinder to foreigners than to Americans. To prove the truth of this assertion I give the prices—domestic and foreign—of a few articles in daily use by almost every farmer, as follows:

Articles.	Domestic price.	Foreign price.
Cultivators	$11.00	$8.40
Plows	14.00	12.60
Axes ..... per dozen	8.25	7.20
Kettles	1.40	.85
Wire nails ..... per 100 pounds	2.25	1.35
Table knives ..... per gross	15.00	12.00
Horseshoe nails ..... per pound	.17	.14
Barbed wire ..... per 100 pounds	3.00	2.00
Rivets ..... do	10.00	5.55

I could give the prices of almost numberless other articles showing the same discrimination in favor of the foreigner. How long will our people stand this condition of affairs? Will you give the people relief or continue to favor the trusts? I leave the question with you, and may the God of justice and the right drive it into your consciences until you do awaken to a full sense of your responsibility, and give the people the relief needed and so richly deserved by them. [Prolonged applause.]

Philippine Problem.

Filipinos want Independence—What They have done in Peace and War—American and Foreign Authorities Quoted—Negros Native Government—Officers and Laws of, Recognized by Americans—An Interview with Buencamino and Others—Why We Purchased the Louisiana Territory—Its Population 59,998 in 1806.

President Jefferson's advice: "Kindly separated by nature and a wide ocean from the exterminating havoc of one-quarter of the globe, too high-minded to endure the degradation of the others, possessing a chosen country, with room enough for our descendants to the thousandth and thousandth generation, etc.—with all these blessings, what more is necessary to make us a happy and prosperous people?" (Inaugural address, 1801.)

"Separated by a wide ocean from the nations of Europe and from the political interests which entangle them, we should be most unwise were we to cast away the blessings of the position in which nature has placed us, the opportunities she has endowed us with of pursuing, at a distance from foreign contention, the paths of industry, peace, and happiness, of cultivating general friendship, and of bringing collisions of interest to the empirage of reason rather than of force." (Message to Congress October 17, 1806.)

SPEECH

OF

HON. JOHN W. GAINES,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 21, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9315) making appropriations to supply urgent deficiencies in the appropriations for the fiscal year ending June 30, 1902, and for prior years, and for other purposes—

Mr. GAINES of Tennessee said:

Mr. CHAIRMAN: For years, indeed for centuries, Spain governed the people of the Philippine Islands not only with an iron but with a corrupt hand. Not content to rule them as a people with tyrannical and oppressive laws, permitting only those who lived, or rather whom Spain allowed to live there, to survive practically for the sole purpose of supporting the Government and not themselves and the Government, we are not surprised that finally the natives in 1896 rebelled and resolved to fight to the death for liberty and for home.

The natives wanted taxes reduced, state divorced from church, general amnesty, home rule, and "a representative in the Spanish Cortes or congress," says Mr. Murat Halstead, having had (says Sawyer) a representative from 1810 to 1814 and from 1820 to 1823, and procuradores from 1834 to 1837.

These reforms had been time and again in late years promised, but never granted in fact. The people stood this colonial tyranny as long as they could, and in 1896 rose in arms, and, as Frederick H. Sawyer (often quoted by the War Department) said, "30,000 were killed," and they were forced to retreat, as they did, to the mountains, continuing their struggle.

The Spanish authorities saw that the end of such a war would be prolonged and distressing, and though in the utmost bad faith on the part of Spain, as subsequent events demonstrated, a treaty was entered into on December 14, 1897, known as the Biacnabato Pact, wherein it was agreed by Rivera, representing Spain, and Aguinaldo, for the natives, that all these reforms would be immediately granted.

Aguinaldo and his associates, in the utmost good faith, kept the conditions of this treaty, but Spain did not; Rivera returning to Spain and repudiating the whole arrangement, and Spanish tyranny continued as before.

Aguinaldo and the insurgents agreed to surrender all or a certain number of their guns, which was done; that Aguinaldo and his immediate associates should leave the archipelago, and they went to Singapore; that Aguinaldo and his associates should be paid, and they were paid, an indemnity of $400,000 cash in silver, the total promised being $800,000 silver.

Before accepting this money they agreed that they would accept and keep it as a "trust fund," to be preserved as a "war fund" to renew the war against Spain in the Philippines if the conditions of this treaty were not executed as promised, and if they were kept, to use the fund in caring for the widows and orphans of the insurgents who had been killed during their recent war with Spain (1896).

Aguinaldo and his associates went to Singapore, and Frederick H. Sawyer, an Englishman and an old resident of Manila, in sympathy with the Americans who wants us to hold these islands permanently, in his invaluable work entitled "The Inhabitants of the Philippine Islands," published in 1900, at page 106 says:

They (Aguinaldo and his associates) lived in a quiet and economical way (in Singapore) upon their own resources. They did not divide the indemnity, nor convert it to their own use, but kept it as a war fund in case of need.

Mr. Sawyer further says:

No reforms were ever granted and things in Luzon went on in the same old way.

MR. HALSTEAD DEFENDS AGUINALDO.

Mr. Murat Halstead, a leading Republican, who states he was "War correspondent in America and Europe, historian of the Philippine expedition, a friend of President McKinley" in his book entitled "Story of the Philippines" (1898), who went, he says, to the Philippine Islands to make a "personal observation" to get and got the "truth," at pages 94 and 124 of his book speaks of "the very honorable position taken by Aguinaldo" in reference to preserving and properly using this $400,000.

He states that—

Aguinaldo claimed that the money was a trust fund and was to remain on deposit (in bank in Hongkong, where he had put it) until it was seen whether or not the Spaniards would carry out their promised reforms, and if they failed to do so it was to be used to defray the expenses of a new insurrection.

No steps had been taken to introduce the reforms; more than 2,000 insurgents who had been deported to Fernando Po and other places are still in confinement, and Aguinaldo is now using the money to carry on the operations of the present insurrection.

When Admiral Dewey sent for Aguinaldo and brought him down to Cavite on May 9, 1898, Aguinaldo (who had prearranged to do so with Dewey's representatives, Consuls Pratt, Williams, and Lieutenant Brumby, at Singapore and Hongkong) immediately began to engage the Spanish forces, cooperating with the American forces then in Manila Bay.

HALSTEAD TELLS HOW AGUINALDO USED THE MONEY.

Aguinaldo used this $400,000 to buy vessels and munitions of war to reengage the Spanish forces, or, to quote the words of Mr. Murat Halstead, "Aguinaldo is now using the money to carry on the operations of the present insurrection."

The testimony found in Senate Document No. 62 shows that many American officials corroborate Mr. Halstead's statement.

Gen. J. F. Bell, August 29, 1898, as this document No. 62 shows, says:

Aguinaldo—honest, sincere, and poor, not educated, but a natural leader of men, with considerable shrewdness and ability—thoroughly trustworthy and capable of self-government—

With others whom General Bell names.

And yet it is still stated by some of the highest and lowest in the land that Aguinaldo sold out his country for gold.

BELIEF OF THE FILIPINOS REGARDLESS OF ACTUAL PROMISES OF INDEPENDENCE.

Whether our officials agreed in words or not to give the people of this country their independence, or whether they by act led the people of this archipelago to believe that such a promise had been made, or they by cooperating with us, as they did, understood that thereby they would achieve their independence, the fact remains beyond all successful refutation that they believed in 1898, and an overwhelming majority of them now believe, such a promise was made by word or wrought by act, or both, and they, as a mass, are irritated that independence is now denied them and may never be within their grasp.

It seems to me that our American officials have placed an estoppal on our Republic to deny these people at least ultimate independence.

The fact is official that right under Dewey's guns (and necessarily within his knowledge) within four days after Aguinaldo arrived at Cavite—that is, on May 24, 1898—Aguinaldo issued three proclamations, all looking toward, if not immediate, certainly ultimate, independence of these people; and Dewey permitted all these acts and cabled all the facts promptly to the authorities at Washington.

It is also an official fact that on July 1, 1898, Aguinaldo issued a proclamation proclaiming the Philippine republic, which proclamation in part reads as follows:

1. The independence of the Philippines shall be proclaimed.
2. A republic shall be established, with a government designed by General Aguinaldo and approved by the admiral and general commanding the United States forces.
3. The government will recognize the temporary intervention of commissioners designated for the purpose by the United States.
4. The American protectorate shall be recognized on the same conditions as arranged for Cuba.

Congress had declared that Cuba is and of a right should be free and independent. Hence it was natural for our officers to think they were doing right to promise or lead these people to believe they would be given their independence.

General Anderson, at the head of our land forces, and Admiral Dewey undoubtedly cooperated with the native forces against the "common enemy," the Spanish forces. Dewey says he "advised" Aguinaldo (Bureau Nav. Rpt., 1898, pp. 103-106). The natives wanted their independence and we wanted Cuba's independence. Spain was the enemy of both ambitions.

Neither General Anderson nor Admiral Dewey had practically any trouble with the Filipinos until General Merritt came, and what did he do? He says he smashed the whole programme.

GENERAL MERRITT SMASHES GENERAL ANDERSON'S AND ADMIRAL DEWEY'S PLANS.

At pages 366, 367, Senate Document No. 62, General Merritt says:

I do not know that the Commission will be interested in that. It is correspondence between General Anderson and Aguinaldo, and relates largely to Aguinaldo's growing views. The whole correspondence was deprecated by Admiral Dewey before I got there, and I suppressed the whole thing after I arrived, because it was not the wish of the Government to make any promises to the insurgents or act in any way with them.

General Merritt smashed everything that Dewey and Anderson, first in command and first land officer to get to the Philippines, had done, and his language just quoted shows that "promises" had been made by Dewey or Anderson, or both, and that they had been acting with the natives in fighting the Spanish forces.

At page 501, Senate Document No. 62, Senator FRYE asked General Whittier this question:

Were they (insurgent army) of material assistance to us?
General WHITTIER. Very great.

At page 489, Senate Document No. 62, October 14, 1898, Commander Bradford, United States Navy, was asked this question by Senator FRYE:

Suppose the United States in the progress of that war found the leader of the Philippine rebellion an exile from his country in Hongkong, and sent for him and brought him to the island in an American ship, and then furnished him 4,000 or 5,000 stands of arms, and allowed him to purchase as many more stands of arms in Hongkong, and accepted his aid in conquering Luzon, what kind of a nation, in the eyes of the world, would we appear to be to surrender Aguinaldo and his insurgents to Spain, to be dealt with as they please?

Commander BRADFORD. We become responsible for everything he has done; he is our ally, and we are bound to protect him.

And yet General Merritt went right over to the Philippines and smashed all the plans of General Anderson and Admiral Dewey, whereby Aguinaldo and the natives were to be protected, as we intended to protect and have protected Cuba. The natives had agreed to this and this was all they wanted.

And we could have as easily provided in the treaty with Spain for the independence of the Philippines as we did for the independence of Cuba and treated the two exactly alike; but we did not do it, and it seems now we do not propose to do it.

At page 370 of Senate Document 62 we read:

Mr. FRYE. I was going to inquire whether it would not be possible to get natives to enlist and whether Aguinaldo could not be given a command.
General MERRITT. Perfectly so; perfectly.

But General Merritt did not do this and General Otis, who succeeded him, contrary to the suggestion of Admiral Dewey, refused to do so.

Dewey wanted to give "some" recognition to the insurgents as General Smith had done in Negros. He cabled on "December 7, 1898" to President McKinley to say to—

the inhabitants that it is our intention to interfere as little in the internal affairs of the Philippines as possible. That as they develop their capabilities of government their powers and privileges will be increased. That [this] the spirit of unrest; that a force of several regiments raised from among the best insurgent troops and officered by the best of their leaders would do much to disarm opposition. (General Otis, Annual Report, 1899, p. 138.)

But no snch proclamation was issued and no native troops were thus employed. No recognition given them. Dewey's advice not followed.

General Whittier, at page 508, Senate Document 62, on this point, states:

I believe it will be an easy matter to secure the loyalty and fidelity of the natives, with the maintenance by us of a small and very quickly decreasing army. It we attempt the unwise thing of ignoring the natives, an army of 50,000 men will be none to small, including the exploration and absolute control of the southern islands and government of the whole of all of them.

Enlisting the natives, and giving them what is very small food and pay compared with our allowances, will make a good army of any size we wish, easily subdue any hostile tribes, open all the country, and reduce our present force of 20,000, to 10,000 men. I am confident in a very short time, to very much less.

Yet Generals Merritt and Otis demanded "unconditional surrender" before they would make or propose to make any concessions to these, "our allies," who had given "very great" assistance to us from the very start, says General Whittier.

The Schurman Commission Report (vol. 1, p. 10) states:

The gentlemen (emissaries of native army) suggested (May 19, 1899) to us that it would be very disagreeable to the army (native) to have to lay down their arms before anything could be done, and they inquired whether an arrangement could be made by which we could take over the Filipino army into our military service.

On page 8 this report states "that they were not fighting for the sovereignty of the islands, but for the honor of the army," quoting Arguelles, a distinguished native and representative of Aguinaldo who now holds high office by American appointment.

"Dewey says this insurgent army has been humane "and progress wonderful." Having been "our allies," rendering "very great" assistance to us, conducting a most civilized warfare, they felt "unconditional surrender" dishonored them, and Generals Merritt and Otis refused to yield, and bloodshed down to this date has followed.

In August, 1899, General Otis reported that "the mass of the people were intoxicated with the cry for independence and self-government."

With such a history as this, are we surprised, Mr. Chairman, that the natives in the Philippine Islands, with but few exceptions, feel that we are not treating them fairly, in that we have determined, or rather the Republican party is determined, to deny these people their independence and hold them permanently as a colony?

There are quite a number of Filipinos who are in civil office under the present government by American appointment. They are acquiescing, and so state promptly, as a rule, when you talk with them; but when you talk with them as I did and get into their confidence they will say to you that they want their own country, want their own flag, want to make their own laws, and do not want the Americans to remain there. [Applause on the Democratic side.]

Mr. KAHN. Will the gentleman yield to me for a question?

Mr. GAINES of Tennessee. I will.

Mr. KAHN. Can you give the names of any one of those officials?

Mr. GAINES of Tennessee. If the Republican officials will unlock the mouths of the Army and Navy, I will give the gentleman so many that he will tire in counting them. Unlock their mouths, as some of them did to me, and you will find that what I say is absolutely true. The gentleman knows that members of the Army and Navy are not permitted to talk on such matters for publication, and hence I withhold their names, while some of the natives said, "If you use my name I fear that some trouble may follow me."

Mr. KAHN. If the gentleman will permit me, I will state that I spoke with many of these Filipinos and the Filipinos who did not occupy positions, and they told me that they favored the occupation of the islands by this country, and they were satisfied that when the ignorant Filipinos understood the Government of the people of the United States as well as they did they would be better and more loyal Americans and dare to lay down their lives for the flag than many of the Americans in this country. [Applause on the Republican side.]

Mr. GAINES of Tennessee. Will the gentleman now give me the names of any of those gentlemen?

Mr. KAHN. Yes, sir. Mr. Fabin, one of the leaders of the Federal party.

Mr. GAINES of Tennessee. Oh, yes; he had been taught into the idea. The Americans over there are teaching him and the members of his party, the "Federal party," to believe that the American people are going to admit the Philippines as a State of this Union; and that is one reason why this party spoke in that way.

Mr. KAHN. They have never been promised that they would be given autonomy.

Mr. GAINES of Tennessee. They were promised it.

Mr. KAHN. They are willing to take their chances, believing in the justness and honesty of the American people to give them the greatest measure of self-government as soon as they are able to assimilate it.

Mr. GAINES of Tennessee. Why did you not say so? Every time your party has spoken about it it has said that the intention is to hold them; and not only that, but hold them outside the Constitution—hold them as colonists, the very thing against which our fathers rebelled and said they would die rather than to submit longer.

HOLDING FILIPINOS AS COLONISTS.

Holding onto them as colonists! Sir, your party dare not and none of you dare say in the Philippine Islands that you propose to hold these people as colonists. No, sir; you dare not tell them the whole truth.

Mr. Chairman, I asked quite a number of Filipinos—and I hope my friend from California will not leave the House—I asked them: "What does your Federal party want?" "We want," said they, "to be admitted as a State into the Union." They say: "Inasmuch as the Constitution follows the flag, and as the Constitution says that Congress shall have the right to admit new States into the Union, you can not keep us out of the Union, and you are obliged to make us a State right away."

I did not make any wounds in the Philippine Islands. I did not tell them what the Supreme Court had said—that the Constitution does not follow the flag—overruling Judge Marshall and his associates, Justice Tawney and his associates, and overruling President Polk and his successors down to when President McKinley turned from his "plain duty," with the result that we now have the right to practically do what we please in the Philippine Islands.

As I say, I made no wounds. I opened no old ones.

I told no Filipino the decisions that the Supreme Court had made in the Porto Rico cases, finding as the majority of the court did for the first time in our history that colonies have a

place in our form of government, and that we can still hold a subject people.

CHINESE EXCLUSION.

Ah, Mr. Chairman, the gentleman from California [Mr. KAHN] would have this Congress exclude the Chinese from California, and I dare say the first speech he makes will demonstrate it. Is that true? [After a pause.] Will the gentleman deny that I state his position? This should be done, but properly. But why does the gentleman want this done, Mr. Chairman? It is to protect his people and the society of his magnificient and hospitable State, California. What are some of the facts in point?

The Chinese come there voluntarily and stay only a short while to earn a few dollars and then go back home to China; they take even their dead back to China for burial. They hurt no one in working, so far as I know, and they soon collect a little money and then leave the United States.

FORCIBLE ANNEXATION.

But the gentleman from California [Mr. KAHN] stands here, the mouthpiece, the aider, and abetter of the party that has reached out 10,000 miles away into the Pacific Ocean and has dragged under the American flag 10,000,000 of brown people, who do not want to come here to make money or anything else, nor to stay under our dominion permanently, in the Philippine Islands. He would have them, although Chinese in a measure, permanently under the flag, because he says "there is money in it." "Consistency, thou art a jewel."

When the gentleman's neighbors came a few days ago to see me in San Francisco, and asked me whether I would vote to exclude the Chinamen or not, I said: "How is it that you ask me that question? Why is it your own members of Congress have reached out to annex Hawaii against the will of that people; and how is it that they have reached out 10,000 miles into the Pacific and impressed 10,000,000 of people against their will, who do not want to come here and labor, who do not want to come here at all, or be held there permanently under the American flag?" "Hold them forever and a day," says the gentleman from Illinois [Mr. CANNON].

Now, if my distinguished friend from California [Mr. KAHN] will tell me that this is consistency when he addresses the House upon this or any other question, I will be gratified.

How does this party undertake to avoid the Philippines sending their products to the United States? The Supreme Court by a vote of 5 to 4 say that we can levy any kind of a tax we choose upon the products from the Philippine Islands or products from United States to the Philippine Islands. Indeed, levy any kind of a tax on their exports whether they come here or go elsewhere.

HOW THE PHILIPPINE TARIFF LAW IS INTENDED TO WORK.

Let us see for a moment how that works. The policy of the Republican party, and of the annexationist as well, whether Republican or Democrat, is to unload all of the American products possible upon the Filipinos and keep just as much of their product out of this country as possible.

How do the Republicans propose to do this? Mr. Chairman, they have succeeded thus far most admirably. They drove through the House the other day a most infamous tariff measure, as un-American as anything that ever passed this body. How will it operate?

I will try and explain to the gentleman from California the modus operandi. They tax our people for everything we send to the Philippine Islands, you may call it an export tax or an import tax, as you please. Then they tax the Filipino and make him pay a tax for everything that he sends out of the Philippine Islands before he can get it out, and then before he can get it into the United States, through our ports of entry, he must pay another tax.

That is not only taxation without representation, but double taxation without representation.

That is a more unjust tax than any of our American colonies were ever subjected to by England; it is double taxation without representation. Now, what else? How is it going to work to "work out" our way? I call attention of my Democratic brethren to the way this measure is to operate.

THE QUESTION ANSWERED, HOW CAN WE UNLOAD OUR AMERICAN PRODUCTS ON THE FILIPINOS AND AT THE SAME TIME EXCLUDE ALL THEIR PRODUCTS FROM AMERICAN MARKETS?

The Filipino will say: "I will get around paying that import tax in the United States in this way: I will not send my products to the United States, but I will pay one export tax to get my products out of the islands, and then I will turn around and send them to the 'free' ports of Europe, and thus avoid the import I would have to pay to get my products into the United States."

So we unload all possible of our products upon the Filipinos and pay an import tax to the Philippine government to do so, while the Filipino, before he will pay a double tax, simply pays his export tax and sends his products to the "free" ports of Europe.

That is equality; that is justice; that is Americanism; that is dealing with the Filipinos according to the utterances of the lamented McKinley.

At a great Methodist meeting in the East President McKinley said: "The American flag does not change its meaning in the Tropics; it means the same thing in the Tropics as in the Temperate Zone;" yet, Mr. Chairman, we find exactly the opposite is true now. It means in the United States uniform taxation and representation. In the Philippines it means "taxation without representation;" but it means more—double taxation "without representation." It does not carry with it the right to trial by jury under this new construction.

All this un-Americanism attaches to the flag abroad for the first time in the history of this country, and sooner or later it may mean the same thing at home.

Who taketh another's freedom his liberty is also lost.

DEMOCRATS HAVE EXPANDED THE LIMITS OF THE REPUBLIC—THEY NEVER TIED COLONIES TO THE UNION.

It is said the Democrats have always been expansionists. That is true. But what did we expand? We expanded the limits of the Republic and on this side of the world, and made the territory a "part of the United States" by the treaties in acquiring the Louisiana, Florida, and the Mexican territory, and the Constitution followed the flag.

TARIFF LAWS UNDER PRESIDENT POLK'S ADMINISTRATION.

Take, if you please, the Administration of President James K. Polk, and what did he proclaim and enforce as the law? He said the Constitution followed the flag, and with that flag and that Constitution went "uniformity of taxation" "throughout the United States."

THE LAW AS PRONOUNCED BY PRESIDENT POLK.

As early as 1846 our military and navy officials had taken the Territory of California, and in giving these officials instructions as to the rights of the inhabitants thereof, President Polk said:

The inhabitants of the California Territory are as much entitled to the protection of our Constitution and laws as citizens in any other portion of the Union.

But the Republicans, the latter-day expansionists, say this was all wrong and not the law, and that the very opposite of this Democratic construction of the law of the land is true.

President Polk, December 4, 1848, to Congress said: "The inhabitants (of California) by the transfer of their country have become entitled to the benefits of our laws and Constitution," and he directed the Secretary of War to say:

But the Government de facto (that is, the Government existing after the termination of the war with Mexico) can, of course, exercise no powers inconsistent with the provisions of the Constitution of the United States, which is the supreme law of the States and Territories of our Union. For this reason no import duties can be levied in California on articles the growth, the produce, or manufacture of any State or Territory of the United States, and no such duties can be imposed in any part of the Union on the productions of California, nor can duties be charged on such foreign productions as have already paid duties in any part of the United States.

This letter was to Colonel Mason, commander in charge in California, October 9, 1848.

OUR TREATY WITH MEXICO WAS RATIFIED OCTOBER 30, 1848.

On October 7, 1848, President Polk directed Mr. Secretary Buchanan to say that—

This Government de facto will of course exercise no power inconsistent with the provisions of the Constitution of the United States, which is the supreme law of the land. For this reason no import duties can be levied in California on articles of growth, produce, or the manufacture of the United States, as no such duties can be imposed in any other part of the Union on the productions of California, nor can new duties be charged in California upon such foreign productions as have already paid duties in any of our ports of entry, for the obvious reason that California is within the territory of the United States.

On the same day Mr. Secretary Walker said officially:

By the Constitution of the United States is declared that all treaties made or which shall be made under the authority of the United States shall be the supreme law of the land. "By the treaty with Mexico, California is annexed to the Republic, and the Constitution of the United States is extended over that territory in full force throughout its limits."

He had already said upon the exchange of ratification of our treaty with Mexico, California "became part of the American Union."

President Andrew Johnson and his Cabinet established free trade with Alaska as soon as we acquired that land.

The law as thus pronounced by President Polk was squarely upheld in the unanimous opinions of the Supreme Court of the United States, and the law as thus pronounced by these two great authorities has been uniformly followed as the law down to the present fatal and mischievous era of Republican expansion—not of the limits of the Republic—but by tieing on, as by a string, colonies and dependent inhabitants, whom we will tax and rule as we please, the rule of uniform taxation pronounced and upheld by President Polk being overturned and abandoned.

LEARNED FILIPINOS.

We have Filipinos in the Philippines, and I challenge anyone to successfully dispute the fact, who have written municipal and

territorial laws adopted by the Taft Commission; written by ex-insurgents now members of the supreme court, trial justices, attorneys-general, governors—men who were in Aguinaldo's cabinet—some of whom took part in the insurgent army and fought until they were without rations, without guns, without ammunition, without a country.

Mr. KAHN. Did the chief justices or any of the associate justices of the supreme court there say that they were opposed to the American administration?

Mr. GAINES of Tennessee. I never asked that question. I did not have the pleasure of meeting the chief justice except at Governor Taft's—at the governor's public reception.

Mr. KAHN. I did.

Mr. GAINES of Tennessee. But I do not suppose that he does, for he seems to be the "whole thing" over there. He started out with Spain, then went over to and counseled Aguinaldo when we took him back to the Philippine Islands, and then he turned again and joined the American side. He is an able lawyer, I think.

He has written many of the laws of that island, before and since Governor Taft went there, subject to the approval of our military authorities and Governor Taft. But they were approved and became law. Chief Justice Arellano, with four other "eminent Filipinos," as the Schurman Commission called them, framed in three or four days a "national constitution for the Philippine Islands" at the request of this Commission, and that body spoke of it in the highest terms. It reserved all power substantially to the native government except that given the President of the United States to appoint a governor-general, coupled with the power to convene the local congress in extra session. Article I provided:

> The government of the Philippine Islands is republican, federal, representative, and responsible.

This was in the nature of a compromise measure, and yet we see it was almost "independence."

But Arelano is not the only man of ability and distinction there. The islands have many of such distinguished men, and the Schurman Commission say so and that they compare favorably with any other people.

The following-named persons were members of the native or Malolos congress in the Philippine Islands:

MALOLOS CONGRESS,

Señores diputados que componen la asamblea nacional que decreto la constitucion politica del estado.

Señor Aguedo Velarde.	Señor José Salamanca.
Señor Alberto Barreto.	Señor José R. Infante.
Señor Ambrosio Rianzares Bautista.	Señor José F. Oliveros.
Señor Antonio Luna.	Señor José Tuason.
Señor Antonio Feliciano.	Señor José Santiago.
Señor Arcadio del Rosario.	Señor José M. de la Vina.
Señor Ariston Bautista.	Señor José M. Lerna.
Señor Ariston Gella.	Señor José Albert.
Señor Arsenio Cruz Herrera.	Señor José Coronel.
Señor Basilio Teodoro.	Señor José Alejandrino.
Señor Benito Legarda.	Señor José Fernandez.
Señor Ceferino de Leon.	Señor José Luna.
Señor Domingo Samson.	Señor Juan Nepomuceno.
Señor Esteban de la Rama.	Señor Juan Manday.
Señor Felipe Buencamino.	Señor Juan Tuason.
Señor Felix Bautista.	Señor Justo Lucban.
Señor Felipe Calderon.	Señor Leon Apacible.
Señor Felix Ferrer Pascual.	Señor Leon Guerrero.
Señor Fernando Cannon.	Señor Lorenzo del Rosario.
Señor Graciano Cordero.	Señor Lucas Gonzalez Maninang.
Señor Gregorio Aguilera.	Señor Manuel Xerez Burgos.
Señor Gregorio Aglipay.	Señor Manuel Gomez Martinez.
Señor Higino Benitez.	Señor Marcial Calleja.
Señor Hipolito Magsalin.	Señor Marciano V. del Rosario.
Señor Hugo Ilagan.	Señor Mariano Abella.
Señor Ignacio Villamor.	Señor Mariano Lopez.
Señor Isidoro Torres.	Señor Mariano Crisostomo.
Señor Isidro Paredes.	Señor Martin Garcia.
Señor Javier Gonzalez Salvador.	Señor Mateo Gutierrez Uvaldo.
Señor Joaquin Gonzalez.	Señor Mateo del Rosario.
Señor José Basa.	Señor Melecio Figueroa.
Señor Mena Crisologo.	Señor Simplicio del Rosario.
Señor Miguel Zaragoza.	Señor Sofio Alandi.
Señor Narciso Hidalgo Resurreccion.	Señor Sotero Laurel.
Señor Pablo Ocampo.	Señor Telesforo Chuidian.
Señor Pablo Tecson Roque.	Señor Teodoro Sandico.
Señor Patricio Bailon.	Señor Teodoro Gonzalez.
Señor Pedro A. Paterno.	Señor Tomas Arejola.
Señor Perfecto Gabriel.	Señor Tomas G. del Rosario.
Señor Pio del Pilar.	Señor Trinidad H. Pardo de Tavera.
Señor Raymundo Alindada.	Señor Vicente Fox.
Señor Ricardo Paras.	Señor Vicente Guzman Pagulayan.
Señor Salvidor V. del Rosario.	Señor Vicente del Prado.
Señor Santiago Barcelona.	Señor Vicente Somozo.
Señor Santiago Icasiano.	Señor Vito Belarmino.
Señor Sebastian de Castro.	

Last fall we had about 5,000 natives who were heads of departments, governors, judges of the supreme court, trial courts, attorneys-general, mayors, sheriffs, constables, clerks, notaries public, and in addition to this the natives are cashiers of banks, artists, teachers, lawyers, mechanics, and so on. The natives are filling every class of positions that exist in the Philippine Islands, and they are filling them well (except the positions filled by Governor Taft and our Philippine Commissioners), and they are appointed to these public positions by Governor Taft and the authorities under him, and yet we have given them no jury laws and do not intend to do so, although in Negros when they framed their constitution they called for jury rights.

JURY RIGHTS DENIED TO AMERICANS AND NATIVES IN THE PHILIPPINE ISLANDS.

Both Americans and natives in the Philippines are indicted without a grand jury; they are convicted without a jury; they are indicted and tried by one man!

Mr. Chairman, this denial of jury rights, mind you, is the fixed and, the Republicans contend, necessary and inevitable policy and law that must be pursued and maintained in these islands.

Years and years ago the Supreme Court of the United States, in unanimous opinions time and again rendered, declared that it was no longer "an open question" that the right of trial by jury was a right that the people in our Territories had under the law of the land. And yet the Republicans are pursuing a policy in the Philippines which denies even our Americans while in the Philippine Islands jury rights in case of trial for their property or their lives.

JURY RIGHTS DENIED IN HAWAII.

Now I will come a little nearer to the home of my friend from California. On my return from the Philippine Islands we came by Hawaii. We found there Republican judges holding that the law prohibiting slavery did not apply to the Hawaiian Islands. Does the gentleman dispute that?

Mr. KAHN. I am not familiar with affairs in that country.

Mr. GAINES of Tennessee. Oh, the gentleman is not familiar with the iniquity of his party. That is what is the matter with him. [Laughter.] I guess he thinks it is too much of a job to keep up with all the wrongs his party has done, and I do not blame him. Sir, it is very easy to keep up with, but hard to prevent, the perversion of the American Constitution at this day and time. But what I state is a fact, and one of the judges who wrote or joined in the opinion denying jury rights to the inhabitants of Hawaii, including Americans, is still a member of the supreme bench of that island, and by his side, as an associate justice, is a Portuguese who united in thus denying this protection of the American Constitution to these people.

Thank God, there is one judge on that bench who dissents from these opinions and holds that the Constitution follows the flag; that a jury there means a jury of twelve good and lawful men; that a return made must not be by a majority, but by the twelve jurors—"no more, no less"—and that when indictments are found they must be by a grand jury, and not by one man; and this judge is from the State of Indiana—a young man, a Democrat. [Applause.]

These opinions are all published and are accessible in the public libraries here.

Mr. Chairman, the gentleman from California talks about the incapability of the Filipinos to do this, that, and the other—a mere opinion, I may add. It is not my purpose now to discuss this feature of the question. I will later. But I will talk about facts that are recorded in official history. I want to tell the gentleman and this House something pertinent that should interest them.

NATIVE GOVERNMENT OF NEGROS—ITS LAWS RECOGNIZED.

In the island of Negros "on November 6, 1898," the natives there routed the Spanish forces, permitted them to leave the island with their private property, the Spaniards turning over all the public property to the natives, who "then and there established," to use the words of General Smith, later governor of the island:

> They elected their own officers—a president, a congress, and a president of the Negros congress and other officers—and made their own laws and executed them down to March, 1899, when they raised the American flag.

And, Mr. Chairman, let me tell my good friend from California, who has been interrogating me, that the Federal officials who went to these islands and found that they were so capable of doing thus for themselves, that our officials absolutely executed the laws of the island of Negros, including the law that repealed some of the most infamous of the Spanish laws which had operated in that island. Does the gentleman from California dispute that statement?

Mr. KAHN. Yes; I do dispute it.

Mr. GAINES of Tennessee. Well, that simply shows that the gentleman does not know what he is talking about, nor has he read the Army or other official reports upon the subject.

Mr. KAHN. I am sorry to see that the gentleman from Tennessee does not appear to know what he is talking about.

Mr. GAINES of Tennessee. That is another error. I will state my proposition again, so that there can be no misunderstanding, and I challenge a successful contradiction. I say that these laws were recognized in this island—the repeal of an old infamous Spanish tax law—and the man who did it was general and governor and now Judge Smith, from the State of California, from

which the gentleman from California [Mr. KAHN] hails. I repeat that he recognized the repeal of certain of these old infamous Spanish laws of the island of Negros, and I defy successful contradiction.

Mr. KAHN. I would like to ask the gentleman from Tennessee if it is a fact that Judge Smith was instrumental in bringing about the adoption of that constitution, and did not he say so to the gentleman from Tennessee in my own presence?

Mr. GAINES of Tennessee. That is correct; but that was after the Americans got control there.

Mr. KAHN. But the question is, Did not he so admit, and did not he say so in your presence?

Mr. GAINES of Tennessee. I have stated exactly the position taken by him——

Mr. KAHN. But did he not say that they had no constitution, and say that in my presence before you?

Mr. GAINES of Tennessee. But I disputed the fact. I disputed it then in his presence, and I dispute it now.

Mr. KAHN. But that is not the question. Did he not state the fact to you in my presence?

Mr. GAINES of Tennessee. He did, and I disputed it then and, I repeat, I dispute it now. I went to the department and got the report, which goes to show that my position was a correct one and that I had made a statement which was entirely in accordance with the facts.

But I will tell the gentleman from California exactly what they did. They made their own laws and they made their own constitution. They repealed these old Spanish tax laws, and when Judge Smith was there and considered the matter he recognized the government of the island of Negros; he recognized their laws, their officers, and their constitution, and he executed the law repealing the old infamous Spanish tax law and another separating state from church. Will the gentleman dispute that? Now, I state that as a matter of fact, and it is stated by Judge Smith in letters to the military authorities at Manila and to the Taft Commissioners, I think.

I will insert, in extending my remarks, parts of the official authorities I rely on to prove my statements in reference to Negros. Of course if they are erroneous, then I am in error.

THE GOVERNMENT OF NEGROS.

The government of the island of Negros, organized November 6, 1898, was conducted by the native officials without "outside intervention" down to March, 1899, when the American flag was raised, and even after that the native officials were retained in office and the native government and laws enacted by it continued, and as they were changed it was done by the voice and consent of the people.

As soon as the Spaniards surrendered to the people of Negros they set up a government "there and then, November 6, 1898," says General Smith.

They elected all necessary officers, repealed certain odious Spanish laws, and General Smith (Senate Doc. No. 190, p. 257) says:

Under these circumstances it would have somewhat affected the good relations then existing between us and these people to have restored that which their provisional government had modified or abrogated previous to our coming.

He was alluding here to the modified tax and other new laws the new government had enacted. The old laws were not "restored;" their new laws not "abrogated." In other words, General Smith took up the government just as it was and continued it, and this is what he intended to do, so he got along splendidly with these people, and he says so.

THE PEOPLE OF NEGROS HAD A CONSTITUTION IN 1898.

Now, then, the next question that I desire to answer for the information of the House and the gentleman from California [Mr. KAHN] particularly is, Did the people of Negros have a constitution before the Americans went there?

NATIVE GOVERNMENT OF NEGROS HAD A CONSTITUTION

I say that the question asked of Maj. Frank S. Bourns (of General Green's staff, who was at the battle of Manila City) by Professor Worcester, while Dr. Bourns was testifying before the Schurman Commission July 29, 1899, clearly shows that the Schurman Philippine Commissioners and Dr. Bourns then knew that they did have a constitution before the Americans went there in March, 1899, and in proof of this I submit the question asked Dr. Bourns by the Schurman Commission on July 29, 1899, as follows:

Q. I want to get from your testimony a statement of the reason for our superseding the expression of the will of those people, as stated in their congress and constitution, by this constitution and form of government which have been adopted and given to the island. (2 vol. Schurman Com. Rept., 357.)

A. They were working for a change in the personnel of their government. They said they wanted to have a new element, so as to have their other men in.

I say that this clearly shows that my statement is true—that these people had a constitution before the Americans went there.

Another question was put to Dr. Bourns by the Schurman Commissioners that further discloses the fact, to wit:

Q. The main thing for us to find out, Doctor—I understand that afterwards they made a start after they had been up here—now, what I want to find out practically is how that thing worked and whether it was wise for the major-general to *supersede* that rather curious government they got up and which, of course, could not be put in force except by act of Congress, by his recent order, which, I suppose, you are familiar with. Take your own way of describing events.

A. They asked for American intervention, and they got more than they wanted. They returned and organized their government, retaining the same officers, I think, they had previously elected in the government.

Some time in February or March, 1899, this Negros government sent four commissioners to ask General Otis to send troops there to protect them against the Tagalogs, and they were sent. Dr. Bourns gives the names of two of the commissioners. He says:

The four men of the commission were Mr. Lacson, the president of Negros; Mr. Luzuriaga, the president of the congress, and two younger men.

All this testimony can be found in the second volume of the report of the Schurman Commission, at pages 356 and 357.

AN OBJECT LESSON.

I wish here, Mr. Chairman, to direct special attention to this fact: That the American authorities on assuming control of the people of Negros, in March, 1899, did not knock down or destroy the existing native government of Negros, but continued it as it stood, as the natives had made it, on and after November 6, 1898. Down to this date—March, 1899—they had run it "without outside intervention," to use General Smith's language.

General Smith continued in office the native officials whom the people had elected, and when he undertook to change the laws the people had a full voice in the change. These people called their congress together and as a congress they acted and made their laws as they had done previous to the advent of the American authorities, the only difference being after the Americans took charge that their legislation was subject to the veto of the military governor, General Smith.

IT WAS NOT SO BEFORE.

This wise and conciliatory policy was pursued and the rich fruits were manifest, and the result was that General Smith got along splendidly and satisfactorily with these people.

Indeed, General Smith, in testifying before the Taft Commission at a later day, in response to a question put to him by Professor Worcester:

What has been your experience with their central legislative body? What sort of work does it do as a matter of fact?

General Smith replied:

The men of the advisory council are not men who understand the artificial drafting of laws. They understand what is for the benefit of the country, but when it comes to putting it into words and sentences they find some difficulty in accomplishing their purpose; not more so, however, than our own legislators, I think. (See page 238, Senate Document No. 190, Fifth-sixth Congress, second session.)

General Smith further states in this same document, page 238:

The civil government prior to our coming decreed the separation of church and state.

Judge IDE. That is a law they enacted themselves.

General SMITH. Yes, sir; they have decreed the separation of church and state.

That is in keeping with our own Constitution and laws, and shows that these people were versed in our laws and institutions, for General Smith states here that prior to his "coming" the civil government had separated by law the church from the state. And I may add that this law was not abrogated by General Smith. It was continued. It was recognized as law, and good law. Yet the gentleman from California denies this fact.

I will prove that the old officials were continued in office and that church and state were separated by law by Señor Luzuriaga, who was president of the Negros congress, spoken of in the highest terms by General Smith, and afterwards appointed to the supreme bench or as governor of some province by our officials in the Philippines.

I read now from volume 2 of the report of the Schurman Philippine Commission the testimony of Luzuriaga before that Commission September 11, 1899. In response to a pertinent question, Luzuriaga answered:

Since the revolution against the Spanish and until the present time I have held the position of president of the congress of the island.

Q. Have you held any position under the American Government?

A. When we accepted the American sovereignty I continued holding the office which I had under the revolution. (P. 414.)

Here, then, is a recognition and a perpetuation of the old officers and the new government created by the natives "November 6, 1898."

Again, on page 420, we find this testimony:

Do the people understand that under our form of government all religions would be equal and there would be no preference given to anybody on account of any religious belief?

A. Yes, sir; we understand that, and when the revolution broke out we proclaimed liberty of sects and adopted the same system which you have.

I think that I have now shown that every statement I have made in reference to the island of Negros is true, if these official records are true; that is, that in November, 1898, the natives crushed the Spaniards, created a government of their own, elected officers, repealed old laws and enacted new ones, and that when General Smith went there in March, 1899, he recognized the native government, the new laws as good law, and continued the old officials.

GENERAL SMITH'S POLICY.

Why did General Smith do this? At page 257 of Senate Document No. 190, Fifty-sixth Congress, second session, he says:

As hereinbefore stated, a provisional government was already in operation when American troops arrived. That government had been ruling from November 6, 1898, until the following March without any exterior or interior intervention whatever. Under a promise given the people preliminary to the rising, the government's first act was to abolish or radically modify all Spanish taxes.

Now, then, he answers my question; under these circumstances it would have somewhat affected the good relations then existing between us and the people to have restored that which their provisional government had abrogated or modified prior to our coming.

In other words, what he did was to prevent the destruction of existing friendly feeling, and he succeeded—had practically no trouble.

General Smith did in Negros with the native government exactly what General Otis refused to do with the Malolos government. The latter refused to recognize that government or its officials in any way for any purpose whatever. Had he acted as General Smith did there would have been no bloodshed in the Philippine Islands.

I will here insert the interesting and instructive account given by General Smith in two official communications—one to the military governor of the Philippine Islands, which I will first insert, and then his testimony before the Taft Commission, July, 1900, all showing the history of the government of Negros from November 6, 1898, before the Americans went there, March, 1899, and down to July, 1900.

GENERAL SMITH'S REPORT ON NATIVE GOVERNMENT OF NEGROS.

In the report to the acting adjutant-general of the Philippine Islands of the military governor of the Philippine Islands on civil affairs, found in the Annual Report of the War Department (House Document No. 2), at page 249, we find that Brig. Gen. James H. Smith, United States Volunteers, commanding, in a letter addressed to the acting adjutant-general, department of Visayas, Iloilo, Panay, dated Bacolod, Negros, July 25, 1900, after stating that the inhabitants of Negros had probably been the most conservative under Spanish dominion, said:

Nevertheless, on the 6th of November, 1898, conservatism ceased to be laudable, and the Negrenos, taking advantage of Spain's preoccupation with other matters, rose against their old-time rulers, overpowered many of the Spanish garrisons, compelled the surrender of others, and finally forced a capitulation from the local governor under the terms of which the Spanish flag was lowered on the island, the public property was turned over to the provisional government then and there established, and the military and civil officials of Spain, minus their arms, were permitted to leave the island with their private belongings.

The overturning of the existing order was wholly accomplished without intervention from Luzon or assistance from Panay. So the Spanish flag ceased to fly in Negros, and the people who had been the playthings of the centuries found themselves, for the time at least, sudden masters of the pomp and circumstance of power.

Yet no act of cruelty or wantonness spoiled the victors' triumph or cursed their new-found liberty. Useless sacrifice of life there was none; neither did pillaging or looting find countenance or sanction. In fact, everything was done with such moderation and deliberation that if it did not induce the love of the fallen foe it compelled his respect.

On page 250 General Smith continues:

The provisional government therefore continued to act for itself and to administer the affairs of the island without outside intervention or assistance until the Americans took Iloilo, about the 12th of February, 1899, when the provisional government of Negros at once raised the American flag and sent a commission to wait on General Miller, the commanding officer in Panay, with a request for troops to protect them against the Tagalogs, who had threatened to land and punish them for their adherence to the United States.

On page 252 General Smith continues:

In good report and bad report, however, the officials of the provincial government stuck to the colors raised by themselves and tranquilly continued their work of drafting a constitution, which was finally completed in June, 1899, and sent by the military governor of the Philippines to Washington.

Notice that General Smith says that "these people continued their work of drafting a constitution, which was completed in June, 1899."

Just about the time General Smith says "the draft of the proposed constitution was forwarded the citizens became impatient to exercise some of the privileges incident to a government of the people and clamored for an election." What did General Smith then do? He says:

In this contingency, and pending the consideration of the proposed organic law which had been presented for approval, order No. 30, office military governor, July 22, 1899, was issued to meet the situation.

Under this order General Smith says the people proceeded to elect new officers, and did so without any trouble following in holding the election.

So, then, down to July 22, 1899, we presume, as I will show the fact was, the existing Negros government, officers and laws, continued. Unquestionably this is true from November 6, 1898, to March, 1899, "without outside intervention."

On page 253, General Smith continues:

The oath of allegiance to the United States was duly taken by the newly elected and appointed officials, and the new provisional government assumed office on the 6th of November, 1899, the anniversary of the overthrow of the Spanish. Since that time this government has practically had charge of the civil administration, subject only to the veto power exercised by the local military governor.

On page 254 General Smith says:

The civil governor came into the office handicapped with the doubts of a considerable number of his fellow-citizens as to his ability to fill the place. He was not considered by many of his cultivated countrymen as the best representative of the able Filipino type, but his faithful work, his industry, and, more than all, his evident desire to make his people happier have overcome much of the prejudice against him, and I think all will concede that so far his administration has been creditably successful.

It will be seen that General Smith says that the administration of the civil governor, although he came into office handicapped, "has been creditably successful."

On page 257 General Smith proves the truth of my statements—that is, that before the Americans went to Negros these people had a government and repealed certain Spanish laws, and that General Smith recognized and did not abrogate or modify the laws which the Negros government had enacted:

As hereinbefore stated, a provisional government was already in operation when American troops arrived. That government had been ruling from November 6, 1898, until the following March without any exterior intervention whatever. Under a promise given the people preliminary to the rising, the government's first act almost was to abolish or radically modify all Spanish taxes. This action was only tentative, of course. It was hurried, and its effects could not be otherwise than imperfect and unequal. But if tentative, imperfect, and unequal, the modified tax was recognized to be and was in fact far less oppressive than that which had theretofore prevailed.

Under these circumstances it would have somewhat affected the good relations then existing between us and the people to have restored that which their provisional government had abrogated or modified prior to our coming.

Moreover, it would have given ground for the opinion that the condition of the native was in no wise to be ameliorated or improved by the change of sovereigns. Of course the fact that upon occupying the island a provisional government was found administering local affairs did not debar the United States from removing such a government; neither did it prevent the imposition and collection of the old Spanish contributions.

It simply introduced the question of whether under existing conditions and considering all the circumstances it would be policy to enforce a hateful tax against the island whose friendly feeling the new sovereign was anxious to cultivate and retain. The provisional government understood and so declared in its proposed constitution that the United States would at least collect all customs imposts, all stamp taxes (sello y timbre), and all other taxes on commerce and industrial products which might be necessary to provide for the common defense, to promote the general welfare, and to pay all obligations incurred to the sovereign power, but I do not think that it was expected that the necessary revenue for such purposes would be secured by enforcing the unmodified Spanish taxes and imposts.

Read on page 259 what General Smith states, and I may add that he acted wisely when he conceded to these people a certain amount of local self-government; and we have already seen that he did not abrogate some of the laws which this new native government had enacted. General Smith says that, "pending action on the constitution which she proposed for herself, a certain measure of local self-government was conceded to her by military authority."

GEN. JAMES SMITH BEFORE THE TAFT COMMISSION JULY, 1900.

[Senate Document No. 190, Fifty-sixth Congress, second session.]

Professor WORCESTER. How is the municipal government working, as a matter of fact? Are they getting sufficient funds for carrying on the affairs of the town comfortably?

General SMITH. Yes, sir; this year the government has been supported since the 6th day of November down to the present time.

* * * * * * *

General SMITH. The civil government, prior to our coming, decreed the separation of church and state.

Judge IDE. That is the law they enacted themselves?

General SMITH. Yes, sir; they have decreed the separation of church and state.

Professor WORCESTER. What has been your experience with their central legislative body—what sort of work does it do, as a matter of fact?

General SMITH. The men of the advisory council are not men who understand the artificial drafting of laws. They understand what is for the benefit of the country, but when it comes to putting it into words and sentences, they find some difficulty in accomplishing their purpose; not more so, however, than our own legislators, I think.

Judge TAFT. Are they orators? Do they talk much?

General SMITH. They do not talk so much, but sometimes they talk with a good deal of force. They get into squabbles among themselves.

Judge TAFT. Are they politicians?

General SMITH. Yes.

Judge TAFT. Are they as much politicians as the Tagalogs?

General SMITH. I think it is in the entire race—diplomacy and political manipulation.

Judge TAFT. You said the other day that you thought the Visayan had a much more reliable character than the Tagalog.

General SMITH. That is my opinion, although I may be doing an injustice to the Tagalog because I lived here at the time of high tension between the two peoples; we were in actual hostilities and our experience with the Tagalogs had been such as to produce strong prejudice. My experience with the Visayans has been to the contrary, In nineteen months I never had but two men break their word of honor; men kept their word even where they were to come back for punishment after being allowed to visit their homes.

Judge TAFT. What kind of courts do you have in Negros?

General SMITH. We have a court there that is composed of men in whom

I have the most complete confidence as to learning and as to honesty. But there is but little judicial material. In case of death or disability it would be hard to fill a vacancy in the court.

Judge TAFT. That is, you have got all in that court that can be found in the islands. What do you think would be the effect of appointing American judges?

General SMITH. I would approve of a mixture.

Judge TAFT. That is, you would prefer not to have a rule as to American judges?

General SMITH. Yes, sir.

Judge IDE. How many courts of first instance are there in the island of Negros?

General SMITH. There are three judges that are assigned to districts—the district of the north, of the south, and the oriental district. The oriental district comprises all of Oriental Negros, or what was formerly the province of Oriental Negros.

Judge IDE. How many provinces are there in the island?

General SMITH. Two original provinces—Oriental Negros and the province of Occidental Negros. The last has been divided into two judicial districts or departments. The court sits in banc for the purpose of hearing appeals.

Judge IDE. Are those judges all natives?

General SMITH. Yes.

Judge TAFT. What are their names?

General SMITH. Estanislao Yusay.

Judge TAFT. Is he a full-blooded Visayan?

General SMITH. I think he is of mixed blood. Vecentes Hilado, Vicente Jocson.

Professor WORCESTER. What is Luzuriaga doing down there now?

General SMITH. He is auditor of the island.

Professor WORCESTER. What sort of an official does he make?

General SMITH. He is one of the ablest men in the islands. He is an able man; he understands finance.

Judge TAFT. What kind of a department governor would he make?

General SMITH. According to my idea, a splendid one.

Professor WORCESTER. Is he showing himself to be an honest man?

General SMITH. In this administration, perfectly so.

Professor WORCESTER. Has he any back history that is against him?

General SMITH. It is said he has.

Professor WORCESTER. It is pretty hard to find a man that has not.

General SMITH. I think that he bore the same relation to the Spanish officials as other men did in the islands. I judge that both from what has been charged against him and from what I know myself. Under the Spanish administration, as far as Negros was concerned, to procure right and justice there was only one way of doing it, and from that habit many were probably led to procuring injustice in the same way.

Judge TAFT. When kissing comes by favor, why——

General SMITH. So far as my connection with him is concerned, he has been scrupulously honest, to the dividing of a cent. He has made an excellent auditor. I do not think that in my own country there could be found an auditor that was more careful and more painstaking in investigating accounts and refusing payment unless it was absolutely clear, from the letter of the law, that payment should be made—that is, if they failed to get into their laws what they intended, that did not cut any figure with him. He did just exactly what the law said—nothing more nor less.

Judge IDE. Is he the auditor for the whole island?

General SMITH. Yes, sir; for all insular expenses.

Professor WORCESTER. Who is your civil governor?

General SMITH. Melecio Severino.

Professor WORCESTER. What sort of a man is he?

General SMITH. Melecio Severino and his whole family belonged originally to what is known as the Insurgent party; in fact, two of his nephews were concerned in the first rising in Negros, and they have been anxiously sought for ever since. He was elected by the popular vote—by 28 votes plurality.

Judge TAFT. What did the vote run up to?

General SMITH. Five thousand on less than a week's registration. I think there were fully 15,000 or 20,000 votes on the island; that is, with the educational and property qualifications. Severino, during his term of office as governor, has acted consistently. He has been energetic; he has worked hard for the people and he has tried to save the poor people from oppression and abuses wherever he could. He has visited nearly all the towns, not once, but oftener, as occasion demanded, and I am perfectly satisfied with his administrative capacity.

Professor WORCESTER. Have you any other men down there of Luzuriaga's caliber?

General SMITH. Leandro Locson, secretary of the interior, a true patriot and an able, honest man. Juan Araneta, secretary of agriculture, who has the method of the dictator; but in all my experience with him I found him to be perfectly honest and perfectly straightforward and very industrious and energetic. Agostin Montella, the treasurer; Demetrio Larena, secretary of public instruction, and Dromcid Mapa are also very good men.

Professor WORCESTER. The Araneta family is a very influential family there?

General SMITH. Yes, sir; but as a family it is more influential in Iloilo.

Professor WORCESTER. Is Juan Araneta the man that was head of the military department there under the provisional government?

General SMITH. Yes, sir.

Professor WORCESTER. He carried a bolo on both shoulders for a while?

General SMITH. No; he was one of the two men that I absolutely relied on, and I have never found fault with. In the beginning I relied upon two men absolutely and implicitly; one of them was Araneta. Even when letters were placed in my hands purporting to be signed by Araneta (and of a highly revolutionary character), I still retained my confidence in him, and I was always glad that I did, because I soon discovered that the letters had been written by the very insurgents who had gone out from Salay. Salay was the seat of the first disturbance, and they cut the telegraph wire after we arrived and said that they would not raise the flag. Araneta sent them word that unless they raised the flag and restored the telegraph wire by the next morning he would reduce the town to ashes. Well, it is needless to say they restored the wire, and there was no friction.

Judge TAFT. If you wanted to bring one of them up here to assist the central government, which one should you take?

General SMITH. If it is for legislative duty, I should take Luzuriaga.

Judge TAFT. This proposition has been made: That the form of government ultimately should be a mixed form like that of Porto Rico, in which there should be a popular assembly, one branch of legislative power, and a legislative council to be appointed by the governor, consisting half of Filipinos and half of Americans. Now, suppose you wished to get a Visayan representative for the legislative council, would you take Luzuriaga?

General SMITH. As the best all-round man, yes.

Professor WORCESTER. Do you know personally anything about Mapa, over at Iloilo?

General SMITH. Yes, sir; he is not a resident of Negros.

Professor WORCESTER. I know he is not a resident, but I did not know but what you might have some knowledge of him personally.

General SMITH. I have.

Professor WORCESTER. What is your impression of him?

General SMITH. Next to Arellano, I consider him the ablest man in the islands.

Judge TAFT. He has been a bit doubtful in his allegiance?

General SMITH. He is a man of honor, I think. There is no question that even to-day he is simply submitting to the inevitable and that he still believes in independence for his people. But I believe him to be honest in his opinions. He is a man of lofty ideas, of lofty sentiments; of course his education and all that sort of thing would lead him to hope for, nay, to believe in, the practicability of nationality for the people. By his own elevated station, as an able and learned man, he judges of the capabilities and natural abilities of all his countrymen.

Judge TAFT. Is he a practical man?

General SMITH. He is a practical lawyer. How far he may be practical in adopting legislation for executive or administrative purposes, I can not say; but he is a practical lawyer, and, next to Arellano, I consider him the ablest lawyer in the islands.

Judge TAFT. He would be a good man for the supreme court?

General SMITH. Unquestionably.

Judge TAFT. Didn't the military governor offer him a position through Arelano?

Professor WORCESTER. I don't know. Arelano told us he had been in negotiations with him.

Judge TAFT. Is he a man of wealth?

General SMITH. He was. He was a man of independent position, and I think he is yet.

Professor WORCESTER. Do you know the record of Melessa? The old man is unquestionably a man of great and very powerful influence, but I believe he aids the insurgent cause, as far as it may be safe, and that his whole heart is with the insurrectionary movement. I don't think he looks on it as a lost cause.

Judge TAFT. That is, the father?

General SMITH. I don't know whether he is the father or not. I believe he is, however.

Professor WORCESTER. It is the father. I know there is a father who had property.

General SMITH. He is immensely wealthy. My judgment upon the Melessas should not be given any great amount of weight, because I have not been thrown into intimate enough contact with them, and I have learned that it is very unsafe to take rumors, statements, or apparently creditable evidence, without actual experience with the men themselves. I had very little experience with old man Melessa.

Judge TAFT. How much experience have you had with Mapa?

General SMITH. I have met him now and then socially and had opportunity to talk with him.

General WRIGHT. Do you speak Spanish?

General SMITH. Enough to get along. I was finally able to dispense with an interpreter except in matters which required delicacy. I was able to get along with them all and understand what they said, and they seemed to understand me.

Professor WORCESTER. Did you have any trouble in finding honest officials?

General SMITH. It is the weak spot and will be the weak spot in all these municipal governments. When you get a man that is ready and able, why, he don't have much respect for honest methods. At least, that was the experience we have had with many presidentes.

General SMITH. Yes, sir.

Professor WORCESTER. Do they raise among themselves any special taxes? Do they have anything corresponding with the old road tax?

General SMITH. No, sir; there is the cedula tax, which corresponds to our poll tax, and also the patente tax, which corresponds to our license tax. There are no taxes especially collected for road purposes. Once collected, the money is set apart for specific purposes by appropriation bills.

Professor WORCESTER. Now, these cedula taxes are usually industrial taxes?

General SMITH. The patente tax and some of the pueblo taxes (such as the tax on tuba, on fish, corals, etc.) are essentially industrial taxes. Just before I left a land tax was adopted in Negros, but the tax on land was so disproportionate to what it should have been that I returned it to the advisory council without approval and recommending that the tax on land be increased.

Judge TAFT. How much did they impose?

General SMITH. They imposed, I think, about $2 on a thousand. No; it was even less than that. I estimated that, under the proposed law, the whole tax would be about $30,000 on a total valuation of the island of $30,000,000. I therefore returned the bill disapproved.

Judge TAFT. It was an ad valorem tax?

General SMITH. Yes, sir.

Judge IDE. Did you control their legislation?

General SMITH. By veto.

Judge IDE. I mean otherwise. Did you practically control it?

General SMITH. No, sir.

Professor WORCESTER. Did you have occasion to use the veto with a good deal of frequency?

General SMITH. I used it sparingly at first. In cases where I saw there would be no substantial injury done to the public I sometimes approved defective laws, at the same time pointing out the defect. When the operation of such laws disclosed the defects, as prophesied, a certain amount of respect was given my forecasts and I was enabled to use the veto power more vigorously. Where any injury was likely to ensue to the public I always used the veto privilege unhesitatingly. I think probably I vetoed about one-third of the number of bills presented for approval.

Gambling was a pet vice and had reached huge proportions, yet when their attention was called to it in a message gambling was at once prohibited under a penalty of at least $500 fine; even the sale of playing cards is forbidden.

Judge TAFT. How did it work?

General SMITH. It has repressed gambling. They may gamble on the sly in private houses, but gambling as a public vice has ceased to exist. They discussed very soberly the question of licensing gambling and limiting it to certain days, but they finally came to the conclusion to prohibit it altogether.

Professor MOSES. You are aware, of course, that the moral effect of a defeat of the will of the Government will be very great?

General SMITH. The moral effect would be very great. There is still in the hearts of the people, and will linger for years to come, a certain amount of hostility to the American Government and to its representative. For many years to come men who are under a cloud with the Government, or who are charged with political offenses or even with crimes perpetrated in the interests of politics, will have considerable popular support. Three

hundred years of arbitrary power and severity have stripped the jail of odium, and the man who wears chains has the popular sympathy.

The people are as sensitive as children—I was going to say as sensitive as women—to anything that offends. Anyone who offends their dignity or their self-love immediately loses his influence. The educated people and the people of means understand to a nicety the little amenities that go to make life pleasant, and a person who does not respect them finds himself unappreciated. Even punishment leaves no rancor if the conventionalities are observed and the delinquent is fairly treated and impartially heard.

Judge TAFT. Is rape at all common among them?

General SMITH. No; very rare. Rape is a rare crime, so far as I can see.

General WRIGHT. No necessity for it.

Judge TAFT. Have any of the soldiers married the Visayan women?

General WRIGHT. I think one has.

Judge TAFT. I suppose they live with them, a great many of them?

General SMITH. If so, it is done secretly. The higher class of Filipinos, of course, won't tolerate immorality among their women. Immoral women are tabooed. They are about as strict among the higher classes as we are.

Mr. Chairman, the gentleman from California by his inquiries has diverted me from what I intended to discuss. I stated that these people did not understand what we were going to do with them. I repeat that assertion now.

I say that as late as July 31, 1900, Governor Taft, in taking the testimony of Santiaga Paya, corroborates my statement. (See Senate Doc. No. 190, p. 60, Fifty-sixth Congress, second session.) Governor Taft asked Paya this question:

Is not one trouble among the people a doubt as to the policy the Americans are going to pursue to retain control of these islands?

A. Partly that; but in a greater way the lies that are told in the provinces. Out there the idea prevails that Aguinaldo's forces are going to succeed. They tell of battles in which 100 Americans are killed, and the people believe that. Here in Manila the half-educated people of the capital believe that the Government will give them independence.

Paya lived in Manila.

If the "half educated" in Manila believe we are going to give them independence, then the half educated outside of Manila must have the same belief. In other words, only the educated believe we will not give them independence, and I believe the "half educated" are in the majority; but I will show in a moment the "educated," at least "intelligent Filipino," want "ultimate independence."

We can get at the definition of the term "half educated," used by Paya by reading the testimony of the "Archbishop of Manila," found in this same Senate Document 190, page 102, in which he says:

The Filipino population, leaving out, of course, those who are in a semi-savage state in the forest, is about 7,000,000. The so-called educated element does not amount to 6,000. That excludes, of course, those who know only how to read and write, and includes only those who have had a college education, those who have taken a secondary course, and those who are in the professions.

Then the college graduates and the post graduates of colleges are the educated class, and they do not amount to more than 6,000, says the archbishop.

Then the half educated, to which Paya alludes, are those who know "how to read and write," while the educated class are the collegiate graduates.

I was informed, as I believe I have stated, that there were last fall over 5,000 natives in the employ of the civil government, and by appointment of American officials, of course.

So that the archbishop was mistaken when he said that there were not 6,000 educated natives in the island, because we must know that to be an employee of the Government of the United States in the Philippines one must be able to do something more than simply "read and write," and I refer to this so that we may get the practical definition of the term "half educated," as used by Paya, and the "educated."

Turn now again to the first volume of the report of the Schurman Philippine Commission and we find this language at page 83, under the heading "Governmental reforms desired by Filipinos:"

That ultimate independence is the aspiration and goal of the intelligent Filipinos.

This is the "intelligent" class. I will insert the entire quotation pertinent:

They need the tutelage and protection of the United States.

For what purpose, however? The Commission answers this question:

They need it in order that in due time they may, in their opinion, become self-governing and independent; for it would be a misrepresentation of facts not to report that ultimate independence—independence after an undefined period of American training—is the aspiration and goal of the intelligent Filipinos who to-day so strenuously oppose the suggestion of independence at the present time.

This Schurman report is signed by Messrs. Schurman, Dewey, Denby, and Worcester, and is dated January 31, 1900. They were appointed in January, 1899. General Otis, though one of the commissioners, did not sign this report.

Paya says the "half educated"—that is, those who can read and write—in the city of Manila, which rule would apply throughout the archipelago, want immediate independence, while the "intelligent Filipinos" want ultimate independence. Then both the half educated and educated want independence, differing only in the time it is given them.

Now, then, in the face of this official testimony, showing these people want their independence, the policy of the Administration is to hold them as dependents, as colonists, by a military or semi-military government. "A military government is not a republican form of government," says our Supreme Court.

Clearly, then, we are now holding, and it is proposed to hold permanently, these people as dependents without giving them their independence now, or now promising them to give them "ultimate independence," which even the intelligent want. Are we not standing temporarily and arranging to stand permanently over an angry volcano that will continue to daily threaten the peace if not the life of not only our Republic, but this our Philippine colony?

A WISE SUGGESTION.

The Schurman Commission, at page 82, in speaking of Governmental reforms desired by Filipinos, said:

The subject is one of the most vital significance, for the United States can succeed in governing the Philippines only by understanding the character and circumstances of the people, and realizing sympathetically their aspirations and ideals. A government to stand must be firmly rooted in the needs, interests, judgment, and devotion of the people, and this support is secured by the adaptation of government to the character and possibilities of the governed—what they are, what they have it in them to become, what they want, and, not least, what they think they are entitled to have and enjoy.

Most of the natives who are in the employ of the government are members of the Federal party. They want statehood and they have been led to believe, by American officials in the Philippines, that Congress will admit this colony and at an early date, as a State of the American Union.

We might class the members of this Federal party, at least, as some of the "intelligent Filipinos." If they can not get this statehood then they want "ultimate independence."

This the president of the Federal party stated to me in an interview taken in shorthand and committed to writing, which I have. Other members so expressed themselves.

Shall we, then, give these people their independence regardless of whether we promised them independence by word or act or both; give it to them as a matter of policy, justice, right, and law? If we do this we clear our skirts of being out for conquest, and we perpetuate in practice the humane principles upon which our own Republic was created and that to this day has preserved our Government as a Republic of, for, and by the people.

If we will do this—promise them now their ultimate independence, and keep that promise, whether it is actually done in the near or distant future—bloodshed will cease and peace will come in that country and in this, and those people will join us in welcoming the happy event. [Applause.]

Mr. KAHN. Will the gentleman yield for another question?

The CHAIRMAN. Does the gentleman yield to his colleague from California?

Mr. GAINES of Tennessee. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has twenty-two minutes remaining.

Mr. GAINES of Tennessee. Yes; I yield.

The CHAIRMAN. The gentleman from Tennessee yields to his colleague from California.

Mr. KAHN. Did anybody in the Philippine Islands tell you that the Americans had promised the natives independence?

Mr. GAINES of Tennessee. Why, my dear sir, I have 20 pounds of manuscript going to prove it.

Mr. KAHN. I ask the gentleman to mention the name of one native who told him that.

Mr. GAINES of Tennessee. Unlock the mouths of the military men over there.

Mr. KAHN. You spoke of natives.

Mr. GAINES of Tennessee. Unlock the mouths of the men there and I will. Does the gentleman suppose I am going to divulge the names of any men who gave me information in confidence and who said to me, "If I take any part in giving this testimony and my name is found out my head will go off," or "I will be given trouble in some way?"

I will give the gentleman some names, however, later in the session, when I get to the discussion of that branch of the case, but I will now refer the gentleman to a number of authorities open to the public.

Go read Welch's book, The Other Man's Country, or the Filipino Martyrs, by Richard Brinsley Sheridan, a London lawyer who was over there at or about the time of the battle of Manila Bay. Go read Murat Halstead's book, A Story of the Philippines. He was there shortly after the battle of Manila Bay.

Mr. Welch and Mr. Halstead are both distinguished Republicans, while Mr. Sheridan wants us to hold the Philippine Islands permanently and went there in sympathy with the American authorities, but now arraigns our treatment of the natives and says he states facts well supported by good authority in defense of his position.

Then the gentleman from California should read Senate Document No. 62. That contains much matter alluded to by these different authors.

And then I hope, if not before, the gentleman will tell us all, not simply a part, but all of the facts and circumstances surrounding and touching upon conditions in the Philippines which came to his eye or ears while in the Philippine Islands. So far the gentleman has contented himself with saying nothing.

But I desire now to discuss another subject, that is, the reasons why we purchased the Louisiana territory.

JEFFERSON CONGRATULATED THE AMERICAN PEOPLE THAT OUR GOVERNMENT WAS "BY NATURE AND A WIDE OCEAN" SEPARATED FROM THE OLD WORLD.

President Jefferson on two separate and distinct occasions officially congratulated the American people that our Republic was separated by nature and a wide ocean from the Old World.

In his inaugural address March 4, 1801, President Jefferson said:

Let us, then, with courage and confidence pursue our own Federal and republican principles, our attachment to Union and representative Government.

BY NATURE AND A WIDE OCEAN.

Kindly separated by nature and a wide ocean from the exterminating havoc of one quarter of the globe, too high minded to endure the degradations of the others, possessing a chosen country, with room enough for our descendants to the thousandth and thousandth generation, etc., etc.—with all these blessings, what more is necessary to make us a happy and prosperous people?

Again President Jefferson, after we had acquired the Louisiana territory in the spring of 1803, in his third annual address October 17, 1803, said:

Separated by a wide ocean from the nations of Europe and from the political interests which entangle them together, with productions and wants which render our commerce and friendship useful to them and theirs to us, it can not be the interest of any to assail us nor ours to disturb them.

MOST UNWISE INDEED TO CHANGE OUR NATURAL POSITION.

We should be most unwise indeed were we to cast away the singular blessings of the position in which nature has placed us, the opportunity she has endowed us with of pursuing, at a distance from foreign contention, the paths of industry, peace, and happiness, of cultivating general friendship and of bringing collision of interest to the umpirage of reason rather than of force.

Before and after we acquired the Louisiana territory we find President Jefferson congratulating the American people and the American Congress that we and our Republic were "by nature and a wide ocean" separated from the nations of the Old World, at the same time in the strongest language urging us to remain thus, for he says:

We should be most unwise were we to cast away the singular blessing of the position in which nature has placed us, the opportunity she has endowed us with of pursuing, at a distance from foreign contentions, the paths of industry, peace, and happiness.

And yet the expansionists, the imperialists, allude to President Jefferson approving the purchase of the Louisiana Territory as an authority and precedent for purchasing and permanently retaining the Philippine Islands.

The Louisiana Territory was on this side of the world and adjoined our Republic. The Philippine Islands are on the other side of the world in an ocean of militarism, immediately connected with the war powers of Europe, Asia, and Africa.

Jefferson taught the American people to keep this Republic on this side of the world, and his mouthpiece, Senator Breckenridge, scouted at the idea of this Republic ever spreading its jurisdiction permanently into the Old World.

Louisiana Territory was purchased to avoid war with Spain, France, and England, and restore peace amongst American citizens in the Mississippi Valley and reinstate our right of deposit at Orleans.

The Philippine Islands are situated 7,000 miles away from our Republic and are inhabited with about ten million people composed of a mixture of almost every brown race in the world.

The Territory of Louisiana was located on this side of the world adjoining our Republic, just across the Mississippi River, and by the census of 1806 contained only 52,998 souls, composed of Americans, Germans, Spaniards, French, English, Irish, some free negroes, and negro slaves, a mere handful of inhabitants compared to the Philippine Islands.

Governor Claiborne, then of Louisiana, in an official communication to the Secretary of State, stated:

In 1806 the census of the inhabitants of this (Louisiana) Territory was taken, and I believe with great accuracy. There were 52,998 souls, of which 23,574 were slaves and 3,355 free people of color, leaving a white population of 26,069; of these at least 13,500 were natives of Louisiana, for the most part descendents of the French: about 3,500 natives of the United States, and the residue Europeans generally, including the native French, Spaniards, English, German, and Irish. (Executive Journal p. 82, vol. 4; Gayarre History of Louisiana, p. 212.)

President Jefferson did not fear making these inhabitants citizens of the United States, and they became citizens; nor did he fear the admission of this Territory later on as States to the American Union, and many States have been made of it. So the treaty provided for both the citizenship of these inhabitants and the admission of this Territory to statehood.

Do we not fear making the Filipinos citizens of the United States? We do. Do we ever intend making the Philippine Islands a State of the United States? The Democrats do not. They are to be held, if held at all, as dependents—political slaves—and the archipelago as a colony or a dependency—conditions which our forefathers fought and died to destroy.

LOUISIANA TERRITORY PURCHASED TO AVOID WAR.

The Louisiana Territory was purchased to avoid war. Minister Livingston was only authorized to treat for the island of Orleans. He had to buy the whole territory to get any. I will now show by historical facts that it was the purpose of President Jefferson to prevent war and to exclude, as much as possible, Spain and France from territorial possessions adjoining our Republic that he urged the purchase of the Louisiana Territory.

We did not acquire the Louisiana country, as Mr. Livingston said, for the "purpose of extending our territory." It was done to avoid war with Spain, and possibly France, and prevent England from attacking France at New Orleans, Spain having in 1803 secretly ceded this territory to France, and now France was in the act of war with England.

In 1795 Spain, by a treaty, gave our people the right to deposit, load, unload, and sell their produce at the port of Orleans, on the island of Orleans, within this territory, and the free access and use of the Mississippi River. Without notice or cause Spanish officials suspended these rights in 1802, while Spanish subjects were murdering our people, throwing some in jail without trial, burning our ships, and destroying our commerce. It was contended these wrongs were just causes for war against Spain and the forcible taking possession of the Island of Orleans and restoring and protecting these suspended treaty rights, and our people, even at the expense of war, demanded immediate restoration and indemnification for depredations, while a prompt declaration of war, much discussed in Congress, was deferred, awaiting the result of Jefferson's efforts to acquire the island of Orleans and our former river rights. Jefferson saw war was inevitable if he failed, and he promptly appointed Mr. Livingston and Mr. Monroe to negotiate with France for a part—not the whole—of this Louisiana Territory.

In February, 1803, President Jefferson wrote Mr. Livingston this:

We must know at once whether we can acquire New Orleans or not. We are satisfied that nothing else will secure us from a war at no distant period.

But we had to take the whole of the territory or none.

Our commissioners reported to Mr. Madison, Secretary of State, that at the very beginning of negotiations "France had decided to offer to the United States the whole of Louisiana and not a part of it." We found as we advanced in the negotiations that M. Marbois was absolutely restricted to the disposition of the whole; that he would treat for no less portion, and, of course, that it was useless to urge it.

We had to treat for the whole or jeopardize, if not abandon, the hope of acquiring any part. On that we did not long hesitate, but proceeded to treat for the whole. They had already stated in the same letter:

An acquisition of so great an extent was, we well know, not contemplated by our appointment; but we were persuaded that the circumstances and considerations which induced us to make it will justify us in the measure to our Government and country.

This letter, dated May 13, 1803, conveyed the treaty with France ceding this territory to the United States (dated April 30, 1803), and we took possession in December of that year.

Mr. Madison, congratulating our commissioners on purchasing, said:

The whole of Louisiana, although the western part of it was not embraced by your powers, but you are justified by the solid reasons you give for it. I am charged by the President to express to you his entire approbation of so doing.

Some of the "solid reasons" our commissioners assigned for purchasing the "whole" were: The complete and uninterrupted use of the Mississippi River, the separation from foreign adjoining powers, and on this point, in language clear, forceful, and to this day pertinent, they said:

We separate ourselves in a great measure from the European world and its concerns, especially its wars and intrigues; we make, in fine, a great stride to real and substantial independence.

Additional "solid reasons" were, however, given in these words:

A divided jurisdiction over the river might beget jealousy, discontent, and dissensions, which the wisest policy on our part could not prevent or control. With a train of colonial governments established along the western bank, from the entrance of the river far into the interior, under the command of military men, it would be difficult to preserve that state of things which would be necessary to the peace and tranquillity of our country. A single act of a capricious, unfriendly, or unprincipled subaltern might wound our best interests, violate our most unquestionable rights, and involve us in war.

But by this acquisition, which comprises within our limits this great river,

with all the streams that empty into it, from their sources to the ocean, the apprehension of these disasters is banished for ages from the United States. We adjust by it the only remaining known cause of variance with this very powerful nation; we anticipate the discontent of the great rival of France, who would probably have been wounded at any stipulation of a permanent nature which favored the latter, and which it would have been difficult to avoid if she retained the right bank.

"We separate ourselves in a great measure from the European world," etc., as above quoted.

These were all "solid reasons," and exploit the policy of this Republic from 1803 down to and excluding the present Administration. In brief, we bought our peace from Spain, France, and England. We divorced ourselves from the powerful and belligerent nations—Spain and France and England—then practically at war. We restored our rights at the port of Orleans, in the Mississippi River, and had complete jurisdiction to the Gulf of Mexico.

It thus clearly appears that the controlling reasons for the acquisition of the Louisiana Territory was to separate ourselves "from the European world and its concerns," whereas now the controlling reason for the acquirement and permanent holding of Asiatic territory is to embroil ourselves with its wars and intrigues against which every President from Washington down to and excluding President McKinley has warned us, and which former administrations and American people have constantly kept in view, enunciating at an early day the Monroe doctrine, the law of self-defense, and vigorously enforcing it without the cost of a cent or the loss of a drop of blood that I recall. Already our armies have been allied with European armies and have fought under the command of European generals.

What next? The purchase of Louisiana was to get rid of these people, their entanglements and intrigues. It therefore bears no kind of analogy to and furnishes not the remotest precedent for Asiatic acquisitions or McKinley expansion. Are the people of this country ready to make this kind of expansion policy the fixed expansion policy of this Republic, or will they recoil to the expansion policy of Jefferson, Monroe, and Polk, and expand our Republic over adjacent territory and under the protection and within the limitations of our Constitution?

I will insert as part of my remarks the letter of our Ministers Livingston and Monroe to Mr. Secretary Madison, clearly setting forth the reasons why they exceeded their authority and treated for the whole of the Louisiana Territory:

Messrs. Livingston and Monroe to Mr. Secretary Madison.

PARIS, *May 13, 1803.*

SIR: We have the pleasure to transmit to you by M. Diriex a treaty which we have concluded with the French Republic for the purchase and cession of Louisiana. The negotiation of this important object was committed on the part of France to M. Marbois, minister of the treasury, whose conduct therein has already received the sanction of his Government, as appears by the ratification of the first consul, which we have the pleasure to forward to you.

An acquisition of so great an extent was, we well know, not contemplated by our appointment; but we are persuaded that the circumstances and considerations which induced us to make it will justify us in a measure to our Government and country.

Before the negotiation commenced we were apprised that the First Consul had decided to offer to the United States, by sale, the whole of Louisiana, and not a part of it. We found, in the outset, that this information was correct, so that we had to decide as a previous question whether we would treat for the whole or jeopardize, if not abandon, the hope of acquiring any part. On that point we did not long hesitate, but proceeded to treat for the whole. We were persuaded that by so doing it might be possible, if more desirable, to conclude eventually a treaty for a part, since, being thus possessed of the subject, it might be easy in discussion, at least, to lead from a view of the whole to that of a part, and with some advantages peculiar to a negotiation on so great a scale. By treating for the whole, whereby we should be enabled to ascertain the idea which was entertained by this Government of its value, we should also be able to form some estimate of that which was affixed to the value of its parts.

It was, too, probable that a less sum would be asked for the whole, if sold entire to a single purchaser, a friendly power, who was able to pay for it and whom it might be disposed to accommodate at the present juncture, than if it should be sold in parcels either to several powers or companies of individuals. It was equally so, if this Government should be finally prevailed on to sell us a part, that some regard would be paid in the price asked for it to that which was demanded for the whole; lastly, by treating for the whole, whereby the attention of this Government would be drawn to the United States, as the sole purchasers, we might prevent the interference of other powers, as also that of individuals, who might prove equally injurious in regard to the price asked for it, whether we acquired the whole or any part of the territory. We found, however, as we advanced in the negotiation, that M. Marbois was absolutely restricted to the disposition of the whole; that he would treat for no less portion, and of course that it was useless to urge it. On mature consideration, therefore, we finally concluded a treaty on the best terms we could obtain for the whole.

By this measure we have sought to carry into effect, to the utmost of our power, the wise and benevolent policy of our Government, on the principles laid down in our instructions. The possession of the left bank of the river, had it been attainable alone, would, it is true, have accomplished much in that respect, but it is equally true that it would have left much still to accomplish. By it our people would have had an outlet to the ocean in which no power would have a right to disturb them. But while the other bank remained in the possession of a foreign power, circumstances might occur to make the neighborhood of such power highly injurious to us in many of our most important concerns. A divided jurisdiction over the river might beget jealousies, discontents, and dissensions which the wisest policy on our part could not prevent or control. With a train of colonial governments established along the western bank, from the entrance of the river far into the interior, under the command of military men, it would be difficult to preserve that state of things which would be necessary to the peace and tranquillity of our country.

A single act of a capricious, unfriendly, or unprincipled subaltern might wound our best interests, violate our most unquestionable rights, and involve us in war. But by this acquisition, which comprises within our limits this great river and all the streams that empty into it, from their sources to the ocean, the apprehension of these disasters is banished for ages from the United States. We adjust by it the only remaining known cause of variance with this very powerful nation; we anticipate the discontent of the great rival of France, who would probably have been wounded at any stipulation of a permanent nature which favored the latter, and which it would have been difficult to avoid had she retained the right bank.

We cease to have a motive of urgency, at least, for inclining to one power to avert the unjust pressure of another. We separate ourselves, in a great measure, from the European world and its concerns, especially its wars and intrigues. We make, in fine, a great stride to real and substantial independence the good effect whereof will, we trust, be felt essentially and extensively in all our foreign and domestic relations. Without exciting the apprehension of any power, we take a more imposing attitude with respect to all. The bond of our Union will be strengthened and its movements become more harmonious by the increased parity of interests which it will communicate to the several parts which compose it.

In deliberating on this subject in a financial view we were strongly impressed with the idea that while we had only right of deposit, or, indeed, while the right bank remained in the possession of a foreign power, it was always to be expected that we should, at some time or other, be involved in war on questions resulting from that cause. We were well satisfied that any war would cost us more than is hereby stipulated to be given for this territory; that none could produce a more favorable result; while it might, especially in the present disturbed state of the world, prove the ruin of our affairs.

There were other considerations which, though of minor importance, had, nevertheless, their due weight in our decision of this great question. If France, or any other power holding the right bank of the river, imposed lighter duties than comported with the revenue system of the United States, supposing even that we had acquired the left bank, all the supplies destined for our extensive and populous settlements on the other side would be smuggled in through that channel, and our revenue thereby considerably diminished. Should such power open offices for the sale of lands on the western bank, our population might be drained to the advantage of such power, the price of our lands be diminished and their sale be prevented. But by the possession of both banks these evils are averted.

The terms on which we have made this acquisition, when compared with the objects obtained by it, will, we flatter ourselves, be deemed advantageous to our country. We have stipulated, as you will see by the treaty and convention, that the United States shall pay to the French Government 60,000,000 francs in stock, bearing an interest of 6 per cent, and a sum not exceeding twenty more to our citizens, in discharge of the debts due to them by France under the convention of 1800; and also to exempt the manufactures, productions, and vessels of France and Spain in the direct trade from those countries, respectively, in the ports of the ceded territory, from foreign duties for the term of twelve years. The stock is to be created irredeemable for fifteen years, and discharged afterwards in three equal annual installments. The interest on it is to be paid in Europe, and the principal, in case this Government thinks proper to sell it, disposed of in such manner as will be most conducive to the credit of the American funds. The debts due to our citizens are to be discharged by drafts on the Treasury. We omit a more minute view of the stipulations of these instruments, since, as you will possess them, it is unnecessary.

Louisiana was acquired of Spain by France in exchange for Tuscany, which latter is settled by treaty on the son-in-law of the King of Spain, with the title of King of Etruria, and was estimated in the exchange, in consideration of its revenue, at 100,000,000 francs. The first consul thought he had made an advantageous bargain in that exchange, as appears by the high idea which he entertained of its value, as shown on many occasions. Louisiana was the territory which he promised in his proclamation at the peace as an asylum to those who had become unfortunate by the Revolution, and which he spoke of as vast and fertile. When he made up his mind to offer the cession of it to the United States it was contemplated to ask for it one hundred millions, exclusive of the debts they owed to our citizens, which they proposed we should also pay, with a perpetual exemption from foreign duties on the manufactures, productions, and vessels of France and Spain in the ports of the ceded territory.

From that demand, however (in respect to the sum), he receded, under the deliberations of his own cabinet; for the first proposition which M. Marbois made to us was that we should pay eighty millions—sixty of which in cash, the balance to our citizens, the whole in one year in Paris, with a perpetual exemption from foreign duties as above. The modification in the mode of payment (that is by stock, for from the quantum he never would depart) and the limitation of the term of the duties to twelve years, with the proviso annexed to it, which was introduced into the treaty, with every other change from his project, was the effect of negotiation and accommodation, in which we experienced, on his part and that of his Government, a promptitude and candor which were highly grateful to us.

In estimating the real value of this country to the United States a variety of considerations occur, all of which merit due attention. Of these we have already noticed many of a general nature, to which, however, it may be difficult to fix a precise value. Others present themselves of a nature more definite, to which it will be more practicable to fix some standard. By possessing both banks the whole revenue or duty on imports will accrue to the United States, which must be considerable. The value of the exports, we have understood, was last year $4,000,000. If a portion only of the imports pass through that channel (as under our Government we presume they will) the amount of the revenue will be considerable. This will annually increase in proportion as the population and productions in that quarter do. The value of the lands in the province of Louisiana (amounting to some hundred millions of acres of the best quality and in the best climate) is perhaps incalculable. From either of these sources it is not doubted that the sum stipulated may be raised in time to discharge the debt.

We hope to be able to forward you herewith the order of this Government for the delivery of the possession of the ceded territory to the United States, or to communicate its arrangements for that purpose, as also its views relative to the sale of the stock, since it is understood that their intention is to sell it. It has been intimated to us that the house of Baring, in London, connected with that of Hope, in Holland, will take the whole at their risk, at the current price in England, on a commission to be agreed on, paying to France a stipulated sum by the month. Their object is said to be, exclusive of that of making profit by it, to keep up the credit of our stock, they being much interested in it. Considering the great capital of these houses, it is presumable that they would be able to comply with any engagement they might make to that effect. And it can not be doubted that it would be more advantageous to us that the whole should be thus disposed of than remain in the hands of France, who, under the pressure of difficulties, might have it less in her power to preserve or regard our credit in the disposition of it. We shall communicate with M. Marbois fully on this subject and apprise you of the result.

We received some days past a letter from Mr. King, in which he says that, in case of war, which he deemed inevitable, the British Government contemplated taking possession of the island of New Orleans. He desired information to be communicated to that Government whether it had been ceded to the United States, as he presumed a knowledge thereof would prevent the measure. We gave an immediate reply to this letter, in which we informed him that the whole of Louisiana had been ceded to the United States, which he was at liberty to communicate to the British Government. We likewise made the same communication to Lord Whitforth, the British ambassador here, who expressed himself to be well satisfied with the event.

These countries—France and England—have been on the point of rupture for some time past. At present the prospect of an accommodation is more remote, as the English ambassador left Paris at 10 o'clock last night. Still, some hope of it is entertained by some persons in power here. This nation is desirous of peace, and it is believed that its Government is similarly disposed.

Permit us to express an earnest wish that the President and Senate may decide, with the least possible delay, on the treaty and conventions which we have concluded and have the pleasure to transmit to you. If it is the sense of our Government to ratify them, the sooner that fact is known to this Government the better its effect will be.

The list of the debts due by France to American citizens not being yet prepared, owing to M. Marbois's absence to-day from Paris, and the previous delays of the offices in which the evidences were, can not be sent by this conveyance. In consequence we retain the original of the convention to which it should be annexed, and send a copy of it. We shall forward in a day or two the original. By the list it may be inferred that the debts amount to a greater sum than they really do. They will be subject, according to the convention, to the revision of our board, by whom it is expected they will be reduced considerably. We have full confidence that, including the interest, they will not exceed the sum of 20,000,000 francs, which is much to be desired, as in that case all our citizens whose claims are entitled to the support of our Government will be provided for and paid by it. You will observe that in the mode adopted considerable indulgence is given to our treasury. The whole sum is to be paid there and under delays which will free it from embarrassment.

We have the honor to be, sir, your obedient servants,

R. R. LIVINGSTON.
JAMES MONROE.

AN IGNORANT APPLICATION.

And yet this great Louisiana acquisition is cited as a precedent for the Philippine Islands acquisition! The cases are not at all parallel. There is no comparison. One was to avoid war and the other, I believe, an unnecessary incident for "settling" a war already at an end. We could easily have said to Spain, "You must give freedom to the Filipino people," or we could have provided that we would do so. We could have done that as easily as not to have done so.

But this matter is in the past. The question is, What are you going to do? Do you propose to stay there permanently? Do you propose to do the thing that Senator Breckenridge said would ruin our Republic and prompt the American people sooner or later to "call for a king?"

Yet, in the face of all this wise counsel of President Jefferson we hear the thunder of words from the lips of the distinguished gentleman from Illinois [Mr. CANNON] that this Government will stay in the Philippine Islands "forever and a day."

The idea of this Republic ever being extended to the other side of the world was, in 1803, in the course of the debates on the Louisiana purchase, suggested as barely possible, but denounced as so extreme a case that it did not merit serious refutation.

This question was asked:

Could we not incorporate into the Union some foreign nation containing 10,000,000 inhabitants, Africa, for instance, and thereby destroy our Government?

WILL "CALL FOR A KING."

Senator John Breckenridge, representing the Administration in the Senate, after thus shaping the question, in reply thereto made this absolutely marvelous statement:

Certainly the thing would be possible if Congress would do it and the people consent to it. But it is supposing so extreme a case and so barely possible that it does not merit serious refutation.

It is also possible, and equally probable, that republicanism may itself one day or other become unfashionable, for I believe it is not without its enemies now, and that the people of America may call for a king.

Ah, gentleman, the people of America will "call for a king"—when? "When republicanism becomes unfashionable." When we do the very thing that is so unrepublican and un-American that the suggestion that we could possibly do it was not even thought worthy of "serious consideration" in 1803—that is, we would begin to destroy this Republic, prepare to "call for a king," or have a President by name, armed with the powers of a king, when we take our flag permanently to the old world!

Mr. Chairman, the power vested in the President by the Spooner amendment is, as a distinguished Republican gentleman has said, and as I say myself, greater than is vested in the Czar of Russia or King of England to-day. All military, civil, and judicial power necessary to control the Philippine Islands and to make all the laws necessary for that purpose, fill all the offices, and repeal all the laws is vested in the President of the United States and such person or persons as he may nominate.

Mr. Chairman, I was delighted when the lamented McKinley came out so promptly and said he would not accept a third nomination for the Presidency of the United States. And yet in spite of that declaration three distinguished men of this country said that they intended to nominate Mr. McKinley anyhow or tender him the nomination. But, Mr. Chairman, President McKinley knew that the American people from the days of Washington down to now have looked upon the third-term idea as the first step toward perpetuity in the Presidential chair, or the "call for a king."

It is a remarkable coincident, however, that just as we had acquired the Philippine Islands in Asia, with "10,000,000 inhabitants," an act which in 1803 was associated with the people of this country calling for a king to rule them, that three great Republican leaders were urging the President of the United States, Mr. McKinley, a kind-hearted, genial, and good man, to run for a third term, to perpetuate himself in the office of President of the United States.

Mr. Chairman, whither are we tending? In the origin of our Government the Constitution was made to control States and Territories then held, with the right to acquire territory for the purpose, I may add, of forming States. And every Supreme Court decision from the beginning of this Government down to the present time, when this question has been passed upon, has declared that we have acquired and that we hold our territory for the single purpose of making future States of this Union. I cite the case of Shively *v.* Bowlby (169 U. S. Reports) and the Morris case, where that decision is affirmed, and the cases which the first decision cites and reaffirms.

Yet we have gone so far toward a "call for a king" that we have crossed to the other side of the world and tied to our Republic ten millions of people, and against their will, perhaps to permanently hold them—for what? Not for the purpose of making citizens, not for the purpose of making States, not for the purpose of making them our equals in law or otherwise, but to exploit their country, to fill our fat pocketbooks and our overflowing Treasury with tax money wrung from these people.

I asked Dr. Albert, the president of the Federal party, "If we do not make the Philippine Islands a State of the Union, what do you want?" The reply was, "Then we want our independence." I said, "Suppose we hold you as a colony?" Another gentleman whom I addressed also said: "If you do that, then there will be another revolution here; there will be bloodshed." And one of these natives and leaders went so far as to say, "I will pick up my family and go to the State of California."

I presume it is only fair for me to warn my distinguished friend from California [Mr. KAHN] that he had better put up his fences against such men, and I give him and his a fair warning. That is the way one of those men talks, who is a great politician in the Philippine Islands, Mr. Buencamino, a lawyer, politician, and capitalist. A distinguished physician, Dr. José Albert, a man who can speak four or five languages, a man who was very much of a gentleman and was very bright, in substance said: "We want statehood. We want no colonies, and our people will not permit themselves to be held again as colonies."

And the most remarkable thing was he said, "We do not want any carpetbag government." I said to him, "Where did you get the word 'carpetbag?'" "Why," said he, "I got it from reading the history of the southern part of the United States." I am quoting in substance what these natives said to me. I have their language written.

But what else, Mr. Chairman? I would have confined myself to the discussion of this item but for this diversion. This is but an entering wedge, this proposition for the establishment of a military post at Manila. This is to be a permanent improvement, to cost $500,000, I believe. We are to purchase, I understand, by way of settlement, what is known as the friar lands, which will cost about $7,500,000, I am told. We are to be called on to improve the port at Cavite, to enlarge the naval station there. We are to be called upon to build an arsenal at Subig Bay, to improve the harbor and make that a military post, because there is a splendid harbor there.

Where, Mr. Chairman, is this to end? I serve notice on you that these requests are all ready to be made.

If they have not yet been filed through official sources they are already matured across the water. I know that. Here is this matter at Manila; here is this matter at Cavite; here is this at Subig Bay; and there is an immense wall which in all probability we shall have to finish at Manila city, so that our vessels may go in and out in safety in that very angry bay. Remember the 50,000 pension claims alone that have been filed up to January 2 as the result of the Spanish war.

Here is a regular Philippine army of 25,000 or more that must be maintained in the Philippine Islands permanently, which will cost more per soldier per year than $1,280. Then we must have a regular Philippine navy to plow through these Asiatic waters all the time. Both the army and navy must remain there in time of war as well as peace, just as here at home.

Mr. Chairman, would it not be better, before all these immense permanent improvements are made, costing untold millions of dollars, that the American people should decide at the ballot box what they have not decided, to wit, that we propose to hold the

people of the Philippine Islands as colonists and that archipelago as a colony of the United States at all hazards and at all costs of blood and money? May the wisdom of our people and their love of our own Republic save us from such an un-Republican, un-Democratic, un-American judgment and consummation. [Applause.]

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. GAINES of Tennessee. Mr. Chairman, I would like to have the privilege of extending my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

APPENDIX.

No. 1.

Interview between Congressman Gaines and Señor Don Felipe Buencamino, in October, 1901, at Manila.

[Interpreted by Walter H. Fergusson.]

Señor Buencamino was asked concerning the early history of the Philippines, and said that previous to the coming of the Spaniards the people of China and Japan had always been trying to take charge of the Philippines and make slaves of the people; that they had always prepared to fight them and to protect their homes, their families, their honor, their rights, and their property; that they had in their language the word "liberty," and that its definition was the protection of life, honor, family, home, and property.

In answer to inquiry Señor Buencamino stated: I am familiar with the Constitution of the United States; the way I came to read it was that at the time I was a political prisoner here I got hold of an American almanac in which was the Constitution of the United States, and with the aid of a soldier who was on guard, and who had a slight knowledge of Spanish, I was able to understand it and to make a translation. Having seen and read of those grand principles which it contained, and which were in accordance with our rights and desires, I changed my mode of thinking and abandoned the insurrecto cause and really became an American at heart.

Therefore my conversion was principally due to having studied the American Constitution through the courtesy of the soldiers who attended me while I was in jail. The soldiers had orders from General Otis to give me three small loaves of bread for each meal—morning, noon, and night. When the soldiers gave me my ration I could only eat one of the loaves and would return the other two. Notwithstanding this the guard would leave the remaining loaves, saying that I might get hungry later on. This detail proved to me that it was an action of sentiment on the part of the soldier; that although he carried out his orders, he showed it was an act of sentiment. I have seen the same thing demonstrated by all Americans.

[Señor Buencamino here repeated from memory with an expression of feeling shown in his voice the preamble to the Constitution of the United States, and said:]

I saw from that preamble that it was one of the noblest documents ever written by man; that I had never seen in any laws or constitutions of European powers sentiments so noble as those expressed in that. In none of those documents had I ever seen the expression "rights of liberty." These were details which had convinced me that they should surrender themselves to the Americans.

This is where the European politicians err in not properly separating the rights of liberty and the wrongs of liberty, not properly defining liberty. Therefore the development of liberty in Europe has caused a great deal of bloodshed, while the development of liberty in the United States has caused but little bloodshed. In a little over one hundred years the United States has multiplied itself at a tremendously greater rate than any European nation, because all Europeans of different races who go to the United States read and understand the preamble of the Constitution of the United States and fall in love with it.

Q. Was the almanac that you read written in English?

A. It was.

Q. What was the name of the almanac?

A. It was the World Almanac.

Señor Buencamino was here given a pamphlet containing the preamble of the Constitution of the United States, written in Spanish and English, and asked to find the preamble of the Constitution in English. He turned to the preamble promptly and read it in English.

Q. When were you imprisoned and where, and who put you there?

A. I was captured at a pueblo called Calarnan. I had in my charge the mother and son of Aguinaldo, and we were all captured together. As I had worked so much for the war, I expected that very morning to be shot. Major Cronin, of the Thirty-third Volunteer Infantry, captured me. Far from desiring to shoot me, he treated me with a great deal of consideration and a great deal of distinction and very humanely. After traveling a day and a half the Major put us in the hands of Lieutenant-Colonel Brereton, who suicided shortly afterwards. After another day's travel we were turned over to General Wheaton. My clothes were very ragged, having been traveling through the forest. General Wheaton presented me with a pair of pants and a coat. They did not belong to the General, but to one of his English interpreters. One of General Wheaton's aids brought me to Manila on the 25th day of November, 1899.

Q. When did you get out of prison, and by whose orders?

A. I was five months in jail and was completely secluded—incommunicado—no one being placed in the same cell. I was very well treated in the prison, but very much alone. I was let out on the 16th of April, 1900, by the order of General Otis. General Otis called me and asked me why I did not recognize the sovereignty of the United States. I answered that the only foreign sovereignty that the Filipinos had ever recognized was that of Spain; that even to them they could not be subjects; that though they were killed they would not give up to it.

Q. Would you have suffered death before you would again have become subject to Spain?

A. Yes.

Q. On what condition did General Otis give you your freedom?

A. After recognizing the sovereignty of the United States. After asking General Otis and being assured by him that the preamble of the Constitution of the United States applied and followed the flag, then I recognized American sovereignty. I was assured both by General Otis and General MacArthur that the preamble of the Constitution of the United States followed the flag. According to my way of thinking it is applied here to-day, because when they take the oath of loyalty they recognize the sovereignty of the United States in these islands.

Q. Have you taken that oath?

A. Yes.

Q. Before you were let out of jail or after?

A. Before.

Q. Did any of the American officers make any promises as to the independence of the islands?

A. Yes. Some of the promulgated laws state this.

Q. Did the military officers themselves promise you the independence of the islands?

A. Following the taking of Manila General Merritt made such a proclamation as that.

Q. Was it published?

A. Yes.

Q. The same thing was repeated by all the commanding generals afterwards?

A. Lately the civil governor has ratified it. The proof of it is that it is in the oath of loyalty that they have here.

Q. Where were you when Manila was taken? Where was it that you read General Merritt's proclamation?

A. I was in Cavite at the time of the taking of Manila. On the following day, the 14th, I came over here as the representative of General Aguinaldo to have a conversation with General Merritt on the following points: First of all, General Merritt asked for the evacuation of the Filipino troops that were in Ermita, Tondo, and Santa Cruz. Secondly, General Merritt asked that the waterworks be turned over to him. Thirdly, he asked that General Aguinaldo surrender all arms to him. By order of General Aguinaldo, I told General Merritt that he could not comply with any of his requests until the promises had been realized which Admiral Dewey made to General Aguinaldo. General Merritt asked me what promise Admiral Dewey had made, and I answered that it was a promise assuring the liberty of the Filipinos. General Merritt answered that he (Merritt) was not authorized to treat upon that point.

Q. Did General Merritt say that Dewey was not authorized to treat upon that subject?

A. He said nothing upon that point.

Q. What did Admiral Dewey promise Aguinaldo?

A. Admiral Dewey promised Aguinaldo the assurance of the independence of the Filipinos.

Q. Who was present when the conversation was held between Admiral Dewey and Aguinaldo? Were you present at any time when Aguinaldo and Admiral Dewey were talking on any subject?

A. No.

Q. Do you know who was present?

A. Only Aguinaldo's interpreter, Marti.

Q. Where is Marti now?

A. He is in Hongkong, being a member of the insurrecto board at that point.

Q. Did I understand you to say that when General Merritt made these requests of you as the representative of Aguinaldo you declined to accept his conditions because of the promises made by Admiral Dewey to Aguinaldo?

A. Yes.

Q. You then left General Merritt?

A. I did.

Q. He made no effort to arrest you?

A. No.

Q. What, then, caused the insurgents to take up a line of action or warfare against the United States?

A. The hate of foreign sovereignty and the lack of knowledge of what American sovereignty would be. Had Governor Taft or any diplomat come here with General Merritt there would have been no war—absolutely none.

Q. If the promises of Admiral Dewey—if he made any promises—had been kept, or if promises had been made by some representative of the Government here at that time of a like nature, and a complete definition of what American sovereignty means, and the Constitution and customs of the United States fully explained to the insurgent forces, would there have been a revolution against the United States, or, in other words, would the insurgents have laid down their arms?

A. Yes; they would have surrendered. They did lay down their arms.

Q. Would you yourself have surrendered, as requested by General Merritt?

A. Yes.

Q. Were the Filipino people throughout the islands informed of what Aguinaldo claimed Admiral Dewey had promised him?

A. Yes.

Q. Can you explain why it is, now after Governor Taft, good and great and strong man as he is, is at the head of the government, administering laws which the Commission thinks are right and just—why it is that the insurgents continue to fight in different portions of the islands and the people do not submit?

A. Batangas is the heart of the war against America, as Cavite was the heart of the war against Spain. From Batangas come Felipe Agoncillo, Mabini, Sixto Lopez, Igalacono, and Apacieble, all of whom are, as I might express it, separatists and lovers of absolute independence of the Filipinos. Three of these gentlemen are abroad, another in Guam. These are the men who are keeping up the insurrection in Batangas. Lukban, who is operating in Samar, is only a subordinate of Malvar, and if Malvar should surrender Lukban would also surrender. Therefore we have come to the worst point of the illness. This warfare that is going on in Batangas is not a warfare of force, but a warfare of ideas, as I have always expressed my opinion to the American authorities here. Therefore I believe for humanity's sake they should fight idea with idea, and not force by force, in Batangas.

Q. What idea is it that they have?

A. The idea of absolute independence.

Q. Are these people informed of the so-called promises of Admiral Dewey to Aguinaldo?

A. Yes.

Q. Is the knowledge of that all over the island; and if so, when did it get over the islands?

A. In May, June, and July of 1898 that knowledge was diffused all through the islands. The greater part of the inabitants of the islands, with the exception of some of the inhabitants of Samar and Batangas, believe that Aguinaldo has deceived them, and I personally believe the same thing, because Admiral Dewey, representing, as he did represent, a nation so great as the United States, and with the glory that he had just attained, had nothing to prompt him to deceive Aguinaldo.

I believe that Aguinaldo had more necessity to deceive the people in order to bring them in arms against the Americans. I say this because I was really the second in rank of Aguinaldo's council after Mabini. In Tarlac I asked him for the documents of the conversation he had with Admiral Dewey in order to guard them and file them, but he told me frankly that none existed; that all the promises that were made were merely verbal.

Q. What portion of the insurgents now in the field are ladrones?

A. In Batangas and Samar there must be somewhere about 6,000 rifles, and, given the number of honorable generals who have surrendered, the greater part of the rifles which they had are now in the hands of men without any conscience whatever. Sometimes these people fight for the sake of robbery and loot, and sometimes out of patriotism. All of the most honorable generals that were under Malvar, Catibac, Calao, Martin, Cabrera, and Casteltor,

have surrendered. Those who now remain in the field are practically unknown or of no importance. They are really appointed for the time being for the lack of having others.

Q. Did the Filipinos as they would read these proclamations, the proclamation of General Merritt, and get and read the Constitution of the United States and the Declaration of Independence, did they become more angry at the United States or were they disposed to surrender and give in to the sovereignty of the United States?

A. At the time of General Merritt's proclamation there were no circulars or anything in regard to the Constitution of the United States. It was unknown. I published the Constitution of the United States at the time I founded the Federal party. General MacArthur furnished me with 400 copies of the Constitution, which were translated into the Spanish language in Washington, and I distributed them all through the islands among the 400 committees of the Federal party. Since that time the pacification has been very rapid.

Q. Does reading the Constitution of the United States pacify these people or make them madder?

A. On the contrary, it pacifies them. From the 23d of December, before General Chaffee came here, until the 1st of June of this year, 24 generals and more than 30,000 insurrectos have surrendered. As the Federal party published the Constitution of the United States the Civil Commission practically demonstrated what was contained in it. It traveled through the different provinces, establishing municipalities and also establishing provincial governments.

Q. I show you a copy of a pamphlet printed in Spanish and English, containing the history of the United States, the Constitution of the United States, and the Declaration of Independence, published under the direction of General MacArthur, major-general of the United States Army. Is this the publication that you distributed among these people?

A. Merely the Constitution of the United States, printed and translated in Washington. If you would be kind enough to present me with a few copies of this pamphlet, I would be very grateful.

Q. I never saw this publication until a few days ago, and I will give you these; but I was informed that many of them had been distributed by the War Department throughout the islands. I show you another publication, dated 1899, in Spanish, containing only the Constitution and its amendments. Is this the document you distributed?

A. That is the one.

Q. That was published by the Government Printing Office at Washington in 1899. What effect had the speeches in Congress that quoted the Constitution of the United States and the Declaration of Independence on these people? Did it tend to pacify them or not?

A. If you will have a little patience I would like to tell you something about this. I want to tell you some truths. They may be bitter truths, but I feel obliged to do this.

Q. Unload.

A. Some of the speeches made by the Democrats in Congress have had a very bad effect here, for the reason that we have understood the following from these speeches. If we have misunderstood, I wish you would rectify the misunderstanding. The Democrats maintain the abandonment of the Philippine Islands by the United States; they state it is a danger to the United States to hold them, which abandonment would result in the Filipino people falling into the hands of the Chinese, the Japanese, the English, or the Germans.

Therefore I tell it from my heart and very frankly that we feel as though we have a great grievance against the Democrats of the United States when they express these sentiments. Dr. Washburn here is a witness to the fact that when some of the Democrats came here I felt as though I could not meet them on account of that feeling that I had formed.

Q. What Democrats came?

A. I mean when your party arrived. I hope you will not feel hurt at all because I speak the truth to you.

Q. What party do I belong to?

A. According to the newspapers you belong to the Democratic party. I do not know. I have seen in the papers here that the Filipinos were very much insulted by Congressman WEEKS.

Q. I think they have a right to be. I don't think that the Filipino people are savages and I never did think so, and regardless of whether Mr. WEEKS is right or wrong in his conclusions it was very impolitic and unfortunate for the authorities here for him to express himself as he did, and I regret it myself.

A. Thank you.

Q. A great many have spoken to me, the Americans here as well as Filipinos, the Americans themselves regretting it, and for the reasons I have stated. Now, the Democrats in Congress and out of it believe that the Constitution follows the flag and that the Filipinos, when the treaty made at Paris became a law of the United States, that the people of the Philippine Islands, and Porto Rico as well, were entitled to have and did have the full protection of this Constitution which you have read. Do not the Filipinos want the protection of the American Constitution?

A. In the perusal of the Constitution it divides into two parts. The first part, which is the preamble, constitutes the American national soul. The second part consists in the external political rights. In order to apply this Constitution to the Philippines one should know that Roman principle "Distingue tempora et concordabis jura."

Q. Do the Filipinos want the protection of the American Constitution or not?

A. We must not apply it all at once, only for one reason, and that reason is the 11,000 miles that separate the Philippines from America. That factor alone will cause to be made a modification of the Constitution, of the application of the Constitution here in the Philippines. [Señor Buencamino here took a copy of the Constitution of the United States and referred to Article IV, section 3.]

Q. What do you want to say about that?

A. (Señor Buencamino now read paragraphs 1 and 2 of this section with reference to admitting new States and Territories.) By these rights and practical precepts of the Constitution I understand that first of all the preamble of the Constitution should be applied to the Philippines. Second, to educate the country in the English language and in American methods, the same as a soldier is trained in the handling of a gun, and after a certain time, when we are sure that the majority of the Filipinos can speak English and are familiar with American methods, then the Constitution in full can be applied to them, in the same way in which a general turns over a rifle to a soldier when he has learned that the soldier is fully trained in the management of it.

Otherwise those political rights would be the same as a gun in the hands of an untrained soldier, and instead of conferring the rights of liberty would have the contrary effect. There is no one in this country who can love these islands as I do. Through that love of my country I desire all of the rights of liberty and not the dangers of liberty. This, of course, refers to the interior of the nation. In so far as the protection of the archipelago on the outside, I ask for the full protection which the Constitution of the United States gives, so that the Filipinos can present themselves to the Japanese, the French, or one of any nationality as American citizens.

The greatest evil in the islands to-day is that the commerce, the industries, and the agricultural life are in the hands of foreigners—the Germans and the English—and it is this point that I desire the Congress of the United States to become familiar with and to act upon. As for the political rights of the Filipinos for the present, of course that is more of a visionary character and is not so material. It will be so until the Filipinos know how to speak English and are familiar with American methods. There is nothing further to state on that point.

Q. Do the Filipinos want to be citizens of the United States or colonists governed by the United States?

A. They want to be citizens—they want to be a Territory and afterwards become a State of the United States.

Q. Is that what you expect and the people now expect?

A. Yes.

Q. What has led you to believe that the Philippines will become a State of the Union and that the inhabitants thereof will become citizens of the United States?

A. The preamble of the Constitution. It can never become a colony. That signifies separation, and the preamble says it shall be a union; therefore it could never become a colony. If the United States is here, as I believe it is, therefore it can not do anything against the preamble of the Constitution, because it would be against its own soul. If Congress makes this a colony, then you will see the revolution return. Personally, I would leave the country and go to San Francisco with my sons, who are at school there. I would never return to the Philippines.

Q. The people of the Philippine Islands, then, do not want to be colonists?

A. They have a most horrible and terrible hatred against making this a colony, from the top of their heads to the bottom of their feet. You have no conception of what the Filipino people have suffered by being colonists.

Q. I have read all the history that I could find about the horrible mistreatment that these people have undergone for years and years and years. I deeply regret it, and sympathize with them all the more that they have undergone this torture. I think theSpaniards are born monsters and oppressors and I have no love in my heart for them and I am glad that they have been driven out of the islands.

I voted for the war in Congress to drive them out of Cuba, and I am glad that they are driven out of here, and I would do it again under the same circumstances. Is it a good policy for the United States to bring teachers here to teach English, build up the schoolhouses, build up the court-houses and other public buildings generally, and bring about peace in the islands? Is that a good policy? Is it a good policy, after the Government of the United States finds that the people here have become sufficiently educated and capable of making their own laws—of self-government, in other words—after they have become strong enough to have a strong army and a good navy, for the Government of the United States to give these people their independence rather than hold them as a colony?

A. I have formed a conception of the meaning of the word liberty which is not only the protection of interior security but also exterior security. There is a new factor in the life of this, the extreme Orient, which we should never overlook or forget in the study of this question which you have now submitted, which is the policy of expansion of all the European nations. When I contemplate that France and Germany, which are such enemies at home and in their own countries, are so friendly here, that England and Russia, which are such enemies in their own country, are so friendly in this country, I tremble at the idea of seeing the Philippines alone and independent.

It is absolutely necessary that the Philippines should be more powerful than the combined strength of these four ambitious powers in order to have the interior and the exterior security to give the necessary basis for the independence of the islands. We should not overlook the fact that the English have now some claims here for damages that they received during the war. The Germans have also similar claims, and the French. If the Philippines were left unprotected they would be divided up among the powers. Therefore, so far as the exterior, the full application of the Constitution should be put into effect, but not the interior.

Q. Do you think the laws of France, England, Germany, and all these oriental countries have been oppressive, more or less, that they are not as good laws as those of the Republic of the United States?

A. They necessarily have to be oppressive.

Q. Would you have the Government of the United States to become an expansion republic, hold colonies, and cease to be simply what it has been heretofore, a republic, or would you have it go on as it has been ever since it has been a republic?

A. In regard to that point I do not consider that I have sufficient knowledge to express an opinion. As it is a fact that the United States are here, I desire them to remain here. The question to me is whether the United States can retire with honor or not, knowing full well that if she does retire the Philippines would be at the mercy of the different powers.

Q. Do you think that the Philippine Islands will never be capable of independence and self-government?

A. Of course, whenever they become sufficiently powerful to withstand the attacks of the European nations.

Q. When they become in that condition, do you and your people want independence of the islands or to be held as a colony of the United States?

A. That is a mysterious point in the future that I think no one is able to solve yet. I can cite, for instance, California, which is a very rich State, and will never wish to separate from the Union.

Q. California is not a colony, but a State.

A. Of course when the Philippines become a State they will never desire to be separated.

Q. But suppose you were never to become a State of the United States, and do not become a State of the United States, do you want to remain as a colony of the United States?

A. No. From that moment there would be another revolution. I can assure you and the Congress of the United States that if this was made a colony an insurrection would take place at once. In order not to be part of that revolution, from that moment I will leave the islands for the United States.

Q. I do not want, I have never voted in Congress, and I never will vote in Congress, to hold these people as a colony; but as soon as they are capable of self-government, and I find that fact, I shall vote, and so will the Democrats, to give them independence rather than to hold them as a colony. Does that policy satisfy you or not?

A. As I have already stated, in order to be independent we must come to that state when we can resist those four powers.

Q. How does this policy suit you and your people? To educate the people, set them up in their schools, their churches, their court-houses, get every thing working smoothly, then after we have done this we will say to them, "You are strong enough to stand alone as a nation among the world, and you are entitled to your independence, and we will give it to you." Does that policy satisfy you and your people or not?

A. No. That would not work, because those that are impatient will think possibly they can get to that state in five or ten years. It is very doubtful if we will reach that state.

Q. How long will it be before you are able to stand alone and have your own government?

A. Whenever all war is over in the world, whenever Germany is no more, whenever the Filipinos have so much strength and force as to be able to face Japan, then we will be able to stand alone. Only then.

Q. Then, when all the world quits going to war, and the nations of the world love each other, then the Philippine Islands will be able to stand alone. Is that what you mean?

A. No, not exactly what I mean. Whenever England and Germany get to be weak nations like Spain is to-day, and when the Philippines are strong enough to face Japan, then I think they will be able to have their independence.

Q. Then, when the Filipino people are capable of maintaining their independence, they want it?

A. Naturally.

Q. And that is what you expect?

A. At present we can not hope for that. Possibly in a hundred years.

Q. Why do you think it will take so long for you to be able to maintain your independence?

A. Due to the European interests that are here now. It takes centuries to wipe out an empire like the Roman, the Spanish, or English empires.

Q. The thirteen American States contained about three and a half million people when they declared their independence. You now have 10,000,000 people in these islands. What makes you think that it will take so much longer for your people, although they may be weaker naturally than the Americans, to be able to assert or, at least, receive their independence and maintain it than the Americans?

A. For the reasons given in that phrase, "Distingue tempora et concordabis jura." Had the European nations the rapid means of making warfare that they possess to-day at the time the thirteen original States existed, then the United States could not have gained their independence. England has a squadron here, also Germany and Japan.

Q. Your idea is that you are afraid that if given your independence, even when you are capable of being independent and maintaining your independence according to American standards, you are afraid that foreign nations will gobble you up?

A. That is evident. If they will swallow China, which has more than 400,000,000 people, is it not a fact that they would do the same here?

Q. The American Government has been to China, too, and that question has not been settled as to whether it will be swallowed or not. You want the American Government to hold on to the Philippines for all time to come to prevent foreign countries from gobbling these islands up?

A. Yes; and in addition to that, I wish that the Filipinos would be American citizens, or could be. I see no reason why they should not be American citizens. Russians, Englishmen, and others go to America and are admitted as American citizens, and I see no reason why the Filipinos should not also become American citizens.

Q. Do you believe that you are an American citizen now?

A. In the sense of the preamble of the Constitution of the United States I think I am, because no one could do me any injustice. The United States is protecting me and no one could disturb the security of my home, the United States defends it; no one can take away my individual rights of liberty and other personal rights, because I am protected by the United States.

Q. Do you want free access to the United States? Do you want the right to go to the United States when you get ready and the right to free markets in the United States from these islands, taking the produce of the islands to the United States to be entered free?

A. This question that you have brought to me is one that should be taken into account before deciding it—the fact of the great distance of 11,000 miles between the Philippines and America.

Q. Between all the States and Territories that you see on that map [a map of the United States hanging on the wall] the people have the right to free access, to go from one State and Territory to others. Now, then, what effect would it have on your people to say to them, "You shan't bring your produce to the United States free, but must pay a tariff?"

A. Absolutely no effect whatever. Commercial expansion obeys no political question at all except in a tariff war.

Q. Do you think it is right to tax produce from the Philippine Islands that wants to come into the United States and not tax that that wants to come in from Alaska and Porto Rico?

A. At the present time there is no remedy but to accept the tariff here to-day.

Q. Is it right to make flesh of Porto Rico and bone of the Philippines?

A. No; that is an error, and that is why I want to make an explanation. The economic life of the Philippines to-day depends entirely upon that tariff. Commerce is paralyzed. There is nothing else that brings in revenue at present. The only means at present for getting an income is through the imports. The military government, after being here three years, has left $20,000,000, an amount which the Spanish Government has not left in over three hundred years, and the reason of that is on account of the tariff.

That is the reason why I said that the factor of the distance of 11,000 miles from the United States to the Philippines should be taken into account in considering this question. There will be very few goods imported from the United States here, and there will be very few goods leave the United States for this country, but from Japan, from Germany, and from other countries there will always be great imports to this country.

Q. What makes you think there will be very few imports from the United States to the Philippine Islands?

A. Due to the distance; that immense distance.

Q. How close are Japan and China to this place?

A. So close that we are always in the same sphere.

Q. Do those countries and the other near foreign countries furnish all the supplies and the imports that the people of the islands here need?

A. Practically all.

Q. Do you want the Chinese let into the islands?

A. That is inevitable.

Q. You want the Chinese turned in then?

A. Not only the Chinese, but all other races, the same as the United States has permitted heretofore.

Q. The United States has excluded the Chinese. They can not come in there now.

A. At present so, but not before.

Q. Would it be a good thing to let them come into the islands or keep them out?

A. Admit them. The reason for that is because we have only 22 inhabitants to each square kilometer (a little less than a mile—3 miles equals 5 kilometers). There is no race in the world that fulfills the precept of God as to multiplying and growing like the Chinese. The Philippines need at least 200 inhabitants to the square kilometer.

Q. How old are you?

A. Fifty years old.

Q. What is your business?

A. I am a lawyer by profession.

Q. What business have you now?

A. In addition to being a lawyer and practicing law, I possess a number of farms and small properties.

Q. What position do you occupy with the Government here?

A. Member of the civil-service board.

Q. How many members on that board?

A. Three.

Q. Who?

A. Dr. Washburn, Mr. Pepperman, and myself.

Q. What salary are you receiving now as such commissioner?

A. Five hundred and eighty-three Mexican dollars per month.

Q. Are the other commissioners receiving the same amount?

A. Yes.

Q. I have been told by those who said they saw the act, and I have read it in history, that when Aguinaldo was stationed here in Cavite he flew the Filipino flag in the Manila Bay on his vessels. Is that true or not?

A. Yes.

Q. Was any objection made to it?

A. There was an objection from the French squadron.

Q. Who did the French squadron make the objection to?

A. To Admiral Dewey.

Q. What did Admiral Dewey do about it?

A. The objection was raised over the fact that the Filipinos took a Spanish vessel belonging to a tobacco company here. The majority of stock is held by French people in that company.

Q. What did Dewey do or say about it?

A. When the French consul went to Dewey with his explanation, Dewey wrote to Aguinaldo to arrange the matter. Aguinaldo still preserves the letter. I was put in charge of arranging the affair and therefore am familiar and can give you full particulars.

Q. I have been informed that Admiral Dewey saluted Aguinaldo's flag. Is that true or not?

A. The American soldiers saluted the Filipino flag. A Filipino boat had a conflict with a German boat and they asked for help from Admiral Dewey, who gave them aid.

Q. That was the fight in Subig Bay? Say yes or no; and tell me whether or not Admiral Dewey or any of his officers saluted the Filipino flag.

A. Yes. I myself, being on Aguinaldo's boat, as he passed they would salute Admiral Dewey and he would salute in turn.

Q. Were the relations between Aguinaldo and Admiral Dewey friendly up to the time he left there?

A. The relations were friendly to such an extent that had Admiral Dewey not been taken away he would have prevented all the trouble—everything. Aguinaldo wept the day Admiral Dewey left. As a parting gift, Aguinaldo presented Admiral Dewey with his most treasured jewels, a souvenir which he had, which was a dagger mounted with diamonds.

Q. What did Admiral Dewey do or say when he presented him with this gift?

A. He thanked him very much, and advised him to be guided by General Otis in everything that he did.

Q. What makes you think if Admiral Dewey had remained here there would have been no trouble?

A. By the departure of Admiral Dewey Aguinaldo understood that General Otis would deceive him.

Q. What made Aguinaldo believe that General Otis was going to deceive him?

A. He said that he had never had any relations with General Otis and did not know him, because he was very friendly with Admiral Dewey and when he left he thought that General Otis was going to deceive him.

Q. The relations, then, of Admiral Dewey and the Filipino leaders and all were very friendly during the stay of Admiral Dewey in Manila?

A. Yes.

Q. Do you remember the time the Filipino was killed out here when the battle began at the Santa Cruz bridge?

A. Yes.

Q. What caused that to occur?

A. The Filipino troops were in Ermita, Malate, Tondo, and Santa Cruz, and facing them were the American troops. The question arose whether they were friends or enemies, but I have been informed that both Aguinaldo and General Otis had given orders that no shots should be fired between the Filipinos and Americans. It appears that this soldier who passed by the American troops made some bad gestures toward the American flag. Some hot-headed American officer gave the order to kill him and it was done. That is the conclusion we came to from the best information we could get.

Q. What was the reason why Aguinaldo did not declare war at that time?

A. A great many of his generals urged him to begin war at once, using as an argument that at that time there were only 9,000 American soldiers here, whereas there were 10,000 Filipinos.

Q. Why did he not begin then?

A. Because Aguinaldo always hoped to have a better understanding with the Americans. All the good intentions of Aguinaldo toward the Americans were lost on the night of the 4th of February, 1899. Before that time I can take oath that Aguinaldo's intentions were the very best toward America.

Q. Where was Aguinaldo when this shot was fired?

A. In Malolos.

Q. How far from this bridge?

A. Thirty-six miles.

Q. Had the Filipino soldiers or the American soldiers, or either, been going backward and forward over this bridge previous to this shot?

A. Yes.

Q. How came they to do that?

A. Because they were very friendly in Cavite.

Q. Was this the first time that a shot had been fired by an American at a Filipino or by a Filipino at an American because they had gone across this bridge, or not?

A. There was another affair of that kind in Cavite before this. It was the other way, though—some Filipinos killed an American soldier.

Q. How long before this?

A. In June.

Q. How far from the city limits of Manila was this bridge where the shot was fired?

A. About 2 miles.[a]

Q. Did the limits of Manila city go out to Santa Cruz Bridge or did they stop 2 miles from there?

A. It is within the city.

Q. Do you mean that Santa Cruz Bridge, at the time this shot was fired, was within the limits of Manila city or not?

A. It is within the limits.

Q. When was it brought within the limits?

A. A long time ago; in the time of the Spaniards.

Q. I am much obliged to you for this unexpected pleasure of meeting you, and very glad to get this information from you.

[a] After this answer was given, the interpreter, Mr. Ferguson, had a conversation with Buencamino in Spanish or some language which I did not understand, and then I asked the question again, "Did the limits, etc.?" and Mr. B. changed his answer, as shown.—JOHN W. GAINES.

A. I am the one who is glad to have this interview, as it affords me an opportunity to judge of the Congress of the United States. I wish you would ask your Democratic members not to abandon the Philippines to the Japanese, the English, or the Germans.

Q. That never was proposed. You have been misinformed, and that is a slander on the Democratic party, of which I am a member.

A. I told you before that I had to tell some bitter truths.

Q. It has given me great pleasure to hear you. Did you ever read any speeches of Mr. McKinley; did you ever hear Mr. McKinley say that forcible annexation was criminal aggression? [Interrupting, Buencamino said "yes."] I do not believe in that and the Democratic party does not and never did and never will. Where did you get your opinion of the Democratic party?

A. I get 15 or 20 American newspapers in every mail.

Q. Give me the names of some of the papers.

A. New York Tribune, Evening Post, New York Times, San Francisco Chronicle, and two Boston papers.

Q. All said that the Democratic party wanted to run off and leave the islands?

A. I have seen that in the Democratic platform, which asked for the abandonment of the Philippines because the islands were a danger to the United States.

Q. Did you ever read the speeches of Senator HOAR?

A. He is better fitted, and has divined the conditions in the Philippines better than any other man.

Q. His speeches better define the conditions, possibilities, etc., of the Philippines than any other speeches?

A. The best of all.

Q. You are willing and your people are willing to stand by Senator HOAR and what Senator HOAR wants, and that is what you want and your people want, and nothing else will satisfy you?

A. Yes.

Q. Did you ever read the speech of Mr. LITTLEFIELD of Maine?

A. I did not read it, but have heard of it.

Q. What did you hear about LITTLEFIELD'S speech?

A. I do not remember very well, but think I have been told that Mr. LITTLEFIELD expressed the opinion that the Constitution follows the flag.

Q. You believe that, and it is what the Filipino people want?

A. They do not only want that, but they understand it to be a fact.

Q. Have you ever read the Declaration of Independence?

A. Yes; I have read it thirty times.

Q. What do you think of it? Pick out some portion you would like to read to me showing your sentiments.

A. After reading it thirty times it is all sacred to me.

Q. What do you think of this: "We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness?"

A. That accords with the sentiments of my heart.

Q. Now, then, you believe in the Declaration of Independence and the Constitution of the United States, and your people want the full benefit of those instruments?

A. Yes.

Q. And nothing else short of that will satisfy your people?

A. Yes.

Q. What per cent of the Filipinos in Manila can read and write?

A. It can be said that there are more Filipinos who can read and write in the archipelago than Spaniards.

Q. I want to find out what per cent of the Filipinos can read and write here in Manila.

A. In Manila alone? I can assure you that there are 50 per cent in Manila but not all in the Spanish language, but in different dialects.

Q. Where were you educated?

A. Here in Manila. [He is a full-blood Filipino. E. O. Johnson.]

Q. What per cent of the Filipinos can read and write in Luzon?

A. Twenty-five per cent, and in all the Visayas about the same, but in their own dialects, because the friars desired them to read about religious matters.

Q. But they can read and write in their own dialects?

A. Yes.

Q. What per cent of the Filipinos in the Philippine Islands can read and write?

A. Twenty-five per cent.

Q. What per cent in the island of Jolo can read and write?

A. I have always understood that Mindanao is excluded in speaking of the Philippines.

Q. Do you believe in slavery?

A. No.

Q. Does slavery still exist in these islands?

A. No. During Spanish times, yes.

Q. Are you not mistaken about that? I saw some in Jolo a few days ago, and they were in the schoolroom at that.

A. As I told you, I always understand in talking, and whenever I speak about the Philippine Islands that I exclude Jolo.

Q. Do you know that there is slavery in Jolo?

A. Yes.

Q. No question about that?

A. No. That is one of the difficult questions here.

Q. They have a harem down there, I am informed.

A. Yes.

Q. That is part of the religion of that island?

A. That is right.

Q. Slavery is part of their religion, too?

A. Yes.

Q. What per cent of the people of Jolo can read and write?

A. In Jolo the greater part of the people can read and write, but it is in Arabic.

Q. When I found this slave boy in school I asked his history, and found that he had been sold six times, and his owner was then trying to make another sale. I called the attention of the military authorities to it immediately, and I was informed that slavery was still going on on the Sultan side of Jolo.

A. That is one of the greatest questions in the Philippine problem.

Q. I was reared down South, where they had slaves before I was born, but I never saw one until I came to the Philippine Islands. I am in favor of the Constitution of the United States, which prohibits that. Have people in other parts of the islands read the Declaration of Independence and the Constitution of the United States?

A. At present, yes. It is very well published now.

Q. Through the document sent out by the officers of the United States?

A. No. They were distributed through the islands by the committees of the Federal party. Of course I do not know about what the military authorities have distributed.

Q. As a matter of fact, they have distributed 50,000 copies in the islands, as I am officially informed to-day.

I again thank you for your courtesy and the information you have given me.

E. O. JOHNSON, *Stenographer.*

I certify that the above as interlined is correct.

E. O. JOHNSON.

No. 2.

ON BOARD U. S. ARMY TRANSPORT SHERIDAN,
Nagasaki Harbor, October 27, 1901.

Interview between M. H. Hollingsworth, of Jacksboro, Tenn., late regimental quartermaster-sergeant, Fourth Tennessee Volunteers, later second lieutenant, Twenty-ninth Infantry, United States Volunteers, and Mr. John W. Gaines.

[L. E. Appleby, stenographer.]

I was in the secret service of the police department of Manila for nearly a year past. The Filipinos want independence. They are waiting now to see what Congress will do for them. That is what they tell me and I have talked with a great many. I have lived with a Filipino family in Manila since I first came there; that is, at their residence, Lorenzo Rosario; he was formerly chief quartermaster to Aguinaldo and surrendered in 1898 to General Otis and took the oath of allegiance.

He has said to me often that he would never have done so if he had seen any chance of the Filipinos gaining their independence by conquering the United States. He has intimated to me that the American Government broke faith with the Filipinos with reference to their independence, but would not come out and say this in so many words, but the effect of what he did say was to that effect. Many Filipinos have said to me that Dewey's plan was when he crushed the Spanish fleet in Manila Bay to leave the islands under the control of Aguinaldo and his government, but the Spaniards prevailed on him to remain to prevent the Filipinos from murdering them, which they believed they would do.

The Filipinos further said to me that Dewey brought Aguinaldo to Manila, which he did, from Hongkong on our own vessel, the *McCullough;* he unloaded him at Cavite, gave him a large number of arms, 25,000 arms I am told, new and old, including cannon. The Spaniards had armed a large number of native Filipinos and had them in their ranks and were preparing them to oppose the advance of the Americans, and that after Aguinaldo came to Cavite these native soldiers, thus armed, deserted the Spanish ranks and went over and joined Aguinaldo and the American forces, who were approaching at that time up about Pasay; and when the fight began between the American and Spanish forces, instead of these natives that the Spaniards had armed firing on the Americans, they fired right back into the Spanish troops. The Spaniards gave in and surrendered.

When the Spaniards returned to Spain they took all their papers with them, and we could never get hold of any of them—that is, the papers touching upon the surrender and its negotiations.

Rosario, with whom I boarded, was a member of the Malolos congress. At the battle of Caloocan he saw there was no chance to whip the Americans and he came in and gave up to General Otis. The Filipinos had organized a government all over the Philippines, except in Manila, and they were working satisfactorily under them. Aguinaldo had taken every Spanish post outside of Manila; he had crushed them up to this place.

I never heard of Aguinaldo and his forces committing any depredations in the city of Manila on the day of or after the fall of Manila City. I have been all over the territory where his forces bivouacked on the day of the battle and after the battle of Manila City until they were forced back by the Americans.

Q. If the Filipinos were given their independence, or if Congress would even now promise them their independence, would they lay down their arms and become peaceful?

A. That is all they want. I have heard them talk of it often and often.

Q. Do you think the failure of Congress to do this is the cause of the continued warfare over there against the Americans?

A. Yes; they have talked to me about that, too. You can get more information in Manila than you can out in the provinces. The headquarters of the friends of the insurrectos is in Manila and always has been. Everything mostly that they get to carry on the war is furnished them by allies in Manila. There is more insurrectionary feeling in Manila than any place else, according to my information and my impression and my judgment. It is not as visible to the naked eye as where they are fighting, but, nevertheless, it is there, and it would not surprise me to hear of an insurrection in Manila before the end of six months. I have been in several provinces—Laguna, Morong, Marinduque, Cavite, Launion, and Romblon.

Q. What per cent of the people in Manila city can read and write English?

A. I will say about 1 per cent. There are a lot of French, Spanish, and German who speak English. Of the Filipinos about one-half per cent speak English.

Q. How many can read and write Spanish?

A. Thirty-three and one-third per cent.

Q. What per cent can read and write their own dialect?

A. About 25 per cent. I have not thought about this particular question before. In the provinces more can read and write the native dialect than in Manila. In the provinces you strike a better class; they are more like the farmers in the United States. About 33⅓ per cent in the provinces can read and write their own dialect.

Q. Do the Filipinos like the Americans?

A. Down in their hearts I don't think they do. Outward appearance seems favorable, but it is only skin deep. They want us to protect them, but they would like to have their independence with the protectorate of America.

Q. Do you find any leading men, men of education, in Manila or out in the provinces?

A. You find a great many in Manila and a great many out in the provinces, very smart men, educated in the best schools of Manila, Singapore, Colombo, Hongkong, and in the schools of Europe, and they are all leading citizens in their community. All these people take side with the insurrectos. They have talked to me a great deal about our laws and customs, Constitution, Declaration of Independence, and the principles of our Government, and also about the separation of church and state; they can't understand it. They want the church and state separated over there, but they don't understand what the effect will be because they have been run so long by the church.

The friars by their oppressive, outrageous, and slanderous conduct started this trouble over there. If you owed a friar anything and didn't pay it promptly he would double it every year. If he wanted your property and you didn't sell it to him at his price he would have you put in prison and take it anyhow, and if he wanted to cohabit with any member of your family from your wife down he would force the husband and father to permit this, which has caused intense and justly rebellious feeling of the Filipinos toward the Spaniards, who permitted the friars to commit these outrages; in fact,

Spain has governed the Philippine Islands through the friars, and they have done as they pleased.

The most attractive women and enlightened men are the daughters and sons of friars by just such unlawful and indecent relations with the wives and daughters of the Filipinos. This is so in 90 per cent of this class of Filipinos that you will meet.

Q. Can we withdraw the military from the Philippine Islands?

A. No, sir; and retain the islands.

Q. How much military must we keep there?

A. There are about 40,000 troops there now. There was at one time 60,000, and there never was too many. If Congress says to these people that we propose to give them ultimately their independence with or without a protectorate, we can withdraw one-half, I think, inside of three years, and by that time, or before, we may be able to withdraw all of them, but we have got to promise them that to do so, and they have got to have their confidence in us restored. We certainly have not got their confidence now; there is no question about that.

Q. If Congress had declared at the beginning that we did not propose or want to hold on to these islands permanently, but that we would ultimately give them their independence, would there have been, do you think, a clash between the insurgent forces and our authority in the Philippine Islands?

A. No; there would not. They were promised that by Dewey, and he went back on the promise; that is my information, and those people surely believed it, and I believe it myself from all I have read and heard on the subject.

Aguinaldo or any of the Filipinos have never asked for a cent of pensions, claims, or otherwise for their services which they rendered us when we were fighting the Spaniards, which is one of the many things which goes to show me that independence was promised them by Dewey, and he led them to believe that, and they acted under that belief, and we certainly got the benefit of their services when we needed them. If we intend to keep those islands without making any concessions along these lines of independence and local self-government, there is one thing certain, we have got not only to keep the army we have in the Philippines, but to increase it, and also to increase the Navy to patrol the waters.

Q. Are the Philippine Islands capable of supporting this army and navy?

A. Not for ten years to come. They have no cattle, no hogs, and no horses, and no agricultural implements. They import about 3,000,000 bushels of rice from China. They have not the facilities to transport their products to the market. They have no saw mills, etc., to work with to put their timber on the market, and thousands of them have been killed. Some of the towns to-day have 66 per cent less population in them than they had in 1896. I know that because I organized several pueblos in the provinces of La Union and Romblon, and I investigated their conditions. I have a census which I took in organizing the government and schools, showing the population in 1898 and 1900. Maj. Cabell Minor, United States volunteer surgeon, assisted me in these organizations.

Q. What are the capabilities of the Filipinos in learning English and being enlightened?

A. They are very bright and quick to learn English. The adults are slow to learn. They are poor laborers.

Q. Is this a white man's country?

A. No.

Q. Can the white laborer work in the cornfields of that country?

A. He can work, but he won't live long.

Q. Why?

A. He is not acclimated to the atmosphere.

Q. Did you see any Spaniards working in the cornfields?

A. No; nor in the rice fields, either.

Q. How does it affect the white women?

A. It ruins them. They can not remain there more than five or six months. It gives them heart trouble and they fade away very fast, and even the men fade away. I feel 50 per cent better to-day at Nagasaki than I did two weeks ago in Manila. My flesh is hard and I feel more vigorous. The Army, from the officers down to the privates, are continually asking for leaves of absence to get into a cold climate or to go back to the States on account of their health; they generally go back to the States. Every transport is crowded with sick soldiers and Americans returning. There are more than 350 sick soldiers who left Manila, and now there are over 400, besides 20 insane soldiers aboard.

Q. Does that climate affect Americans mentally?

A. They lose their ambition mentally and physically. He wants sleep in the afternoons, and that grows on him. Before American occupation the Spanish merchants informed me that they never opened their doors from 12 to 3 in the afternoon, but now the most of them do, but it is on account of the rush in trade. The majority of them even close their stores now.

Q. Does or not permanently holding the Philippines strengthen the United States from a military standpoint?

A. No; it does not.

Q. Why?

A. Because if any of the foreign powers were to fall out with us they would strike us in the Philippines; very reasonable, just as we struck the Spaniards there. We could have gone and struck the mainland of Spain, but we struck the Philippines because it was a weak place. If we remain there we must make the Philippine Islands just as impregnable as any part of the United States, because our sovereignty is there, and to crush it there is just as bad as to crush it in the United States.

We run the risk of being captured there and then if we don't appease the Filipinos by giving them what they want, they will strike us in the back or any other way they can. Already they have said to me that the reason we locked so many of them up at one time and deported so many to Guam was because we were afraid some other nation would strike us, and they (the Filipinos) would unite with them. They have said this to me time and again.

As I said to you to-day, they knew they practically had their independence before Manila City fell, as they had conquered all the outposts in the Philippines, driven them all in, and had the Spaniards practically starved to death; had their government established in 5 miles of Manila, in Cavite Province, and the people were satisfied with it and loyal to Aguinaldo and his policy, and they stated to me that they were satisfied. They had the Spaniards in a hole and in six months would have accomplished their desires, and now that they haven't got their independence and we haven't said that we were going to give it to them they feel sore and disappointed.

Q. What do you think of the conditions in the Sulu Archipelago?

A. My information is absolutely reliable that we may have war with the Moros before we reach San Francisco. We are going to have trouble sure with those people if concessions are not granted that they have asked for, which I do not believe will be granted. I do not believe they will ever give up to our laws and customs. Before they will surrender they will fight to their death, and we will have to exterminate them or make concessions which will be inconsistent with our policy.

I have talked to Filipino soldiers who were in the Spanish army down there, and they have told me that one Moro will attack a regiment and will kill three or four men before he can be killed. It is their religion that when they kill one man when they die they go direct to heaven. Part of their religion is to have slaves and harems, and they will never surrender them short of their lives. My idea is that we had better give them up and let them go. They will not give up slavery nor their harems, and we can not stand them, and they will not submit to our laws and customs, and they must do so, as there is nothing else left for them to do unless we exterminate them.

Q. Will it do to use the native soldier as a part of our Army?

A. There are two parts of the Filipinos. One portion will do and the other will not. Those who opposed the Spaniards and who were led by Aguinaldo will not do for us. Those who remained true to the Spaniards until their downfall will do if well selected. The former are largely in the majority.

Q. What makes you think that?

A. Because those who were loyal to Spain have been loyal to us, and they are composed of Macabebes and a very few Tagalogs. The Macabebes fight their neighbors and everybody else, because all the natives are opposed to them because they took sides with the Spaniards.

Q. Are there not other tribes that would make good soldiers?

A. Yes, there are; the Ilocanas and Visayans and a few scattered Tagalogs, if they are commanded by good American officers.

Q. Is it not common repute, however, that these native tribes, and particularly the Macabebes, commit various outrages upon the people and upon the women in acting as soldiers?

A. That is their reputation, and various charges have been filed against them for raping the women, murdering, and robbing. They have to be controlled absolutely along these lines with great vigilance. We must give them great credit for what they have done for us.

Mr. HOLLINGSWORTH. The Filipinos are great gamblers from the time they leave the cradle to the time they hit the grave. They will gamble by moonlight.

Q. What proportion of the land is owned by the masses?

A. Not over 15 per cent. The balance is held by the United States and the friars. Not the church, but the friars.

Q. Are the Filipinos as a race easily controlled; if so, by what means are they the easiest reached?

A. The Filipino is the easiest person controlled that I ever came in contact with by giving him honest, just, and upright treatment; treating him as you would your brother or a good neighbor, paying him what you owe him, showing him any courtesy that you would have him show you, and he will do anything he can for you. This has been my experience with them, and I have seen a great many in and out of Manila. I have been in the Secret Service for nearly a year in Manila.

I enlisted in the Spanish-American war as a private, and was mustered out as regimental quartermaster-sergeant, and served later in the Twenty-ninth Infantry, United States Volunteers, as a second lieutenant, and was offered various positions under the civil government in the Philippines, but I declined them all.

Q. Are you familiar with San Juan bridge, where Grayson shot the Filipino on February 4, 1899?

A. I am; I have been over it several times, both day and night.

Q. How far was it at that time from the limits of Manila city?

A. Not over a mile and a half. Efforts are being made now to include it in the city limits. The officials are working on a map that will include it in the limits.

Q. Were you in Cuba during the Spanish-American war?

A. Yes; I was in the city of Trinidad.

Q. How long?

A. I was in Trinidad four or five months. There is no question but what the Filipino is far superior mentally, morally, and physically to the Cuban.

No. 3.

Interview I had with Joseph G. Garcia, a young Spaniard in the employ as the interpreter of the United States Army, on board the *Sheridan:*

"I was born in Cadiz, south Spain. I am 17 years old. I am an orphan. I came to Manila August 16, 1896. I can speak, read, and write English, which I have learned some little in Manila. Most of it I learned in the Fourth Infantry, United States Army, as interpreter of Spanish and Tagalog. I was employed by the United States Government April 1, 1900, and have been ever since. I began to work for the Fourth Infantry April 1, 1900.

"I have been interpreter for Colonel Baldwin and am now on my way to California to go to school. I have talked to General Trias and other leading Filipinos. General Trias said (and all the others) that the Filipinos wanted, and still want, the same freedom and rights the Americans have; that they expected them. I am satisfied that is what they want. I saw the battle of Manila Bay and city both. I am convinced if independence was given or promised the Filipinos, they would be peaceful. About 45 per cent can read and write Spanish and Tagalog in Cavite Province.

"I have been nearly all over that province of about 120,000 people. Governor Trias is governor by appointment of Governor Taft, and, as far as I can see, he is a good man, all right. He is an educated man of the Manila schools. He had to surrender. He was very sick when he surrendered. His army had nothing to eat and he was surrounded by the United States troops. He told me that he and his soldiers were almost starved. He had 125 soldiers, including him, and 117 rifles. There were 2 colonels also of this number. At least 8,000 native soldiers in the Spanish army at Manila, who left the Spanish army, took their arms and went over to Aguinaldo when he came to Manila.

"The insurgent forces aided the Americans to fight the battle of Manila City. When these native soldiers left the Spanish army there remained about 3,000 native soldiers who could not get away to join Aguinaldo—those who did were on the outskirts of the city and got away. The others could not. The Spanish soldiers in Manila could not escape into the country or mountains as the American army approached, but they could not do so because the insurgent army was on the outskirts of the city and they were afraid to go out.

"They were short of water and food, and had been so for thirty-seven days. They were shut off from all outside communication and could get nothing by land or sea. By surrounding the Spanish army this way the Filipinos were of great service to the American Army—Dewey cut off by sea and Aguinaldo off by land all supplies. The Spanish army could not have held out much longer under these conditions. They had nothing to eat, practically, and Aguinaldo had cut off the water.

"I was in the city all the time. I had an uncle in Manila, and my aunt sent me to live with him.

"Up to this battle the United States forces and Aguinaldo were friendly. He and his forces were excluded from Manila by American forces when the surrender was made to the American Army. They did come to Ermita and Malate. I heard of no depredations they committed. I lived out there before and after this battle of Manila, city and bay. I think I would have heard of any wrongs they committed if they had existed. I live right out in the same place and neighborhood that they were in. I saw them when they went out of the city five days or about after the city fell.

"I am going to try and work my way through school in California. If I

can't I will come back to the Philippines with Colonel Baldwin. I have come in contact with many Filipinos in the islands. I was paid $25 gold and subsistence as interpreter."

Colonel Baldwin introduced this bright little Spaniard to me in the Colonel's office and said that he was bright and honest as anybody, and he was going to try to have him educated in California. I wrote the young man's words down just as he spoke them, and he impressed me as he had Colonel Baldwin, who knew him well.

The young man said he was not a friend of the Filipinos, and while they wanted their independence, as stated, that they ought not have it.

No. 4.

An interview I had with a doctor major in the United States Army, written by his own pen:

I arrived in the Philippines June, 1899, and I have been on duty on the transports and at the different posts in the islands. I was also in China during the trouble there. From what I have read and observed, this is not a place a white man can thrive in by working in the open sun. He may live in the shade. He can not work on the farm.

I have noticed very many men strong and robust, of temperate habits, teamsters and soldiers, who managed to get along, but they soon broke down and gave in, as they could not stand the climate. The women seem to suffer more than the men and they fade away. They become anæmic, and, as in all tropical climates, their menses are irregular and the flow very large and increases, and childbirth is very distressing. That is the history in English colonies.

The figures reported in the States and out here are very misleading as to the percentage of soldiers who are sick. They are not purposely to mislead, but in effect they do. Many soldiers are carried on the duty list who are sick, and they will not go on the sick list because in this climate they did not improve so much when on the sick list—I mean they would not improve enough to induce them to leave the duty list to go on the sick list—and they could not go home unless their cases became chronic or until their time was up, so that they lag along on the duty list until they become sick, and rather than go on the sick list they remain for duty until their time is up and they are sent home. In a very sick or chronic condition they send the soldiers to the United States.

The death rate reported from the Philippines is misleading; for instance, those that actually die in the Philippines are recorded as dying there of course, but those who take sick and are sent to the States, some of whom die on the way and may die after arriving in the States, of course the Philippine climate is often the cause of both deaths; that is those in the United States and the Philippines. The official reports as of the deaths in the Philippines may show all right comparatively speaking, but when you combine those who actually die in the Philippine Islands and those dying after being sent to the United States of diseases contracted in the Philippine Islands the total shows quite a different condition of things when we read about it.

I have never been able to get at the number of deaths in the Philippine Islands plus those who die in the United States, owing to the diseases contracted in the Philippine Islands, nor have I been able to ascertain the number of deaths of soldiers in the States that contracted their diseases in the Philippine Islands. You must combine those who die in the Philippine Islands, or those who were taken sick while in the Philippine Islands who die, in order to get at the number of deaths caused by the Philippine Islands climate, and that is the way to get at it. It would be hard to get, and I have never seen an official statement showing the number of deaths in the States of soldiers who have been to the Philippine Islands and went home sick or were taken sick after they started and die plus the number of deaths in the Philippine Islands.

Men are doing duty in the Philippine Islands every day who in the States would not be permitted to leave the hospital on a pass; that I know from actual observation. They are short of men, and the soldiers realize that and avoid going on sick list. The conditions and surroundings are such in the Philippine Islands as to cause insanity to a certain extent. They are isolated away from civilization. Bad food, circumstances more or less distressing, is enough of itself to cause insanity, and it does do it.

Add to that the climate and the heat and the general depressing effects of the Tropics, and you have what produces insanity in the Philippine Islands. I am informed that when they return to the States many improve.

NO LOVE FOR AMERICANS.

Filipinos don't like the Americans. They say they can not see any difference in the fight they have been making for their independence and the fight that American colonists made for their independence. Many of them have talked to me along these lines. There are a few merchants and property owners around Manila and some of the larger towns who profess friendship for the Americans for personal reasons. At least, many say so, because it is to their interest to protect their property; but the masses of the Filipinos want independence.

I don't think anything else will satisfy them. If independence had been given them at the beginning when we took Manila city we would probably had no trouble with them, and if Congress would now pass a law declaring that at a future date their independence would be given it would be a great stimulus toward having absolute peace in the islands, and I believe that all warlike deportment of the Philippine Islands would end.

The trouble is they don't understand what we want to do with them or what we are going to do with them, and they never have understood it. They lack confidence in our work. They have been deceived so long and so often that they look upon all white men the same. Their idea is that we propose to make all that we can out of the country and go away, and many of them have asked me why it is that the Americans came here and soon returned to the States. They say that it shows that the Americans don't care anything for them or their country, but they merely go there to make money and then leave. They have asked me why I didn't bring my wife and family there, and also why others did not bring their families there; and think it strange that we want the country and do not care to live there.

The death rate among children is very high, but of course the birth rate is also high, as it is in all tropical countries, which make up for the high death rate.

The Filipino feels that there are enough learned and educated men in their ranks to hold office and make their laws and execute them. In the smaller towns the lesser fry can manage the affairs; in other words, they have enough ability in their own ranks to run their country in a manner satisfactory to themselves.

Taking our management of the Indians in America and comparing it with the way that the Spaniards have governed the Philippine Islands, I believe the results are better than the Spaniards have been given credit for. They have built their cities and they have built up a certain amount of trade, and they have built schools. Until 1896 the white man could travel anywhere in the islands with impunity. Of course, now and then there were certain ladrones who would attack them, the same as in America.

The Filipinos won't talk to any Army officer much, and I have only been able to get information from them upon which I base these statements as I would get more or less in their confidence. I have seen and talked with a great many in the different provinces in which I have been. I have been in Manila, Batangas, and the Camarines, in and about Nueva Caceras, where there are a great many insurrectos, but now the neighborhood in and about Nueva Caceras has been practically pacified.

BRUTALITY.

I have not seen with my own eyes any brutality visited upon the Filipinos by the American soldiers, but I have sat for hours and listened to experiences related by officers and soldiers who told of punishment that they had seen visited on the Filipinos that I did not believe any white man would visit upon any human being, and certainly not an American soldier; but, being protected by their uniform, they have done so.

This brutality is the exception and not the rule, and has been deemed absolutely necessary by our troops, yet it is deplorable that we have to resort to such means to accomplish our ends; possibly I am a poor judge, being a civilian. I have rather admired the Filipinos for refusing to turn traitor upon his neighbor or comrades, and I have heard officers express the same sentiments. I have heard men speak admiringly of the Filipino for so doing, admiring his pluck and grit. The way they have stuck to their neighbor in this would do credit to any white man, and I have heard many of them say so.

MUTUAL BRUTALITY.

The Filipinos have mistreated our soldiers, in some instances shockingly so, but I have not thought that the American soldier should condescend to their plan of punishment as a retaliatory measure. I don't think we ever did so with the Indians. We have killed their soldiers in open battle and have captured and executed them, but this is not the kind of punishment I speak of; that is legitimate warfare. It is brutality I speak of, and that has made the Filipinos revengeful. If this brutality had been eliminated it would have been better. I don't believe two wrongs make a right.

These people are entirely capable of governing themselves in a way that is entirely suitable to themselves. There is no question about that. But to say they are capable of the civilized Government that we have at this date in the United States is going too far for them—too much for them to grasp at this moment. We have had to work for over two hundred years to get to our present status as American citizens.

These people are capable of running their government, creating one and running it to suit themselves, and one with which they would be entirely satisfied. They have a great many very able men in their ranks, educated lawyers, doctors, etc.

The Spanish friars are very much disliked wherever I have heard them spoken of, and the people, as a rule, are against them. The Filipinos love their own padres and the padres sympathize with the Filipinos, very naturally.

I can not see any possible benefit that our Government will derive from holding onto these islands permanently, but do see the opportunity of being involved with other powers, and I think the very fact of having these possessions so far from home would be the cause of internal discord at home and troubles with foreign powers. I think something should be done to get rid of the islands. You can not arm and trust the native, as he will use these arms against you in case of foreign war in hope of gaining his independence. We will have to keep an immense army and navy to defend the sovereignty of the United States, which of course would be conducted, in the first place, in the Philippine Islands.

Instead of the Philippine Islands strengthening the United States militarily, it weakens her and increases our expenses far beyond any possible hope of benefits. It weakens our Monroe doctrine, if it doesn't destroy it. It opens up a way for them to attack the Monroe doctrine, and they are now talking about it, and they have a perfect right to do so.

Naval stations would accomplish all needed without the islands. The Army officer is not in favor of the islands, though many youngsters who were recently commissioned are, and they are the least able to judge with their limited experience.

The possibility of the future commercial value of the Philippine Islands does not warrant the jeopardizing our national welfare, especially in a country as young as ours.

No. 5.

An interview I had with a leading Army official:

Q. How long did you serve in Cuba and how long in the Philippine Islands in the United States Army?

A. I was in Cuba during the Santiago campaign and in the Philippine Islands for over two years.

Q. Which of the two peoples, the Cubans or the Filipinos, are the superior race?

A. I think the Filipinos are very superior in intelligence and education to the Cubans.

Q. How about morals?

A. They are superior in morals also.

Q. Are the women moral in the Philippine Islands?

A. They are, I believe.

Q. Whatever the immoralities are, they are confined almost, if not entirely, to the other brown races?

A. Yes. To the Chinos and to what are known as the Mestizas and Japanese.

Q. Did you ever see a drunken Filipino?

A. I think during the entire time I was in the Philippine Islands I never saw but one Filipino under the influence of an intoxicating drink.

Q. Do you know what he drank?

A. Some of the officers had some wine and delegated this Filipino to carry it, and he drank some.

Q. Are the Filipinos quick and ambitious to learn?

A. They are.

Q. Aren't the children very bright?

A. Yes; I consider them so.

Q. What per cent can read and write their native dialects?

A. About 90 per cent of the population are civilized, and I believe all of the children have learned to read and write their native language, and generally before the age of 10 years.

Q. Does that apply to the adults too?

A. Of course if the children learn, the adults already know.

Q. Do they have newspapers and other periodicals?

A. They did until our occupation. I have in my possession copies of periodicals published in Tagalic and Spanish, and these periodicals I speak of are of a very educative nature. They discuss such subjects as geography, physics, and nearly all branches that are taught in the schools, and give definitions, etc., which are very educative in their nature.

Q. Do they discuss politics any?

A. They discuss politics, religion, and nearly all branches of science. In brief, excluding the savages—and they are back in the mountains—nearly all, or quite all of the Filipinos can read and write, and do read and write their native dialects, and their newspapers are many and they are ably

edited. I could not say that they were many, but I think had a pretty good circulation.

Q. They were all suppressed by American occupation?

A. I could not say that they were suppressed by American occupation, but they were discontinued owing to the unsettled state of affairs.

Q. Did you ever see anything about the American Constitution or the Declaration of Independence or American laws in these papers.

A. I don't know that I have.

Q. You don't remember?

A. No; not perfectly. I have seen the American Constitution more or less discussed in what is called the "Republica" in the early days of our occupation of the islands, and they discussed our American institutions to some extent.

Q. Are the Filipinos people of refinement and decorous in their attentions to guests?

A. Very.

Q. And they expect and demand the same of one who is their guest?

A. Yes.

Q. Are they quick to resent an insult or oppression?

A. I have not known them to show any great resentment, but I do believe they are very sensitive.

Q. In other words, you mean that they expect to be treated deferentially?

A. Yes; and when treated otherwise they resent it.

Q. Did you distribute or did you see distributed any copies of the Constitution or Declaration of Independence in the islands?

A. There was an order published in which, as I remember it, the Declaration or Constitution, I don't remember which, was translated into Tagalog and Spanish and sent out to the Army. I don't remember to what extent it was distributed to the natives. Personally I had no opportunity to distribute them.

Q. It was translated into Spanish and Tagalic and it was either the Constitution or the Declaration of Independence.

A. I think it was the Constitution only.

Q. What effect did the distribution of the Constitution or Declaration have on these people?

A. Well, I don't know that it had any effect. I could not say. It is hard to judge.

Q. Did they ever talk to you about it?

A. No.

Q. What part of the islands were you in?

A. I campaigned various parts of Luzon and visited some of the other islands, Cebu and Samar, and some of the smaller islands that I don't remember the names of. We just went with the launch while lying in Cebu and Samar—in the vicinity of these two islands, however.

Q. You are familiar with these two islands and the people?

A. Well, I could not say. You can't get familiar in a week or so, you know.

Q. Well, you remained in the islands three years?

A. Oh, you mean the Philippine people?

Q. You think you are familiar with the Philippine people?

A. Yes; I do. I speak the Tagalic language sufficiently well to get along in conversation with them.

Q. Do you speak Spanish?

A. Well, yes; enough to get along; enough to converse with the Spanish.

Q. Do these people like to be called savages and Corabis?

A. I don't consider them savages.

Q. Do they resent being criticised as savages?

A. Yes.

Q. It is very offensive to them?

A. Yes.

Q. Did you ever hear of them being called Corabis?

A. I have heard them called all sorts of names, niggers, etc.

Q. Do they resent that?

A. Well, I said a while ago I had never seen them show any great resentment. They feel it very much.

Q. Are they superior to our negroes?

A. I consider them so.

Q. They are superior mentally and morally?

A. Yes; I consider them so.

Q. Are they not ambitious to be something as individuals, and something as a people?

A. Yes.

Q. They are superior to the Chinamen?

A. Far superior to them.

Q. Will it weaken us or strengthen us to permanently hold the Philippine Islands, from a military standpoint?

A. From a military standpoint I should say that it would weaken us.

Q. Why so?

A. Because it necessitates our having a large portion of our Regular Army in the Philippine Islands, where they won't be available in case of emergency, or an attack upon our country.

Q. Do you mean an attack upon this side of the world between the Atlantic and Pacific?

A. Yes; that is what I meant to say. The powers at which we would probably be at war would be European powers, and if it was defensive warfare we would not have the men immediately available for defense.

Q. You mean that we could not quickly defend the Philippine Islands if we were attacked there and we could not defend with the soldiers there the mainland of the United States?

Q. Yes; it divides our army, where they could neither be supported promptly or support others promptly.

Q. By remaining in the Philippine Islands are we more likely to get into complications than if we did not remain there?

A. Well, I could not say that.

Q. Are we not nearer to them?

A. Nearer to who?

Q. To the European powers.

A. No; I could not say that we are.

Q. How far away from China are we?

A. From San Francisco about 7,000 miles.

Q. How far is it from the Philippine Islands to China?

A. About three or four days' run.

Q. How did the troops hold out in their health in the fighting in China?

A. Well, I was not in China at the time of the fighting.

Q. How does the climate affect the white man in the Philippine Islands? In short, is it a white man's country or not?

A. I will say this: I was in Manila very little. I was out in the provinces most of the time with native troops. I heard a great deal of complaint in Manila among the troops about the climate. I had 14 American officers under me. Two of these had to return to America for their health, and 2 others were considerably affected by the climate. My health was excellent; but I had already had the yellow fever in Cuba, and was rather an immune from other fevers. However, speaking personally, I think if a white man was there and took good care of himself and had a change now and then to a colder climate, say, Japan, I do not see why he should not have good health. I consider the islands to a great extent free from the epidemics which generally occur in that region of the world.

Q. Is Manila a healthier place than in the provinces?

A. I should consider Manila a very unhealthy locality. It is low and does not have sufficient drainage.

Q. Must we have a standing army in the Philippine Islands?

A. If we hold them as colonies—that is, without giving them all the rights of American citizenship, it will necessitate keeping a large standing army there continually.

Q. Do they object being held as colonies and not making them citizens?

A. I understand that is what they are fighting for—to be citizens.

Q. Will you explain what you heard them say about this?

A. I believe their object in the insurrection was either to secure independence or to secure all the rights and privileges of a free people; that is, with the sovereignty vested in the United States for that matter; but what I mean by a free people, as our American citizens are free, and I believe that those who have voluntarily surrendered have either done so for their own personal interests or they have been persuaded that it is our intention to eventually give them those rights and privileges that I have spoken of; that is, either give them independence or incorporate them as part of our people.

Q. You mean incorporate them as a State?

A. I mean as a part of our people. Maybe a Territory, but the Constitution is to be extended to them.

Q. Then these people, according to your observation and experience among them, rebelled because they desired their independence, or all the privileges of American citizenship, or a free people, that we have—that is, to be made into a State of the United States or one of the Territories of the United States, and enjoy all the privileges of American citizenship under our Constitution, and those who have voluntarily surrendered have done so for their own personal interest, hope of office, or something, or they believe that ultimately they will be given their independence or made a free people. This would apply to the officers of rank, the leaders?

A. The leaders have in the main been given high offices, a great many have been, but what per cent I do not know. Lukebarn, one of their most prominent members, was ex-governor of Cavite; also Buencamino, Alejandrino, Paterno, and others of that class, were given offices.

Q. You have, of course, talked with many Filipinos, and from the impressions you got from them is what you base your opinion upon?

A. Yes.

Q. If we do not give these people their independence, or make them a Territory or a State of the Union, giving them all the rights that we enjoy, you state that we will have to have a standing army there? How large?

A. Sufficiently large to enforce the military governor.

Q. Your opinion is that if we do not give them all the rights we enjoy we must hold them at the point of the sword?

A. Yes.

Q. We have educated these people in the way of fighting and in the art of war, have we not?

A. They are very quick to observe, and I believe will profit by our methods if the opportunity presents itself. Of course if we get all their arms away from them and they can not get any more, they may then quit fighting us. In other words, they may see the hopelessness of their cause and quit until a better opportunity is presented.

Q. Your idea is then that until they are given the rights and privileges that you have alluded to that they are going to keep up actual war if they have arms, and if not they will wait for an opportunity to start it again?

A. They will keep up as long as they think they have any chance.

Q. Suppose, then, they lay down their arms, is it your idea they will seek a good opportunity to get those rights and privileges that you allude to? Are you familiar with the proclamation that was issued by Aguinaldo on July 1, 1898?

A. I have read it, but have forgotten the details of it.

Q. Let me refresh your memory. I read from John D. Ford's (of the United States Navy) book called "An American Cruiser in the East," at page 501. You will find it also in Sawyer's book and in Halstead's book. Is this the one you allude to?

"1. The independence of the Philippines shall be proclaimed.

"2. A republic shall be established with a government designated by General Aguinaldo and approved by the admiral and general commanding the United States forces.

"3. The government will recognize the temporary intervention of commissioners designated for the present by the United States.

"4. The American protectorate shall be recognized on the same conditions as arranged for Cuba.

"5. The Philippine ports shall be opened free for the universal commerce of the world.

"6. Precautionary measures shall be adopted against Chinese immigration, so as to regulate the competition with the work of the natives.

"7. The corrupt judicial system at present existing shall be reformed, intrusting at the commencement the administration of justice to competent European legal officials.

"8. The complete liberty of association, as likewise that of the press, shall be declared.

"9. There shall be a general religious toleration, but measures shall be adopted for the abolition and expulsion of the religious communities who with an iron hand have heretofore demoralized the actual civil administration.

"10. Measures conducive to the working, development, and prospects of the natural resources of the country shall be adopted.

"11. The development of the public wealth shall be facilitated, together with the opening up of roads and railways.

"12. The existing obstacles to the forming of commercial enterprises and investment of foreign capital shall be suppressed.

"13. The new government will keep the public order, and will be obliged to prevent every act of reprisal against the Spaniards.

"14. The Spanish official element shall be removed to some other safe and healthy island until the opportunity is presented for them to return to Spain."

A. I have in my papers a copy of his proclamation, but it has been some time since I have read it, and I could not say whether this is it or not.

Q. You see that the very first sentence is that independence will be proclaimed?

A. Yes.

Q. What do you think we should do with the Philippine Islands?

A. As an American citizen, I think it is our duty to give them all the rights and privileges of a free people, either as a part of our Republic, or we should give them an independent government and should prevent that government against encroachments from foreign powers until such time as they are able to protect themselves.

Q. If we would do this now, or if we would promise this by a statute, not by simple words or proclamations, do you not believe that these people would at once become reconciled and contented and lay down their arms and wait until we would redeem our promise?

A. I do; and I believe that within a very short time any American would be able to travel without escort through any portion of the islands without

danger except from the savage tribes and from the ladrones and Tulusanes, who recognize no law.

Q. Do you not believe that if the United States had said to these people at the beginning—that is, before the clash between our forces and the insurgents—that we are going to give you independence as quick as you are able to maintain it, that they would have been content and we would have had no clash with them?

A. Yes; by giving them some definite statement, as you could by a statute or law, I do.

Q. Have they ever understood over there really what we were going to do with them, and has not that been one of our troubles?

A. I have never understood myself; I don't see how they could.

Q. Well, has not that been one of our troubles?

A. Yes; they have never known what was going to be the ultimate disposition of them. And what they feared was that they would become slaves or vassals, and they wanted freedom, and this is what they want now.

Q. If they had an army and a navy and a suitable government set up for them through our kind offices, they to have a voice in framing this government, how long would it be before they would be capable of maintaining their independence, and with the strength and dignity that is characteristic of the other brown races of the world?

A. They have immense resources and in a few years would be able to equip an army and build a navy that would put them on a defensive footing equal to Japan.

Q. Haven't they many leading learned men who are capable of ruling and controlling that government in a way entirely acceptable to them and to us?

A. I believe that to be the case. I have no doubt about it. They have a great many learned men there.

Q. And haven't these men been identified immediately in framing and making the laws and forming even the young government we have over there in that country?

A. Well, to just what an extent they have had a voice in that I do not know, but I know there are a great many of them who are holding office under our government; they occupy places in the supreme court, and they are governors of provinces, but to what extent they have had a voice in framing the laws I do not know.

Q. Did they not have a government that they had framed and we executed under what is known as the Aguinaldo government?

A. They had a government which was framed by themselves, and I believe acceptable under the conditions that existed and to the extent that it had been perfected.

Q. It was operating all right so far as you were able to learn?

A. So far as I was able to know, it was. Of course, it was in its mere infancy.

Q. As an infant government it was operating all right and was satisfactory?

A. It seemed to have the unanimous approval of the people at that time.

Q. And that was just when they had gotten out of the struggle of 1896 and 1897 and were going into a struggle with us, and that government was operating acceptably to the masses of the people?

A. Yes.

Q. Have you ever examined what form of government they had?

A. Well, not critically I have not. I have read their papers, their political organ, The Republica, which was full of patriotic articles. The people seem to be striving toward progression.

Q. Don't you think the start they made was a very remarkable start, and what they accomplished was equally remarkable?

A. I think it was sufficient to demonstrate their ability to establish a suitable and permanent government.

Q. Even without our assistance?

A. Without our assistance, other than in preventing the invasion of the Philippines by other powers.

Q. The Americans did not aid in the establishment of the government we are talking of?

A. No; without any assistance whatever, so far as the establishment of the government was concerned, it being understood that we would defend them against invasion by the powers, as they are weak.

Q. Are you familiar with the Negros government?

A. No.

Q. You don't know about them establishing a government down there?

A. No.

Q. Are you familiar with the relations that existed between Dewey and Aguinaldo?

A. Nothing more than newspaper comment.

Q. Have you ever heard the people over there talk about the promises Dewey made or our men made to Aguinaldo?

A. No.

Q. Were you there when the first shot was fired at San Juan bridge?

A. No, I was not; and the first shot was fired on the — day of January, in which a Filipino officer was killed.

Q. The first shot of the war was fired on the 4th of February, but I understand there were conflicts between our outposts previous to that, and that on one occasion firing took place in which a Filipino officer was killed.

Q. This was the one that was killed, as you state, in January?

A. I think the date of it was about the middle of January.

Q. Do you know the cause of this first shot on the 4th of February?

A. No. It was evidently the intention of the Filipinos to make an attack upon our forces on that date.

Q. What makes you think so?

A. From a telegram that I captured a short time ago, about a year ago, dated 9 o'clock, February 4, from Fernandes Gray, which, translated, was, in substance, as follows. The telegram was translated at Santa Anna at 9 o'clock, February 4. "Telegram transmitted Malolos received. General Ricarta not here. We are of the opinion that if we open fire the Americans will attack. We await instructions from Malolos."

Q. Have you that telegram?

A. No; it was turned in with the other papers to the War Department.

Q. Where and when?

A. In May, 1901, at Manila.

Q. This telegram was dated February 4, 9 a. m. or p. m.? You are certain it was 9 a. m.?

A. Of course I am giving this all from memory.

Q. And was written by whom?

A. It was among the papers of Fernandes Gray, who was an insurgent officer in the command of Pio del Piloro, but I am not positive.

Q. And was addressed to who?

A. As I remember, it was addressed to the secretary of war at Malolos.

Q. Malolos was then the seat of government of the Philippines?

A. Yes.

Q. Do you think it was the intention of Aguinaldo to have war against the Americans at this time?

A. I think it was the intention of the leaders of the Filipinos to secure independence and, believing that their purposes were in danger, caused the conflict at that time.

Q. As I understand your answer, and if I do not understand it correctly explain it, is that at this time, and as it had been all the time previous, these people wanted to secure their independence, and conditions had gotten to where it looked at this time as though they were not going to do it, and it was their intention to have independence peaceably, and if not, to fight for it.

A. Yes; that is my impression.

Q. Do you know where Aguinaldo was when this 4th of February shot was fired?

A. He was at Malolos.

Q. And he stated to me that he was playing on the piano at the time the telegram came to him notifying him of the first shot, and that he paid no attention to the first telegram, and not until he got the second telegram did he pay any attention to it, thinking it was a joke someone was playing on him, and then he went down to the telegraph office to find out something about it, but the lines were all cut and he could not communicate because the lines were all disconnected, and next morning he sent two lawyers into Manila to find out about it, and they were not allowed to go through our forces.

He stated to me that it was not his purpose to have war with us, and in reply to a question I asked him, did he want to fight the United States, he laughed, as much as to say, "I should say not," and in substance said, "Who does want to fight the United States?" That was his way of answering. If at this time Major-General Otis had been conciliatory, or if the American Congress had said—and of course that means by statute or by a resolution having the power of a statute—that we don't want any conflict with you, we don't want to hold you permanently, and as quick as we can turn you loose we will give you independence, after having set you up in your government here, given you a suitable form of government, we will turn you loose, and, if necessary, protect you from foreign nations for a certain number of years, do you think we would have had a clash with them?

I believe you have already said we would not. You do not think we would have had any clash; and if we would do that now, you think it would end the trouble over there; and you are perfectly firm and fixed in that opinion, and you base this opinion on what you have seen and heard and know about the people?

Q. Do you know anything about the abuses of our people by the Filipinos or the abuse of the Filipinos by our people?

A. In a conflict between two forces there are bound to be always breaches of discipline. I do not believe any abuses have been countenanced by the Filipino government, and certainly not on the part of our men by our military authorities.

Q. In other words, the lawlessness has been without the authority of either the Filipino or the American forces and has been by that gang of people who follow in the wake of an army or precede it and for their own personal gain or spite have recklessly punished people promiscuously. What has been the rule with reference to the treatment of our soldiers by the Filipinos, excluding this lawless gang?

A. I believe their treatment has been very considerate. Haven't you heard of our prisoners being fed at the Filipino officer's table and treated as kindly and considerately as they had means and power to do, and our men did the same thing? The case of Captain Roberts not being accustomed to Filipino diet or cooking, and Colonel Tecson sent down into one of the towns and secured a cook that could cook American fashion for Captain Roberts.

Q. I have heard of this. Where is Captain Roberts now?

A. I don't know where he is, but I have frequently heard that men who were with them stated on their release that they had been well treated.

Q. And this is the rule that has obtained with the regular Filipino army?

A. They are very hospitable, and are disposed to treat everybody dependent upon their hospitality with every consideration.

Q. What makes the Maccabebes so antagonistic to the other Filipinos?

A. This antagonism to the Maccabebes and the Tagalogs is not, as generally supposed, a hereditary feud between them previous to the insurrection of the Filipinos against the Spanish rule. In 1896 the Spanish Government had organized, I think, 10 regiments of native troops. In these 10 regiments 2 regiments were Maccabebes.

There were other regiments of Tagalogs, Ilocanos, Visayan, and others; that at the beginning of the insurrection against Spain the Maccabebe regiments were under the command of General Blanco, who was an able officer, had been educated in European schools and was a man of high influence among the Maccabebes, who, with other prominent Maccabebes, believed the time was not ripe for setting up an independent Philippine government or successfully conducting a war for independence.

They therefore declined to take any part in the insurrection, while the other regiments of native troops joined the insurrection. This state of affairs of course necessitated fighting among the native troops that had remained loyal to Spain and the troops that had revolted.

Q. So the Maccabebes wanted to remain Spanish subjects and the Filipinos wanted certain wholesome reforms?

A. As I stated the Maccabebes did not think the time was ripe when they could conduct a war for independence successfully.

Point Judith Pond, Rhode Island—River and Harbor Appropriation Bill.

SPEECH

OF

HON. ADIN B. CAPRON,

OF RHODE ISLAND.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 3, 1902,

On the conference report on the bill (H. R. 12346) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. CAPRON said:

Mr. CHAIRMAN: I desire to thank my friend the chairman of the Committee on Rivers and Harbors [Mr. BURTON] for the amendment offered by him to this bill providing for a resurvey of Point Judith Pond, Rhode Island, with a view to ascertaining whether it is desirable to enlarge the entrance to said pond from the ocean, and also to thank him for his patient indulgence of me in my efforts to secure further recognition of this project by the Government.

This is, by comparison with the great projects in the pending bill, a small matter, but to the people of the locality in which the proposed improvement is sought to be made it is important. I therefore wish to place upon record a brief chronological history of the project and the reasons which prompted the action proposed at this time, notwithstanding the locality has been reported by Government engineers as unworthy of improvement.

The Chief of Engineers, in his report of July 17, 1895, said:

Point Judith Pond is a triangular-shaped inland lake of an area of about 1,800 acres, lying about a mile westward of Point Judith, at the southern extremity of the Narragansett shore of Rhode Island, and having a depth of from 3 to 10 feet. The pond is separated from the ocean on the south by a sand and gravel beach of about 1,000 to 3,800 feet in width, intersected at the southwestern corner of the pond by a shallow breachway connecting the pond with the ocean. The original entrance to this pond was formerly about a mile east of its present position, and is reported to have been completely closed up by a severe storm.

Examinations and surveys of this pond were made by General Warren in 1873, Major Livermore in 1888, Captain Bixby in 1892, and Lieutenant Harts in 1895, all of whom reported adversely upon the plan to open the former entrance to the pond.

By direction of the Secretary of War in 1895 further action was delayed until the subject could again be considered by Congress. Therefore, until now no action has been taken, and the appropriations of $7,500 made in 1892 and $2,500 made in 1894 remain unexpended, except that $518.38 was used for surveys, leaving a balance of $9,841.62.

All action heretofore has been taken with a view to opening the former entrance to the pond. What is now desired is that the opening be made through the present entrance, as shown by the correspondence which I shall incorporate with my remarks.

Toward making this improvement the town of South Kingstown, R. I., in which Point Judith Pond is located, has appropriated $13,000, which, together with the unexpended appropriations made by Congress and an additional appropriation of $15,000, a total of about $37,000, will, it is thought, effect the desired improvement.

The Committee on Rivers and Harbors has accorded this project greater attention and consideration than its seeming unimportance would warrant, and it was evidently the purpose of that committee in the last and in the present Congress to provide that the former unexpended appropriations be paid back into the Treasury. But the fact that the people of South Kingstown had sufficient faith in the practicability of making a breachway at the present entrance to the pond to make a liberal appropriation with which to prosecute the work no doubt induced the committee to agree to the amendment offered by my friend [Mr. BURTON] for a resurvey as the greatest concession that could be granted at this time in view of the former adverse reports of engineers.

I again thank my friend and the committee for their courtesy to me and for their painstaking consideration of this project.

I desire to append the following letters and report of a hearing before the Committee on Rivers and Harbors in relation to this subject:

PEACE DALE, R. I., *January 20, 1902.*

Hon. A. B. CAPRON,
House of Representatives, Washington, D. C.

DEAR SIR: We are counting upon your active assistance toward an appropriation for Point Judith Pond. You are familiar with some of the details of this work. It has been talked about in a general way for many years; but the people of the town have taken it up more strongly of late than ever before, and have shown their sincerity by appropriating $13,000 for surveys and the work of opening a permanent breachway.

The committee have contracted for a canal 5,300 feet long, 75 feet wide on the bottom, and 6 feet deep, extending from deep water in the pond to within a few feet of the ocean, but they have not money enough to build the necessary protecting jetties outside and revet the canal banks, as should be done for a few hundred feet back. We think this is a proper subject for Government activity, and ask that the appropriation of $10,000 made in 1892 and 1894, less the amount already expended for surveys, net $9,481.62, be made available, and that an additional sum of $15,000 be added.

The present location for the breachway is better in many respects than any that has been suggested in the past. It is shorter, more thoroughly protected, and is the natural position for an outlet to this pond.

Maj. D. W. Lockwood, of the Corps of United States Engineers, reporting August 12, 1897, on the general question of opening Point Judith Pond into the ocean, said: "An entrance to be of any service to navigation should have a width of 300 feet with a central depth of 8 feet. This passageway would require revetting where it crosses the marsh and beach, and the channel into the ocean beyond the shore line would require protecting by jetties of riprap stone, the west one being made sand tight."

The cost of making such an opening 300 feet in width and continuing it 150 feet wide to the deep water in the pond would be $22,000, based on the contract price for the work which is now under way. The two jetties, extending one on the west side into 9 feet of water, and one on the east into 7 feet, as suggested by Major Lockwood, and recommended by Mr. F. W. Hodgdon, would be about $15,000, a total of $37,000. Deducting from this amount the $13,000 appropriated by the town leaves $24,000 wanted. Of this amount $9,481.62 has already been voted as above. In order to make this available, however, it will be necessary to change the phraseology of the act to make it read "improving the present entrance instead of the former entrance."

Maj. G. W. Goethals looked over the plan in a preliminary way, and promised to come and see the location later. He saw no objection to the scheme as outlined, but of course would give no definite opinion at present. The line of canal, the position of the jetties, and the general construction has been suggested after careful examination by Mr. F. W. Hodgdon, of Boston, who is the engineer of the land and harbor commissioners of Massachusetts, and has made a number of very successful breachways and channels into the salt ponds on the sandy coast of that State.

We would call your attention to the fact that from Wickford to Stonington, upon 40 miles of coast line of Washington County, no outlay has ever been made by the United States Government for a permanent landing. This breachway when completed would be at a central point on the shore of southern Rhode Island, and would benefit the towns of South Kingstown, Narragansett, and Charlestown, and therefore the whole State.

Hoping that you will aid us in this matter,

Yours, truly,

WM. C. CLARKE,
WM. C. GREENE,
CARDER H. TUCKER,
Committee for the Town of South Kingstown.

HOUSE OF REPRESENTATIVES,
Washington, D. C., January 22, 1902.

WILLIAM C. CLARKE, Esq.,
Chairman Committee for Town of South Kingstown, R. I.,
Peacedale, R. I.

DEAR SIR: Your favor of the 20th instant, together with a number of letters from other citizens of South Kingstown, regarding the need of an appropriation to aid in completing the breach way from Point Judith Pond to the ocean, is received.

For no other river and harbor project have I labored so strenuously since coming to Congress as for this, but I find the Committee on Rivers and Harbors firmly set against it for the reason, as alleged, that it is not possible to make the pond available for the uses of commerce or as an inner harbor of refuge without a vast and unwarranted expenditure. This opinion has been fixed by the reports of various engineers and by oral hearings when the engineers have appeared before the committee.

I have hitherto labored and shall continue to labor with the committee, and wish it were possible for you to furnish me with some new argument which might appeal to the mind of the committee. The chairman, Mr. BURTON, a close friend of mine, says that the improvement is of purely local value, and not in the interest of commerce or shipping.

I am stating the facts, without gloss, that you may understand the nature and extent of the opposition.

Very truly, yours,

A. B. CAPRON, *M. C.*

HOUSE OF REPRESENTATIVES,
Washington, D. C., January 23, 1902.

Hon. THEODORE E. BURTON,
Chairman Committee on Rivers and Harbors,
House of Representatives.

MY DEAR Mr. BURTON: Referring to our conversation of yesterday with reference to the Point Judith Pond breachway, when I brought to your attention an illustrated newspaper article on the subject, I beg to inclose said article for your further consideration, together with several communications on the subject which fairly state local conditions and sentiment with respect to the project. These letters are but a few of many I have received recently.

I will regard it as a great favor if you will kindly consider the matter further in the light of the local efforts that are under way to improve the breach way.

Very truly, yours,

A. B. CAPRON.

NARRAGANSETT PIER, R. I., *January 25, 1902.*

Hon. ADIN B. CAPRON,
House of Representatives, Washington, D. C.

DEAR SIR: Your letter of the 22d in reply to letter of the 20th to you in relation to obtaining an appropriation for the establishment of a permanent breachway into Point Judith Pond has been received, and I note your request for the furnishing of some "new arguments which might appeal to the mind of the committee."

This I will do, premising them with the statement that facts in relation to this matter, obtained by our committee, are just as stubborn and more truthful and convincing now, as to the feasibility of improving the present breachway, than those set forth by engineers against improving the old or former entrance.

Firstly. We are not expending our money on the former entrance, but at a different, shorter place, where a straight line or run can be made by vessels for about 5 miles to Wakefield and where the channel or canal we have gotten about half completed comes into the deep and broad expanse of water in the pond.

Secondly. We are doing this work under a contract, and the contractor expresses himself as perfectly satisfied with his terms, price, etc., for the dredging of the canal; so we know the number of cubic yards to be moved; we have made and possess complete surveys, plats, etc.

Thirdly. We are basing our requests for aid by the Government as to the practicability of this work on the opinion of Mr. Frank W. Hodgdon, civil engineer, of Boston, who is engineer for the board of land and harbor commissioners of Massachusetts, and who has had experience in opening many of the salt ponds along the sandy coast of that State.

Fourthly. We base our statements as to the amount of money required to complete this project to the width of 150 feet into deep water in the pond on our contract, and to build the jetties outside and revet the sides of the canal on bids for the work in our hands, contractors to give bonds for completion, etc.

Fifthly. The total expenditure complete would require the sum of $37,000, and deducting the amount appropriated by the town of South Kingstown leaves balance required of $24,000.

Sixthly. I assert that no Government engineer has ever made a survey of the location of our channel and present breachway, which, at this time of writing, is at its mouth 100 feet wide, straight, and 10 feet deep; and further, that no Government engineer has any record of soundings made in the sand where our canal has been dug, while we have positive knowledge of all details thereof.

Seventhly. Our plans have been shown to Major Goethals, the United States engineer in charge at Newport, who stated that the plan looked feasible and that he would come over and look at it.

Your allusion to the "reports of various engineers and by oral hearings where the engineers have appeared before the committee," prompts me to say that all reports made had in view the opening or improving the former entrance to the pond, meaning the old breachway existing prior to a gale and extraordinary tidal wave in September, 1815, and which location since the building of the harbor of refuge has become impracticable, and their estimates, surveys, etc., of that locality are wholly useless in this project, as they are one-half mile from the present breachway, on which our work is being done.

Mr. BURTON, chairman of the Committee on Rivers and Harbors, says, to quote you, "That the improvement is of purely local value." Well, I respectfully ask if he or you can name any appropriation which was not local? Treat it with all the ingeniousness of a master of the English language, and it still means pertaining to a place, or to a limited portion of space, limited or confined to a spot or definite district. What, I ask, have the numerous appropriations made for the Pawcatuck River by the Government, secured

by Hon. James M. Pendleton, Hon. Nathan F. Dixon, and Nathan F. Dixon, jr., and by Hon. Warren O. Arnold been, except local? Years ago the Pawcatuck River was narrow, only 5 miles long, and could only be ascended by small boats, and its statistics of commerce when those appropriations were first made were no greater than ours, if as large.

Again, your friend states that this project is not in the interests of commerce or shipping. Upon this statement I answer that in 1887 the carefully computed statistics of commerce of South Kingstown were as follows:

Domestic imports of merchandise, town of South Kingstown, 1887.

Articles.	Tons.	Value.
3,000,000 shingles	900	$120,000
4,000,000 feet lumber	50,000	869,000
1,000,000 brick	2,000	90,000
10,000 tons coal	10,000	57,000
200 tons phosphate	200	7,000
2,200 barrels cement	300	3,000
100 tons hay and straw	100	1,000
100 tons nails and hardware	100	10,000
125,000 bushels grain	1,750	65,000
500 cords wood	900	2,700
20,000 tons fertilizer	20,000	30,000
15,000 tons miscellaneous	15,000	350,000
1,175,000 pounds wool	587	411,250
Total	101,837	2,015,950

EXPORTS.

Manufactured woolens	$800,000
Farm products, etc	200,000
Total	1,000,000

For 1901 the estimated amount and value of imports of articles enumerated are 100,000 tons, valued at $3,500,000, and of exports, $2,000,000.

Furthermore, a fact to be noted is that 1,200 acres of the bottom of this pond are natural oyster grounds, and the simplest and cheapest shipment of oysters is by water, and with a breachway as asked for, the major portion of this item would be transported by vessels.

In 1892 the town of South Kingstown voted to exempt from taxation for the term of twelve years every firm or corporation which might locate for manufacturing purposes, but notwithstanding many parties have examined this locality, the lack of water transportation for coal, lumber, building materials, and manufactured products is the sole drawback, and they have failed to locate.

Finally, we are not asking for appropriations for the former entrance to the Pond, and the language of the act of 1894 making the appropriation should be changed to improving the present entrance, and in the interests of commerce for this portion of Washington County we ask that the old sum or balance of about $9,500 be retained, and the modest sum of $15,000 be added thereto, thus invigorating this part of the State and aiding this town, which is earnestly striving to be a worthy portion of the district you have the honor to represent in Congress.

Yours, very truly, WM. C. CLARKE.

P. S.—I wish to add that about the time of the securing the aggregate appropriation of $10,000 from Congress in 1892 and 1894 the town councils of every one of the seven towns of Washington County memorialized Congress in behalf of this object, and those papers should be on file.

NOTE.—The papers above referred to were found in the files of the House and were referred to and considered by the Committee on Rivers and Harbors.

WASHINGTON, D. C., *January 28, 1902.*

WILLIAM C. CLARKE, Esq.,
Narragansett Pier, R. I.

MY DEAR SIR: I am in receipt of your favor of the 25th instant, which I have read carefully, and will refer to Chairman BURTON for the consideration of the Committee on Rivers and Harbors. The committee are about to proceed to formulate the bill. On Friday last I appeared before the committee and urgently appealed for favorable action upon the Point Judith breachway project. Previously I had placed in the hands of Chairman BURTON your former communication and other letters upon the subject, all of which he assured me would be given due consideration by the committee. During the hearing of my argument it was pointed out by the chairman what he had referred to in private conversations—that engineers had successively reported the locality unworthy of improvement, and that for that reason the amounts heretofore appropriated had not been expended.

I granted the accuracy of the statement, but called attention to the efforts being made on the part of the town of South Kingstown to improve the present breachway, and that it was hardly reasonable to suppose that the town would involve expense for a project if its feasibility were questioned by those who are familiar with local conditions. I strongly urged the application of the appropriations heretofore made and further liberal treatment by the Government in view of the local activity and interest being displayed, which apparently had the effect of removing to some extent the opposition which the adverse reports of engineers had engendered, and to cause the chairman to suggest that perhaps it would be well to authorize a new examination and survey to determine the practicability of improving the present breachway. So that, as matters stand, it appears that the committee will at least make provision for a new examination; and to me, understanding as I do the opposition that has been manifested toward taking any sort of action other than adverse, it will be a distinct victory if we are merely able to cause the project to be further investigated by the Government.

Having confidence in the judgment of those who declare the improvement practicable we can not fear but that the result of a new examination will be favorable, particularly as it seems that Major Goethals, the local engineer, so far as he has expressed himself, thinks the proposition feasible.

To my mind, your letter just received furnishes excellent arguments in favor of the project, and I am very glad, indeed, that I have them to present to Mr. BURTON, just as the committee are on the point of formulating the bill and while my statements are fresh in their minds.

I am not altogether satisfied with the prospect of a new examination and shall continue to labor for the appropriation, accepting the former as inevitable only after it appears that it is impossible to get more at this session.

The former petitions on the subject, to which you refer, are in the files of the House, and I will have them placed before the committee.

Reassuring you of my deeply interested labors in behalf of the proposed improvement of the breachway, I am, very sincerely,

A. B. CAPRON.

WASHINGTON, D. C., *January 28, 1902.*

Hon. THEODORE E. BURTON,
Chairman Committee on Rivers and Harbors, House of Representatives.

MY DEAR MR. BURTON: I inclose for your further information in regard to the Point Judith Pond breachway, Rhode Island, a letter from Mr. William C. Clarke, chairman of the committee for the town of South Kingstown, R. I. I would call your particular attention to the fact, which he emphasizes, that it is the present breachway, and not the former entrance, which it is proposed to improve.

Yours, very truly, A. B. CAPRON.

COMMITTEE ON RIVERS AND HARBORS,
HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., March 18, 1902.

Hon. A. B. CAPRON,
House of Representatives, City.

MY DEAR SIR: I have been giving the greater part of an hour this evening to examining the confusing mass of correspondence relating to Point Judith Pond. I have prepared the inclosed provision. Is this satisfactory?

It is not altogether clear what is wanted. I am really very reluctant to insert this provision, and do not want to do so unless you insist upon it and think it desirable. All the reports have been extremely unfavorable to this project.

Very respectfully, yours, T. E. BURTON.

Statement of Hon. Adin B. Capron before the Committee on Rivers and Harbors, House of Representatives, January 25, 1902.

Mr. CAPRON. Mr. Chairman: A number of years ago an appropriation of $10,000 was granted by Congress to make a breachway from Point Judith Harbor of Refuge into Point Judith Pond, Rhode Island, with the idea that it would become an inner harbor of refuge of value for the fishing fleet, which is of considerable importance in that locality. The breachway is at this point [indicating on map]. Many years ago there was a tremendous storm and the breachway was filled up with sand. Of course in a short time the water behind it broke through, and there is a great area in Point Judith Pond, an enormous pond, and this appropriation was made to create there a place affording anchorage for the fishing craft; and a survey was made, and Major Lockwood, then engineer for that section, was not favorable to the dredging.

The town of South Kingstown, realizing the importance of the improvement and finding that the entrance to the pond was getting blocked more and more, has this year appropriated $13,000 and has got a dredge now at work there dredging through this breachway. It is felt in that community and along there that the completing of the Point Judith breakwater, upon which $1,250,000 has already been expended, will prevent in a great measure sand drifts which are caused by the easterly and southeasterly winds, and also do much to stop the blocking up of the entrance which Major Lockwood felt was a great obstacle. With the appropriation hitherto made and with the amount now desired, the entrance when once opened will make accessible and navigable this tremendous area from the breakwater up to Wakefield. Then railroads from Wakefield open up communication to many villages with a prospect of bringing in larger commerce there. I believe it would be a great improvement and that the conception of it was a true one. Eventually, if this improvement is made, it will permit not only the assembling of fishing craft, but little additions will be made from time to time, so that finally vessels of the lighter draft, such as carry coal along our coast, will be able to go in there. Our people feel very strongly that the amounts heretofore appropriated may be expended, and that an additional appropriation be made at this time.

The CHAIRMAN. How much was the amount?

Mr. CAPRON. Ten thousand dollars; and a little of it expended for surveys. That small appropriation, it seems to me, you can well afford to leave in there and allow it to be expended for the purpose for which it was originally intended.

Mr. MCCULLOCH. Was this million-dollar breakwater here made to protect that harbor?

Mr. CAPRON. No, sir. Point Judith is a harbor of refuge. It was the most dangerous point on the whole coast all the way from Maine to Florida almost, and terrible wrecks have happened there by the fifties and hundreds. Considering the drift of the wind at Block Island I do not think there is another place like it. All the shipping goes up the coast through that way because it is protected from the ocean, and then past Montauk, and with an easterly wind it drifts over on this Point Judith where the breakwater to which you refer is undergoing construction.

There has already been expended for this breakwater about $1,250,000, and it is estimated by the engineer that $440,000 will be required to complete it. Point Judith Pond breachway is, however, a separate and distinct project from that.

The CHAIRMAN. The trouble about Point Judith Pond is this: That if there is any project in the United States that the engineers have reported against it is this. We have to rely on the Government engineers for expert information, and they have four or five times taken this up. There was General Warren; Major Livermore was another. Bixby, Lockwood, and every one of them has sent in such a decided, radical report that the committee has felt justified in cutting it out.

Mr. CAPRON. I believe Major Livermore did report against it, but I think a close and careful survey of Point Judith Pond was made during the incumbency of Major Lockwood, and I believe he thought that it would be of distinct value if the breachway was not liable to fill up with sand.

The CHAIRMAN. The engineers say the only result is a small increase of its local commerce and a large increase in the value of its real estate; perhaps a small increase of its local commerce, so local in its nature that the expense thereof should not be borne by the United States. That is the report by Captain Hart, in addition to the others made.

Mr. CAPRON. As I remember, Major Livermore in his report went back to the time of that great storm. That storm was so tremendous that it threw up sand dunes 30 feet high. It is true that the successive storms did fill up the old breachway; but it is supposed and expected that the breakwater of the harbor of refuge, which is now nearly completed, will prevent that. This [indicating] is the part they ask to be completed. You see, when it filled in here it threw up great sand dunes, and the water took care of itself by making another cut.

The CHAIRMAN. This $10,000 is appropriated——

Mr. CAPRON. To make a breach there. Now, the town of South Kingstown has appropriated $13,000 and has a dredge at work there, and if that $10,000 could be given them they could put in piling, and that would scour this out. The town is so poor that it really can not make an additional appropriation. You have filed with you a letter from Mr. William C. Clarke, chairman of the committee for the town of South Kingstown, R. I., and several other gentlemen, more minutely describing from the ground there what the present condition is and what is desired.

The CHAIRMAN. I think the best that would be possible down there would be to order another resurvey. I do not see how we could absolutely disregard

these reports, all of the same tenor and all so unfavorable. If anything is done there it will certainly cost more than $10,000.

Mr. CAPRON. They feel very certain that a resurvey will show present conditions, as developed by what the town has done, which will justify the completion of the town's work. I would hope that so much as is necessary, before the former appropriations are covered back into the Treasury, would be applied to a resurvey, believing that I would then be able to come before the committee with a survey demonstrating its value and utility.

The CHAIRMAN. How much of a channel would you suppose that $30,000 would afford?

Mr. CAPRON. A channel 100 feet wide, permitting a vessel of 10 feet draft to enter.

The CHAIRMAN. At high or low tide?

Mr. CAPRON. At mean tide, as we figure it. Of course at very low tide, and when the wind is adverse, it might be lower.

The CHAIRMAN. Of course you can see that we are anxious to get rid of all these projects.

Mr. CAPRON. I understand that, but I believe that the matter is worthy of a resurvey, based upon the fact of the new conditions.

The CHAIRMAN. Based upon the action of the town, they having shown some improvement there.

The committee then adjourned.

ACTION OF THE HOUSE, MARCH 19, 1902.

Mr. BURTON. Mr. Chairman, I desire to offer an amendment, which I send to the Clerk's desk.

The Clerk read as follows:

"Page 7, after line 6, insert:

"'Said board shall also make an examination of Point Judith Pond with a view to ascertaining whether it is desirable to enlarge the entrance to said pond from the ocean, and if such enlargement is, upon examination, found to be desirable, an estimate of the cost thereof shall be made. The expense of such examination, as well as of the survey, if made, shall be paid from the unexpended balance remaining to the credit of the former entrance to Point Judith Pond.'"

Mr. BURTON. Mr. Chairman, this amendment is to meet a very perplexing situation. Last year we inserted in the bill a provision covering back into the Treasury the amount remaining on hand for the entrance of Point Judith Pond. Representations have been made by citizens in that locality that a possibile improvement could be made which would be of very considerable value, and they desire that the money on hand be diverted for that purpose; that is, to make an opening in a different place from the one that formerly existed. The committee thought the best solution of the matter, in view of the fact that a board of engineers will make several examinations in that neighborhood, was to include with their other duties an examination of the entrance to this pond. I will say further that there are some adverse reports upon the old improvement of a former entrance which are quite decisive in their terms. The committee hesitated somewhat about inserting it, but it seemed only fair, in view of the unexpended balance, to make the examination. If there are no further remarks upon the amendment, I ask for a vote.

The question was taken; and the amendment was agreed to.

FINAL ACTION.

The bill as finally agreed upon in conference and in both Houses of Congress contained the provision for a survey of Point Judith Pond substantially as originally agreed to by the House.

Government in the Philippine Islands—Can the Filipinos Govern Themselves?

SPEECH

OF

HON. HENRY D. GREEN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 12, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 11354) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1903—

Mr. GREEN of Pennsylvania said:

Mr. CHAIRMAN: The stormy debate on the subject of the construction of a Pacific cable by this country waged by the gentleman from Michigan [Mr. CORLISS] and the gentleman from Alabama [Mr. RICHARDSON] seems to have cleared the atmosphere, and I will take advantage of the calm which usually succeeds such a storm by asking the attention of the House to an examination of the Philippine Islands from a governmental standpoint.

In a former speech I discussed the Philippine problem from a commercial standpoint, and promised on some future occasion to dwell with more detail upon the government as it is now being carried on there and give some facts from which the members of this body could judge to what extent the Filipino is fitted for self-government.

The purpose had in mind in discussing the question first from a commercial standpoint was because I believed the only honest reason ever given for the United States acquiring an interest in this archipelago, whether by treaty, by purchase, or the forcible subjugation of its people, was that the islands would pay.

This idea was strengthened by the blunt and very frank statement of one of the majority's leaders that "We will keep them as long as they are profitable."

That there exists a vague impression and hope in the minds of many of our citizens that they can be made profitable, and by giving them up to the native people, who were during the war with Spain our valued allies and friends and to whom in our hearts we feel they belong, this country would be giving up a great prize and a useful and valuable acquisition, can not be denied.

To remove this suspicion if possible I dwelt upon the real facts as personal examination disclosed them to me, and gave frankly the reasons for my conclusions. To that multitude of our citizens who after giving the subject some intelligent study frankly admit that it would have been far better if Admiral Dewey after sinking the Spanish fleet had sailed away and left the inhabitants to solve the problem of government, and that it was a mistake in our ever attempting to establish our sovereignty over these islands and their people, I address my remarks.

These people ask the very natural and practical question, "We have them; now what are we going to do with them?" I will try to answer this question, and in doing so will not discuss the subject from a Republican or Democratic point of view, but from an American standpoint.

It is much to be deplored that the rights and liberties, the lives and property of over 8,000,000 people should be made the football of partisan politics by a free, liberty-loving, rich and prosperous, busy and progressive nation located on the other side of the world over 10,000 miles away.

The longer this question is discussed by Congress the more partisan prejudice, bias, and bitterness are injected, and for this reason I beg of you to look at it with dry eyes and consider it in an impartial spirit.

Be governed in your conclusions by a sense of justice and fair play, and, if possible, of generosity. The Presidential election is too far off to warrant unfair action, and long before that time arrives the light of truth will be turned on and the clouds and mist of falsehood dispelled.

It is well at this time to bear in mind that trite and true saying of the immortal Lincoln, "You can fool all the people sometimes and some people all the time, but you can not fool all the people all the time." The American people can be relied upon to get at the bottom of the question, and when they do they will act justly to the Filipino and be fair to the taxpayer of this country. If wrong has been done, it will be righted. I have this faith in my countrymen.

Much has been said pro and con about the people of these unfortunate islands being capable of maintaining a stable and responsible government, under which the lives and property of native and foreigner living there would be safe and justice administered.

The earliest official statement was made by Admiral Dewey in his dispatch to the Secretary of the Navy, dated June 27, 1898. He said:

> In my opinion, these people are far superior in their intelligence and more capable of self-government than the natives of Cuba, and I am familiar with both races.

This was a naval officer's private opinion, formed early, it is true, and is accompanied with no statement of facts, circumstances, or reasons showing how his conclusions were reached.

Some time after this, about the middle of October, two naval officers belonging to Dewey's fleet (Paymaster W. B. Wilcox and Cadet L. R. Sargent) made an extended tour over North Luzon, and returning to Manila November 20, 1898, made a detailed report of what they saw.

During the period of their travels Aguinaldo, as president of the insurgent republic, had control of the whole island of Luzon, was obeyed as the controlling power, and was directing the government, general and local.

The Philippine congress was in session at Malolos and did not adjourn until December 26, over a month after their return. This report as then made I believe to be absolutely true, and advise every student of this problem to read it carefully, as it was made before the treaty of Paris was signed—before the American arms were turned against the insurgents, their former allies, and before any partisanship had been injected into this question.

These officers, in their report, pay a high tribute to the Tagal people, who occupy in great part the island of Luzon, the largest and most important of the Philippine group, and dominate that country.

FILIPINOS NOT SAVAGES.

There seem to be many people in the United States, and among them men and women who pretend to some education, who believe these islands are inhabited by barbarous and savage people only. The fact is, the savage in the Philippines bears to the main population in numbers and influence about the same relative position as the red men of the States do to the main body of our citizens.

In discussing the subject of government, they need not be considered. They are the Negritos and Igorotes—few in numbers—inhabiting the mountain fastnesses, rarely coming in contact with the real natives. Many of these savage people are inoffensive and in the main peaceable.

So far as I have been able to observe, under military rule the American officer and private too often treated all the natives as savages, and sometimes with far greater severity than the hostile brave on the war path was treated in our bloodiest Indian wars. That many of them regarded the only good Filipino as a dead Filipino is no fiction, and it is no wonder they were often treated accordingly. But that is another story.

TAGALS, VISAYAS, AND MOROS.

Before taking up the report of Wilcox and Sargent, let me say that the people of these islands may for all practical purposes be divided into three groups—the Tagals, inhabiting Luzon; the Visayas, inhabiting Samar, Leyte, Panay, Negros, Cebu, Romblon, Bohol, Sibuyan, all the small islands of the middle archipelago, and a portion of the seacoast of Mindanao; and last the Moros, who inhabit the mainland of Mindanao, the Sulu group, and Palawan, as well as numerous small islands of the southern portion of the archipelago.

The Tagals and Visayas are Christians, and much alike.

The Moros are Mohammedan Malays, and radically different from the former.

I have seen and moved among the people of these three divisions in their homes, and have formed some strong opinions of their abilities and characteristics. I doubt whether the Moros can be ruled by the same character of government as the Tagals and Visayas, and I am certain that none of the peoples of the Philippines will ever be fitted to become desirable citizens of this Republic.

WILCOX AND SARGENT'S STATEMENTS.

Now, let us take up the statements of Wilcox and Sargent, which may be taken as giving a correct picture of the Tagal people in their towns and villages outside of Manila and its environments, as they lived in the inland country, often far away from the trading centers. I will quote briefly sufficient to give a correct general idea:

In no country have I been treated with more kindly hospitality. In all the towns the best the Filipinos had was given us, and not a cent would be accepted as payment.

Speaking of the inhabitants of Alcola, Pangasinan Province:

A large number of the inhabitants gathered about us from curiosity. Some of the men were dressed conventionally, with shirts hanging loosely outside their trousers, but the more important element wore neat fitting military blouses, hats, and shoes. The women wore the Tagalo costume—light-colored cloth draped from hips down to below their knees, with white petticoat shown beneath, and loose, white blouse with low neck and short sleeves. The people were very respectful and polite and offered the hospitality of their homes.

Of Rosales, province of Nueva Ecija:

We were visited by official representatives from the "Presidente Local," who extended a most cordial welcome and hearty invitation to come into town and enjoy better comfort and conveniences. I learned it was the invariable custom for strangers on entering the place to call upon the Presidente immediately.

The officials regretted we had stopped on the outskirts of the town and seemed fearful lest the discomforts we experienced might reflect upon their hospitality. The officials were neatly attired in military dress, with the distinguishing insignia of rank—a cane with gold head and red tassel for the presidente and with silver head and green tassel for the others. Their manners were polite, and I found their conversation agreeable and friendly.

I carried 500 Mexican dollars in a saddle bag on a horse, and to the credit of the inhabitants of all the provinces I traveled through it was as safe as in any bank.

In every town my entertainment was given without pay, which I more fully appreciated from the fact that the people gave me their best, regretting it was not better, while I knew the conditions were such that they had very little for themselves.

Of Puncan, same province:

I shall never forget the welcome of the local official of Puncan, how he offered all he had for our comfort.

Speaking of Carranglan, same province:

All through this town, almost in every house, people were thrashing rice in the customary way. A man had perched himself on a high seat and on a guitar played a tune with a rythm to suit the lifting and dropping of the thrashing flail. Nothing was left undone by the presidente local and his under officials to furnish the choicest food the town was capable of producing, and to his credit and that of his assistants it was extremely good, and given without any charge.

Of Aritao, province of Nueva Viscaya:

The presidente local, an elderly man of pleasing manners, received us with kindlier hospitality, if possible, than any of the preceding representatives of Aguinaldo's government. He and his official household were most assiduous in their attentions; supplied us with sweetmeats, excellent coffee, and cigars. The local band gave us a serenade.

It appeared to me here that the local government was fairly well organized and working successfully.

Of Bambang, same province:

Soon the village dignitaries made their calls, mostly young men of inquiring minds and absorbing natures. One was a school-teacher and a most interesting man, whose chief aim in life was to gain more knowledge. The egotism and self-sufficiency of the younger element were apparent.

Of Bayombong, the chief town of Nueva Viscaya province:

We were invited to the home of Señor Arista, a gentleman in every sense, well educated, a lawyer, and principal member of the junta. He was one of the finest type of the Filipino man. His house was well furnished, he had a good library of rare books, a drawing-room decorated with artistic taste, a dining room supplied with choice linen and the best of china, and a garden filled with beautiful flowers—even a Jersey cow.

Of Ilagan, the capital of Isabela province, noted for its fine tobacco:

Our arrival was welcomed by manifestations of the warmest hospitality. We were taken to the house of the acting presidente, a man of wealth. The principal officials made calls and were followed by many of their wives, finely dressed in gowns of silk and pina that would have excited the envy of the women of our country. A lady played on the piano, and the Filipino national hymn was sung by a small boy and the whole company joined in the chorus.

Several fiestas were held in our honor. The first was a baile (evening dance), at which the social set were present and the local band produced its choicest selections. The hall was decorated. A good dinner preceded the dance. The hall was filled with attractively dressed women in silks and pina. The men were attired in low-cut black coats, white linnen shirts, collars, and ties, some wearing patent-leather shoes.

I felt a regret at not having my dress suit with me to be more in keeping with my surroundings. My partner, the daughter of our host, waltzed exquisitely. Her costume was pina silk, with long train embroidered in flowers, a waist of delicate pink, white kid slippers and gloves. She wore large and beautiful diamonds. Other women challenged my admiration when I considered that this locality was deep in the interior of a country where taste and culture was supposed to be unknown.

At midnight supper was spread. Some fifty young ladies were seated at the table, whose furnishings were in good form in every respect.

One evening a play at the theater was arranged. The actors were ameteurs. It was put on the stage in proper costumes and commendably acted, with music interspersed.

A steam launch was sent to take us down the Rio Grande de Cagayan to Aparri.

APARRI.

Aparri, with a population of 20,000, has many handsome houses. News had been received from Hongkong papers that the Senators of the United States favored the independence of the islands, with an American protectorate. Colonel Tirano considered the information sufficiently reliable to justify him in regarding Philippine independence assured and warfare in the island at an end.

He proceeded to relinquish the military command he held over the provinces and to place this power in the hands of a civil officer elected by the people. On the day following our arrival the ceremony occurred which solemnizes the transfer of authority in the province of Cagayan.

The presidentes locales of all the towns in the province were present at the ceremony. The elected officer, called Jefe Provincial, thanked the disciplined military forces and their colonel for the service rendered the province and assured them that the work they had begun would be perpetuated by the people, when every man, woman, and child stood ready to take up arms and defend their newly won liberty and resist with the last drop of blood the attempt of any nation whatever to bring them back to their former state of dependence.

He was followed by the three officers who constituted the provincial government, the heads of the three departments of justice, police, and internal revenue. Every town in this province has the same organization.

VIGAN, PROVINCE OF ILOCOS SUR.

The general appearance is that of a prosperous town, with important commercial transactions. We were quartered at the Palacio with 18 military officers, all very young, as is usual in the Filipino army. They were inquisitive, but pleasant enough and willing to render any assistance. The natives are most temperate, althougn a sort of liquor—cana dulce—is manufactured there in large quantities and shipped, mostly to Manila.

SANTA MARIA, SAME PROVINCE.

I noticed at this place, as in others, how well dressed the people were. One never sees a man, however humble, in tattered, torn, or shabby clothes.

CANDON.

Candon is a handsome town, symmetrically laid out, and, after Vigan, was the finest we had visited.

BANGAN, LA UNION PROVINCE.

One could not but notice the industry of the women almost ceaselessly at work weaving cotton in their thatched cottages surrounded by natural flowers. They are rigidly loyal and devoted to their homes and families and do a full share of the work in a cheerful and always pleasant, natural manner.

SAN FERNANDO, UNION PROVINCE.

The men were attired in neat white shirts, collars, ties, black coats, and trousers. A number of young women had bright, attractive-looking faces and comely, graceful manners.

I have given these detailed pictures of this country at the risk of being tiresome, but I believe it always best to give facts and circumstances when possible and leave people to either draw their own conclusions or at least be able to judge of the correctness of the conclusions advanced.

The route taken by these travelers was over 600 miles in length, and may be said to have been almost entirely through the backwoods country of Luzon. It extended through seven large provinces—Pangasinan, Nueva Ecija, Nueva Vizcaya, Isabela, Cagayan, Ilocos Sur, and La Union—important and characteristic districts.

The only sure way of forming a fair opinion as to whether people can govern themselves and what kind of a government is most suitable for them is to know the people. This is always shown by their cities and towns, churches and schools, the habits and occupations of the individuals, their manners and customs, their officials and organization of their home governments.

WESTERN LUZON.

Having last fall personally traveled sufficiently far to obtain a general idea of the people through the provinces of Pangasinan, Tarlac, Pampanga, Bulacan, Manila, La Laguna, and the two Camarines, I will, after giving a brief summary of the conclusions reached by Wilcox and Sargent, proceed to give a short description of facts coming under my personal observation in these provinces.

Comparing the statements above detailed and the conclusions of these naval officers with personal observations and conclusions personally formed, I believe their conclusions to be, in the

main, sound and reliable for all present purposes. There is sufficient homogeneity among the people of Luzon to be controlled by one government.

To summarize the situation as these wide-awake, intelligent American naval officers view it, I give some of these inferences and opinions, as they bear directly on the question of government:

I know of no other country where a stranger can travel hundreds of miles and be entertained by the very best the country produces, where it is offered freely and cheerfully and with apologies for not having something better, and not permitted to pay a cent in return. This, too, in a land devastated by a revolution that had begun nearly three years previously. It is an example of generosity and goodness of heart I have never met with before in my wanderings in various countries of the world, where it has been my keenest enjoyment to travel on untrodden paths far away from the busy turmoil and unceasing activity of a city's throng.

As I progressed farther into the unbeaten tracks we were surrounded by a greater part of the men, women, and children of the near-by population, always respectful, smiling, and with suave and gentle manners.

In spite of a dark exterior one can easily fathom a manifestation of like or dislike on the face of a Filipino man or woman, and I do not remember having ever seen in the expression of the dark-brown eyes of the female population other than the kindly suavity of their gentle nature.

It is amazing to see how well these natives can read and write when their limited opportunities for learning are considered. Large numbers of them have at one time or other been attached to some official post, so that when their oppressors were overthrown they were prepared to supplant them in office, and in many instances they conducted the affairs of state with a greater degree of efficiency than was displayed by their Spanish predecessors.

At this time the United States had not yet announced its policy with regard to the Philippines. The treaty of peace was being negotiated. In the meantime the native population, taking matters into their own hands, had declared their independence from all foreign jurisdiction and had set up a provisional government with Aguinaldo at its head.

It can not be denied that in a region occupied by many millions of inhabitants for nearly six months it stood alone between anarchy and order.

The Philippine officers, both military and civil, that we met in all the provinces, with very few exceptions, were men of intelligent appearance and conversation. The same is true of all those men who form the upper class in each town. They have great respect and admiration for learning, and many men of importance told me the first use the public revenues would be put to after the danger from war was over was to start good schools in every village. The poorer class are ignorant on most subjects, but a large percentage of them can read and write. In the provinces of eastern Luzon which we visited there appears to be no friction between the civil and military.

As to the question of independence at that time among the civil and military officers and the leading townspeople, the desire was universal. "On one point they seemed united, viz, that whatever our Government did for them it had gained no right to annex them."

The railroad—for there is but one in the archipelago—traverses the provinces of Bulacan, Pampanga, Tarlac, and Pangasinan, which districts, with that of Manila, contain one-third of the total population of Luzon. My observations were limited to places along its line.

I stopped at a number of places for a few minutes, but for longer periods at San Fernando, Pampanga Province, Tarlac, in province of same name, and at Dagupan, province of Pangasinan, all large places and at the time occupied by the United States troops.

Although the military, from the highest commissioned officer to the private, constantly referred to the native people as "damned niggers," and were highly incensed at the fact that the civil government, whose authority had at that time superseded theirs, had appointed some of the principal citizens to the high civil offices in these provinces instead of hanging them, as they claimed they deserved, I could not help being struck with the bright, intelligent faces of many of the people we met, noticeable even in the children. The dignity and courteous manners and evident superiority of the principal citizens impressed me. That many had brains and education was apparent. The towns were well laid out and the houses comfortable. The finest structures were occupied by United States officers, and if the people who occupied them previously could be judged by the elegance of the interiors, they certainly belonged of right to the upper crust of society, as our people call it.

Elegant hardwood furniture, dark polished floors, and doors and windows carved and gilded, ornamental woodwork; on the walls and ceiling frescoes and decorations of all kinds. Some houses had ballrooms. The owners must have lived before the war like princes.

Everywhere it was admitted that the children attended school regularly whenever opportunity was given them, and learned quickly, and were ambitious and bright and well behaved. The people were well clad and modest, and went to and fro with a minding-their-own-business air. I never saw a drunken or disorderly native, and they have the reputation of being, with few exceptions, temperate, polite, and well behaved. They are passionately fond of music and dancing, are often artistic and sentimental.

Great gamblers, very fond of cock fighting and games of chance; pleasure loving, but sometimes vain and vindictive. Our soldiers say they are irritated easily, treacherous, and superstitious.

Everywhere they had all the appearance of being devout Christians.

I believe them to be easily governed and appreciative of kindness.

DAGUPAN.

At Dagupan I visited a wealthy boat builder at his home. He certainly had a well-ordered house and well-behaved family, and a modest wife. Champagne was not good enough for us. What would have become of our party had we accepted all of this man's pressing hospitality I fear to contemplate.

A TAGALO LADY.

On the second day after my arrival in those islands our party visited Santa Cruz, in Laguna Province. I had never spoken to a native woman, and after dinner at a small hotel kept by a Chino, left the quasi hotel and crossed the street to a very humble shack, where, on the ground floor, cigars and cigarettes were sold. A very neat and quite pretty native woman stood behind the window sill, used as a counter.

In my very best Spanish I priced her wares. Imagine my surprise, when she replied in a very sweet voice, "Excuse me, sir; I speak English." With pride she informed me that her sisters, and her nieces, and cousins, also spoke English. I bought cigars and cigarettes, and offered her a cigarette, when to my astonishment she said, "I never smoke, nor do my sisters, nieces, or cousins." Begging her pardon, I asked how that happened, pleading that it seemed to be a common practice among the Filipino women. Her answer was, "Not among the better classes." More inquisitive than polite, I asked why she had not acquired the habit, and she very sweetly informed me that her father did not approve of his daughters smoking, as he considered it unladylike, and added the statement, "We always obey our parents."

This girl was a full-blooded Tagalo. Was I not right in changing my mind about the Filipino being a savage and not fit to govern himself? I introduced Senator BACON and Representatives MERCER and JACK and DE ARMOND to the young woman, and during the conversation she informed us that the American military bands "played good music, but rarely played well." When asked whether she played and sung she without hesitation said she did, and when requested to sing for us she said if we would step into the ground-floor room adjoining the store she would play and sing. Her replies were frank, modest, and gracious, with no egotism or false modesty. We entered the room and in a few minutes her niece, a girl of 10, and her cousin, a girl of about 8, came in with harp and violin.

TAGALOG SINGING.

The cousin began with, to our utter astonishment, a song of the civil war which I had not heard for ten years, John Brown's Body Lies Moldering in the Grave. The niece followed with Marching Through Georgia—in as good English as I have ever heard—to our amusement and the edification of the Senator from Georgia; and my little Filipino acquaintance, and I hope friend, in the clearest and sweetest voice sang that most difficult of American patriotic songs, the Star-Spangled Banner. She, at my request, also sang a Spanish madrigal and a Tagalo national air in as fine style as I have ever heard anyone sing.

When our party left next day the Army ambulance loaded up before the hotel, and in the presence of our party and the garrison officers, with perfect modesty and good taste she gave me her little brown hand and in farewell said: "I so sorry my good friend leaves; I hope he always be well." Have you ever received a more gracious or graceful parting? Never will I forget that pretty little brown-skinned Tagalo lady, and I will cherish her memory always.

I often wonder whether these are the kind of people whose homes we have burned and lives we have taken—whose fathers and mothers and loved ones we have dishonored, mangled, and tortured in our cruel and bloody struggle to establish and maintain the doctrine of imperialism, to the falsification of our boasted motto of liberty and independence, the dishonor of the flag of the free, and the disgrace of our Christian teachings.

NUEVA CACERES, CAMARINES PROVINCE.

September 21 and 22, 1901, our party spent in Nueva Caceres, the capital of the Camarines Province. Governor Ross, an American, was the civil governor there, and I was one of his guests during my stay. There had been no fighting in this neighborhood and one saw the natives at their best. The province is rich, and many wealthy families reside here. The secretary of the civil government is a Filipino and we were entertained at his home. Rarely have I eaten a better dinner; and he has a large family, as his wife's unmarried sisters reside with him. It was impossible not to feel that we were among intelligent and educated people. They had particularly fine manners, which seems to be the rule among families of the better classes of these people.

They are called Vicols. The second day of our stay a banquet was given in our honor. The principal officers of the civil government as well as all the presidentes of the provinces were present, and many officers of the Army, giving us a very good opportunity of forming an estimate of the character of the men controlling the local governments. While I could converse with but a few

who spoke English, I was satisfied that they were a substantial, dignified lot of men, whose good common sense and practical ideas were stamped upon their features.

A number of the Filipinos present addressed us in Spanish; some of them were very earnest and eloquent. Several of the best speakers were lawyers, and after they had finished no doubt was left in my mind of their ability, intelligence, and education. They strongly impressed upon us the universal desire of the Tagalo for independence or the right of carrying on his own government, as well as the fact that under the guidance of such intelligent leaders self-government was perfectly feasible.

If they were fair specimens of the upper classes of the country, the assertion that the Filipino is not able to carry on a substantial government is absolutely false. I talked with them about the administration of the laws, about schools, municipal government, the resources of the provinces, and the policy of the United States, and was surprised at their direct and intelligent answers and questions.

It must not be forgotten that all the places mentioned heretofore are scattered over Luzon, with practically no communication with each other, and oftentimes not even telegraphic communication with Manila—isolated communities who receive the news of the world's happenings long after they occur.

Add to this Manila, a city of 300,000 people, as large or larger than Washington, where the culture, education, and refinement and wealth of the country are gathered together. Is it at all reasonable that the people of Luzon by themselves are not capable of maintaining a first-rate government and that the broad statement to the contrary can not be and is not true?

Speaking at the banquet at Nueva Caceres, in response to an invitation to reply, I made the statement that from what I had seen and heard of the Filipinos in Luzon I felt satisfied that, following the genius and spirit of American institutions, they could be expected to maintain a government which would not only be a credit to their people but an example to the nations of the Orient. To-day I believe I spoke the truth.

THE VISAYAS.

This race, while second in importance, is the most numerous, and its people are very much like the natives of Luzon. They were converted to Christianity by the earliest Spanish priests and have remained Christians for three hundred years.

They are said to be in appearance more like the Malays of Java, Sumatra, and the Malacca Peninsula, but at this time I think the difference in general appearance between them and the Tagals would require an expert to detect it.

Owing to the location, they are better watermen than the Tagalo, and are expert fishermen. As soldiers they are considered superior, owing to the fact that for many years they have had constant contentions with the warlike Moros, who are their neighbors on the southern side. They raise their own food, consisting mainly of rice, fish, and fruit, and their towns and villages are largely located on the seacoasts. The women of many of the islands are expert weavers, using the hand loom entirely and making the celebrated pina and hoosic cloth; also mats and cotton and hemp cloth.

They are less temperate and tractable than the people of Luzon, nor do I consider them as intelligent. There are in their midst a very considerable number of educated men and women, and the common people seem to have a primary education as a rule. The two largest cities next to Manila—Iloilo, on Panay, and Cebu, on Cebu—are their chief commercial towns, and there you find a very considerable number of the most intelligent people, who are frequently quite wealthy, as considerable of the hemp, sugar, and copra exported come from this country. Their local governments are simple and do not differ from those of Luzon. I have visited their two principal cities and have met the people living on the outskirts. I have visited Catbalogan, on Samar, which is considered and appeared to be the most rugged of these islands, and the people usually take after the country.

From all I saw and heard the children are exceedingly bright and easily taught. They are ambitious and anxious to learn, especially the English language. The grown people also show the same anxiety, and you can please them no better than give them the English words for objects they point out. Spanish never was spoken to any great extent by the common people; they used the native dialect, which, like the Tagalog, was written as well as spoken. On the whole, while they seem to have as vigorous intellects as the Tagalo, they are of rougher grain and lack much of the refinement which one finds so generally prevalent among the better classes of Luzon. There can be no doubt about it that the same character of government found most suitable for the Tagalo will fit the requirements of the Visaya.

In speaking of the mental powers of the native Christian people of these islands, two facts stand out in bold relief. First, there are a very considerable number of highly educated people among them. Second, the children are admitted by all to have active minds, acquire easily, are ambitious to learn, and industrious. Their rapid progress is by American school-teachers considered remarkable.

When we examine into the reasons for finding so many cultured men, we find that it was a universal practice for those families who could afford it to educate their children, both male and female. That gave them a standing in their communities and maintained the family importance. The schools of Manila were first resorted to, and when these were exhausted and the students trained they were often sent abroad to complete their education.

You will find quite a number of Filipinos who have studied and hold degrees from the most celebrated of the German universities—Berlin, Leipzig, Heidelberg, Göttingen—and a far greater number who have studied in the universities of Spain. These men returning filled the professional ranks, and you find in Manila a considerable number of natives who are leading lawyers and physicians and professors in the educational institutions there. Secondary education has by no means been as much neglected as most people have been led to suppose. The history of educational institutions show this.

San José was built about 1610, and as early as 1622 the King of Spain was informed that this seminary for grammatical, philosophical, and theological students was being administered in Manila. The College of Santo Tomas, of Manila, was founded in 1619, and was elevated to a university by a bull of Pope Innocent X, at the instance of King Philip IV, in 1645.

So we find educational institutions, not only of a primary character, but those teaching secondary or higher branches, in existence and operation in the Philippines before the universities of Harvard and Yale in the United States had been founded, and long before the American occupation the Municipal Atheneum and College of San Juan de Letran were successfully filling the field of secondary education there. While the white man was establishing colonies, killing the aborigines, and conquering the country now embraced in the States of our Union, the missionaries of the Roman Catholic Church were converting to Christianity, civilizing, and educating the natives of the Philippine Islands.

For three centuries this has been going on, and the results are perfectly apparent to anyone not blind sojourning among these people. The old saying, "There are none so blind as those who will not see," alone explains many of the false and misleading statements circulated about the Filipinos.

In the later days there can be no doubt that through the agents of Spain and certain individuals among some branches of the Spanish friars injustice, tyranny, and greed, and sometimes immorality, have cast a blight over these people.

But for the first two hundred years, from 1600 to 1800, it can not be contended this was the case. During the formative and a large portion of the developing periods the rule of the agents of Spain and of the Roman Catholic Church was exceptionally honest, earnest, and beneficent. Under it people who were savages were converted to Christianity, morality was instilled into the minds and hearts of the inhabitants, agriculture and the arts of civilized and enlightened peoples were introduced and encouraged. Cities and towns were built everywhere, and in every one of these municipalities, small or large, churches were built and schools carried on.

A very careful writer who spent some fourteen years in the Philippines and made the country, the people, and their history a study asserts as a fact that the Augustinian order alone, from their entrance into this country before 1600 up to 1892, founded no less than 242 cities and towns. And the history of the country will disclose that the Roman Catholic religious orders have largely contributed to the conversion of these native people to Christianity and have at the same time contributed to their education and enlightenment. And it is not at all fair to say that all the troubles and suffering and discontent are traceable to them as a source.

This is not true. On the contrary, their influence has, in the main, been beneficial. The Philippines have been, through the work of their men, brought very far forward on the road to civilization and enlightenment, and no country in the Torrid Zone, and peopled by natives, can now or before the American occupation could compare with the Philippines. When we consider the people of our own country we must not forget the fact that the United States is located in the Temperate Zone; nor the very important fact that our population is not a native population. We have driven the natives out, practically exterminated them, not developed, educated, and transformed them into an enlightened nation.

We are of the stock of the nations of the white race, up to the present time acknowledged to be—both in military prowess and in mental equipment, as shown by its educational progress as well as its inventive ability; by its organizing powers; by everything that has raised man from savagery to modern advancement—the superior of the races of the world.

Our progenitors have come from the countries of Europe, where the developing processes have been going on for many centuries. As the years rolled by they have become more active, and it would not be reasonable or natural were we to expect to find in the mixed and heterogeneous races of the Philippine Archipelago our equals.

To me the wonder is, from what I have seen and heard and read, that they, beset with the obstacles we know that they have had to contend with, are as far advanced as we find them to-day. Through three hundred years this growth has extended, slowly at first, but quite rapidly during the last century.

Before the so-called beneficent American despotism was reared in these lands we find a cable connecting its capital with Hongkong and the civilized world and an internal telegraph system extending to all the important towns of its largest island, Luzon. We find a well-equipped railroad extending from Manila to Dagupan, about 125 miles in length; mail and passenger steamers reaching the important towns of the archipelago; tramways and electric lights, and an exceedingly substantial, adequate, and well-constructed water-supply plant in the capital city. Lighthouses are maintained along the important water channels and wharves and docks in many of its more important harbors.

Sometimes one wonders how at this late day, after the Philippine question has been so much examined and discussed, it was possible for men interested in its solution to hold such widely different opinions on the subject of their ability to maintain a substantial government or even to govern themselves under popular institutions. There can be no doubt about it that much has been done to manufacture the sentiment of their want of capacity. Practically the whole body of officials and employees of the civil government broadly assert the proposition.

Their testimony, we must not forget, may be, and no doubt to a great extent is, based upon personal interest, for there are very many fat positions and well-paid berths under the control and in the gift of the commissioners, and many of these people are getting more good hard dollars than they have ever received or earned at home. It is human nature to hold on to a good thing even at the cost of holding biased views or circulating a little fiction. With this class of men the longer we hold these islands and the more progress the people make the less ability they will develop for self-government. It is so easy for men to get the idea that their particular individual services are so valuable and necessary that should they give up the world would come to a sudden termination.

Opposed to all these opinions and statements is the pregnant fact—fact, I say—that the Philippine commissioners have always been able to find natives capable of filling any position from justice of the supreme court down to policeman. In fact, they point with pride to the fact that they have appointed so many of the native people to positions both high and low. And they deserve great credit, in my mind, for pursuing this policy, for the places belong to these people.

Nor is it any the less natural that many Army officers should add their statements to the negative side of this question. This strife which has been vainly sought to be dignified as a war has furnished to every man of the old officers opportunities for promotion and increased compensation, and to nearly all the new ones a coveted place in the ranks of the Regular Army. The only drawbacks they see are due to increased liability to sickness and death occasioned by climatic conditions and the prevalence of contagious diseases. The larger number are willing to take their chances of these until they are ordered back across the broad Pacific to "God's country."

When I visited Manila and other principal places where our troops were stationed in considerable quantities one became promptly acquainted with the fact that there was a marked difference of opinion existing between the military and the civil authorities as to how the country should be run. From general to private the military openly and savagely criticised the Commission for not following the strenuous policy they considered as the only one calculated to bring about peace and order.

Their proposition was that only by fear and a rule of terror could the population be controlled. The policy of the civil authorities was denominated weak and foolish. To them the native was a nigger—treacherous, cowardly, dishonest, in no way responsive to kind treatment. When the commissioners started the experiment of organizing a native police for the maintenance of order in Manila and in other important places, its utter failure was loudly predicted. When the Commission asserted that it had been their experience that these employees had been faithful and that an extension of the system would be beneficial, it was strongly denied, and another insurrection was predicted. Events up to this time show the commissioners were correct and the military wrong.

With these views generally held by the military it is easy to see why not much dependence can be placed upon their statements that these people are not capable of self-government.

Again, in September and October of last year the commissioners were loudly denounced by the military because they had appointed so many of the educated Filipinos to important positions and were contemplating the appointment of more. They claimed the men should be hung for what they had done while in command of the native forces instead of being rewarded with fat positions.

They seemed to be utterly oblivious to the fact that during the war of the rebellion the ablest and most intelligent men of both the North and South, and especially of the South, were in the ranks of one or the other of the contending armies.

I am satisfied that the more pacific policy of the Commission after it was once started did more to pacify the country than the strennous policy of the military. It is the only policy by which peace there can be maintained by any government we institute. The bullet, bayonet, and water-cure policy did more to prevent reconciliation and to create hate, antipathy, and distrust to everything American than any other policy that could have been pursued. The Filipino found us to be even worse than the Spaniard had taught him to believe us to be.

Another circumstance always appealed to me to be a very strong argument that these people were capable of self-government, and of a very high form of government, and that is the fact that when a scheme of government was planned it was, in many of its important details, modeled after our own, which I regard as the highest type of government in the world.

If it is safe to intrust the people with the local or municipal governments, why are they not fitted to manage the general government?

During the time since a civil government has been proclaimed and local organizations formed under it in how few instances has the general government been obliged to interfere.

When Judge Taft and General Wright were selected to head the Philippine Commission, no mistake was made in the selection. We put our best foot forward. They were not only well equipped by education, but were men of cool judgment, nerve, firmness, as well as honest, just, and kind-hearted.

I do not believe in trusting any man or men with absolute power, but men of this type abuse it the least. I tremble at the thought of the result had we sent men who were selfish, bigoted, quick tempered, or vindictive. And what had they been venal or strenuous?

The ordinary men whom we so often elect as chief magistrates of our cities and sometimes of our Territories and States would have made a sad failure.

The Filipino has no guaranty that should we adopt the policy of permanent occupation he will not get some good specimens of the average American politician, trained to run a machine government for all there is in it. He has just cause to fear that such appointment will often be made.

A fair criticism of the government as now carried on in the Philippines is that its object seems to be to make the Filipino fit the government, and not the government fit the Filipino.

It is fundamentally a despotism with republican trimmings. Not more of a despotism, I hear you say, than that of your own native State of Pennsylvania. You may be right, but some of us hope in the near future to break the shackles of machine despotism and relieve our proud Commonwealth from political slavery. We hope the time is near at hand. And we would not that the Filipino should be obliged to live under conditions which have ceased to arouse comment among the majority of our people. And then we must always admit that it is self-imposed.

We know the people of these islands have for three centuries been accustomed to be governed. We know that Aguinaldo's government of six months preceding the war was a success, and that there was no disorder or anything savoring of anarchy. We know that the people of these islands are united as they have never been before and are anxious to try the experiment of governing themselves.

Why not give them a chance and promise them ultimate liberty and freedom? We know or ought to know that the maintaining our sovereignty over them will bring nothing but trouble, adverse criticism, and immense expense to the people of the United States. We know the policy of holding colonial possessions will strain the very fabric of our free popular government and republican institutions. We know that in war with foreign countries it will be impossible to defend this isolated territory. We know or ought to know that it is calculated to arouse China to be a more progressive nation and enter into competition with us for the control of the world's commerce.

We know it will only add to our troubles by attaching and annexing eight or ten million of colored people, with whom we can not with benefit mix. We know we have trouble enough at home in our effort to govern our own people. Why not, instead of aspiring to be an imperial world power, extending its dominion over alien races in all parts of the world, turn our attention to uplifting our own citizens and follow the motto "America for Americans?"

National Parks in California.

SPEECH

OF

HON. JAMES C. NEEDHAM,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 28, 1902.

The House having under consideration the bill (H. R. 14511) to authorize the relinquishment to the United States of patented lands and claims, etc.—

Mr. NEEDHAM said:

Mr. SPEAKER: I ask unanimous consent for the present consideration of the bill (H. R. 14511).

The Clerk read the bill, as follows:

Be it enacted, etc., That in cases in which a tract of land covered by an unperfected bona fide claim or by a patent is included within the limits of the Sequoia National Park, set aside by act of Congress approved September 25, 1890, and the Yosemite and General Grant National parks, set aside by act of Congress approved October 1, 1890, the settler or owner thereof may, if he desires to do so, relinquish the tract to the Government and secure other land, outside of said parks, in accordance with the provisions of the law relating to the subject of such relinquishment of lands in the forest reservations created under section 24 of the act of Congress approved March 3, 1891.

Mr. RICHARDSON of Tennessee. Mr. Speaker, reserving the right to object, I want some explanation of this bill.

Mr. NEEDHAM. Mr. Speaker, this bill is unanimously reported from the Committee on Public Lands. It was prepared by the Secretary of the Interior in accordance with his last annual report, pages 154 and 155. It provides that the owners of patented lands in the national parks in California may relinquish their lands to the Government and go upon the public domain and take in lieu thereof other land open to settlement. It creates no expense to the Government and has been recommended repeatedly by different Secretaries of the Interior and by superintendents of these parks, and was prepared by the Interior Department and unanimously reported from our committee.

Mr. SHAFROTH. Is it necessary in order that the national parks shall be properly carried on that private owners should be out of them?

Mr. NEEDHAM. That is the object of the bill, for the better administration of the parks.

Mr. RICHARDSON of Tennessee. How much is involved in it?

Mr. NEEDHAM. Something like 55,000 acres are held in private ownership in these parks.

Mr. SHAFROTH. But the whole of those 55,000 acres will not be exchanged; only a portion.

Mr. NEEDHAM. This is simply a privilege extended to these owners; there is nothing compulsory in it; it is simply a privilege of which they may avail themselves if they desire to do so.

Mr. LACEY. The limitation is precisely the same as in the case of forest reserves.

Mr. NEEDHAM. Exactly; this simply extends the law, so far as relinquishments are concerned, to the national parks.

Mr. MADDOX. Have the owners already cut the timber off the land?

Mr. NEEDHAM. No, sir; not to any great extent.

Mr. LACEY. Very little of the timber has been cut in these national parks.

Mr. MADDOX. Have not the parties who own this land cut the timber off?

Mr. LACEY. I think that very few of them have done so, for the reason that the lands are so inaccessible. They are away up in the heart of the Sierra Nevada Mountains.

Mr. SHAFROTH. Let me state that the same provision exists now under the general law as to forest reserves; and we have a great number of forest reserves, including many millions of acres. The national parks ought to be, and in fact are, on a better basis than the reserves; yet by reason of the fact that the law with relation to forest reserves has not been extended to the national parks we have private ownership now in the national parks, which should not exist there.

Mr. MADDOX. Let me state my reason for asking the question. I saw a report here the other day from the Secretary of the Interior in regard to one of these parks. It stated that some parties had gone into some of these parks and cut all of the timber off, and now they want to exchange that land with the Government and go out and locate on other timber lands in order to get the timber from those also. I simply wanted to know whether that was the fact in this instance.

Mr. NEEDHAM. I do not think that condition of things is as prevalent in the parks as in the forest reserves.

Mr. SHAFROTH. A number of applications have been made for land in forest reserves for purposes of that character. But I am opposed to any such policy. It is wrong for the Government to exchange in this way good land for bad.

Mr. FINLEY. Is it not a fact that the holdings by private parties in this national park are comparatively small and are isolated, and that the parties wish to get out of the park and to take lands on the public domain elsewhere, the result of which will be beneficial not only to the Government from having its national park as a unit, but also beneficial to these private parties? The arrangement will be mutually beneficial.

Mr. NEEDHAM. That is approximately the situation. This legislation is recommended by the Secretary of the Interior.

Mr. FINLEY. The results of such a policy, I understand, will be beneficial both to the Government and to the private parties.

Mr. CANNON. How much land is held in these parks by private individuals?

Mr. NEEDHAM. About 55,000 acres.

Mr. CANNON. I believe there are two small parks, which are close together.

Mr. NEEDHAM. Yes, sir. This applies to the three national parks in the State of California.

Mr. CANNON. Does it provide for the purchase, or for the issue of lieu scrip?

Mr. NEEDHAM. Neither. It simply provides that these parties shall relinquish their claims to the Government and go upon the public domain and take other lands which are open to settlement. This is the same legislation which was before the gentleman's committee in connection with a proposed appropriation, and the committee advised this course.

Mr. LACEY. This bill embraces the same limitation which was put in the appropriation bill. It applies to nonmineral, surveyed land, open to settlement.

Mr. CANNON. Then lieu scrip can not be issued.

Mr. LACEY. No scrip is to be issued. An exchange is to be made. The owners of land in the forest reserves or in this park will convey their land with an abstract of title to the Government and then locate on surveyed, nonmineral public lands, open to settlement elsewhere.

Mr. MCRAE. Just as in the case of a forest reserve.

Mr. LACEY. Precisely the same as a forest reserve.

Mr. RICHARDSON of Tennessee. Who superintends that exchange?

Mr. LACEY. The exchange is effected through the Land Office.

Mr. GAINES of Tennessee. Why do they want to make the exchange?

Mr. LACEY. I will state that these parties inside who have located lands find themselves now, by virtue of the fact that the land has been placed in perpetual reservation, in such a position so that there can be no new neighbors, schoolhouses, churches, or other conveniences. In other words, settlement has been stopped, and they want to get out alongside of people where the land is open to settlement.

Mr. MCRAE. I suggest to the gentleman from Iowa [Mr. LACEY] that the purpose of the Government is to get control of the park.

Mr. NEEDHAM. Now, Mr. Speaker, I desire to extend somewhat my remarks upon this bill.

The Sequoia National Park was created by an act of Congress approved September 25, 1890. The Yosemite and General Grant national parks were created in one act which was approved October 1, 1890.

The amount of land held in private ownership in the General Grant National Park is only 160 acres; the amount in the Sequoia National Park is about 972.87 acres of patented land and one claim of 40 acres, while the amount in the Yosemite National Park is between 54,000 and 55,000 acres.

Since the establishment of these parks there has been designated annually a superintendent to take charge of the Sequoia and General Grant national parks, and another superintendent to have charge of the Yosemite National Park.

RECOMMENDATIONS AS TO SEQUOIA AND GENERAL GRANT PARKS.

In 1891 the acting superintendent of the Sequoia and General Grant national parks made no recommendation as to the disposition of private holdings within these parks, neither was any recommendation made by the Secretary of the Interior.

In 1892 the acting superintendent reported as follows:

In my opinion all the land in the Sequoia Park owned by individuals should be purchased by the Government. There is not a great amount of such land, and no one person owns enough to make him wish to keep it or improve it now that the park is established. The amount that can be used for agricultural purposes is very small and is so situated that it will probably never improve in value. The resident proprietor of one of these tracts is remote from neighbors and good roads; he is surrounded on all sides by the park and can not enlarge his possessions and can not get sufficient pasturage for his domestic stock if they increase in number.

Some of the cattlemen, as Mr. Tharpe and Mr. Dean, own several tracts of land apiece. These tracts are from 40 to 160 acres in area and were purchased as "State swamp" or "School lands." They generally contain a few acres of meadow land that is more or less boggy after the snow melts in the spring, and remains so in spots during the summer. The men who own these lands complain that they are unjustly deprived of the use of them for their cattle and receive no money or other lands as a recompense. The reason

for their exclusion is that if the cattle are placed there they will range over miles of park territory instead of remaining on these few acres of private land. The meadows are not fenced in, with the exception of the Wolverton Meadow, and do not furnish grass enough to support the cattle if they were fenced. The owners say that the land is not worth fencing, and as they expect that the Government will purchase the land eventually they do not care to take the trouble or time to put up fences. The Giant Forest has a quantity of meadow land claimed by individuals, one of them being Mr. Tharpe, who has been in the habit of using it all. The camp of the detachment in the Giant Forest is on land that he claims, and as it is not fenced we are keeping his cattle so far from it that it is of no use to him, while our own horses and mules are feeding on it. So far as cattlemen who own such lands are concerned, the condition of affairs promotes the growth of grievances.

The same year the Secretary of the Interior in his annual report recommended as follows:

It is recommended that all individual holdings of land in Sequoia Park should be purchased by the Government because of the isolated location of these lands, the unavailability of the same for private purposes by reason of the inability of owners to purchase adjacent tracts or to use present holdings for grazing or agricultural purposes.

In 1893 the Secretary of the Interior made no recommendation, but the acting superintendent recommended as follows:

That the claims of all parties to land within the park be settled without delay.

In 1894 the Secretary of the Interior makes no specific recommendation, but quotes, evidently with approval, the recommendation of the acting superintendent that all claims within the parks be settled.

In 1895 the acting superintendent again recommends that all claims within these parks be settled, and the Secretary of the Interior recommends that all claims with the parks be investigated and settled.

The same recommendations are practically made by the Secretary of the Interior and the acting superintendent for the various fiscal years down to the present time.

RECOMMENDATIONS AS TO YOSEMITE NATIONAL PARK.

The recommendations of the various superintendents of this park since its establishment, and also of the Secretary of the Interior, are well illustrated by extracts from the reports of the Secretary of the Interior for the years 1896, 1897, 1898, and 1899, which are as follows:

PRIVATE LANDS IN YOSEMITE PARK.

The attention of Congress is called to the necessity for the acquirement of the title by the Government to all private lands within the boundaries of the reservation; this matter has been urged by every acting superintendent of the park since its establishment, and is again reiterated, for so long as settlers own land in the park and live thereon trespass on the park lands can not be prevented. (Secretary's report, 1896.)

Much of the land in the park is owned by individuals, the title thereto having been acquired before or soon after the establishment of the park. The Government should, it is stated, own all the land inside the park, and none should be given over to private use except for the purpose named in the act reserving the land now included in the Yosemite National Park. The prompt purchase by the Government of all patented lands within the park will be to the benefit of the United States and to that of most of the owners of such lands. (Secretary's report, 1897.)

SEQUOIA, YOSEMITE, AND GENERAL GRANT NATIONAL PARKS.

In the several annual reports of my predecessors, as well as in that submitted by me to you for the last fiscal year, the fact that there are numerous private holdings on these reservations was adverted to. The aggregate acreage of these lands in which the Government has wholly parted with its title may be stated, approximately, to be 55,064.02, and that in which title has not fully passed from the United States to be 367.975 acres, divided as follows: In the Yosemite National Park, 53,931.15 acres of patented lands and three claims embracing 327.975 acres on which patents have not yet issued; in the Sequoia National Park, 972.87 acres of patented lands and one claim of 40 acres on which patent has not yet issued; and in the General Grant National Park, 160 acres of patented lands.

The right of owners, transferees, or lessees of such lands to the use thereof for lawful purposes has always been recognized by the Department, and there has been practically no interference in the use of such property except where it was desired to cut timber therefrom or graze sheep or cattle thereon. In such cases it was first required that the metes and bounds of such lands be properly marked and defined, so that it might be easily determined whether the lands from which timber was cut or on which stock grazed was within the limits of patented lands or on the reservation lands. Furthermore, that in removing timber from the reservations or taking animals to and from patented lands, it must be done under the supervision of the acting superintendent of the park, and over the roads and trails within the park.

Although this requirement is a reasonable one, it has been found to be extremely difficult of enforcement. Persons controlling these patented tracts have leased the same to stockmen, well knowing the conditions upon which their use would be permitted by the Government. The latter, whether with the knowledge of the Departmental regulations or not, have taken their herds to these patented lands. These depredators have caused much trouble, and the greater part of the time of the park force has been taken up in ascertaining the location of herds within the parks and their subsequent ejectment if found roaming on the reservation lands.

As long as these private interests are permitted to remain within these reserves just so long will there be trouble and annoyance to this Department in their protection. Some provision should therefore be made at an early day looking to the extinguishment of these holdings, in order that the reserves may be, as an entirety, the property of the Government, as in that way alone are they susceptible of being satisfactorily protected. To that end, therefore, I have to recommend that so much of the act of Congress approved June 4, 1897 (30 Stats., 36), as permits the relinquishment by owners of tracts of land in the several forest reservations, and the selection in lieu thereof of vacant lands in other localities which are open to settlement be extended to these parks. (Secretary's report, 1898.)

The superintendent recommends that owners of patented lands should be bought out by the Government, thus removing one great source of destruction and trouble within the park limits.

Then follows a quotation from a previous report relative to lieu lands; then the Secretary says:

Concurring in his conclusions in the premises, I earnestly recommend favorable legislation in the matter by Congress, provided the exchange of land can be made on an equitable basis. (Secretary's Report, 1899.)

The recommendations in the reports of the Secretary for the years 1900 and 1901 contain nothing new, previous recommendations as to purchase of private land and legislation as to lieu lands being renewed.

Now, Mr. Speaker, it will be seen that there has been almost constant agitation ever since the establishment of these parks looking toward the extinction of private holdings. My two immediate predecessors, Mr. Bowers and Mr. Castle, both introduced bills providing for the appointment of a commission for the appraisement of these holdings with a view to their purchase by the Government. During my first term in Congress I introduced a bill of this character also, but nothing has ever come of any of these bills. At the beginning of the present session, on December 18 last, I introduced the bill H. R. 7216, providing for the purchase of these holdings and their revesting in the United States.

The Yosemite National Park is situated in the district of my colleague [Mr. WOODS], while the Sequoia and General Grant are in my district. Mr. Woods and myself have used every endeavor to get legislation looking toward the purchase of these holdings. We appeared before the Appropriations Committee and argued for the insertion of an item in the sundry civil bill authorizing the Secretary of the Interior to enter into negotiations looking toward the purchase of these park lands, but this committee was unalterably opposed to such a procedure, some of the members even going so far as to hold that Congress has no authority to appropriate money for such a purpose.

Now, Mr. Speaker, the situation of many of the owners of these private holdings is most unfortunate. They took up these lands in good faith, and ever since they have paid taxes to the county in which the land is situated, and to the State of California. Congress by an exercise of its legislative power established these parks and thus prevented further settlement or development within their boundaries. Some relief should be granted to these settlers. I believe that the Government should purchase these claims, or at least those that can be obtained at reasonable figures.

I consented most reluctantly to introduce the present bill and did so only after I was convinced that it was impossible to obtain anything better at the present session of Congress. The present bill was prepared by the Secretary of the Interior in accordance with his last annual report, pages 154 and 155, and was forwarded to me by the Secretary of the Interior under date of May 16. The bill proposes to extend as a privilege to those having lands in the national parks in California the same rights that are now enjoyed by those similarly situated in forest reserves. The equities are much stronger in behalf of those living in our national parks than those similarly situated in forest reserves. The bill does not create any scrip, and it has been uniformly held by the Department that the right of lieu selection applies only to surveyed nonmineral land.

I desire to say, Mr. Speaker, that the national parks in the State of California have received very scant consideration at the hands of Congress, and I wish to submit some comparisons in regard to appropriations granted to our various national parks:

Yellowstone National Park:	
Heretofore appropriated	$968,872
Carried in present sundry civil bill	755,400
Total	1,724,272
Chickamauga and Chattanooga:	
Heretofore appropriated	1,351,600
Pending sundry civil bill	50,000
Total	1,401,600
Shiloh:	
Heretofore appropriated	405,000
Pending sundry civil bill	40,000
Total	445,000
Gettysburg:	
Heretofore appropriated	425,920
Pending sundry civil bill	75,000
Total	500,920
Vicksburg:	
Heretofore appropriated	165,000
Pending sundry civil bill	100,000
Total	265,000

Now, Mr. Speaker, Congress has heretofore appropriated for the Yosemite National Park only $16,000, and the present sundry civil bill grants to this magnificent park only $6,000.

When I was elected to Congress there had never been appropriated a dollar to either the General Grant or the Sequoia national parks. During the last two sessions at each session there has been

appropriated to the General Grant $2,500 and to the Sequoia $10,000, and the present sundry civil bill carries the same amount, making total, provided these items in the pending sundry civil bill remain unchanged, for General Grant $12,500 and for Sequoia $30,000.

Now, if the present bill, even though it does not go any further than the House, will serve to call to the attention of Congress the urgent necessity of granting adequate relief to the owners of private lands in these parks, I feel that something will have been accomplished. I am not at all satisfied with the bill under consideration for the reason that I do not believe that it is a measure of adequate relief. I believe that Congress should purchase these holdings, and I am satisfied in my own mind that Congress has the power to do so. I am not willing, however, Mr. Speaker, that this session of Congress should adjourn without passing some legislation upon this subject. I do not believe that the present bill can in any way be abused, as there are no mandatory provisions in the bill, and the holdings of the Department have been such as to minimize the difficulties under which we suffered for some time after the creation of the right of lieu selection as applicable to forest reserves.

The present bill will extend a privilege which no doubt some at least of these holders will avail themselves of. All of the parks in question are situated more than 20 miles from any railroad line, and consequently the subject of railroad land grants can not enter into the question.

While I am not at all satisfied with the present bill, because I do not believe that it is an adequate measure of relief for those affected, yet I feel compelled from a sense of duty to a large number of constituents who are directly interested to get the best legislation possible for them.

I desire to say that in view of the munificent manner in which Congress has treated all national parks outside of the State of California, that I shall insist, so far as I am able, while I am a member of this body, on more generous treatment of the national parks of our State.

The Efficiency of the Militia.

SPEECH
OF
HON. CHARLES DICK,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1902,

On the bill (H. R. 11654) to promote the efficiency of the militia, and for other purposes.

Mr. DICK said:

Mr. SPEAKER: In submitting this bill as the chairman of your Committee on the Militia I desire to express high appreciation of the earnest cooperation of the members of the committee in its preparation. From the very first there has been entire unanimity of feeling in the desire to prepare a bill which would be acceptable to all interests involved, and would result in greatly improving the efficiency of the National Guard as the second line of the country's defense in time of war. With this spirit animating every member of the committee, there was no difficulty in harmonizing differences of opinion. The one object sought has been kept clearly in view and the members of the committee have worked earnestly and faithfully to that end. Many conferences have been had between members of the committee and the Secretary of War and the heads of the various bureaus of the War Department and the representatives of the National Guard.

The approval of the Secretary of War is set forth in the following communication:

WAR DEPARTMENT, *Washington, March 18, 1902.*

SIR: I have to acknowledge the receipt of a copy of House bill No. 11654. It is the object of the bill, as indicated by its title, to promote the efficiency of the militia. I have examined the measure with great care, and approve the wise and patriotic endeavors of the committee to frame an enactment which seems to me well calculated to accomplish the purpose set forth in its title.

The bill, which has been exhaustively considered in committee and which meets the approval of those most directly interested in the development of the constitutional militia, makes reasonable and proper provision: (1) For the ordinary training and discipline of the militia as a force belonging, in time of peace, to the several States; (2) for its special employment by the General Government as a part of the constitutional military forces in time of war or public danger, such use being made the subject of special statutory limitations in respect to time, place, and occasion of its employment; (3) for its acceptance by the United States, in the form of complete organizations, as a part of any volunteer forces that may be authorized to be raised and embodied in the event of war, and (4) for the volunteer service of its individual members, with preferential rights of appointment and enlistment, in any volunteer forces that may be authorized by Congress, in an emergency of war, in excess of or in addition to the organizations of militia which may tender their services as such, under the authority of their respective States.

With a view to secure that uniformity of instruction which can only be attained by an entire uniformity of armament and equipment, I approve of the gratuitous issue of small arms of the latest and most approved types in exchange for the arms of obsolete patterns with which the militia of the several States are now armed and equipped.

It is believed that the operation of sections 23 and 24 will be especially beneficial as measures of preparation for national defense. Section 23 undertakes to provide for the preparation of a register of persons whose ability to exercise command in the line or to render corresponding services in the staff has already been established by the test of actual military experience. The capacity of those candidates whose military education or previous service in the Army or militia entitles them to consideration is required to be tested by an examination conducted by a competent military board, which is required to certify its opinion as to the fitness of such candidates for appointment in the volunteer forces. The immediate result of such certification is to place all candidates who have obtained certificates in a class from which officers of any volunteer forces which may be authorized by Congress in pursuance of section 24 are required to be selected.

In section 24 the attempt has been made to remedy a defect which is inherent in the voluntary system of recruiting, which has been hitherto relied upon by the United States as a means of maintaining its military establishment in time of peace. It is the purpose of this section to utilize the services of those who have served at least one term of enlistment in the regular or militia forces by the establishment of a national volunteer reserve. The force so designated is to be composed of men of considerable military experience who are to be embodied, in time of peace, for occasional brief tours of duty, not exceeding ten days in length, and whose services are to be utilized in time of war only when the volunteer forces authorized by Congress exceed in number the organized commands of militia who may enlist in bodies, in pursuance of section 6, act of April 20, 1898.

In conclusion, I venture to express the hope that the carefully prepared clauses of the bill, which provide for a larger measure of cooperation on the part of the War Department than has hitherto been regarded as practicable, will operate to bring about that close and intimate contact between the several branches of the constitutional military establishment which is so necessary to their mutual and harmonious development.

Very respectfully,

ELIHU ROOT,
Secretary of War.

HON. CHARLES DICK,
Chairman Committee on the Militia, House of Representatives.

The present law governing the militia has been on the statute books for one hundred and ten years and has long since been inoperative and obsolete.

The Constitution gives to Congress the power (Art. I, sec. 8)—

To provide for organizing, arming, and disciplining the militia and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress.

For over one hundred years Congress has made no adequate provision for organizing, arming, and disciplining the militia, and the matter has been left entirely in the hands of the States and Territories. It is true that Congress has made annual appropriations for the purpose of aiding in the support of the militia of the States and Territories, and the Fifty-sixth Congress increased this annual appropriation from $400,000 to $1,000,000.

This annual appropriation has been available for the issue of arms, ordnance stores, quartermaster stores, and camp equipage, but otherwise the United States has assumed no control or supervision over its expenditure. The principal expense of maintaining and supporting the organized militia of the States and Territories has been borne by the States and Territories themselves, and while these troops are generally known and described as the National Guard, they are in no proper sense a national guard, but are strictly State militia, and are not subject to supervision and control by the War Department. It was believed that these State troops would be promptly available for national defense in case of an emergency. The experience of the country during the war with Spain showed that these expectations were not fully realized.

The following extracts from chiefs of the bureaus, made to the Secretary of War in 1898, are pertinent:

[Extracts from reports, 1898.]

INSPECTOR-GENERAL UNITED STATES ARMY.

Recent experiences have shown that our militia system could advantageously be reconstructed and a more intimate relation established between it and the National Government.

The great number of volunteer regiments moving to the centers of concentration without arms or uniforms, and the subsequent difficulties in meeting their needs promptly, suggest the establishment of reserve or supply depots at convenient points, in order that each State on call can put its quota in the field in condition for service, at least as far as arms and equipments go.

To secure better cohesion between the National Guard and Regulars and the greatest efficiency of the troops in the field, funds should be provided for combined encampments and periodical military maneuvers and experimental mobilization in times of peace, as is customary with all first-class European powers. One of the most serious defects noted during the Spanish-American war was the inexperience and utter disregard for the most elementary principles of military life in large camps.

SURGEON-GENERAL UNITED STATES ARMY.

Considerations of domestic economy and sanitation in the companies and regiments were not given proper attention, and men who were being taught to meet the enemy in battle succumbed to the hardships and unsanitary conditions of life in their camps of instruction.

CHIEF OF ORDNANCE UNITED STATES ARMY.

When the first call for volunteers from the States for the war with Spain was made it was decided to take as many of the regiments of the National Guard as possible, already armed and equipped by the States. * * * The supposition was that * * * the State troops, being already armed and equipped, would be ready for immediate service. This was based on the supposition that the arms and equipments were in good condition—an expectation not generally realized during the war. It is probable that the troops would have been ready for service as quickly by being equipped anew.

As these troops (volunteer, first call) were mainly from the National Guard of the different States, it was understood that they were well equipped, * * * which supposition was not realized.

In addition to the failure of the National Government to exercise its power to organize, arm, and discipline the militia, and to make the various State troops a national guard in fact as well as in name, the following causes also operated to prevent the successful operation of the existing militia law:

1. The several clauses of the general law never became fully operative, as their execution depended upon State legislation which was never obtained.

2. The terms of the statute were too sweeping, and the attempt to include all able-bodied males of military age was practically impossible of execution; the statute not being applicable to a smaller or more restricted class, was thus rendered inoperative.

3. The organization prescribed having been fixed in the original statute soon became obsolete and failed to furnish a uniform standard of composition for the militia embodied from time to time by the legislatures of the several States. The modifications brought in by the legislation of 1862 are now completely at variance with those prescribed by law for corresponding organizations in the Army of the United States.

The Presidents of the United States, from Washington down to the present time, have recognized the inadequacy and inefficiency of legislation on the subject of the militia, and have repeatedly recommended the repeal of the old law and the substitution of something practical. Almost without exception they have recognized that the main support and defense of the country in time of danger must rest upon its volunteer forces, and have repeatedly called the attention of Congress to the necessity of making proper provision for organizing, arming, and disciplining the militia.

The following are extracts from messages of Presidents relative to the militia:

[Extracts from messages of Presidents relative to the militia.]

PRESIDENT WASHINGTON, 1789.

Along with this object (the preservation of peace and tranquillity on the frontiers) I am induced to suggest another, with the national importance and necessity of which I am deeply impressed; I mean some uniform and effective system for the militia of the United States. It is unnecessary to offer arguments in recommendation of a measure on which the honor, safety, and well-being of our country so evidently and so essentially depend; but it may not be amiss to observe that I am particularly anxious it should receive as early attention as circumstances will admit, because it is now in our power to avail ourselves of the military knowledge disseminated throughout the several States by means of the many well-instructed officers and soldiers of the late Army, a resource which is daily diminishing by death and other causes. To suffer this peculiar advantage to pass away unimproved would be to neglect an opportunity. * * *

PRESIDENT WASHINGTON, 1790.

Among the many interesting objects which will engage your attention, that of providing for the common defense will merit particular regard. To be prepared for war is one of the most efficient means of preserving peace.

A free people ought not only to be armed, but disciplined, to which end a uniform and well-digested plan is requisite.

PRESIDENT WASHINGTON, 1791.

The first (militia) is certainly an object of primary importance, whether viewed in reference to the national security, to the satisfaction of the community, or to the preservation of order.

PRESIDENT WASHINGTON, 1793.

They are incapable of abuse in the hands of the militia, who ought to possess a pride in being the depository of the force of the Republic, and may be trained to a degree of energy equal to every military exigency of the United States. But it is an inquiry which can not be too solemnly pursued, whether the act more effectually to provide for the national defense by establishing a uniform militia throughout the United States has organized them so as to produce their full effect; whether your own experience in the several States has not detected some imperfections in the scheme, and whether a material feature in an improvement of it ought not to be to afford an opportunity for the study of those branches of the military art which can scarcely ever be attained by practice alone.

PRESIDENT WASHINGTON, 1794.

The devising and establishing of a well-regulated militia would be a genuine source of legislative honor and a perfect title to public gratitude. I therefore entertain a hope that the present session will not pass without carrying to its full energy the power of organizing, arming, and disciplining the militia, and thus providing, in the language of the Constitution, for calling them forth to execute the laws of the Union, suppress insurrections, and repel invasions.

PRESIDENT WASHINGTON, 1795.

With the review of our Army Establishment is naturally connected that of the militia. It will merit inquiry what imperfections in the existing plan further experience may have unfolded. The subject is of so much moment, in my estimation, as to excite a constant solicitude that the consideration of it may be renewed until the greatest attainable perfection shall be accomplished. Time is wearing away some advantages for forwarding the object, while none better deserves the persevering attention of the public councils.

PRESIDENT JEFFERSON, 1801.

These considerations render important that we should, at every session, continue to amend the defects which from time to time show themselves in the laws for regulating the Militia, until they are sufficiently perfect. Nor should we now, or at any time, separate until we can say we have done everything for the militia which we could do were an enemy at our door.

PRESIDENT JEFFERSON, 1802.

Considering that our regular troops are employed for local purposes, and that the militia is our general reliance for great and sudden emergencies, you will doubtless think this institution worthy of a review, and give it those improvements of which you find it susceptible.

PRESIDENT JEFFERSON, 1804.

Should any improvement occur in the militia system, that will be always seasonable.

PRESIDENT JEFFERSON, 1805.

I can not, then, but earnestly recommend to your early consideration the expediency of so modifying our militia system as, by a separation of the more active part from that which is less so, we may draw from it, when necessary, an efficient corps for real and active service, and to be called to it in regular rotation.

PRESIDENT JEFFERSON, 1806.

A militia so organized that its effective portions can be called to any point in the Union, or volunteers instead of them, to serve a sufficient time, are means which may always be ready yet never preying on our resources until actually called into use. They will maintain the public interests while a more permanent force shall be in course of preparation. But much will depend on the promptitude with which these means can be brought into activity.

PRESIDENT JEFFERSON, 1808.

For a people who are free, and who mean to remain so, a well-organized and armed militia is their best security. It is therefore incumbent on us at every meeting to revise the condition of the militia, and to ask ourselves if it is prepared to repel a powerful enemy at every point of our territories exposed to invasion. Some of the States have paid a laudable attention to this subject; but every degree of neglect is to be found among others. Congress alone has power to produce a uniform state of preparation in this great organ of defense; the interest which they so deeply feel in their own and their country's security will present this as among the most important objects of their deliberation.

PRESIDENT MADISON, 1809.

Whatever may be the course of your deliberations on the subject of our military establishments, I should fail in my duty in not recommending to your serious attention the importance of giving to our militia, the great bulwark of our security and resource of our power, an organization the best adapted to eventual situations for which the United States ought to be prepared.

PRESIDENT MADISON, 1810.

These preparations for arming the militia having thus far provided for one of the objects contemplated by the power vested in Congress with respect to that great bulwark of the public safety, it is for their consideration whether further provisions are not requisite for the other contemplated objects of organization and discipline. To give to this great mass of physical and moral force the efficiency which it merits, and is capable of receiving, it is indispensable that they should be instructed and practiced in the rules by which they are to be governed. Toward an accomplishment of this important work I recommend for the consideration of Congress the expediency of instituting a system which shall in the first instance call into the field, at the public expense and for a given time, certain portions of the commissioned and noncommissioned officers. The instruction and discipline thus acquired would gradually diffuse through the entire body of the militia that practical knowledge and promptitude for active service which are the great ends to be pursued. Experience has left no doubt either of the necessity or of the efficacy of competent military skill in those portions of an army in fitting it for the final duties which it may have to perform.

PRESIDENT MADISON, 1812.

A revision of the militia laws, for the purpose of rendering them more systematic and better adapting them to emergencies of war, is at this time particularly desirable.

PRESIDENT MADISON, 1813.

The militia being always to be regarded as the great bulwark of defense and security for free States, and the Constitution having wisely committed to the national authority a use of that force, as the best provision against an unsafe military establishment, as well as a resource peculiarly adapted to a country having the extent and the exposure of the United States, I recommend to Congress a revision of the militia laws for the purpose of securing more effectually the services of all detachments called into the employment and placed under the Government of the United States.

PRESIDENT MADISON, 1814.

I earnestly renew at the same time a recommendation of such changes in the system of the militia as by classing and disciplining for the most prompt and active service the portions most capable of it will give to that great resource for the public safety all the required energy and efficiency.

PRESIDENT MADISON, 1815.

And I can not press too much on the attention of Congress such a classification and organization of the militia as will most effectually render it the safeguard of a free State. If experience has shown in the recent splendid achievements of militia the value of this resource for public defense, it has shown also the importance of that skill in the use of arms, and that familiarity with the essential rules of discipline which can not be expected from the regulations now in force. With this subject is intimately connected the necessity of accommodating the laws, in every respect, to the great object of enabling the political authority of the Union to employ promptly and effectually the physical power of the Union in the cases designated by the Constitution.

PRESIDENT MADISON, 1816.

An efficient militia is authorized and contemplated by the Constitution and required by the spirit and safety of free government. The present organization of our militia is universally regarded as less efficient than it ought to be made, and no organization can be better calculated to give to it its due force than a classification which will assign the foremost place in the defense of the country to that portion of its citizens whose activity and animation best enable them to rally to its standard. Besides the consideration that a time of peace is the time when the change can be made with the most convenience and equity, it will now be aided by the experience of a recent war, in which the militia bore so interesting a part.

PRESIDENT MONROE, 1817.

An improvement in the organization and discipline of the militia is one of the great objects which claims the unremitted attention of Congress.

PRESIDENT MONROE, 1822.

I have to add that in proportion as our regular force is small should the instruction and discipline of the militia, the great resource on which we rely, be pushed to the utmost extent that circumstances will admit.

PRESIDENT MONROE, 1823.

As the defense and even the liberties of the country must depend in times of imminent danger on the militia, it is of the highest importance that it be well organized, armed, and disciplined throughout the Union.

PRESIDENT ADAMS, 1825.

The organization of the militia is yet more indispensable to the liberties of the country. It is only by an effective militia that we can at once enjoy the repose of peace and bid defiance to foreign aggression; it is by the militia

that we are constituted an armed nation, standing in perpetual panoply of defense in the presence of all the other nations of the earth. To this end it would be necessary so to shape its organization as to give it a more united and active energy. There are laws for establishing a uniform militia throughout the United States and for arming and equipping its whole body. But it is a body of dislocated members, without the vigor of unity, and having little of uniformity but the name. To infuse into this most important institution the power of which it is susceptible, and to make it available for the defense of the Union at the shortest notice and at the smallest expense of time, of life, and of treasure, are among the benefits to be expected from the persevering deliberations of Congress.

PRESIDENT ADAMS, 1826.

The occasion was thought favorable for consulting the same board, aided by the results of a correspondence with the governors of the several States and Territories and other citizens of intelligence and experience, upon the acknowledged defective condition of our militia system, and of the improvements of which it is susceptible. The report of the board upon this subject is also submitted for your consideration.

PRESIDENT JACKSON, 1832.

If in asserting rights or in repelling wrongs war should come upon us, our regular force should be increased to an extent proportioned to an emergency, and our present small army is a nucleus around which such force could be formed and embodied. But for purposes of defense, under ordinary circumstances, we must rely upon the electors of the country. Those by whom, and for whom, the Government was instituted and is supported will constitute its protection in the hour of danger, as they do its check in the hour of safety.

But it is obvious that the militia system is imperfect. Much time is lost, much unnecessary expense incurred, and much public property wasted under the present arrangement. Little useful knowledge is gained by the musters and drills now established, and the whole subject evidently requires a thorough examination. Whether a plan of classification, remedying these defects and providing for a system of instruction, might not be adopted, is submitted to the consideration of Congress. The Constitution has vested in the General Government an independent authority upon the subject of the militia which renders its action essential to the establishment or improvement of the system, and I recommend the matter to your consideration, in the conviction that the state of this important arm of the public defense requires your attention.

PRESIDENT JACKSON, 1835.

Occurrences to which we, as well as other nations, are liable, both in our internal and external relations, point to the necessity of an efficient organization of the militia. I am again induced by the importance of the subject to bring it to your attention. To suppress domestic violence, and to repel foreign invasion, should these calamities overtake us, we must rely in the first instance upon the great body of the community whose will has instituted and whose power must support the Government.

PRESIDENT JACKSON, 1836.

In this connection it is also proper to remind you that the defects in our present militia system are every day rendered more apparant. The duty of making further provision by law for organizing, arming, and disciplining this armed defense has been so repeatedly presented to Congress, by myself and my predecessors, that I deem it sufficient on this occasion to refer to the last annual message and to former Executive communications in which the subject has been discussed.

PRESIDENT VAN BUREN, 1837.

It is not, however, compatible with the interests of the people to maintain, in time of peace, a regular force adequate to the defense of our extensive frontiers. In periods of danger and alarm we must rely principally upon a well-organized militia, and some general arrangement that will render this description of force more efficient has long been a subject of anxious solicitude. It was recommended to the First Congress by General Washington, and has since been frequently brought to your notice, and recently its importance strongly urged by my immediate predecessor. The provision in the Constitution that renders it necessary to adopt a uniform system of organization for the militia throughout the United States presents an insurmountable obstacle to an effective arrangement by the classification heretofore proposed, and I invite your attention to the plan which will be submitted by the Secretary of War, for the organization of volunteer corps, and the instruction of the militia officers, as more simple and practicable, if not equally advantageous as a general arrangement of the whole militia of the United States.

PRESIDENT VAN BUREN, 1838.

I would again call your attention to the subjects connected with and essential to the military defenses of the country, which were submitted to you at the last session, but which were not acted upon, as is supposed, for want of time. The most important of them is the organization of the militia on the maritime and inland frontiers. This measure is deemed important, as it is believed that it will furnish an effective volunteer force in aid of the Regular Army, and may form the basis for a general system of organization for the entire militia of the United States.

PRESIDENT VAN BUREN, 1839.

The present condition of the defenses of our principal seaports and navy-yards, as represented by the accompanying report of the Secretary of War, calls for the early and serious attention of Congress, and, as connecting itself intimately with this subject, I can not recommend too strongly to your consideration the plan submitted by that officer for the organization of the militia of the United States

PRESIDENT TYLER, 1843.

In all cases of emergency the reliance of the country is properly placed in the militia of the several States, and it may well deserve the consideration of Congress whether a new and more perfect organization might not be introduced, looking mainly to the volunteer companies of the Union for the present, and of easy application to the great body of the militia in time of war.

PRESIDENT LINCOLN, 1861.

The recommendation of the Secretary (of War) for the organization of the militia on a uniform basis is a subject of vital importance to the future safety of the country and is commended to the serious attention of Congress.

PRESIDENT HAYES, 1880.

Attention is asked to the necessity of providing by legislation for organizing, arming, and disciplining the active militia of the country, and liberal appropriations are recommended in this behalf.

PRESIDENT ARTHUR, 1882 AND 1883.

I invite the attention of Congress to the propriety of making more adequate provision for arming and equipping the militia.

From the reports of these (United States Army) officers I am induced to believe that the encouragement of the State militia organizations by the National Government would be followed by very gratifying results, and would afford it in sudden emergencies the aid of a large body of volunteers educated in the performance of military duties.

PRESIDENT HARRISON, 1890.

The encouragement that has been extended to the militia of the States should be continued and enlarged. These military organizations constitute in a large sense the Army of the United States, while about five-sixths of the annual cost of their maintenance is defrayed by the States.

PRESIDENT CLEVELAND, 1896.

The appropriations for its (organized militia) support by the several States approximate $2,800,000 annually, and $400,000 is contributed by the General Government. Investigation shows these troops to be usually well drilled and inspired with much military interest, but in many instances they are so deficient in proper arms and equipment that a sudden call to active duty would find them inadequately prepared for field service. I therefore recommend that prompt measures be taken to remedy this condition, and that every encouragement be given to this deserving body of unpaid voluntary citizen soldiers, upon whose assistance we must largely rely in time of trouble.

PRESIDENT ROOSEVELT, 1901.

Our militia law is obsolete and worthless. The organization and armament of the National Guard of the several States * * * should be made identical with those provided for the regular forces. The obligations and duties of the guard in time of war should be carefully defined. * * * It is utterly impossible in the excitement and haste of impending war to do this satisfactorily if the arrangements have not been made long beforehand.

HISTORY OF THE MILITIA LAW.

On July 18, 1775, the Continental Congress passed a series of resolutions recommending "to the inhabitants of all the United English Colonies in North America that all able-bodied, effective men between 16 and 50 years of age in each colony immediately form themselves into regular companies of militia." One of these resolutions is particularly suggestive, as it contains the germ of the volunteer system which has now grown to such proportions that we have been led to recommend its recognition, and is as follows:

That one-fourth part of the militia in every colony be selected for minutemen, of such persons as are willing to enter into the necessary service, * * * and as these minutemen may eventually be called to action before the whole body of the militia are sufficiently trained, it is recommended that a more particular and diligent attention be paid to their instruction in military discipline.

On the formation of the Federal Government one of the earliest acts of the first House of Representatives, in 1789, was the appointment of a committee to prepare a bill to organize the militia. The session adjourned before the committee made a report, but at the following session, in 1790, General Knox, Secretary of War, submitted his celebrated plan for organizing the militia, accompanying it by a letter of transmittal, which is remarkable for its terse, striking, and strong arguments. His plan, in brief, was that every boy, on arriving at the age of 18 years, should be enrolled in the cadet corps of militia and be obliged to serve in camp of instruction thirty days in each of first two years and ten days the third year, and that no person arriving at the age of 21 years should be entitled to exercise the rights of a citizen unless he could produce his certificate of having so served. All citizens between 21 and 45 years of age were to be enrolled in the main corps of militia and be obliged to drill four days in each year, and between 45 and 60 years of age to be enrolled in the reserve corps, which should be assembled twice in each year for inspection of arms. Under his plan the General Government was to furnish uniform, arms, equipments, and bear all the expenses of the camps of instruction.

The features of General Knox's plan were embodied in a bill by a committee of the House of Representatives, and the subject was discussed through the two succeeding sessions until all of its original features were changed or modified, and the act of May 8, 1792, finally agreed upon and enacted. As this is the law still in force, we reserve a detailed explanation of its provisions, and simply state here that its main feature is that every citizen between 18 and 45 years of age shall be enrolled in the militia and shall arm and equip himself at his individual expense. This law was found to be so crude and inadequate that it became the subject of criticism immediately after its passage, and of efforts to amend it which have continued to the present time. As well expressed by Washington, after the attempt was made to put it in practical operation, it "exhibited such striking defects as could not have been supplied but by the zeal of our citizens;" and in his annual messages to each succeeding session of Congress, during his two terms of office, he urged that the evident defects of the law be remedied.

In the session succeeding the enactment of the law an effort was made to repeal the provision requiring every citizen to arm himself. In the next following session, in 1794, a bill was reported by a committee of the House of Representatives to organize a "select corps" of militia, to be armed and equipped by the General Government, and paid for service in annual camps of instruction. Different propositions, having in view these two changes in the militia system, were discussed in successive sessions until 1798, when the threatened condition of our relations with France culminated in the formation of a provisional army

and other warlike preparations that temporarily suspended consideration of the militia system.

Our troubles with France having been amicably settled, the militia question again assumed prominence, and Jefferson in his annual messages to Congress, importuned them to take some action. It was chiefly through his earnest efforts that the law of April 23, 1808 (section 1661, Revised Statutes), was passed, making a permanent appropriation of $200,000 a year to provide arms and equipments for the militia. Somewhat curiously, however, the requirement of the old law that every citizen should arm and equip himself was not repealed, and still remains the statute.

As the country was rapidly increasing in population the uselessness of requiring active militia duty from the whole body of citizens became more apparent, and was felt to be an unnecessary burden. Jefferson, in his annual message in 1805, recommended that the militia be classified according to ages, and thought that those from 18 to 26 years of age would form a sufficiently large body to be subjected to any duty in time of peace.

This proposition was taken up by Congress, and in various forms was the subject of debate in successive sessions, until the war of 1812 put an end to the discussion without any result having been reached.

Madison was almost as urgent in his appeals to Congress to amend the militia law as Jefferson had been. In his annual message in 1810 he advanced a new proposition in the suggestion that the commissioned and noncommissioned officers of the militia should be assembled in annual camps of instruction at the expense of the General Government; and in his last annual message, in 1816, he earnestly recommended a reorganization of the militia, and classifying them according to age.

Prompted by the recommendation of Madison, the Fourteenth Congress, in 1816, directed the Secretary of War to prepare and report a plan for the organization of the militia. Secretary of War Graham reported to the following session, recommending that the militia be divided into three classes according to age, and that the two younger classes be required to assemble annually in camps of instruction and be armed, equipped, and subsisted at the expense of the General Government. This report was referred to a committee of which General Harrison (then a Representative from Ohio) was chairman. Harrison took a deep interest in the subject, and presented a careful report. He deemed it essential that the whole body of the people should be instructed in military matters, and for this purpose recommended that military instruction be made a branch of education in every school in the country. Believing that it would entail too great an expenditure of time and money to subject the whole enrolled militia to drill and military training, he revived the propositions first made by President Madison, and recommended that the officers and sergeants be assembled annually in camps of instruction, be paid for their time, and be thoroughly drilled and instructed at the expense of the General Government, which he estimated would amount to about one and a half million dollars a year. Harrison continued the agitation of the subject while he remained in Congress, and made reports in 1818 and 1819 urging action.

Various bills and propositions were introduced and discussed from 1819 to 1825, most of them, however, agreeing in classifying the militia so that only a small portion of it should be subject to any duty in time of peace, and that this portion should be maintained at the expense of the General Government.

In 1825 Secretary of War Barbour addressed a circular letter to the governors of all the States and to many citizens most prominent in military and civil life, setting forth that it had long been apparent that some change in the militia law was necessary, and asking their views on the subject. He then convened a board composed of some of the most distinguished officers of the Army and militia for the purpose of considering the question, and submitted to them the voluminous correspondence that had resulted from his circular letter.

It is worthy of note that the president of this board was Winfield Scott, then a major-general in the Army, and that Zachary Taylor, then a lieutenant-colonel of artillery, was one of the members. The militia were represented on the board by General Cadwalader, of Pennsylvania; General Sumner, of Massachusetts, and General Daniel, of North Carolina.

The report of this board (S. Docs., second session Nineteenth Congress, vol. 1), together with all the papers and correspondence connected with it, was transmitted to Congress by the President. The board reported that they considered the primary defects of the militia law to be in the excess of numbers which it held to service. They recommended that a select corps of militia be formed, to consist in each State of one brigade for every Congressional Representative, and that the officers of this select militia be assembled in camps of instruction ten days in each year, and be paid by the General Government for their time and traveling expenses. They also recommended that the office of adjutant-general of militia be created, and that, on the application of State executives, the United States should furnish officers to instruct the annual camps.

From 1826 to 1835 the unanimity of opinion as to the absolute necessity of some change in the militia law was only equaled by the diversity of opinion as to what that change should be, and resulted in unproductive discussions of numerous bills and propositions that were submitted.

In 1835 President Jackson, in his annual message, urged Congress, in his usual forcible style, to give their attention to the subject, and, among other things, recommended that volunteer organizations be encouraged and inducements held out for their formation. The Secretary of War (General Cass), in his annual report, gave his views on the subject, and represented the necessity of some legislation. Urgent effort was made in Congress to secure agreement to some plan, but without success.

In 1840 Secretary of War Poinsett submitted a plan to Congress. Apparently despairing of securing agreement to any plan that simply changed and perpetuated the existing system, he proposed a radical reform that stretched the constitutional powers of the General Government to such an extent as to cause opposition to it on that ground. His plan was to divide the militia into three classes—the active, reserve, and mass. The active militia to consist of 100,000 men, apportioned to the respective States, and each State to be required to keep its quota filled at all times, either by voluntary enlistment or draft. One-fourth of the active militia to go out of service annually and be enrolled in the reserve corps. The mass of the militia not to be subject to any duty in time of peace. He proposed that Congress should by law authorize the President to order the active militia into the service and pay of the United States for thirty days in each year for the purpose of placing them in camps of instruction.

This appears to have been the last decided attempt to save the decaying system from dissolution, with the exception of an effort in 1846, when a bill was reported to remedy the excess of number of the militia by limiting the enrollment in time of peace to those between 21 and 30 years of age, who should be formed into a legion of active militia in each State, the officers of which should serve annually in camps of instruction at the expense of the General Government.

The militia system, by this time, was virtually dead; during the many years devoted to debating a remedy for its defects it had gradually sunk, until it no longer existed except on the statute book. In the meantime, in all the States, by a process of "natural selection," there had sprung up volunteer organizations of militia, and the States, by fostering and encouraging them, had supplied the deficiencies of the general law. These volunteer organizations made possible and gave efficiency to that splendid body of volunteers whose soldierly qualities and deeds of valor in the Mexican war gave such renown to our arms.

After that war still greater interest was manifested in the volunteer militia; the States devoted to them the meager supply of arms and equipments obtained annually from the General Government, which in many instances they supplemented by large appropriations of their own, and the volunteer militia continued to increase in numbers and efficiency until the breaking out of the "war of the rebellion." Of that fearful struggle it is safe to say that the magnificent armies which were so quickly formed on both sides were only made possible by the fact that the efforts of regularly educated officers in drilling and disciplining them were supplemented by those who had received a partial military training in the volunteer militia.

Just before the war, in 1860, an earnest effort was made in the House of Representatives to increase the annual appropriation for furnishing arms and equipments to the militia. In urging the measure, Mr. Vallandigham reviewed the militia system and spoke of the volunteer system replacing it, asserting that they would "in time become the National Guard of America."

After the close of the "war of the rebellion" another most decided effort was made, both in the House and Senate, to reorganize the militia, or rather to create a new militia system, and several bills for that purpose were introduced in the Thirty-ninth Congress. Although none of these bills were passed, they contained provisions that are interesting and suggestive, and some that went to the extreme limit, if they did not go beyond the constitutional power of Congress in the premises. It was, however, a purpose common to all the bills to form an active volunteer militia, and that seemed to be accepted as the true solution of the militia question.

Every nation maintains some form of militia as a reserve to its standing army, and the smaller the standing army the greater the necessity that the militia be thoroughly organized and efficiently trained. Under our form of government the militia has two distinct functions: For the States, separately, it is their reserve police force for the preservation of order, the support of civil authority, and the enforcement of law; for the States,

collectively, it was intended by the Constitution to be a military force trained to be a reserve or support to the Regular Army in sudden emergencies, and a school of instruction in which the youth of the country should receive a sufficient amount of military instruction to enable the country to raise efficient volunteer armies when needed.

These two distinct objects of the militia are skillfully provided for in the Constitution, which delegates to Congress the power "to provide for organizing, arming, and disciplining the militia," and reserves to the States the appointment of the officers and the authority to train the militia, but this latter reservation is carefully limited by the proviso that they shall train them "according to the discipline prescribed by Congress."

The wisdom of the men who founded our Government, and the necessity of carrying out their theories by maintaining an efficient militia is clearly demonstrated by the condition of our country to-day. Rich, prosperous, devoted to agriculture, manufactures, and commerce, we apparently have no danger threatening us. But in case of threatened danger, foreign or domestic, the small body of regular troops we could summon to our defense would be wholly inadequate, and the mass of patriotic citizens that might volunteer for defense would simply become victims of ignorant zeal, and their lives and treasure be wasted. It is wise, and it is necessary to the future security of our country, that we maintain such an efficient militia force that it will be counted as a material element in our means of national defense, and thereby secure us against attack.

The first enactment of Congress in furtherance of its constitutional power over the militia—an act to provide for calling forth the militia to execute the laws of the Union, to suppress insurrections, and repel invasions—received executive approval on May 2, 1792 (1 Stats., 264). It had been found necessary on three occasions, within the two years immediately following the establishment of the Government under the Constitution, to authorize the President to call forth a portion of the militia, but in none of the enactments to that end had a method of calling it forth been pointed out or provided for, and it was for that reason that the statute regulating the calling forth of the militia preceded, in order of time, the legislation of Congress in respect to its organization and discipline. This failure to legislate had not been due to a want of initiative on the part of the executive branch of the Government, which had prepared and submitted to the First Congress a plan for the organization of the militia, which will presently be described; and it was not until the first session of the Second Congress was approaching its end that that question received favorable action at the hands of Congress in the form of "An act more effectually to provide for the national defense by establishing a uniform militia throughout the United States," which was approved on May 8, 1792 (1 Stats., 272).

A scheme for the "arrangement of the militia" was submitted to the First Congress, during its first session, by the Secretary of War (General Knox), but without legislative result. A modified form of the same project was formally transmitted to the Senate by President Washington on January 21, 1790, and will be found in Volume XII of the American State Papers (Volume I, Military Affairs, pp. 6–13). Some traces of this plan are to be found in the organization clauses of the general militia law of 1792, but, aside from this, it can hardly be said to have received serious legislative consideration.

The Knox project contemplated the organization of one or more legions in each State; each legion or division to have a numerical strength of 153 commissioned officers and 2,880 enlisted men, and to be composed of 2 brigades of infantry of 2 regiments each, and of 2 companies of riflemen, a battalion of artillery of 4 companies, and a squadron of cavalry of 2 companies, which were to be under the immediate control of the legionary or division commander.

The infantry regiments were to be composed of two battalions of eight companies each, and the company, of all arms of service, consisted of six sections of 12 men each, the section being the fundamental unit of the legionary organization. The number of legions, or divisions, to be maintained in any State depended upon the number of its able-bodied male population, and the male population of the United States of military age was estimated by General Knox, at the date of the project in 1790, to consist of 325,000 men. From this computation slaves and exempts were excluded. Assuming the entire body of the militia, as subsequently described in section 1 of the act of May 8, 1792, to consist of 325,000 men, General Knox made the following arrangement into corps or classes: The first class to constitute the advanced corps, ages 18, 19, and 20, 32,500; the second class to constitute the main corps, ages 21 to 45, 211,250; the third class to constitute the reserve corps, ages 46 to 60, 81,250; making an aggregate of 325,000, which would constitute nearly 110 legions, or divisions, of 3,033 men each.

The following table shows the composition of the legion:

The legion.

	Commissioned officers.	Enlisted men.	Total.
Legionary staff	5	.....	5
Two brigades	4	.....	4
Four regiments of infantry	24	2,400	2,424
Two companies of riflemen	6	150	156
Four battalions of artillery, four companies	12	600	612
One squadron of cavalry, two companies	6	150	156
Total	57	3,300	3,357

General Knox's project contemplated the progressive organization of the legions, beginning with a force of 10,000 men, or three legions, for the first year, to which three legions of 10,000 men were to be added on each succeeding year. The legions first embodied were to consist of young men of the advanced corps of the ages of 17, 18, and 19 years, those of 17 and 18 being required to take part in the annual camps of instruction, which were to be maintained for thirty days. At the age of 20 but ten days' service was to be required, and this was to be rendered during the last ten days of the annual encampment. The legions of the main corps were eventually to be composed of men who had passed through the course of instruction prescribed for the advanced corps.

The Knox project is less specific in respect to the detailed organization of the main and reserve corps. It is apparent that much less was expected, in point of efficiency, from those portions of the militia, although their organization into legions was contemplated—apparently under State auspices; but their training was not carefully provided for, and the contributions of the General Government for their support were intended to be casual and occasional, including expenditures much less considerable in amount than was appropriated for the advanced corps. The main and reserve corps were to "practice the exercises and maneuvers" for four days only in each year; the regiments were to be assembled annually, but the legions were only required to be mobilized once in three years. The reserve corps was to be assembled twice annually for an inspection of arms. As no provision was made for the cost of arms or equipments, it is presumed that they were to be furnished by the individual members of the militia in accordance with the existing practice.

The estimated expense of carrying the plan into effect for the first three years was as follows: Cost of clothing, subsistence, etc., for 10,000 men, including pay of officers, first year, $225,670; cost of same for 20,000 men (10,000 additional), second year, $346,340; cost of same for 30,000 men (20,000 additional) for the third year, and the annual cost thereafter of camps of instruction, $390,440, or, in round numbers, $400,000 per annum.

The revenues of the United States from the date of the organization of the Government under the Constitution to December 31, 1792, were $11,017,460.84, and the project of General Knox contemplated an annual expenditure of 3.7 per cent of the entire Federal revenue in the maintenance of the militia. The revenues of the United States for the fiscal year ending June 30, 1887, when the appropriation for arming and equipping the militia actually reached $400,000, amounted to $371,403,278; 0.001 per cent of which was expended by the Federal Government as its contribution to the support of the militia.

If the present annual revenue of the United States from all sources be estimated at $500,000,000, an appropriation of 3.7 per cent for militia purposes would require the expenditure of $18,500,000 per annum.

General Knox's project is worthy of attention for several reasons:

First. On account of the expense involved, as indicating the importance attached to the matter of military preparation by Generals Knox and Washington.

Second. By reason of the implied participation of the Federal Government in the training of the militia, as is indicated by its proposition to charge itself with the entire expenses of the annual encampments.

Third. The attempt to form a national militia force which could be safely relied on in time of war, by passing a portion of the able-bodied male population through an annual course of military instruction at an age when such instruction was likely to be most effective and profitable. This project preceded by nearly twenty years the corresponding attempt of the Government of Prussia, under Scharnhorst and Stein, to form an army on similar lines to resist the aggressions of the Emperor Napoleon.

Fourth. The failure to provide the armament of the militia at the expense of the public; while clothing, subsistence, the pay of the commissioned officers, and the incidental expenses of the

annual encampment was made a charge against the United States, the expense of furnishing small arms was required to be borne by the individual members of the militia.

Fifth. Were it possible to carry it into effect to-day, upon a larger scale, and with some modifications, suggested by the military experience gained by the General Government during the last century, it would probably solve the problem of an efficient national militia.

No immediate action was taken by Congress on General Knox's plan for the organization of the militia, and there is no indication in the state papers that the matter received serious legislative attention at any time. Subsequent Executive recommendations having in view a general modification of the militia laws were without legislative result.[a]

THE GENERAL MILITIA LAW OF 1792.

The pressure of the Indian war in progress in the Northwest Territory at the time of the adoption of the Constitution made it necessary for Congress to undertake a permanent organization of the militia. Hildreth speaks of this as "a very difficult subject, as well on account of the conflicting claims to authority on the part of the States and the General Government, as by reason of obstacles to be encountered in establishing any system that should produce an effective force."[b] The emergency was met near the close of the first session of the Second Congress by the enactment of a statute regulating the militia of the United States. "The act as passed still remains, in spite of numerous attempts to amend it, the basis of the militia system of the United States; though very much modified as to its local operation by State laws on the same subject."[c]

The original enactment on this subject was the act of May 8, 1792 (1 Stats., 271), and is embodied, with some modifications, presently to be discussed, in the revision of the statutes in 1874, as Title XVI, sections 1625 to 1661 of the Revised Statutes.

THE BASIS OF ENROLLMENT.

The original enactment[d] contemplated the establishment of militia districts in the several States composing the Union; in each of these a company of militia was to be maintained, which was to be under the supervision of a captain; the territorial area composing such district being indefinitely described in the statute as "the bounds of his company." It is fair to presume that the districts so created were more exactly described in the legislation of the several States in respect to their militia, adopted subsequently to the enactment of the general militia law; but such enactments were not general, and legislative interest in militia matters languished until, in the first quarter of the nineteenth century, it became practically obsolete as a part of the constitutional military establishment.

The first section of the act of May 8, 1792, assuming the existence of the company district above described, makes every able-bodied male citizen of the respective States, resident therein, who is of the age of 18 years and under the age of 45 years, a member of the "enrolled," as distinguished from the "embodied," militia; a distinction which will be presently explained. The same section provided for the enrollment, which was to be made by the captain; and the second section specifically described the persons or classes of persons who are exempted from enrollment. It is only necessary to observe in respect to the foregoing provision for enrollment that it has been obsolete in fact for nearly a century, and is entirely impracticable at the present time, if for no other reason, because it makes a demand upon the citizen for military service which is, in some respects, considerably more extensive than any which prevails in the continental states of Europe, where military forces are raised by conscription; for where a system of conscription exists a considerable portion of the able-bodied male population, by drawing fortunate numbers, escape military service, which would have been impossible under a rigorous enforcement of the enrollment clauses of the legislation of 1792, the operation of which would have called into the militia service the entire able-bodied male population of the United States.

ORGANIZATION.

Section 3 of the act of May 8, 1792, prescribed a general organization of the militia. Each regiment was to consist of two battalions of five companies each. A regiment of two battalions was to have a colonel, lieutenant-colonel, one major, and one chaplain. An adequate regimental staff was also provided. A separate battalion was commanded by a major who was not assisted by either a commissioned or noncommissioned staff. The company of infantry, which was the fundamental unit of the organization, was composed of 1 captain, 1 lieutenant, 1 ensign, 4 sergeants, 4 corporals, 2 musicians, and 64 privates. Each battalion was to have one company of "grenadiers, light infantry, or riflemen," and it is not quite clear whether this company was to be in addition to or to be formed out of the five by selection or otherwise. The context would indicate, however, that the latter course was contemplated in the formation of the special company above described. A company of artillery was authorized for each division, and was to be composed of 1 captain, 2 lieutenants, 4 sergeants, 4 corporals, 6 gunners, 6 bombadiers, 2 musicians, and 64 privates. A "troop of horse" was composed of 1 captain, 2 lieutenants, 1 cornet, 4 sergeants, 4 corporals, 1 saddler, 1 farrier, 1 trumpeter, and 64 privates. During the war of the rebellion the organization of the militia was modified by the act of July 17, 1862 (12 Stats., 597), which provided a ten-company organization for the infantry regiment, and required companies of cavalry and artillery to be organized "as in the regular service." This statute is still in force.

The tactical organization of the militia of the several States was provided for in section 3 of the act of May 8, 1792 (sec. 1630, Rev. Stat.), by a general requirement that the militia of each State "shall be arranged into divisions, brigades, regiments, battalions, and companies, as the legislature of the State may direct." Each brigade was to consist of four regiments, but the composition of the division was not expressly provided; and the divisions, brigades, and regiments were to be numbered at their formation, the numbering being of record in the adjutant-general's office of the State; and "when in the field, or in service in the State, each division, brigade, and regiment shall respectively take rank according to its number."

The third section also provided the number, rank, and duties of the general and staff officers necessary to the command and administration of the tactical organization therein provided for. The act of March 2, 1803 (2 Stats., 207), made further provision for the general staff of the militia forces. The organization prescribed for the militia in the act of May 8, 1792, underwent some modification in the act of July 17, 1862 (12 Stats., 598), which prescribed a regiment of infantry of ten companies; fixed the proportions of artillery and cavalry at one company of each arm for each ten-company regiment of infantry, and established a uniform organization for divisions and brigades. This enactment, which is embodied in sections 1645–1647 of the Revised Statutes, is still in force.

ARMAMENT AND EQUIPMENT.

In considering the several sections of the act which provides for the armament and equipment of the militia it is necessary to remember that the militia during and immediately succeeding the war of the Revolution was a trained force composed to an appreciable extent of men skilled in the use of firearms and accustomed to military operations. As a considerable portion of the able-bodied males of militia age possessed firearms and were fully accustomed to their use in 1792, it was only necessary, in the enactment of that year, to verify the fact of such possession on the part of those who were required by statute to render service in the militia and to secure such uniformity in type and caliber of firearms as was possible under the peculiar circumstances of the case. The clauses of the statute which relate to the arms, ammunition, and equipment, therefore, placed the burden of providing them upon the individual; but in consideration thereof it was provided that "all arms, ammunition, and accouterments so provided and required shall be held exempted from all suits, distresses, executions, or sales, for debt of for the payment of taxes."

Section 2 of the act of March 2, 1803 (2 Stats., 207), contains a requirement, in aid of the act of May 8, 1792, to the effect that—

> Every citizen duly enrolled in the militia shall be constantly provided with arms, accouterments, and ammunition, agreeably to the direction of said act, from and after he shall be notified of his enrollment; and any notice or warning to the citizens so enrolled to attend a company, battalion, or regimental muster, or training, which shall be according to the laws of the State in which it is given for that purpose, shall be deemed a legal notice of his enrollment.

The possibility of war with France in the last decade of the eighteenth century led to some revision of view on the part of Congress in respect to the efficiency of the militia and the uniformity and completeness of its armament, which is reflected in the act of July 6, 1798 (1 Stats., 576), which authorized the manufacture of a limited number of firearms for sale to the States for the use of their militia. The enactment required—

> That there shall be provided, at the charge and expense of the Government of the United States, 30,000 stand of arms, which shall be deposited, by order of the President of the United States, at suitable places, for the purpose of being sold to the governments of the respective States, or the militia thereof, under such regulations, and at such prices, as the President of the United States shall prescribe.
>
> That the President of the United States be, and he is hereby, authorized to cause all or any part of the arms herein directed to be provided and deposited for sale, which shall at any time remain unsold, to be delivered to the militia, when called into the service of the United States, proper receipts and security being given for the return of the same.

The sum of $400,000 was appropriated to carry the statute into effect. An earlier statute (secs. 11 and 12 of the act of May 28, 1798; 1 Stats., 558), authorized the loan of field pieces to militia

[a] Messages and Papers of the Presidents, Vol. I, pp. 71, 238, 240, 329, 519, 538; Vol. II, *ibid.*, 303, 603.

[d] Act of May 8, 1792 (1 Stat. at Large, 272).

organizations established by law, and of field artillery, arms, and accouterments to any portion of the militia which may be called forth and engaged in the actual service of the United States. The new policy culminated in the act of April 23, 1808 (2 Stats., 490), which made an annual appropriation of $200,000 for the armament and equipment of the entire body of the militia, which was made permanent by the act of April 29, 1816 (3 Stats., 320). This annual appropriation remained at $200,000 for seventy-nine years, when it was increased to $400,000 annually by the act of February 12, 1887 (24 Stats., 401), and to $1,000,000 by the act of June 6, 1900 (31 Stats., 662).

ACCOUNTABILITY FOR PROPERTY.

The act of July 6, 1798 (1 Stats., 576), passed in contemplation of the war with France, authorized the President to sell arms to the several States for the use of their militia, and any arms remaining unsold were, by the same authority, to be issued to the militia "when called into the service of the United States, proper receipts and security being given for the return of the same."

The act of April 23, 1808, and that of April 26, 1816, made a permanent annual appropriation for arming and equipping the whole body of the militia, but contained no provisions respecting the accountability for the arms, ammunition, equipments, and other articles of war material furnished to the several States for the use of their militia forces, and it was not until the annual appropriation had been increased to $400,000 that the matter was brought to the attention of Congress; as a consequence a clause was inserted in the act of February 12, 1887, which fixed the right of property in all articles supplied to the militia in the Government of the United States, and prescribed a system of accountability which is calculated to insure their care and preservation, and also to regulate their final disposition when, by the incidents of service, they have become obsolete or unserviceable.

BASIS OF DISTRIBUTION.

It having become the policy of the United States to gradually arm the entire body of the militia, it became necessary to establish some uniform rule of distribution, and such a rule was provided in section 3 of the act of April 23, 1808, which contained the requirement:

> That all the arms procured in virtue of this act shall be transmitted to the several States composing this Union and Territories thereof, to each State and Territory, respectively, in proportion to the number of the effective militia in each State and Territory, and by each State and Territory to be distributed to the militia in such State and Territory, under such rules and regulations as shall be by law prescribed by the legislature of each State and Territory.

What constituted the "effective" militia is not easy at this distance of time to determine. Assuming the term to have been used in the sense in which it was then understood, it would seem to have included such portion of the able-bodied male citizens of the several States between the ages of 18 and 45 as were subject to enrollment, and were presumed to have been enrolled in conformity to the act of May 8, 1792, and this constituted the basis of distribution until 1855, when the apportionment was changed by a provision requiring:

> That the annual distribution of arms to the several States under the act approved April 23, 1808, entitled "An act making provisions for arming and equipping the whole body of the militia of the United States," shall be hereafter made according to the number of their Representatives and Senators in Congress, respectively; and that arms be distributed to the Territories and the District of Columbia in such quantities and under such regulations as the President, in his discretion, may prescribe: *Provided*, That the Secretary of War shall first equalize, as far as practicable, the number of arms heretofore distributed and now in possession of the several States, so that each State which has received less than its pro rata share shall receive a number sufficient to make an equal pro rata proportion for all the States, according to the present number of their Representatives and Senators in Congress, respectively. (Sec. 7 of the act of March 3, 1855; 10 Stats., 635.)

This enactment continued in force for about thirty-two years, when it was replaced by section 2 of the act of February 12, 1887 (24 Stats., 401), which provided, in addition to the apportionment upon the basis of representative districts:

> That no State shall be entitled to the benefits of the appropriation apportioned to it unless the number of its regularly enlisted, organized, and uniformed active militia shall be at least 100 men for each Senator and Representative to which such State is entitled in the Congress of the United States. And the amount of said appropriation which is thus determined not to be available shall be covered back into the Treasury.

The present distribution is regulated by the foregoing enactment.

CALLING FORTH THE MILITIA.

The Constitution (Art. I, sec. 8, par. 14) authorizes the militia to be employed "to execute the laws of the Union, suppress insurrections, and repel invasions." The first legislation under this clause of the Constitution was that contained in the act of May 2, 1792 (1 Stats., 264), which authorized the President to call forth the militia in the following cases:

First. Whenever the United States shall be invaded, or be in imminent danger of invasion from any foreign nation or Indian tribe, it shall be lawful for the President of the United States to call forth such number of the militia of the State or States most convenient to the place of danger or scene of action as he may judge necessary to repel such invasion, and to issue his orders for that purpose to such officer or officers of the militia as he shall think proper.

Second. In case of insurrection in any State, against the government thereof, it shall be lawful for the President of the United States, on application of the legislature of such State, or of the executive (when the legislature can not be convened), to call forth such number of the militia of any other State or States as may be applied for, or as he may judge sufficient to suppress such insurrection.

Third. Whenever the laws of the United States shall be opposed, or the execution thereof obstructed, in any State, by combinations too powerful to be suppressed by the ordinary course of judicial proceedings * * * it shall be lawful for the President of the United States to call forth the militia of such State to suppress such combinations, and to cause the laws to be duly enforced.

In the last case above cited (where the laws of the United States shall be opposed or the execution thereof obstructed) the statute provided that—

> If the militia of the State, where such combinations may happen, shall refuse or be insufficient to suppress the same, it shall be lawful for the President, if the legislature of the United States be not in session, to call forth and employ such numbers of the militia of any other State or States most convenient thereto, as may be necessary, and the use of the militia, so to be called forth, may be continued, if necessary, until the expiration of thirty days after the commencement of the ensuing session.

This enactment was to continue in force for two years and "from thence to the end of the next session of Congress thereafter, and no longer." (Sec. 10, act of May 2, 1792; 1 Stats., 264.)

Before the act of May 2, 1792, had expired by its own limitation, the matter was again taken up by the legislature, and just before the close of the last session of the Second Congress, the old enactment was replaced by the act of February 28, 1795 (1 Stats., 424), which, with some modifications, still regulates the calling forth of the constitutional militia, and was embodied in the revision as sections 1642 to 1660 and 5297 to 5300 of the Revised Statutes. The new statute vested less discretionary power in the Executive than did the enactment which it replaced, and was similarly defective in that it did not prescribe, in express terms, the method to be followed by the President in calling forth the militia. The need of such a requirement was apparent, as Governor Mifflin of Pennsylvania, when requested by the Federal Government, in July, 1794, to call forth the State militia to assist in the restoration of order in western Pennsylvania—the theater of the whisky insurrection—had declined to do so, and had thus drawn attention to one of the obvious defects of the original statute.[a]

This enactment gave rise to the leading cases of Houston *v.* Moore (5 Wheaton, 1), and Martin *v.* Mott (12 Wheaton, 19). In the former case the constitutionality of the statute was affirmed by the Supreme Court, and in the latter it was decided that the President was the exclusive judge of the existence of an emergency justifying the calling forth of the militia in the cases specified in the Constitution.

It will be observed that the acts of 1792 and 1795 contemplated two methods of calling forth the militia: One, suggested by the relative situation and powers of the two political sovereignties, but not expressly prescribed in either enactment, presumes that the call would be first addressed to the executive authority of the State; the other authorized the President to order particular organizations of the militia into the Federal service. Although the first, or normal method, has failed on several occasions of emergency, I can find no instance in which the second method has been resorted to. On this point the court, in the case of Houston *v.* Moore,[b] says:

> The method of calling forth the militia by requisition, is, it is believed, the only one hitherto resorted to in any instance. Being partially dependent upon the integrity of the States, the General Government has hitherto been satisfied to rest wholly on that integrity, and, except in a very few instances, has never been disappointed. The compulsory power has been in its practice held in reserve, as only intended for use when the other shall fail. Historically it is known that the act of 1795 was passed with a view to a state of things then existing in the interior of Pennsylvania, when it became probable that the President of the United States would have to exert the authority of the General Government immediately on detached portions of the officers or militia of the Union, to aid in the execution of the laws of the United States. And the instances may still occur in which the exercise of that power may become necessary for the same purpose. But, whenever bodies of militia have been called forth for the purposes of general defense, it is believed that in no instance has it been done otherwise than by requisition, the only mode practiced toward the States from the commencement of the Revolution to the present day.

TERM OF SERVICE.

In the earlier enactments in respect to the Federal employment of the militia, the period of compulsory service was fixed at three

[a] During the war of 1812 the governors of Massachusetts, Connecticut, and Rhode Island expressly declined to honor the call of the President for detachments of their respective militia. (12 American State Papers, vol. 1, Military Affairs, pp. 321-326, 604-623.)

[b] For a form of requisition upon the executive of a State for a quota of its militia, see letter from the Secretary of War to the governor of Pennsylvania; 5 Wheaton, page 28, note *a*.

months in any one year, and the completion of such a period of service entitled a member of the militia to exemption from active service save "in due rotation with every other able-bodied man of the same rank in the battalion to which he belongs." (Sec. 4, act of February 28, 1795; 1 Stats., 424.) This period was extended to six months by section 2 of the act of March 3, 1839 (5 Stats., 355), and to sixty days after the commencement of the next regular session of Congress, by section 3 of the act of July 29, 1861 (12 Stats., 281), and to nine months by the act of July 17, 1862 (ibid., 597), which is the existing law.

PENAL CLAUSES.

The authority to order forth the militia presumes the existence of a power to compel execution of the order. As the field of operation of such an order is included in the debatable ground lying between the Federal and State jurisdictions, and partly covered by both, conflicts would be likely to arise were it attempted to cover it by legislation originating with either sovereignty. Section 5 of the act of February 28, 1795 (1 Stats., 424), the Federal enactment on the subject, provides:

> That every officer, noncommissioned officer, or private of the militia who shall fail to obey the orders of the President of the United States, in any of the cases before recited, shall forfeit a sum not exceeding one year's pay, and not less than one month's pay, to be determined and adjudged by a court-martial; and such officer shall, moreover, be liable to be cashiered by sentence of a court-martial, and be incapacitated from holding a commission in the militia for a term not exceeding twelve months, at the discretion of the said court; and such noncommissioned officers and privates shall be liable to be imprisoned, by a like sentence, on failure of the payment of fines adjudged against them for one calendar month for every $5 of such fine.

The leading case of Martin *v.* Mott (12 Wheaton, 19), already alluded to, grew out of an attempted enforcement of this section, and that of Houston *v.* Moore (5 Wheaton, 1) out of a corresponding attempt in the case of an enactment of the Pennsylvania legislature in its support. A report submitted to Congress by the Comptroller of the Treasury on October 30, 1820, shows that 9,945 persons were fined under the provisions of this section in sums aggregating $483,685.41 for neglect of duty in failing to render service in the militia during the war of 1812 (12 American State Papers, vol. 2, Military Affairs, pp. 314–319), to which should be added $15,377 subsequently reported as collected in Virginia. An incomplete report of the expenses of the court-martial convened for the purpose of imposing fines for the year above mentioned shows that $97,194.14 were disbursed on that account during that period. In New York the fines collected amounted to $243,609.41, and the cost of collection was $55,428.49, about 20 per cent. In Pennsylvania $15,377 was collected at a cost of $41,531.77. Regarded, therefore, as a practicable method of enforcing obedience to the President's orders calling forth the militia, this portion of the enactment must be looked upon as a failure.

TRAINING AND DISCIPLINE.

The clauses of the Constitution which deal with the militia vest in the General Government two important powers: One to call it forth in the event of the existence of one of the emergencies described in that instrument, and the other to provide for its organization and discipline. The term "discipline," as used in the Constitution, in describing one of the powers of Congress in respect to the militia, has been interpreted to extend no further than to prescribe methods that were to be used by the State authorities in the training and instruction of the militia—this, probably, with a view to secure uniformity in instruction.

In the enactment of 1794 the organization of the militia is provided for—very imperfectly, indeed, when judged by the standard of a century ago, obsolete, ineffective, and in some respects grotesquely absurd when compared with the system of to-day. The power to discipline the militia, also vested in Congress, was exercised in the same enactment by a requirement that the rules of discipline framed by Baron Steuben, and approved and established by a resolution of Congress, dated March 29, 1779, and which had been examined and subjected to some modification by General Washington prior to their submission to Congress, should be "the rules of discipline to be observed by the militia throughout the United States." (Sec. 7 of the act of May 8, 1792; 1 Stats., 272.)

This section was repealed and the Steuben drill regulations were displaced by the system devised by Maj. Gen. Winfield Scott by the act of May 12, 1820 (3 Stats., 582), which directed that—

> The system of discipline and field exercises, which is and shall be ordered to be observed by the Regular Army of the United States, in the different corps of infantry, artillery, and riflemen, shall also be observed by the militia, in the exercise and discipline of the said corps, respectively, throughout the United States.

This enactment is still in force.

MODIFICATIONS OF THE GENERAL MILITIA LAW.

The general militia law has been in existence for a little more than a century; during the greater part of that time it has been in some respects inoperative, and in others substantially obsolete. As a measure of national defense it failed signally in 1812; it was not resorted to during the wars with Mexico in 1846, or with Spain in 1898; and its enforcement was attempted, with more than doubtful advantage, during the war of the rebellion.

It is but just to say, however, that the prompt response of the militia of the loyal States to the call of President Lincoln saved the Capital in 1861, and enabled the Government to occupy and hold a number of important places and lines of communication and supply at the outbreak of the civil war, some of which would have passed into the military possession of the enemy had there been no such force in existence. But when it was attempted to employ the militia in active field operations it failed as signally in 1861 as it did in 1812. This failure is due in part to the clauses of the Constitution upon which the law is based, and in part to the political forces of whose antagonistic operation the constitutional requirements, and the subsequent legislation in furtherance thereof, are the records of a compromise. Apart from the question of divided constitutional authority, the particular causes of failure may be stated as follows:

1. The organization clauses of the general law never became fully operative, as their execution depended upon State legislation which was never obtained.

2. There can be no efficient military organization in time of peace which is not composed of persons uniformly armed and equipped. The provision of the general law requiring each member of the enrolled militia to furnish his own arms and accouterments was impossible of execution from the first, and tended to bring the whole militia into disrepute as a body of nondescripts.

3. The terms of the statute were too sweeping, and the attempt to include all able-bodied males of military age was practically impossible of execution, and the statute not being applicable to a smaller or more restricted class, was thus rendered inoperative.

Prior to the year 1810 six plans had been submitted for the better organization of the militia, some of which had originated with the Executive, and others with Congress, but none of them had been able to obtain legislative approval. Between 1794 and 1819, five reports were submitted by committees of Congress opposing any alteration whatever in the existing militia law. From 1812 until 1890, a period of nearly three-quarters of a century, save for the meager legislation of 1862, the enactment of which was due to the emergencies of the civil war, all efforts to modify or improve the militia system seem to have been abandoned. In recent years attention has again been drawn to the defects of the system. The legislative department of the Government has shown an interest in the matter by increasing the annual appropriation for armament and equipment to $1,000,000; the War Department has done much, but not enough, to assist in its development and instruction; in some of the States very considerable sums of money have been expended, especially in the construction of armories and the establishment of encampments, with a view to foster its development and increase its efficiency. In so far as the contribution of the General Government is concerned, it can only be stated that while it has done all that could be expected of it under the Constitutional limitations which restrict its participation in the training of the militia, it has not done enough to secure results of serious or practical importance.

Having regard to the divided control over the militia forces, which is established in the Constitution and has clearly operated to prevent anything like unity in their development, the question is? What is the least that can be done that will contribute, in some degree, to the efficiency of the militia forces under the present system? From this point of view the following suggestions are submitted:

1. The organization of the militia should conform to that of the Regular Army.

2. In return for the material assistance furnished by the United States, in the way of providing arms, equipment, and military stores, there should be such inspection, by officers of the War Department, as will assure the Secretary of War that the several organizations assisted conform to the requirements of section 2 of the act of February 12, 1887 (24 Stat. L., 401).

3. The obsolete sections of the general militia law should be repealed. (Secs. 1626, 1627, 1628, 1632, 1635, 1639–1641, 1645–1647, 1649–1660, Rev. Stat.)

4. Those portions of the law which continue to have operative force (secs. 1625, 1630, 1631, 1634, 1636–1638, Rev. Stat.) should be revised and brought up to date.

FEDERAL AID IN SUPPORT OF THE MILITIA.

This subject has already been alluded to. The first direct aid furnished by the United States in support of the militia will be found in the act of April 23, 1808 (2 Stat. L., 490), which is embodied with subsequent modifications in section 1661 of the Revised Statutes. By the legislation of 1808, $200,000 was appropriated for the armament and equipment of the whole body of the militia,

and this sum was increased to $400,000 by the act of February 12, 1887 (24 Stat. L., 401), and to $1,000,000 by the act of June 6, 1900 (31 Stat. L., 662). By the operation of the foregoing enactments the following sums have been appropriated:

Act of April 23, 1808, from 1808–1887	$15,800,000
Act of February 12, 1887, from 1888–1900	5,200,000
Act of June 6, 1900, from 1901–1902	2,000,000
Total	23,000,000

This aggregate does not include transfers of artillery, small arms, ammunition, and military stores of considerable value which have been made to the States and Territories in pursuance of authority conferred by Congress for that purpose.

The lesson to be learned is that its future policy should be such as to make it reasonably certain that expenditures should hereafter be conditioned or made to depend upon such return, in the way of improved organization and increased efficiency, as will be calculated to justify its liberality in the matter of appropriation.

The returns of the adjutants-general of the several States, of the militia thereof, received at the office of the Adjutant-General of the Army, for the year 1901, show the organized strength of the militia to be as follows:

Organized strength of militia.

Your committee has endeavored to provide a plan as simple and practical as possible to place the militia of the country upon an adequate and satisfactory footing, so that in time of danger it would be immediately available for national defense. The committee believes that that end can be accomplished without changing, or attempting to change, the long-established relations between the General Government and the States, and with that end in view that such legislation as is recommended should be in substantial conformity to the following conditions:

1. The obsolete and inoperative sections of the general militia law should be repealed.

2. Those portions of the original statute which continue to have operative force should be brought into conformity with existing military conditions.

3. The organization and discipline of the militia should, for the sake of uniformity of instruction, conform to that prevailing in the Army.

4. The cooperation of the Federal Government should be so regulated as to make it reasonably certain that its expenditures for the maintenance and armament of the militia should hereafter be conditioned or made to depend upon such return, in the way of improved organization and increased efficiency, as will be calculated to justify its liberality in the matter of appropriations.

THE GENERAL MILITIA LAW OF 1792.

The original enactment on this subject was the act of May 8, 1792 (1 Stat., 271), and is embodied, with some modifications presently to be discussed, in the revision of the statutes in 1874 as Title XVI, sections 1625 to 1661, of the Revised Statutes.

The sections of the proposed enactment will be discussed in the order in which they are recommended for adoption.

SEC. 1. That the militia shall consist of every able-bodied male citizen of the respective States, Territories, and the District of Columbia, and every able-bodied male of foreign birth who has declared his intention to become a citizen, who is more than 18 and less than 45 years of age, and shall be divided into three classes—the organized militia, to be known as the National Guard of the State, Territory, or District of Columbia, or by such other designations as may be given them by the laws of the respective States or Territories, the National Volunteer Reserve as provided in this act, and the remainder to be known as the Reserve Militia.

This section prescribes the basis of enrollment, conforming in that regard to the corresponding definition of the obligation of citizens, and of aliens who have declared their intention to become such, which is embodied in the act of April 22, 1898.

The original enactment contemplated the establishment of militia districts in the several States composing the Union. In each of these a company of militia was to be maintained, which was to be under the supervision of a captain, the territorial area composing such district being indefinitely described in the statute as "the bounds of his company." It is fair to presume that the districts so created were more exactly described in the legislation of the several States in respect to their militia, adopted subsequently to the enactment of the general militia law, but such enactments were not general, and legislative interest in militia matters languished until, in the first quarter of the nineteenth century, it became practically obsolete as a part of the constitutional military establishment.

The first section of the act of May 8, 1792, assuming the existence of the company district above described, makes every able-bodied male citizen of the respective States resident therein who is of the age of 18 years and under the age of 45 years a member of the "enrolled," as distinguished from the "embodied," militia, a distinction which will be presently explained. The same section provided for the enrollment, which was to be made by the captain, and the second section specifically described the persons or classes of persons who are exempted from enrollment. It is

only necessary to observe in respect to the foregoing provision for enrollment that it has been obsolete, in fact, for nearly a century, and is entirely impractical at the present time, if for no other reason, because it makes a demand upon the citizen for military service which is, in some respects, considerably more extensive than any which prevails in the continental states of Europe, where military forces are raised by conscription; for where a system of conscription exists a considerable portion of the able-bodied male population, by drawing fortunate numbers, escape military service, which would have been impossible under a rigorous enforcement of the enrollment clauses of the legislation of 1792, the operation of which would have called into the militia service the entire able-bodied male population of the United States.

The National Volunteer Reserve provided for is a new subject of proposed legislation, and we believe it is warranted for strategic purposes.

History shows that within the one hundred and seventy-one years from 1700 to 1871, inclusive, less than ten instances have occurred in which declarations of war have preceded hostilities; on the other hand, one hundred and seven cases are recorded in which hostilities have been begun by Europe or by the United States of America without previous declaration of war.

HISTORICAL EXTRACTS SHOWING WHERE HOSTILITIES BEGAN WITHOUT DECLARATIONS OF WAR.

The year 1700 opened with profound peace, yet on March 12, without public declaration of war, 40,000 Saxons under General Fleming swept down before Riga, then belonging to Sweden.

In the month of December, 1700, French troops arrived by night and took possession of the strongest places in Spanish Flanders.

On July 28, 1701, Marshal Catinat, with a French corps d'armée took possession of the Alpine passes and descended into Lombardy.

During the early part of the winter of 1701 Prince Eugene seized, without declaration of war, Canneto and other places in the territories of Guastalla, Parma, and Modena.

Throughout 1701 a naval war was carried on by England and Holland against France, but a formal declaration of war was not declared for several months after hostilities had been carried on.

In 1708 the Pope of Rome attacked by surprise a body of German imperial troops and ordered them cut to pieces with great barbarity; also,

In 1708 the English fleet suddenly appeared at Civita Vecchia and by surprise dictated terms to the Pope.

In 1714 the Turks by sudden invasion seized from Venice the Morea, without declaration of war.

In 1715 England, in peace, seized Swedish provinces.

In August, 1717, during peace, a fleet of war vessels carrying 9,000 men left Barcelona secretly for Sardinia. Cagliari, the capital, was surrendered to the Spaniards.

In 1719 Spain secretly prepared an expedition and seized Messina and the greater part of Sicily.

The first case in the eighteenth century when declaration preceded war was in 1719, when France and England joined in war against Spain.

In 1726, without declaration of war, a British squadron under Admiral Hosin was sent to the West Indies and blockaded Porte Bello.

In 1727 Spain, at peace with England, laid siege to Gibraltar from February 11 to November 23.

In 1733 Russia invaded Poland without a declaration of war.

In 1739 reprisals preceded war between Spain and England. War was declared by England October, 1739.

In 1740 the first Silesian war.

In 1741 naval fights between France and England without declaration of war.

In 1742, without declaration of war, Naples, by action of an English admiral, forced to become neutral.

On June 27, 1743, the battle of Dettingen was fought; at which time no declaration of war had been made, nor was it made until March 20, 1744, when France declared war against England.

On August 9, 1744, Saxony and Bohemia were invaded by Frederick without declaration of war.

In 1747 sudden invasion of Holland by the French, in which the French secured all the advantages of sudden attack.

In 1754 France and England put forth hostile claims in America without declaration of war or notice. Fighting commenced between English and Virginia troops on the one hand and French on the other.

On May 17, 1756, England declared war on France.

In August, 1756, Frederick the Great suddenly invaded Saxony with 75,000 men. He did not publish a declaration until after crossing the frontier.

In 1759 the Dutch commenced hostilities in India against the English without proclamation of war.

In June, 1770, 1,700 Spanish soldiers and mariners with 5 frigates and a train of artillery and ordnance stores arrived at Port Egmont, when only 2 sloops of war and a miserable blockhouse with 4 guns constituted all the means of defense. Articles of capitulation were immediately concluded.

In 1777 Austrian troops numbering many thousands entered lower Bavaria and seized every important place, no declaration of war having been previously declared.

On February 6, 1778, France signed secretly a treaty with Franklin, engaging to give assistance to the American colonies. France did not then declare war upon England.

In 1779 Spain joined France in a war against England.

On April 21, 1784, Austria sent a detachment of troops into Dutch territories and took possession of Fort Lillo.

On December 20, 1787, before the declaration of war was issued, Austria sent 6 regiments into Turkey for the purpose of surprising the Turkish fortress Belgrade. Declaration of war was not declared until July 10, 1788.

In July, 1789, a Spanish frigate of 26 guns captured two English vessels and seized a settlement.

On April 20, 1792, France declared war against the Empire of Germany.

On September 28, 1792, the French Republic surprised Nice, Montalbon, and Ville Franche, in the Kingdom of Sardinia, during peace.

In the same year, without declaration of war, the French Republic ordered invasion of neutral Switzerland.

On July 1, 1793, France declared war upon England, Spain, and the Netherlands.

In 1795 England seized Dutch colonies, capturing the island of Ceylon without fighting, no declaration of war having previously been made.

In 1796 the French republican army, without declaration of war, seized forts and territories of the States of the Church, Naples, Tuscany, Parma, Modena, etc.

On January 28, 1798, France suddenly invaded Switzerland. Naples moved against France, and France took possession of Navarra, Suza, and Coni. No declaration of war was made in any instance.

On September 5, 1800, Russia seized two British ships in Russian ports and sent their crews prisoners into the interior without declaration of war.

On July 14, 1801, reprisals were ordered by the English cabinet. All Swedish, Denmark and Russian vessels in English ports were seized and a large English fleet under Sir Hyde Parker was dispatched to the Baltic, although there was no declaration of war.

On March 20 the Swedish inland steamer *Bartholomew*, wholly unprepared for any defense, surrendered at the first summons to a force of three regiments of foot and a detactment of artillery under Lieutenant-General Trigge and a squadron under Rear-Admiral Duckworth.

In 1802 Napoleon sent a force of 20,000 men into friendly Switzerland and seized by surprise Soleure, Zurich, and Berne.

On November 23, 1806, the Russian army, during negotiations and after full concessions, suddenly invaded Moldavia and seized Chotsim, Bender, and Jassi.

In 1806 England sent an expedition against Curaçoa; her fleet suddenly entered the harbor, and Fort Amsterdam was assaulted and captured.

On March 6, 1807, England sent an expedition, during negotiations, into Egypt, and on the 21st of March the governor of Alexandria accepted terms of capitulation.

In 1807 the English man-of-war *Leopard*, 52 guns, demanded of the *Chesapeake*, an American frigate cruising off Virginia, the requisition of some English deserters on board the *Chesapeake*. The American captain denied the right of search, whereupon the *Leopard* fired a broadside, killing and wounding several Americans in time of peace.

In 1812 Napoleon, by sudden attack on troops of Kowno, declared war with Russia.

On June 18, 1812, the United States declared war against Great Britain. During the month of April previous, however, a general embargo was laid by Congress upon all vessels in the harbors of the United States for seventy days.

In 1815, Murat, King of Naples, attacked Austria without notice.

In 1816 Portugal invaded the Spanish possessions on the River Plata without explanation or previous declaration.

In 1818 the United States, during peace with Spain, seized Pensacola and St. Marks.

In 1821 the United States seized a French ship during time of peace.

In 1826 the King of Spain carried on hostilities against Portugal with willful falsehood without declaring war, but professing friendship.

During the same year England, without declaration of war on Spain, dispatched troops to fight the Spaniards.

In 1827 the Turkish fleet was destroyed by Russia, England, and France, without warning of war.

In 1828 the Russo-Turkish war occurred. Hostilities on both sides preceded declaration of war.

In the same year France sent an expedition against the Turks in Greece and captured five fortresses.

In 1831, without declaration of war, Russia fired into, sank, and captured Greek ships and joined in a formal attack upon Poros.

During this same year a French admiral carried off the whole Portuguese fleet and converted reprisals into war. And the King of Holland pressed his troops into Belgium and in nine days crushed the Belgian forces.

On February 22, 1832, France sent a squadron with troops and captured Ancona, by sudden surprise, during absolute peace between France and Rome.

In 1834 the Spanish army, without notice, crossed the Portuguese frontier and, by a forced march, surprised and defeated the force under Don Carlos.

In 1835 the inhabitants of Texas raised the standard of revolt against the Mexican Government, and declared themselves independent.

During the year 1838 an invasion of Canada took place under circumstances described in the United States Congress as such "That the people were at war while their Governments were at peace."

On the 17th of April, 1840, the British ships of war in the vicinity of Naples commenced hostilities and captured a number of Neapolitan vessels, and an embargo was laid on all ports of Malta that bore the Sicilian flag.

In 1844 hostilities by France against Morocco commenced by Prince de Joinville on not receiving a satisfactory answer to an ultimatum.

On May 13, 1846, the Congress of the United States passed a resolution that, by virtue of the constitutional authority vested in them, declared that a state of war existed between the Republic of Mexico and the United States. The President in his message recited many and various acts of hostilities prior to any declaration of war.

In 1847 a revolutionary junta had been established in Portugal and was carrying on a war against the Queen. The war having dragged on for some time, England, France, and Spain agreed to interfere, but no declaration of war was made.

In 1848 the Italian insurrectionary war broke out; the King of Piedmont at once joined his armies to those of the Italians, and the war, from its nature, was carried on without any formal notice.

On April 25, 1849, the French General Oudinot entered citidel Civitá Vecchia. The Roman Assembly protested in the name of God and the people against this unexpected invasion. A short time after there followed the siege and capture of Rome.

In 1850 and 1851 the United States waged the "unofficial" war against Cuba.

In 1853 and 1854 the Crimean war was waged. Hostilities preceded war as follows: The Russian Government seized the Danubian Principalities.

On May 31 the order for the passage of the Pruth was passed.

On June 2, before it was known in London, orders were sent to English and French admirals to move up the Besike Bay.

On October 22 the English and French fleet, under orders from London and Paris, entered the Dardanelles in express breach of treaty of 1841.

On October 23 Turkey declared war upon Russia and crossed the Danube to expel the Russians.

In 1859, France and Italy against Austria. The Austrian Government alleged that the actual commencement of this war was on both sides (as between France and Austria), declared to be due to prior hostile acts, not words.

On May 5, 1860, Garibaldi sailed from Genoa with 2,000 troops to wrest Sicily from the King of Naples.

In 1863 war between Austria and Prussia on one side and Denmark on the other virtually commenced by the occupation of Holstein and Lauenburg by the troops of the two great powers.

In 1870, the war between France and Germany, the declaration of war clearly preceded war.

These facts prove the necessity of a wise people being prepared for any emergency. While at present there may be no probability

of any foreign power waging war against the United States, yet, as an intelligent nation, we should not in our repose of security lose sight of the possibilities of such an event. Great Britain, if uninterrupted, could place within forty days an army of 100,000 men in the midst of the greatest wheat-producing section of our country.

In addition to the wheat fields, the lumber regions, and the ore beds of the Northwest, the entire output of which would be controlled by the presence of an army of occupation moving from Winnipeg south into the United States, and thus cutting the Northern Pacific Railroad, Great Britain would, by means of her light-draft gunboats, have control of the Great Lakes, and thus have an uninterrupted water communication, except when the ice of winter prevented, between the left wing of the army of occupation of the Northwest, resting at Duluth, and the right wing of the army of the Northeast, with its right resting probably on Lake Erie.

This army would be composed of the troops of the home garrisons in the United Kingdom and Ireland and of levies from Bermuda and Jamaica and all the militia and volunteers of Canada. Great Britain constantly keeps in her squadron which is at Bermuda or Halifax, or between these two points, from four to five fine gunboats of such a draft as will allow them to pass through the St. Lawrence system of canals into Lake Ontario, and by the Welland Canal into Lake Erie. These vessels, without infraction of treaty, and indeed probably without our knowledge, can pass so far up the St. Lawrence that the time required for them to enter and cross Ontario and pass through the Welland Canal into Lake Erie must be estimated in hours rather than days. Once there, and even if we succeeded in successfully disputing the passage through the Detroit River and Lake St. Clair into Lake Huron, there would nevertheless lie at their mercy the cities of Buffalo, Dunkirk, Erie, Cleveland, Toledo, Sandusky, and other cities and villages on the south shore of Lake Erie.

Treaty stipulations prevent our having a fleet on the lakes, and to-day in that region the antiquated and obsolete man-of-war (?) *Michigan* not unfitly represents the majesty of our naval power.

Is there any way to prevent the mobilization of this great army and the passage of these vessels. The answer can not be given positively in a word. There is if we have an efficient militia system, there is not if we have not; for our skeleton of an army, numbering less than 65,000 men, scattered from one end of this great country to the other, and from the North to the South, and a large proportion of it serving in the Philippines, Porto Rico, and Hawaii, forms nothing more than a picket guard to sound the alarm. The St. Lawrence canals are all upon the far side of the St. Lawrence from us, with one exception, which is the Beauharnois (called in the local tongue "Barnway"). This, it is true, lies upon our side of the river, although, of course, upon Canadian soil, but its exposed position in case of war is as well known to England and Canada as ourselves; and consequently a canal to replace it has been projected on the other side of the St. Lawrence; surveys have been made and probably work upon it has already been begun. Still, a bold and efficient force under a dashing leader might reach some of the St. Lawrence canals in time to cripple them; but the natural movement would be upon the Welland. With an effective force of militia such as we should have the Welland Canal can be seized and held, the movement of troops upon the St. Lawrence can be checked, and before the thirty-six days, to which allusion has been made in the first part of this report, have passed, the line of the Canadian Pacific Railroad can be in our possession. But that these things should be possible, it is essential that the United States should be able to mobilize a force of 100,000 men in not less than forty-eight hours.

We can have millions if we can spare the time to raise, equip, drill, and discipline volunteers, but time is exactly the element which the wary enemy will not allow us, and therefore our only safeguard lies in a militia which can give us an effective "first line" of 100,000 men in forty-eight hours. It is not reasonable to suppose that for this short notice we can obtain more than 75 per cent of the paper force; and therefore while our militia should be 200,000 men, it is absolutely unsafe for it to be less than 150,000. But to have a force of this size more money is needed. The States already appropriate more for the militia than the United States. It is a popular delusion that the money which is annually appropriated by the United States for arming and equipping the militia is money given to the militia. The law states that this money is appropriated for the purpose of "providing" arms, etc. That is to say, the United States appropriates this money and with it buys or manufactures war material, which material, instead of being placed in storehouses, is intrusted to the National Guard of the States or Territories; and while some of it of course is, of necessity, worn-out in the drilling and disciplining of this reserve of volunteers, all of it that is serviceable—to quote the language of the law—"shall remain the property of the United States," and in the event of need, can be and will be utilized by the United States in arming and equipping its troops. The money thus appropriated should, therefore, be looked upon not only as money expended for the benefit of the militia, but as funds provided for the very necessary purpose of preparing a reserve stock of war material for use in emergencies.

Reference has been made to how important an element time is. The following is quoted from a lecture delivered by Capt. D. M. Taylor, Ordnance Department, United States Army, at San Francisco in 1885:

With the introduction of steam, electricity, and arms of presision, the "pomp and circumstance of glorious war" went out, and with them departed the dignified slowness which characterized military operations of the period when combatants took their time about wars, and their duration was from seven to thirty years. Modern wars are short and sharp. In this connection the following dates are instructive:

Year.	War.	Declared.	Decisive battle.	Days.
1859	France and Austria	May 3	Solferino, June 24	52
1864	Dano-German	Jan. 16	Fall of Duppel, Apr. 18	93
1866	Austro-Prussian	June 16	Sadowa, July 3	17
1866	Austro-Italian	June 20	Lissa, July 20	30
1870	Franco-German	July 15	Sedan, Sept. 2	49

So that we see in many instances the fate of war has been decided and its decisive battles fought in fewer days from the declaration of war than is needed in shipbuilding England to prepare the plans and let the bids for one class of unarmored vessels.

The sections replaced by section 1 of the bill are 1625, 1626, 1627, and 1628, which provide that—

SEC. 1625. Every able-bodied male citizen of the respective States, resident therein, who is of the age of 18 years, and under the age of 45 years, shall be enrolled in the militia.

SEC. 1626. It shall be the duty of every captain or commanding officer of a company to enroll every such citizen residing within the bounds of his company, and all those who may, from time to time, arrive at the age of 18 years, or who, being of the age of 18 years, and under the age of 45 years, come to reside within his bounds.

SEC. 1627. Each captain or commanding officer shall, without delay, notify every such citizen of his enrollment by a proper noncommissioned officer of his company, who may prove the notice. And any notice or warning to a citizen enrolled to attend a company, battalion, or regimental muster, which is according to the laws of the State in which it is given for that purpose, shall be deemed a legal notice of his enrollment.

SEC. 1628. Every citizen shall, after notice of his enrollment, be constantly provided with a good musket or firelock, of a bore sufficient for balls of the eighteenth part of a pound, a sufficient bayonet and belt, two spare flints, and a knapsack, a pouch with a box therein to contain not less than twenty-four cartridges, suited to the bore of his musket or firelock, each cartridge to contain a proper quantity of powder and ball; or with a good rifle, knapsack, shot pouch, and powderhorn, 20 balls suited to the bore of his rifle, and a quarter of a pound of powder, and shall appear so armed, accoutered, and provided when called out to exercise or into service, except that when called out on company days to exercise only he may appear without knapsack; and all arms, ammunition, and accouterments so provided and required shall be held exempted from all suits, distresses, executions, or sales for debt or for the payment of taxes. Each commissioned officer shall be armed with a sword or hanger and spontoon.

SEC. 2. That the Vice-President of the United States, the officers, judicial and executive, of the Government of the United States, the members and officers of each House of Congress, persons in the military or naval service of the United States, all custom-house officers, with their clerks, postmasters and persons employed by the United States in the transmission of the mail, ferrymen employed at any ferry on a post road, inspectors of exports, artificers and workmen employed in the armories and arsenals of the United States, pilots, mariners actually employed in the sea service of any citizen or merchant within the United States, and all persons who are now exempted by the laws of the respective States or Territories shall be exempted from militia duty, without regard to age.

The old clause of exemption is reenacted without substantial change as section 2 of the proposed enactment.

The foregoing section replaces section 1629, Revised Statutes, which provides that—

SEC. 1629. The Vice-President of the United States; the officers, judicial and executive, of the Government of the United States; the members of both Houses of Congress and their respective officers; all custom-house officers, with their clerks; all postmasters and persons employed in the transportation of the mail; all ferrymen employed at any ferry on post roads; all inspectors of exports; all artificers and workmen employed in the armories and arsenals of the United States; all pilots; all mariners actually employed in the sea service of any citizen or merchant within the United States; and all persons who now are or may hereafter be exempted by the laws of the respective States shall be exempted from militia duty, notwithstanding their being above the age of 18 and under the age of 45 years.

SEC. 3. That the regularly enlisted, organized, and uniformed active militia in the several States and Territories and the District of Columbia who have heretofore participated or shall hereafter participate in the apportionment of the annual appropriation provided by section 1661 of the Revised Statutes of the United States, as amended, whether known and designated as National Guard, militia, or otherwise, shall constitute the organized militia. The organization, armament, and discipline of the organized militia in the several States and Territories and in the District of Columbia shall be the same as that which is now or may hereafter be prescribed for the Regular and Volunteer Armies of the United States within five years from the date of the approval of this act: *Provided*, That the President of the United States, in time of peace, may by order fix the minimum number of enlisted men in each company, troop, battery, signal corps, engineer corps, and hospital corps.

And provided further, That any corps of artillery, cavalry, and infantry existing in any State at the passage of the act of May 8, 1792, which by the laws, customs, or usages of the said State have been in continuous existence since the passage of said act under its provisions and under the provisions of section 232 and sections 1625 to 1660, both inclusive, of Title 16 of the Revised Statutes of the United States relating to the militia, shall be allowed to retain their accustomed privileges, subject, nevertheless, to all other duties required by law in like manner as the other militia.

This section provides an elastic organization for the embodied militia conforming to the present composition of similar troops in the Army, and changing in the future as Congress may see fit from time to time to make changes in the composition of the corresponding organizations in the Regular Army.

The objects of the provision that "the organization, armament, and discipline of the organized militia * * * shall be the same as that which is * * * prescribed * * * for the Regular and Volunteer Armies of the United States" are twofold.

First, that in time of peace there shall be uniformity of instruction; and second, in time of war organization shall be identical, to avoid confusion.

While at the time of entry into the service of the United States interpretation of the requirement relating to organization might be strict, in time of peace it might properly be liberal, when not interfering with the true intent of the provision.

Thus, while in time of peace a company, troop, battery, battalion, or regiment of infantry or cavalry might, as a necessity of instruction or administration, have assigned or detailed to it extra officers to perform the duties of extra lieutenants, battalion adjutants and quartermasters, inspectors of small arms practice, assistant surgeons, etc., these officers, unless subsequently provided for in the Regular and Volunteer service, would be relieved from duty at the time of entry into the United States service of the organization to which attached, but might conveniently fill vacancies in line or staff at such time or fill other offices of usefulness in the service.

In spite of tradition, the fact remains that all necessities, tactical and administrative, are best met in all cases by requirements of three battalions of four companies each. It is not unreasonable to assume that with the increased public appreciation of the importance of the organized militia under the new law, the necessary increase of companies and recruiting would follow. While a regiment of ten companies might be considered as untactical (except under Upton's discarded tactics), even in the regular service a regiment might properly be left at eight companies pending recruitment to a full regiment or as a ten-company regiment divided into three battalions, two to consist of three companies only.

In case of separate companies of infantry or troops of cavalry, if the organization is similar to that of the corresponding body in the regular service, and conditions are inconvenient to attach them to a battalion, squadron, or regiment existing, it would not appear to be violating section 3 that such company or troop should remain unattached until a larger unit should be created.

As to special numerical or other designation, there appears to be nothing in the new law to conflict with present nomenclature. When forming part of a battalion or squadron or regiment, the present designations might still be preserved.

In cases of existing bodies of engineers or artillery, organized as regiments, conceding the necessity of such organizations for administrative and instruction purposes, this organization does not differ from the regular army organization, except in name, which is not important. If the same number of companies of the Regular Artillery or Engineer Corps were assembled permanently at one post, they might properly be commanded and administered by detailed field and staff officers and noncommissioned staff, as is the case of National Guard heavy artillery and engineer regiments. In the event of entry into the United States service, if as coast artillery or engineers, neither of these organizations would be brigaded, but split up as the necessities of the service should determine. Therefore, no change except in the matter of the detail of extra officers need be contemplated in such organizations.

Uniformity of organization, or at least to an extent that will insure uniform instruction in time of peace and absolute uniformity on entry into the United States service, may well be considered the very essence of the new bill, and any variation or qualification of the terms of section 3 which would open the door to a perpetuation of the lack of uniformity now prevailing would be most injurious to the service. In comparison, the inconvenience involved on the part of the different States in conforming to the spirit and letter of the new law would be very slight.

This section also requires that the "armament" and "discipline" shall conform to "that which is now or may hereafter be prescribed by law for the Regular and Volunteer armies of the United States." The requirements as to a uniform armament needs no explanation. The provision requiring uniformity in discipline replaces a similar requirement of the law of 1792, which provided that—

SEC. 1637. The system of discipline and field exercise which is ordered to be observed in the different corps of infantry, artillery, and riflemen of the Regular Army shall also be observed in such corps, respectively, of the militia.

From an examination of section 1637 it will be seen that the term "discipline," as used in the section proposed for adoption, relates to the tactics or drill regulations of the different arms or corps, and such other books and manuals as are provided for the instruction of troops; the purpose being to secure uniformity in training in the militia of the several States, and at the same time to reserve to the States and Territories, respectively, the duty of training or disciplining their militia in accordance with the methods prescribed by Congress, or by the President under its authority and direction.

Section 3 of the act of May 8, 1792, prescribed a general organization of the militia. Each regiment was to consist of 2 battalions of 5 companies each. A regiment of 2 battalions was to have a colonel, lieutenant-colonel, 1 major, and 1 chaplain. An adequate regimental staff was also provided. A separate battalion was commanded by a major who was not assisted by either a commissioned or noncommissioned staff. The company of infantry, which was the fundamental unit of the organization, was composed of 1 captain, 1 lieutenant, 1 ensign, 4 sergeants, 4 corporals, 2 musicians, and 64 privates. Each battalion was to have 1 company of "grenadiers, light infantry, or riflemen," and it is not quite clear whether this company was to be in addition to or to be formed out of the 5 by selection or otherwise. The context would indicate, however, that the latter course was contemplated in the formation of the special company above described.

A company of artillery was authorized for each division, and was to be composed of 1 captain, 2 lieutenants, 4 sergeants, 4 corporals, 6 gunners, 6 bombadiers, 2 musicians, and 64 privates. A "troop of horse" was composed of 1 captain, 2 lieutenants, 1 cornet, 4 sergeants, 4 corporals, 1 saddler, 1 farrier, 1 trumpeter, and 64 privates. During the war of the rebellion the organization of the militia was modified by the act of July 17, 1862 (12 Stats., 597), which provided a ten-company organization for the infantry regiment, and required companies of cavalry and artillery to be organized "as in the regular service." This statute is still in force.

The tactical organization of the militia of the several States into brigades and divisions was provided for in section 3 of the act of May 8, 1792 (sec. 1630, Rev. Stat.), by a general requirement that the militia of each State "shall be arranged into divisions, brigades, regiments, batallions, and companies, as the legislature of the State may direct." Each brigade was to consist of four regiments, but the composition of the division was not expressly provided; and the divisions, brigades, and regiments were to be numbered at their formation, the numbering being of record in the adjutant-general's office of the State; and "when in the field, or in service in the State, each division, brigade, and regiment shall respectively take rank according to its number."

The third section also prescribed the number, rank, and duties of the general and staff officers necessary to the command and administration of the tactical organizations therein provided for. The act of March 2, 1803 (2 Stats., 207), made further provision for the general staff of the militia forces. The organization prescribed for the militia in the act of May 8, 1792, underwent some modification in the act of July 17, 1862 (12 Stats., 598), which prescribed a regiment of infantry of ten companies, fixed the proportions of artillery and cavalry at one company of each arm for each ten-company regiment of infantry, and established a uniform organization for divisions and brigades. This enactment, which is embodied in sections 1645–1647 of the Revised Statutes, is still in force.

Section 3 of the bill replaces sections 1630, 1631, 1632, 1633, 1637, 1641, 1645, 1646, and 1647 of the Revised Statutes, which are as follows:

SEC. 1630. The militia of each State shall be arranged into divisions, brigades, regiments, battalions, and companies, as the legislature of the State may direct. Each brigade may consist of 4 regiments, each regiment of 2 battalions, each battalion of 5 companies, each company of 64 privates. Each division, brigade, and regiment shall be numbered at the formation thereof, and a record of such numbers shall be made in the adjutant-general's office of the State. When in the field, or in service in the State, each division, brigade, and regiment shall, respectively, take rank according to its number, reckoning the first or lowest number highest in rank.

SEC. 1631. The militia shall be officered by the respective States as follows: To the militia of each State, 1 quartermaster-general; to each division, 1 major-general, 2 aides-de-camp with the rank of major, 1 division inspector with the rank of lieutenant-colonel, and 1 division quartermaster with the rank of major; to each brigade, 1 brigadier-general, 1 brigade inspector, to serve also as brigade major, with the rank of major, 1 quartermaster of brigade with the rank of captain, and 1 aid-de-camp with the rank of captain; to each regiment of 2 battalions, 1 colonel, 1 lieutenant-colonel, 1 major, and 1 chaplain; to only 1 battalion a major, who shall command the same; to each company, 1 captain, 1 lieutenant, 1 ensign, 4 sergeants, 4 corporals, 1 drummer, and 1 fifer or bugler. And there shall be a regimental staff, to consist of 1 adjutant and 1 quartermaster, to rank as lieutenants, 1 paymaster, 1 surgeon, 1 surgeon's mate, 1 sergeant-major, 1 drummer, and 1 fife-major.

SEC. 1632. There shall be formed for each battalion at least 1 company of grenadiers, light infantry, or riflemen, and for each division at least 1 company of artillery and 1 troop of horse. For each company of artillery there shall be 1 captain, 2 lieutenants, 4 sergeants, 4 corporals, 6 gunners, 6 bombardiers, 1 drummer, and 1 fifer. The officers shall be armed with a sword or hanger, a fusee, bayonet, and belt, with a cartridge box to contain 12 cartridges; and each private shall furnish himself with all the equipments of a private in the infantry, until proper ordnance and field artillery is

provided. For each troop of horse there shall be 1 captain, 2 lieutenants, 1 cornet, 4 sergeants, 4 corporals, 1 saddler, 1 farrier, and 1 trumpeter. The commissioned officers shall furnish themselves good horses of at least fourteen hands and a half high, and shall be armed with a sword and a pair of pistols, the hostlers to be covered with bearskin caps. Each dragoon shall furnish himself with a serviceable horse at least fourteen hands and a half high, a good saddle, bridle, mail-pillion, and valise, hostlers, and a breast-plate and crupper, a pair of boots and spurs, a pair of pistols, a saber, and a cartridge box to contain 12 cartridges for pistols. Each company of artillery and troop of horse shall be formed of volunteers from the brigade, at the discretion of the commander in chief of the State, not exceeding one company of each to a regiment, nor more in number than one-eleventh part of the infantry, and shall be uniformly clothed in regimentals, to be furnished at their own expense, the color and fashion to be determined by the brigadier commanding the brigade to which they belong.

SEC. 1633. Each battalion and regiment shall be provided with the State and regimental colors by the field officers, and each company with a drum and fife or bugle horn by the commissioned officers of the company, in such manner as the legislature of the respective States may direct.

SEC. 1637. The system of discipline and field exercise which is ordered to be observed in the different corps of infantry, artillery, and riflemen of the Regular Army shall also be observed in such corps, respectively, of the militia.

SEC. 1641. All corps of artillery, cavalry, and infantry now existing in any State which, by any law, custom, or usage thereof, have not been incorporated with the militia, or are not governed by the general regulations thereof, shall be allowed to retain their accustomed privileges, subject, nevertheless, to all other duties required by law in like manner as the other militia.

SEC. 1645. The militia, when called into actual service, shall be organized as prescribed in the two following sections:

SEC. 1646. They shall be formed by the President into regiments of infantry, with the exception of such numbers for cavalry and artillery as he may direct, not to exceed the proportion of one company of each of those arms to every regiment of infantry, and to be organized as in the regular service.

Each regiment of infantry shall have 1 colonel, 1 lieutenant-colonel, 1 major, 1 adjutant (a lieutenant), 1 quartermaster (a lieutenant), 1 surgeon, and 2 assistant surgeons, 1 sergeant-major, 1 regimental quartermaster-sergeant, 1 regimental commissary-sergeant, 1 hospital steward, and 2 principal musicians, and shall be composed of 10 companies, each company to consist of 1 captain, 1 first lieutenant, 1 second lieutenant, 1 first sergeant, 4 sergeants, 8 corporals, 2 musicians, 1 wagoner, and from 64 to 82 privates.

SEC. 1647. They shall be further organized into divisions of 3 or more brigades each, and each division shall have a major-general, 3 aids-de-camp, and 1 assistant adjutant-general with the rank of major. Each brigade shall be composed of 4 or more regiments and shall have 1 brigadier-general, 2 aids-de-camp, 1 assistant adjutant-general with the rank of captain, 1 surgeon, 1 assistant quartermaster, 1 commissary of subsistence, and 16 musicians as a band.

The concluding paragraph of this section applies to certain military organizations which have been in continuous existence since 1792, and continues the provisions of sections 10 and 11 of the original militia act of May 8, 1792, allowing them to retain their accustomed privileges. The list is a brief one, and includes three organizations in Massachusetts, two in Connecticut, three in Rhode Island, the City Troop in Philadelphia) which antedates the revolution and has served in every war the United States has had), and possibly two or three in the South, perhaps one each in Virginia, South Carolina, and Georgia. The history of these commands is very interesting.

Of the Massachusetts organizations, the one located in Boston, now officially known as the First Corps of Cadets of the Massachusetts Volunteer Militia, is the successor of a company chartered in 1741, by the commission of Col. Benjamin Pollard, of Boston, in the English province of the Massachusetts Bay.

The commission of Colonel Pollard contains the authority for raising and commanding the company, and the said commission is still in possesion of the present corps.

The company had a continuous and useful existence as a military company, whose special duty it was to act as the bodyguard of the governor of the province, until, in 1774, Lieut. Col. John Hancock (the first signer of the Declaration of Independence), then its commander, was dismissed by Governor Gage because of his Revolutionary sentiments, the letter of dismissal being still in possession of the present corps. It was practically disbanded by the dismissal of Colonel Hancock, and holding sentiments in accord with his own, refused to serve further under the English governor, and did not come together again until after the siege of Boston. The company was reorganized after the British evacuated Boston, and served in 1778 with the forces of the Revolutionary Army in Rhode Island. Colonel Hancock was chosen colonel, and the letter apprising him of his selection is still in possession of the present corps; but Colonel Hancock, being then President of the Continental Congress, could not take actual command, and the next officer in rank performed that duty.

At the time of the peace of 1783 the company, in common with all the military bodies of the colonies then becoming States, was not actively employed. In 1785, however, measures were taken for a reorganization, and the State of Massachusetts has officially recognized August 9, 1786, as the date of the actual and active reorganization, although the company, under officers commissioned a few days before, did not make its first parade as State troops, under officers duly commissioned, until October 19, 1786. Since the last-mentioned date the company, now for many years extended into a battalion of four companies, has had a continuous and useful existence, retaining its distinctive function as in 1741 and in 1786 of acting as bodyguard to his excellency the governor of Massachusetts. The law under which the said reorganization was effected was passed by the State of Massachusetts in 1785, and consequently, when the militia law, known as the act of May 8, 1792, was passed by the General Government the Independent Corps of Cadets, as it was then designated, had been in existence nearly seven years.

The General Government in framing the law of May 8, 1792, recognized and provided for the continuance of the corps in its special functions by the enactment of two sections of said law, which law also protected two other military bodies then and now existing in Massachusetts with unbroken records, viz, the Ancient and Honorable Artillery Company of Boston, dating from 1638, and the Second Corps of Cadets, of Salem, Mass., the latter dating from 1786, and similar to the first corps of cadets. These two corps of cadets have, since their organization, possessed peculiar privileges, which were in 1854 investigated and approved by a committee of the Massachusetts legislature.

The adjutant-general's report of 1853 makes the following reference to the special privileges of these companies:

The two companies of cadets attached to the first and second divisions are peculiar in their organizations. They were chartered under a resolve passed in 1785 authorizing the raising of cadet companies. At that time each company of artillery and infantry had but three commissioned officers; cadet companies have since 1803 been entitled to five. Within a few years every company has been allowed that number. The commissioned officers of the company in the first division organized October 18, 1786, are as follows: One captain, with the rank of lieutenant-colonel; one lieutenant and one ensign, each with the rank of ensign; one adjutant, with the rank of captain, and one surgeon. The commissioned officers in the company attached to the second division, organized July 10, 1786, are one captain, one captain-lieutenant, and one ensign. In the former company there are not so many commissioned officers for drill as other companies are now allowed, although the officers have extra rank. The latter company has one commissioned officer of a lower grade than any other company.

Under the provisions of the act passed by Congress May 8, 1792, these companies are permitted to retain their accustomed privileges. Being divisionary companies, not connected with any brigade or regiment, each of them is to all intents and purposes a battalion, maneuvering and drilling as such. Under this peculiar organization both of these companies have attained a high degree of efficiency.

In all the legislation passed by the Commonwealth of Massachusetts relating to the militia, enrolled or active, especial care has been taken to provide for the continuance of the organizations and privileges of the three military bodies before mentioned, viz, the First and Second Corps of Cadets and the Ancient and Honorable Artillery Company, and that great care seems to have been taken to carry out not only the letter but the spirit of the United States law of 1792.

The First Corps, as a school, having up to that time seldom more than a hundred members, furnished to the Union Army in the civil war no less than 179 men, nearly all of whom were commissioned officers. The record of the Second Corps in the civil war was an honorable one.

The First Corps has acquired a considerable property, which, although devoted to public uses, is, and will continue to be, private property. A camp ground at Hingham has been provided at a cost of $30,000 or more, and an armory in Boston at a cost exceeding $450,000. These properties are used for none other than military purposes. The armory in Boston, besides holding the corps property, is the repository of the libraries of the Military Historical Society of Massachusetts and the Massachusetts Commandery of the Loyal Legion of the United States. The collections of these societies are in many respects priceless.

Unless this corps is allowed to continue to hold the position and privileges it has enjoyed since 1786, it can not retain and support the property it owns and dedicates to public use; nor can it continue its own scheme of military instruction, now conducted in a manner that would be impossible were the corps to lose its identity.

Neither the Cadet Corps nor the Ancient and Honorable Artillery Company were a part of the enrolled militia, and the ancients never joined the volunteer militia, whereas the two cadet corps did, and inspection reports have always rated them very high.

SEC. 4. That whenever the United States is invaded or in danger of invasion from any foreign nation, or of rebellion against the authority of the Government of the United States, or the President is unable with the other forces at his command to execute the laws of the Union in any part thereof, it shall be lawful for the President to call forth, for a period not exceeding nine months, such number of the militia of the State or of the States or Territories or of the District of Columbia as he may deem necessary to repel such invasion, suppress such rebellion, or to enable him to execute such laws, and to issue his orders for that purpose to such officers of the militia as he may think proper.

This section, which has undergone no material change in revision, replaces section 1642 of the Revised Statutes, which provides that:

SEC. 1642. Whenever the United States are invaded, or are in imminent danger of invasion from any foreign nation or Indian tribe, or of rebellion against the authority of the Government of the United States, it shall be lawful for the President to call forth such number of the militia of the State or States most convenient to the place of danger or scene of action as he may deem necessary to repel such invasion or to suppress such rebellion, and to issue his orders for that purpose to such officers of the militia as he may think proper.

SEC. 5. That whenever the President calls forth the militia of any State or Territory or of the District of Columbia to be employed in the service of the

United States, he may specify in his call the period for which such service is required, not exceeding nine months, and the militia so called forth shall continue to serve during the term so specified, unless sooner discharged by order of the President.

An able statement of the reasons why the militia can not be taken out of the United States for the purposes of war is to be found in Ordronaux's Constitutional Legislation, page 501, from subhead "Calling out the militia and its government" to the subhead "Jurisdiction over ceded places," page 506.

CALLING OUT THE MILITIA AND ITS GOVERNMENT.

The Constitution distinctly enumerates the three exclusive purposes for which the militia may be called into the service of the United States. These purposes are: First, to execute the laws of Union; second, to suppress insurrection, and, third, to repel invasions.

These three occasions, representing necessities of a strictly domestic character, plainly indicate that the services required of the militia can be rendered only upon the soil of the United States or of its Territories. Under these circumstances they still remain the militia of their several States, although temporarily in the service of the United States as the superior power constitutionally invoked "to execute the laws of the Union, to suppress insurrection, and to repel invasions." In the history of this provision of the Constitution there is nothing indicating that it was even contemplated that such troops should be employed for purposes of offensive warfare outside the limits of the United States. And it is but just to infer that the enumerations of the specific occasions on which alone the militia can be called into the service of the General Government was intended as a distinct limitation upon their employment. (Kneedler *v.* Lane, 45 Penn., 238; Martin *v.* Mott, 12 Wheat., 19; Houston *v.* Moore, 5 ibid., I.)

Being the ministers of the law to enforce its demands, they can only be summoned by the lawmaking power to act within the extent of its jurisdiction and in the manner prescribed by the Constitution. They can not, consequently, be used to invade the territory of a neighboring country or to enforce any public rights abroad. While serving as State militia they do not lose their distinctive character beyond becoming the militia of the United States for the time being.

It was the hereditary fear of standing armies as a menace to liberty in time of peace which led the framers of the Constitution to provide that the militia should always remain a militia of the States.[a]

It was never designed to be a militia of the United States, nor under the control of the President, except when called into actual service under some one of the above-enumerated contingencies. Nor was he even to be allowed to do so at his arbitrary pleasure, but only after the necessity for so doing had been recognized and approved by Congress.

Remember always [says Mr. Webster] that the great principle of the Constitution on that subject is that the militia is the militia of the States, and not of the General Government, and being thus the militia of the States, there is no part of the Constitution worded with greater care and with a more scrupulous jealousy than that which grants and limits the power of Congress over it. (Works, vol. 2, p. 95.)

Speaking likewise on this question of the government of the militia, the justices of the supreme judicial court of Massachusetts, in their opinion upon the subject, say that—

Were it otherwise, were the General and State governments to have their own militia, the results would have been that there would be within the bosom of each State a large embodied military force not by its organization amenable to the laws or subject to the orders of the State government, and also a similar force on which the General Government would have no right to call for aid to repel invasion, suppress insurrection, or execute the laws—a state of things not only rendering each, to a great extent, inefficient and powerless, but also entirely destructive of that harmony and union which were intended to characterize the combined action of both governments. (80 Mass. R., 614.)

The militia of the States, restricted to domestic purposes alone, are to be distinguished, therefore, from the Army proper of the United States, which, whether in the form of regular troops or volunteers, may be used to invade a foreign country as well as to repel the attack of foreign enemies. The invasion of Mexico in 1846 and of Canada during the war of 1812 with Great Britain are notable instances of this kind. Although in the latter case some militia did participate in the battles of Chippewa and Niagara on Canadian soil, a portion claimed their constitutional rights and refused to cross the frontier. (Hildreth's Hist. of the U. S., vol. 3, p. 358.)

Guilty as they may have been of flagrant insubordination, it is doubtful whether any military court could have vindicated its jurisdiction in punishing this disobedience of an unlawful command.

From 1792 (act of May 8, 1792, 1 Stat. L., 271) to 1862 (act of July 17, 1862, 12 Stat. L., 597) none but free white male citizens could be lawfully enrolled in the militia of any of the States. By the latter act "all able-bodied male citizens between the ages of 18 and 45" are included, and it is further enacted that "the militia when so called into service shall be organized in the mode prescribed by law for volunteers." As a fact, during our civil war the State regiments, whether raised by draft or voluntary enlistments, retained the name of their several States with their appropriate numbers, and they were called "volunteers" to distinguish them from troops of the Regular Army.

By the confiscation act of July 17, 1862 (12 Stat. L., 592), the President was authorized to enlist persons of African descent into the Army for the suppression of the rebellion. This was the initiation of colored soldiers into our Army, and led to the permanent organization of negro regiments.

The power to call out the militia and the power to govern them authorizes the passage of laws to enforce the call by the infliction of suitable penalties and the erection of courts for the trial of offenders. This Congress has done in the various acts passed between 1792 and 1862 giving to the President the authority to call forth the militia and to provide for their government when in active service. (Rev. Stats. U. S., Title XVI.)

In respect to their control the power of the State and General Government over the militia are concurrent in this sense, that the powers of the State governments antedating the Constitution and not having been prohibited by that instrument, still remain with the States until a necessity arises calling for the exercise of the superior authority of the General Government over the same subject. (Houston *v.* Moore, 5 Wheat., 1.)

Then the State authority (except in the matter of training and officering them according to the discipline prescribed by Congress) becomes subordinated to that of the President as commander in chief of all our forces. Whenever, therefore, any body of the militia has entered into the service of the United States its authority over them is exclusive and paramount.

As to the command of the militia, the State alone is authorized to provide its officers, but when it has passed into the service of the United States the President, as commander in chief, may exercise his command over them either through Regular Army officers or through the officers of the militia themselves. Until such troops have actually been mustered into this service they are not amenable to the Articles of War prescribed by the General Government and can not be punished for disobedience to them. The militia called into the public service are still the militia of the States until organized in the manner prescribed by Congress. (Mills *v.* Martin, 19 Johns., 7; Houston *v.* Moore, 5 Wheat., 20; Vanderhyden *v.* Young, 11 Johns., 150.)

The Revised Statutes of the United States (Title XVI) have reenacted the act of 1792, with all its obsolete military terms and references to weapons long since relegated to the museums of military antiquities. Much of this scheme of organization is in the light of modern science not only faulty but, under present and accepted rules of formation, wholly impracticable. Our highest military authority, whose statements should receive the serious attention of Congress, has pointed this out most forcibly in a recent publication. (Our Army and Militia, by Gen. W. T. Sherman, in North American Review for August, 1890.)

This section replaces section 1648 of the Revised Statutes without other change than is believed to be necessary in order to bring the requirement up to date.

SEC. 1648. Whenever the President calls forth the militia of the States, to be employed in the service of the United States, he may specify in his call the period for which such service will be required, not exceeding nine months; and the militia so called shall be mustered in and continue to serve during the terms so specified, unless sooner discharged by command of the President.

In the earlier enactments in respect to the Federal employment of the militia the period of compulsory service was fixed at three months in any one year, and the completion of such a period of service entitled a member of the militia to exemption from active service, save "in due rotation with every other able-bodied man of the same rank in the battalion to which he belongs." (Sec. 4, act of February 28, 1795; 1 Stats., 424.) This period was extended to six months by section 2 of the act of March 3, 1839 (5 Stats., 355), and to sixty days after the commencement of the next regular session of Congress by section 3 of the act of July 29, 1861 (12 Stats., 281), and to nine months by the act of July 17, 1862 (ibid., 597), which is the existing law.

SEC. 6. That when the militia of more than one State is called into the actual service of the United States by the President he may, in his discretion apportion them among such States or Territories or to the District of Columbia according to representative population.

This section replaces section 1643 of the Revised Statutes. It differs from that section only in that it is not mandatory, but vests

[a] Charles II by his own authority kept on foot a body of 5,000 troops in time of peace, and James II increased the number to 30,000, who were paid out of his civil list. This it was which gave rise to the revolution of 1688 and to the insertion in the Bill of Rights of the clause that "raising and keeping a standing army within the Kingdom in time of peace, unless with the consent of Parliament, is against law." (1 William and Mary, 1689.) The complaint that George III had done so in the colonies is one of the grievances set forth in our Declaration of Independence. (Federalist, No. 26; Macaulay's Hist., chap. 23; Hallam's Const. Hist., chap. 25.)

a discretion in the President in respect to the apportionment of quotas where the militia of more than one State is called into the service of the United States. Section 1643 provided that—

When the militia of more than one State is called into the actual service of the United States by the President he shall apportion them among such States according to representative population.

SEC. 7. That every officer and enlisted man of the militia called into the service of the United States in the manner hereinbefore prescribed shall be held to be in such service from the date of the publication of such call; and any officer or man who shall refuse or neglect to obey such call shall be subject to trial by court-martial, and shall be punished as such court-martial may direct.

The authority to order forth the militia presupposes the power to enforce compliance with the order, and to make such authority effective it must be accompanied with the power to punish for a disobedience of such order from the moment a call is made. The only effective means to enforce such authority is by court-martial. Section 5 of the act of February 28, 1795 (1 Stats., 424), the Federal enactment on the subject, provided—

That every officer, noncommissioned officer, or private of the militia, who shall fail to obey the orders of the President of the United States in any of the cases above recited, shall forfeit a sum not exceeding one year's pay and not less than one month's pay, to be determined and adjudged by a court-martial; and such officer shall, moreover, be liable to be cashiered by sentence of a court-martial, and be incapacitated from holding a commission in the militia for a term not exceeding twelve months, at the discretion of the said court; and such noncommissioned officers and privates shall be liable to be imprisoned, by a like sentence, on failure of the payment of fines adjudged against them, for one calendar month for every $5 of such fine.

The leading case of Martin *v.* Mott (12 Wheaton, 19) grew out of an attempted enforcement of this section, and that of Houston *v.* Moore (5 Wheaton, 1) out of a corresponding attempt in the case of an enactment of the Pennsylvania legislature in its support. A report submitted to Congress by the Comptroller of the Treasury on October 30, 1820, shows that 9,945 persons were fined under the provisions of this section in sums aggregating $483,685.41 for neglect of duty in failing to render service in the militia during the war of 1812 (12 American State Papers, vol. 2, Military Affairs, pp. 314–319), to which should be added $15,377 subsequently reported as collected in Virginia. An incomplete report of the expenses of the courts-martial convened for the purpose of imposing fines for the year above mentioned shows that $97,194.14 were disbursed on that account during that period. In New York the fines collected amounted to $243,609.41, and the cost of collection was $55,428.49, about 20 per cent. In Pennsylvania $15,377 was collected, at a cost of $41,531.77. Regarded, therefore, as a practicable method of enforcing obedience to the President's orders calling forth the militia, this portion of the enactment must be looked upon as a complete failure.

This section, in the opinion of your committee, replaces sections 1649, 1659, and 1660 of the Revised Statutes, which provide:

SEC. 1649. Every officer, noncommissioned officer, or private of the militia who fails to obey the orders of the President when he calls out the militia into the actual service of the United States shall forfeit of his pay a sum not exceeding one year's pay and not less than one month's pay, to be determined and adjudged by a court-martial; and such officer shall be liable to be cashiered by a sentence of a court-martial, and be incapacitated from holding a commission in the militia for a term not exceeding twelve months; and such noncommissioned officer and private shall be liable to imprisonment, by a like sentence, on failure to pay the fines adjudged against him, for one calendar month for every $25 of such fine.

SEC. 1659. All fines assessed under the provisions of law concerning the militia or volunteer corps when called into the actual service of the United States shall be certified by the presiding officer of the court-martial before whom they are assessed to the marshal of the district in which the delinquent resides, or to one of his deputies, and to the Comptroller of the Treasury, who shall record the certificate in a book to be kept for that purpose. The marshal or his deputy shall forthwith proceed to levy the fines, with costs, by distress and sale of the goods and chattels of the delinquent, which cost and manner of proceeding, with respect to the sale of the goods distrained, shall be agreeable to the laws of the State in which the same may be in other cases of distress. And where any noncommissioned officer or private is adjudged to suffer imprisonment, there being no goods or chattels to be found whereof to levy the fines, the marshal of the district or his deputy shall commit such delinquent to jail during the term for which he is so adjudged to imprisonment or until the fine is paid, in the same manner as other persons condemned to fine and imprisonment at the suit of the United States may be committed.

SEC. 1660. That the marshal shall pay all fines collected by him or his deputy under the authority of the preceding section into the Treasury of the United States within two months after he has received the same, deducting 5 per cent for his compensation; and in case of failure it shall be the duty of the Comptroller of the Treasury to give notice to the district attorney of the United States, who shall proceed against the marshal in the district court, by attachment, for the recovery of the same.

The experience of the United States for nearly three-quarters of a century has been that in an ordinary emergency of war neither inducements nor penalties are necessary in order to induce or compel citizens to perform the duty required of them as members of the militia forces in time of public danger. As the remedy for a failure to respond to the call of the President as prescribed in the sections above cited failed completely upon the only occasion in our history in which it was resorted to, your committee can not do otherwise than to recommend its repeal.

SEC. 8. That courts-martial for the trial of officers or men of the militia when in the service of the United States shall be composed of militia officers only.

In this section the committee recognizes and continues in operation a rule which has prevailed without interruption since the adoption of the Articles of War by the Continental Congress, in 1776, and which was embodied in its present form in the general militia law of 1792. It has seemed to your committee a wise precaution to embody in the new section a declaration that while such courts shall be composed exclusively of militia officers they shall not of necessity be from the same State as the accused.

SEC. 9. That the militia, when called into the actual service of the United States, shall be subject to the same rules and articles of war as the regular troops of the United States.

This section, which has been reenacted without change, replaces section 1644 of the Revised Statutes, which provides that—

SEC. 1644. The militia, when called into the actual service of the United States, for the suppression of the rebellion against and resistance to the laws of the United States, shall be subject to the same rules and articles of war as the regular troops of the United States.

SEC. 10. That the militia, when called into the actual service of the United States, shall, during their time of service, be entitled to the same pay and allowances as are or may be provided by law for the Regular Army.

The provisions of the general militia law in respect to the pay and allowance of the militia when called into the service of the United States are in some respects not only obsolete but inoperative. Your committee has therefore retained the wholesome requirement of section 1650 of the Revised Statutes, which places troops of the militia upon practically the same footing as those of the regular establishment in all matters relating to pay, rations, clothing, travel allowances, and other emoluments. The section recommended for retention reenacts section 1650 and replaces the inoperative provisions of sections 1653 and 1655, which required that—

SEC. 1653. The officers of all mounted companies in the militia called into the service of the United States shall each be entitled to receive forage, or money in lieu thereof, for two horses, when they actually keep private servants, and for one horse when without private servants, and 40 cents per day shall be allowed for the use and risk of each horse, except horses killed in battle or dying of wounds received in battle. Each noncommissioned officer, musician, artificer, and private of such mounted companies shall be entitled to receive forage in kind for one horse, with 40 cents per day for the use and risk thereof, except horses killed in battle or dying of wounds received in battle, and 25 cents per day in lieu of forage and subsistence when the same is furnished by himself, or 12½ cents per day for either, as the case may be.

SEC. 1655. When the militia in the military service of the United States are employed on the Western frontiers, there shall be allowed 2 ounces of flour or bread and 2 ounces of beef or pork, in addition to each of their rations, and half a pint of salt in addition to every hundred of their rations.

SEC. 11. That when the militia is called into the actual service of the United States, or any portion of the militia is accepted under the provisions of this act, their pay and allowances shall commence from the day of their appearing at the place of company rendezvous. But this provision shall not be construed to authorize any species of expenditure previous to arriving at such places of rendezvous which is not provided by existing law to be paid after their arrival at such places of rendezvous.

The experience gained from the mobilization of militia forces in 1861 and 1898 shows that the duty of the Federal Government to maintain and support militia which it calls into its service should become operative as to each company when it assembles at its company rendezvous in obedience to the call of the President, and all expenses subsequently incurred for pay, subsistence, and transportation constitute a proper charge against the Federal Government.

The proposed section replaces sections 1651, 1652, and 1654 of the Revised Statutes, which provide—

SEC. 1651. Whenever the militia is called into the actual service of the United States their pay shall be deemed to commence from the day of their appearing at the place of battalion, regimental, or brigade rendezvous.

SEC. 1652. The officers, noncommissioned officers, musicians, artificers, and privates shall be entitled to one day's pay, subsistence, and allowances for every 20 miles' travel from their places of residence to the place of general rendezvous, and from the place of discharge back to their residence.

SEC. 1654. The expenses incurred by marching the militia of any State or Territory to their place of rendezvous, in pursuance of a requisition of the President, or of a call made by the authority of any State or Territory, and approved by him, shall be adjusted and paid in like manner as the expenses incurred after their arrival at such place of rendezvous, on the requisition of the President; but this provision does not authorize any species of expenditure, previous to arriving at the place of rendezvous, which is not provided by existing laws to be paid for after their arrival at such place of rendezvous.

SEC. 12. There shall be appointed in each State, Territory, and the District of Columbia an adjutant-general, who shall perform such duties as may be prescribed by the laws of such State, Territory, and District, respectively, and make returns to the Secretary of War, at such times and in such form as he shall from time to time prescribe, of the strength of the organized militia, and also make such reports as may from time to time be required by the Secretary of War. That the Secretary of War shall, with his annual report of each year, transmit to Congress an abstract of the returns and reports of the adjutants-general of the States, Territories, and the District of Columbia, with such observations thereon as he may deem necessary for the information of Congress.

As the office of adjutant-general is created by the State government, this section places that office under the control of the governor and legislature of the State, whose agent he is and to whom he is responsible for the correct performance of the functions imposed upon him by law. In addition to the duties attached to the office by authority of the State, this section contains the provision of existing law which requires returns of strength of the enlisted organized and uniformed active militia to be rendered to the War Department, annually, by that office.

Section 232 of the Revised Statutes requires the Secretary of

War to transmit to Congress, on or before the first Monday in February of each year, an abstract of the returns of the adjutants-general of the several States. In the section as proposed, this return is to accompany the annual report of the Secretary to Congress. This change is believed to be in the direction of promptness in the transaction of public business, and the operation of the enactment will be to cause the report to be rendered about two months earlier than is the case at present.

Section 12 replaces sections 232, 1634, 1635, 1636, and 1640 of the Revised Statutes, which provide that—

SEC. 232. The Secretary of War shall lay before Congress, on or before the first Monday in February of each year, an abstract of the returns of the adjutants-general of the several States of the militia thereof.

SEC. 1634. There shall be appointed in each State an adjutant-general, whose duty it shall be to distribute all orders from the commander in chief of the State to the several corps; to attend all musters when the commander in chief of the State reviews the militia, or any part thereof; to obey all orders from him relative to carrying into execution and perfecting the system of military discipline established by law; to furnish blank forms of returns that may be required, and to explain the principles on which they should be made; to receive from the several officers of the different corps throughout the State returns of the militia under their command, and to make proper abstracts from such returns, and lay the same annually before the commander in chief of the State.

SEC. 1635. The several officers of the divisions, brigades, regiments, and battalions shall report, in their returns of the corps under their command, the actual condition of their arms, accouterments, and ammunition, their delinquencies, and every other particular relating to the general advancement of good order and discipline, and shall make the same in the usual manner.

SEC. 1636. It shall be the duty of the adjutant-general in each State to make return of the militia of the State, with their arms, accouterments, and ammunition, agreeably to the provisions of law, to the President of the United States, annually, on or before the first Monday in January; and it shall be the duty of the Secretary of War from time to time to give such directions to the adjutants-general of the militia as may, in his opinion, be necessary to produce a uniformity in such returns.

SEC. 1640. It shall be the duty of the brigade inspector to attend the regimental and battalion meetings of the militia composing the several brigades during the time when they are under arms, to inspect their arms, ammunition, and accouterments; to superintend their exercise and maneuvers, and to introduce throughout the brigade the system of military discipline prescribed by law, and such orders as they receive from the commander in chief of the State.

SEC. 13. That the Secretary of War is hereby authorized to issue, on the requisitions of the governors of the several States and Territories, or of the commanding general of the militia of the District of Columbia, such number of the United States standard service magazine arms, with bayonets, bayonet scabbards, gun slings, belts, and such other necessary accouterments and equipments as are required for the Army of the United States, for arming all of the organized militia in said States and Territories and District of Columbia, without charging the cost or value thereof, or any which have been issued since December 1, 1901, or any expense connected therewith, against the allotment to said State, Territory, or District of Columbia, out of the annual appropriation provided by section 1661 of the Revised Statutes, as amended, or requiring payment therefor, and to exchange, without receiving any money credit therefor, ammunition, or parts thereof, suitable to the new arms, round for round, for corresponding ammunition suitable to the old arms, theretofore issued to said State, Territory, or District by the United States: *Provided*, That said rifles and carbines and other property shall be receipted for and shall remain the property of the United States and be annually accounted for by the governors of the States and Territories as now required by law, and that each State and Territory, and District shall, on receipt of the new arms, turn in to the Ordnance Department of the United States Army, without receiving any money credit therefor, and without expense for transportation, all United States rifles and carbines now in its possession.

To provide means to carry into effect the provisions of this section, the necessary money to cover the cost of exchanging or issuing the new arms, accouterments, equipments, and ammunition to be exchanged or issued hereunder is hereby appropriated out of any moneys in the Treasury not otherwise appropriated.

The requirement of the Constitution which confers upon Congress the power to prescribe the discipline of the militia forces, and vests in the States the right to instruct them in conformity to the system of drill and discipline so prescribed by Congress, has for its purpose to secure substantial uniformity in drill and instruction as between the Army and the militia. That there should be such uniformity in discipline it is absolutely necessary that there should be a corresponding uniformity in armament and equipment. In other words, the systems of drill and target practice for the Army and militia can not be uniform unless the arms and equipments are the same for both forces. This principle was recognized in the act of February 24, 1897 (29 Stats., 592), which authorized the issue of the Springfield breech-loading rifle to the whole body of the militia in exchange for the diverse types of small arms which were then in use by the militia of the several States. A similar exchange is contemplated in this section, and for the same purpose, viz, of introducing uniformity of instruction throughout the constitutional militia establishment. The advantage which will result to the United States in the way of increased efficiency in the militia forces is a sufficient consideration and warrants the exchange being made on the same basis as was prescribed in the legislation of 1897.

SEC. 14. That whenever it shall appear by the report of inspections, which it shall be the duty of the Secretary of War to cause to be made at least once in each year by officers detailed by him for that purpose, that the organized militia of a State or Territory or of the District of Columbia is sufficiently armed, uniformed, and equipped for active duty in the field, the Secretary of War is authorized, on the requisition of the governor of such State or Territory, to pay to the quartermaster-general thereof, or to such other officer of the militia of said State as the said governor may designate and appoint for the purpose, so much of its allotment out of the said annual appropriation under section 1661 of the Revised Statutes as amended as shall be necessary for the payment, subsistence, and transportation of such portion of said organized militia as shall engage in actual field or camp service for instruction, and the officers and enlisted men of such militia while so engaged shall be entitled to the same pay, subsistence, and transportation or travel allowances as officers and enlisted men of corresponding grades of the Regular Army are or may hereafter be entitled by law, and the officer so designated and appointed shall be regarded as a disbursing officer of the United States, and shall render his accounts through the War Department to the proper accounting officers of the Treasury for settlement, and he shall be required to give good and sufficient bonds to the United States, in such sums as the Secretary of War may direct, faithfully to account for the safe-keeping and payment of the public moneys so intrusted to him for disbursement.

It is contemplated in this section to extend the participation of the United States Government in the training of the militia by authorizing the transfer to the States of any sum remaining to their respective credits out of the allotments accruing to them under the operation of section 1661 of the Revised Statutes, as amended by the act of February 12, 1887 (24 Stats., 401); the sums so paid are to be used for the training of the organized militia in camp duty and field service. With a view to secure the end contemplated in the original enactment, of providing for the armament and equipment of the whole body of the militia, such payments are conditioned upon an inspection, to be made under the authority and direction of the Secretary of War, with a view to ascertain whether the militia of the State is fully equipped for field service. When that condition has been fulfilled to the satisfaction of the Secretary of War, any sums remaining to the credit of the State may be paid over to an officer designated by the governor, who in virtue of such designation becomes, for the purpose of receiving and distributing such funds, a disbursing officer of the United States, giving bond, as such, for the safe-keeping and faithful distribution of the moneys intrusted to him for the purpose above mentioned.

Under the present law the sum of $1,000,000 is annually appropriated for the purpose of providing arms, ordnance stores, quartermaster stores, and camp equipage for issue to the militia.

Said appropriation is apportioned among the several States and Territories, under the direction of the Secretary of War, according to the number of Senators and Representatives to which each State, respectively, is entitled in the Congress of the United States, and to the Territories and District of Columbia such proportion and under such regulations as the President may prescribe. No State, however, is entitled to the benefits of the appropriation apportioned to it unless the number of its regularly enlisted, organized, and uniformed active militia is at least 100 men for each Senator and Representative to which such State is entitled in the Congress of the United States. The amount of this appropriation which is thus determined not to be available is covered back into the Treasury.

The apportionment under this act is as follows:

Apportionment to each State and Territory.

State or Territory.	Representation.	Amount.
Alabama	11	$23,366.00
Arkansas	8	16,993.46
California	9	19,117.64
Colorado	4	8,496.73
Connecticut	6	12,745.08

Many of the States have large credits under the annual apportionment of Congress, credits which in some cases are unavailable because it can only be drawn in arms and stores, with which the States may be fully supplied. Under the terms of the new bill this balance can be used to pay for annual encampments, field maneuvers, target practice, and other military exercises necessary for the training of the National Guard.

That the United States should make provision for training the National Guard in the field, in encampments and practice marches, is only too apparent.

I desire to submit in this connection a statement of the comparative cost of maintenance of the organized militia by the States and the National Government. Only approximate figures can be given, for the reason that the various State appropriations which are known are supplemented in many States by county and town allowances, the amount of which can not be accurately learned. However, I presume, the following calculations are fairly illustrative.

For purposes of comparison I have grouped the 45 States geographically, have omitted Territories and the District of Columbia, and have used the figures of active militia and State appropriations for 1897, those being the latest accessible at the moment, and have been little subsequently varied. These are combined with the present United States annual appropriation, increased in 1900 from $400,000 to $1,000,000, allotted to the States, etc., in proportion to Congressional representation.

Group of 10 Eastern States.—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, and Delaware.

Group of 14 Southern States.—Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Kentucky, Tennessee, and Arkansas.

Group of 12 Middle Western States.—Ohio, Indiana, Illinois, Minnesota, Wisconsin, Michigan, Iowa, Missouri, Kansas, Nebraska, North Dakota, and South Dakota.

Group of 9 Western States.—Montana, Idaho, Wyoming, Colorado, Nevada, Utah, Washington, Oregon, and California.

	10 Eastern States.	14 Southern States.	12 Middle Western States.	9 Western States.	Total.
Organized militia, 1897	39,771	30,763	31,245	9,574	111,353
State appropriations, 1897	$1,454,400	$201,600	$776,000	$241,250	$2,673,250
United States appropriation	$259,000	$300,157	$333,377	$78,250	$970,784
Total appropriation	$1,713,400	$501,757	$1,109,377	$319,500	$3,644,034
State appropriation per head of organized militia	$36.56	$6.55	$24.83	$25.19	*$23.28
United States appropriation per head of organized militia	$6.46	$9.75	$10.66	$8.18	*$8.76
Total appropriation per head of organized militia	$43.02	$16.30	$35.49	$33.37	*$32.04
Population, census 1900	21,231,430	23,269,683	26,333,004	3,773,108	74,607,225
State appropriation per head of population	$0.068	$0.0086	$0.029	$0.064	*$0.0424

*Average.

It will be noted that the appropriations of the States average per man $23.28, and of the United States $8.76, or slightly more than one-third of that of the States, the total appropriation per man being $32.04, which is less than 5 cents per head per annum of population defended. The cost of maintenance of the volunteer organizations of Great Britain was, prior to the South African war, $4,000,000 per annum; about 12 cents per head of population defended.

The figures show that in the group of 14 Southern States the State appropriations are less than one-quarter of the average State appropriations per head of organized militia in the other States, and that the allotment of the annual United States appropriation to these States is 50 per cent greater than the State appropriations. In the 10 Eastern States the States appropriate more than five times the amount of the United States allotment; in the 12 Middle Western States, more than twice as much; in the 9 Western States, more than three times. The small appropriations of the Southern States is accounted for by the circumstance that they have to provide homes and care for disabled ex-Confederate soldiers, widows, and children. While we may not sympathize with the "lost cause" as a cause, it would be unworthy the brave Southern men of this generation who so gallantly rallied round the flag in the war with Spain and in the Philippines if they did otherwise.

Outside of the Eastern States and a few others in which the men are transported, subsisted, and paid out of appropriations during camp and field service, there has been little, if any, of that most essential duty performed. Particularly in the Southern States, in the rare cases when field practice is had, the men have received no pay. Transportation and subsistence have been furnished by means of private and local subscriptions. All of this is provided for in the legislation under consideration.

With a view to assimilate the conditions of such field or camp service to those prevailing in the Army, it is provided that the pay, subsistence, and transportation of the militia forces undergoing such instruction shall be the same as are allowed to the troops of the United States under the same circumstances.

SEC. 15. That the Secretary of War is hereby authorized to provide for participation by any part of the organized militia of any State or Territory on the request of the governor thereof in the encampment, maneuvers, and field instruction of any part of the Regular Army at or near any military post or camp or lake or seacoast defenses of the United States. In such case the organized militia so participating shall receive the same pay, subsistence, and transportation as is provided by law for the officers and men of the Regular Army, to be paid out of the appropriation for the pay, subsistence, and transportation of the Army: *Provided*, That the command of such military post or camp and of the officers and troops of the United States there stationed shall remain with the regular commander of the post without regard to the rank of the commanding or other officers of the militia temporarily so encamped within its limits or in its vicinity.

It is the purpose of this section not only to invite but to authorize the participation of the organized militia in the encampments and maneuvers of the Regular Army, and to provide for the expense of such participation out of the annual appropriation for the support of the Army. The extent of such participation is vested, by the terms of the enactment, in the Secretary of War, whose duty it will be to submit estimates of cost to Congress with his annual estimates for the support of the military establishment. In this way the authority of Congress to regulate the matter is assured by the control which it exercises through its annual grants of money in appropriations for the maintenance of the military establishment.

SEC. 16. That whenever any officer of the organized militia shall, upon recommendation of the governor of any State or Territory, or of the general commanding the District of Columbia, and when authorized by the President, attend and pursue a regular course of study at any military school or college of the United States, such officer shall receive from the annual appropriation for the support of the Army the same traveling allowances and quarters, or commutation of quarters, to which an officer of the Regular Army would be entitled if attending such school or college under orders from proper military authority, and shall also receive commutation of subsistence at the rate of $1 per day while in actual attendance upon the course of instruction.

It is the purpose of this section to assist officers of the militia who desire to obtain educational advantages afforded by the service schools. The extent of the assistance extended is slight, when measured by a financial standard, and extends only to the allowances of quarters in kind, or to commutation therefor, to a moderate allowance for subsistence, and to the travel allowances to which officers of the Army would be entitled under the same circumstances.

SEC. 17. That the annual appropriation made by section 1661, Revised Statutes, as amended, shall be available for the purpose of providing for issue to the organized militia any stores and supplies or publications which are supplied to the Army by any staff department. Any State, Territory, or the District of Columbia may, with the approval of the Secretary of War, purchase for cash from the War Department, for the use of its militia, stores, supplies, material of war, or military publications, such as are furnished to the Army, in addition to those issued under the provisions of this act, at the price at which they are listed for issue to the Army, with the cost of transportation added, and funds received from such sales shall be credited to the appropriations to which they belong and shall not be covered into the Treasury, but shall be available until expended to replace therewith the supplies sold to the States and Territories and to the District of Columbia in the manner herein provided.

The permanent annual appropriation which is carried by section 1661 of the Revised Statutes, as amended by the act of June 6, 1900 (31 Stat., 662), now authorizes the issue of ordnance, quartermasters' stores, and camp equipage for the use of the militia. It is the purpose of this section to extend these issues so as to include all stores, supplies, or publications which are now or may hereafter be issued or supplied to the Army by any branch of the War Department. The second clause modifies and replaces the authority to sell stores, supplies, etc., to the several States for the use of their militia, which was embodied in section 3 of the act of February 24, 1897 (29 Stat., 592).

SEC. 18. That each State or Territory furnished with material of war under the provisions of this or former acts of Congress shall, during the year next preceding each annual allotment of funds, in accordance with section 1661 of the Revised Statutes as amended, have required every company, troop, and battery in its organized militia not excused by the governor of such State or Territory to participate in practice marches or go into camp of instruction at least five consecutive days, and to assemble for drill and instruction at company, battalion, or regimental armories or rendezvous or for target practice not less than 24 times, and shall also have required during such year an inspection of each such company, troop, and battery to be made by an officer of such militia or an officer of the Regular Army.

With a view to secure such an amount of training on the part of the States as will be calculated to warrant the expenditure of the public money in support of the militia, this section provides for a certain number of drills and a certain amount of instruction in field service and target practice in the several organizations of the militia in order to entile them to the benefits of the allotments of funds provided for by section 1661 of the Revised Statutes, as amended by the acts of February 12, 1887 (24 Stat., 401), and June 6, 1900 (31 Stat., 662). It also requires that the work of instruction above provided for shall be verified by appropriate inspections under the authority of the governors of the States and the Secretary of War, representing, respectively, the State and Federal authority.

SEC. 19. That upon the application of the governor of any State or Territory furnished with material of war under the provisions of this act or former laws of Congress, the Secretary of War may detail one or more officers of the Army to attend any encampment of the organized militia, and to give such instruction and information to the officers and men assembled in such camp as may be requested by the governor. Such officer or officers shall immediately make a report of such encampment to the Secretary of War, who shall furnish a copy thereof to the governor of the State or Territory.

It is the purpose of this section to still further increase the participation of the War Department in the practical instruction of the militia forces by authorizing the Secretary of War to detail officers of the Army to attend the annual encampments of the State militia for the purpose of assisting in the instruction of the troops and of reporting the results to the Secretary of War. That the troops undergoing instruction shall receive the full benefit of such participation, it is required that full copies of such reports shall be furnished to the governors of the respective States for the use of the officers of their militia.

SEC. 20. That upon application of the governor of any State or Territory furnished with material of war under the provisions of this act or former laws of Congress, the Secretary of War may, in his discretion, detail one or more officers of the Army to report to the governor of such State or Territory for duty in connection with the organized militia. All such assignments may be revoked at the request of the governor of such State or Territory or at the pleasure of the Secretary of War.

In the section last above cited provision was made for the cooperation of officers of the Army in the annual encampments of the militia forces. It is the purpose of this section to provide for an extension of such cooperation during the armory drill season by authorizing the detail of officers of the Army for duty with the militia. Such details are to be made by the Secretary of War, upon the request of the governors of the respective States, and provision is made in the enactment for the termination of said details upon request by the same authority.

SEC. 21. That the troops of the militia encamped at any military post or camp of the United States may be furnished such amounts of ammunition for instruction in firing and target practice as may be prescribed by the Secretary of War, and such instruction in firing shall be carried on under the direction of an officer selected for that purpose by the proper military commander.

This section is in furtherance of the purpose which is embodied in sections 15, 19, and 20, which have already been explained. It authorizes the expenditure of a limited amount of ammunition for the instruction in target practice of any organizations of the militia while encamped, for the purposes of instruction, at a military post of the United States. It also authorizes the use of the target range and other facilities for target practice, and permits the detail of an officer of the Army to supervise the instruction.

SE . 22. That when any officer, noncommissioned officer, or private of the militia or of the National Volunteer Reserve is disabled by reason of wounds or disabilities received or incurred in the service of the United States he shall be entitled to all the benefits of the pension laws existing at the time of his service, and in case such officer, noncommissioned officer, or private dies in the service of the United States or in returning to his place of residence after being mustered out of such service, or at any time, in consequence of wounds or disabilities received in such service, his widow and children, if any, shall be entitled to all the benefits of such pension laws.

It is the purpose of this section to insure a pensionable status to the officers and enlisted men of the militia when called into the military service of the United States in pursuance of a proclamation of the President. This section replaces the obsolete provisions of sections 1639, 1656, and 1657 of the Revised Statutes.

SEC. 1639. If any person, whether officer or soldier, belonging to the militia of any State, and called out into the service of the United States, be wounded or disabled while in actual service, he shall be taken care of and provided for at the public expense.

SEC. 1656. When any officer, noncommissioned officer, artificer, or private of the militia or volunteer corps dies in the service of the United States, or in returning to his place of residence after being mustered out of service, or at any time, in consequence of wounds received in service, and leaves a widow, or if no widow, a child or children under 16 years of age, such widow, or if no widow, such child or children, shall be entitled to receive half the monthly pay to which the deceased was entitled at the time of his death, during the term of five years; and in the case of death or intermarriage of such widow before the expiration of five years, the half pay for the remainder of the time shall go to the child or children of the decedent; and the Secretary of the Interior shall adopt such forms of evidence in application under this section as the President may prescribe.

SEC. 1657. The volunteers or militia who have been received into the service of the United States to suppress Indian depredations in Florida shall be entitled to all the benefits which are conferred on persons wounded or otherwise disabled in the service of the United States.

SEC. 23. That for the purpose of securing a list of persons specially qualified to hold commissions in any volunteer force which may hereafter be called for and organized under the authority of Congress, other than a force composed of organized militia, the Secretary of War is authorized from time to time to convene boards of officers at suitable and convenient army posts in different parts of the United States, who shall examine as to their qualifications for the command of troops or for the performance of staff duties all applicants who shall have served in the Regular Army of the United States, in any of the volunteer forces of the United States, or in the organized militia of any State or Territory or District of Columbia, or who, being citizens of the United States, shall have attended or pursued a regular course of instruction in any military school or college of the United States Army, or shall have graduated from any educational institution to which an officer of the Army or Navy has been detailed as superintendent or professor pursuant to law, after having creditably pursued the course of military instruction therein provided. Such examinations shall be under rules and regulations prescribed by the Secretary of War, and shall be especially directed to ascertain the practical capacity of the applicant.

The record of previous service of the applicant shall be considered as a part of the examination. Upon the conclusion of each examination the board shall certify to the War Department its judgment as to the fitness of the applicant, stating the office, if any, which it deems him qualified to fill, and, upon approval by the President, the names of the persons certified to be qualified shall be inscribed in a register to be kept in the War Department for that purpose. The persons so certified and registered shall, subject to a physical examination at the time, constitute the eligible class for commissions pursuant to such certificates in any volunteer force hereafter called for and organized under the authority of Congress, other than a force composed of organized militia, and the President may authorize persons from this class to attend and pursue a regular course of study at any military school or college of the United States and to receive from the annual appropriation for the support of the Army the same allowances and commutations as provided in this act for officers of the organized militia: *Provided*, That no person shall be entitled to receive a commission as a second lieutenant after he shall have passed the age of 30; as first lieutenant after he shall have passed the age of 35; as captain after he shall have passed the age of 40; as major after he shall have passed the age of 45; as lieutenant-colonel after he shall have passed the age of 50, or as colonel after he shall have passed the age of 55: *And provided further*, That such appointments shall be distributed proportionately, as near as may be, among the various States contributing such volunteer force: *And provided*, That the appointments in this section provided for shall not be deemed to include appointments to any office in any company, troop, battery, battalion, or regiment of the organized militia which volunteers as a body or the officers of which are appointed by the governor of a State or Territory.

It has been attempted in this section to provide for the preparation of a register of persons whose capacity to exercise command in the line or to perform staff duties has been proved by the test of actual military service. To entitle an individual to register he must have served in the regular or volunteer forces, or in the organized militia of a State or Territory, or must have graduated from the war college or from one of the regular service schools, or from a college or military school maintained in part by a grant of lands from the United States, at which an officer of the Army or Navy has been detailed as superintendent or as professor of military science, in pursuance of the authority conferred by sections 1225 and 1260 of the Revised Statutes, as amended by the act of November 2, 1893 (27/7).

To ascertain the capacity of such candidates for registration as have conformed to the conditions above set forth in respect to military or academic training, it is provided that boards of examination shall be convened, from time to time, by the Secretary of War, before which the candidates will be permitted to appear with a view to determine their fitness for registration. The examinations prescribed in the section are intended and required to be so conducted as to ascertain and test the practical capacity of the candidate for the performance of duty as a commissioned officer. To still further restrict the theoretical tendency of the examinations herein contemplated, it is expressly required that the record of service of the applicant shall be considered a part of the examination. A rigid physical examination is also provided for. Having regard to the practical efficiency and military capacity of the applicant as thus determined, the board is required to certify its opinion as to the office which he is qualified to fill in the military service, and upon approval of such certification by the President the applicant's name is to be recorded at the War Department in a register kept for that purpose.

Persons so registered become entitled, in consequence of such registration, to membership in a class from which appointments are required to be made in any volunteer force which may hereafter be raised by authority of Congress, save in an organization of the active militia which volunteers in a body or the officers of which are appointed by the governor of a State. Certain age limitations are imposed, the operation of which will be to remove from the register the names of persons recommended for appointment upon reaching the ages assigned to their respective grades of rank in the military service. An equitable distribution of appointments upon a territorial basis is also provided for.

SEC. 24. That for the purpose of providing a reserve force of trained men which shall be ready for immediate service whenever called for and organized under authority of Congress, the Secretary of War is authorized to apportion among the several States and Territories and enroll not exceeding 100,000 men, who shall have served in the Regular or Volunteer armies of the United States or in the organized militia. Such reserve force shall be designated as the National Volunteer Reserve, and when called forth by the President shall serve wherever ordered, within or without the territory of the United States. Such enrollment shall in each case continue for a period of five years, but in the event they shall be called into the service of the United States, other than for the purpose of drill, inspection, and instruction, they shall be entitled to be discharged at the close of the war or after nine months' service. The persons so enrolled shall report for drill, inspection, and instruction at such times and places to be specified and under rules and regulations to be prescribed by the Secretary of War, and each person so reporting shall, during the time of such service, be subject, as far as practicable, to the regulations and discipline governing the military establishment, and shall be entitled to the same pay and allowances as are or may be provided by law for the Army of the United States, to be paid out of the appropriation for the pay of the Army; but in time of peace, except in case of threatened invasion, said National Volunteer Reserve shall not be required to perform military duty to exceed ten days in any one year.

Whenever a volunteer force shall be called for by authority of Congress, and the members of any companies, troops, batteries, battalions, or regiments of the organized militia shall enlist in the Volunteer Army in bodies, such companies, troops, batteries, battalions, or regiments shall be received as the first organizations of such volunteer force. Whenever a volunteer force shall be called for by authority of Congress exceeding in number the companies, troops, batteries, battalions, and regiments of the organized militia which shall enlist in bodies pursuant to the provisions of section 6 of the act entitled "An act to provide for temporarily increasing the military establishment of the United States in time of war, and for other purposes," approved April 22, 1898, the persons so enrolled as a reserve force of trained men, or so many thereof as shall be required, shall be organized in the manner provided for the organization of the volunteer force by section 12 of the act entitled "An act for increasing the efficiency of the Army of the United States, and for other purposes," approved March 2, 1899.

Provided, That the President of the United States, in time of peace, may by order fix the minimum number of enlisted men in each company, troop, battery, signal corps, engineer corps, and hospital corps: *Provided further*, That no person shall belong to both organizations at the same time.

The sections referred to above are as follows:

[Act of 1898, ch. 187, Fifty-fifth Congress, second session.]

SEC. 6. That the Volunteer Army and the militia of the States when called into the service of the United States shall be organized under and shall be subject to the laws, orders, and regulations governing the Regular Army: *Provided*, That each regiment of the Volunteer Army shall have one surgeon, two assistant surgeons, and one chaplain, and that all the regimental and company officers shall be appointed by the governors of the States in which their respective organizations are raised: *Provided further*, That when the members of any company, troop, battery, battalion, or regiment of the organized militia of any State shall enlist in the Volunteer Army in a body as such company, troop, battery, battalion, or regiment the regimental, company, troop, battery, and battalion officers in service with the militia organization thus enlisting may be appointed by the governors of the States and Territories, and shall, when so appointed, be officers of corresponding grades in the same organization when it shall have been received into the service of the United States as a part of the Volunteer Army: *Provided further*, That the President may authorize the Secretary of War to organize companies, troops, battalions, or regiments, possessing special qualifications, from the nation at large, not to exceed 3,000 men, under such rules and regulations, including the appointment of the officers thereof, as may be prescribed by the Secretary of War.

[Act of 1899, ch. 352, Fifty-fifth Congress, third session.]

SEC. 12. That to meet the present exigencies of the military service the President is hereby authorized to maintain the Regular Army at a strength of not exceeding 65,000 enlisted men, to be distributed amongst the several branches of the service, including the Signal Corps, according to the needs of each, and raise a force of not more than 35,000 volunteers to be recruited as he may determine from the country at large, or from the localities where their services are needed, without restriction as to citizenship or educational qualifications, and to organize the same into not more than twenty-seven regiments organized as are infantry regiments of war strength in the Regular Army, and three regiments to be composed of men of special qualifications in horsemanship and marksmanship, to be organized as cavalry for service mounted or dismounted: *Provided*, That each regiment shall have one surgeon with the rank of major; two assistant surgeons, one of whom shall have the rank of captain and one that of first lieutenant, and three hospital stewards: *Provided further*, That such increased regular and volunteer force shall continue in service only during the necessity therefor, and not later than July 1, 1901.

All that is undertaken by section 24 of the bill is to provide who shall constitute the national volunteer reserve. They do not become a part of the standing Army of the United States. All that could be done would be, under the direction of the Secretary of War, to provide for their organization, drill, inspection, instruction, and give authority in time of threatened war to call them out; and upon declaration of war by Congress, to make them a part of the volunteer force of the United States.

It is a defect of the voluntary system by means of which the military establishment of the United States is habitually maintained in time of peace that no provision has been made to retain the services of its discharged soldiers in some organization of volunteer reserves. It is therefore proposed in this section to keep in touch with, and, in case of emergency, to utilize the services of men who have received a military training, either in the Regular or Volunteer Army or in the organized militia. To entitle an individual to enrollment in the reserve force created by this section, he must have served at least one enlistment in the regular or volunteer establishment or a corresponding term in the organized militia of a State or Territory.

With a view to verify the enrollment and provide for an occasional brief course of training and instruction, it is proposed to embody the reserve forces provided for in this section and to assemble or mobilize them from time to time as funds for that purpose are provided by Congress. In the event of war, if the volunteer forces authorized by Congress exceed in strength the regiments, battalions, troops, or other commands of organized militia who shall enlist in bodies, in pursuance of section 6, act of April 22, 1898, the reserve forces herein provided for may be accepted by the President in organizations conforming to the requirements of section 12 of the act of March 2, 1899.

The Secretary of War approves and explains the provisions of section 24 in the following letter:

WAR DEPARTMENT, *Washington, June 13, 1902.*

MY DEAR SIR: I thank you for your letter of June 7 relating to clause of the Dick bill which has reference to the so-called reserve force of 100,000 men, and saying that there is an impression in some States that the enrollment of such a reserve force would be inimical to the best interests of the National Guard.

I think such an impression must necessarily be founded upon a misunderstanding as to the true meaning and effect of the bill. The proposed enrollment of not exceeding 100,000 veterans, who have been graduated from the Regular Army, the Volunteers, and the National Guard, is carefully subordinated by the bill to the National Guard itself, which has a preference of liberal treatment in peace and opportunity in war definitely secured to it by the bill.

The National Guard is practically made a first reserve so far as it elects to become so, while the proposed enrollment of veterans practically takes the place of a second or volunteer reserve, to be called into service only when any other volunteer organization would be called into service, and the great effect produced being that after the Regular Army and after the National Guard we shall have a volunteer force, the first regiments of which are composed of experienced and trained soldiers who have seen service and have then gone back to civil life.

As we have a three years' term of enlistment in the Regular Army, approximately one-third of the 66,000 go out each year on the expiration of their enrollment. After making allowance for reenlistment, nearly 20,000 a year will be regularly going back into civil life. We want to keep track of those young men and be able to call them out instantly whenever war comes and have the first volunteer regiments composed of them and of the young men who have seen service and graduated from the volunteer regiments of the war with Spain, and who have seen service in the National Guard and have graduated from that.

Until war comes we will simply keep track of these men by enrollment. When the war comes they will be organized and put into the field ready for immediate service while the other volunteer regiments are being trained. There is no doubt that by this expedient we will save months of valuable time in the organization of a very considerable force, but so far as the National Guard is concerned it will make no difference, because under the bill the National Guard organizations come first.

I am very glad to be assured by your letter of your belief in the bill, and I assure you that your valuable support for its provisions is appreciated. I am confident that when it is enacted and put into force the organization and regulation of the citizen soldiery, upon whom our country must in the main rely in all future wars, will be far more efficient than it has ever been before, and that it will give to the United States at a minimum of expense a defensive power greater than could be obtained by the expenditure of millions of dollars annually in maintaining a larger standing army, and I am also confident that it will greatly promote the practical importance, the dignity, and efficiency of the National Guard throughout the United States.

Sincerely, yours,

ELIHU ROOT, *Secretary of War.*

HON. CHARLES DICK,
Chairman Committee on the Militia, House of Representatives.

SEC. 25. That all the volunteer forces of the United States called for by authority of Congress shall, except as hereinbefore provided, be organized in the manner provided by the act entitled "An act to provide for temporarily increasing the military establishment of the United States in time of war, and for other purposes," approved April 22, 1898.

The act referred to in this section reads as follows:

Be it enacted, etc., That all able-bodied male citizens of the United States, and persons of foreign birth who shall have declared their intention to become citizens of the United States under and in pursuance of the laws thereof, between the ages of 18 and 45 years, are hereby declared to constitute the national forces, and, with such exceptions and under such conditions as may be prescribed by law, shall be liable to perform military duty in the service of the United States.

SEC. 2. That the organized and active land forces of the United States shall consist of the Army of the United States and of the militia of the several States when called into the service of the United States: *Provided*, That in time of war the Army shall consist of two branches, which shall be designated, respectively, as the Regular Army and the Volunteer Army of the United States.

SEC. 3. That the Regular Army is the permanent military establishment, which is maintained both in peace and war according to law.

SEC. 4. That the Volunteer Army shall be maintained only during the existence of war, or while war is imminent, and shall be raised and organized, as in this act provided, only after Congress has or shall have authorized the President to raise such a force or to call into the actual service of the United States the militia of the several States: *Provided*, That all enlistments for the Volunteer Army shall be for the term of two years, unless sooner terminated, and that all officers and men composing said army shall be discharged from the service of the United States when the purposes for which they were called into service shall have been accomplished, or on the conclusion of hostilities.

SEC. 5. That when it becomes necessary to raise a volunteer army the President shall issue his proclamation stating the number of men desired,

within such limits as may be fixed by law, and the Secretary of War shall prescribe such rules and regulations, not inconsistent with the terms of this act, as may in his judgment be necessary for the purpose of examining, organizing, and receiving into service the men called for: *Provided*, That all men received into service in the Volunteer Army shall, as far as practicable, be taken from the several States and Territories and the District of Columbia and the Indian Territory in proportion to their population. And any company, troop, battalion, or regiment from the Indian Territory shall be formed and organized under such rules and regulations as shall be prescribed by the Secretary of War.

SEC. 6. That the Volunteer Army and the militia of the States, when called into the service of the United States, shall be organized under, and shall be subject to, the laws, orders, and regulations governing the Regular Army: *Provided*, That each regiment of the Volunteer Army shall have one surgeon, two assistant surgeons, and one chaplain, and that all the regimental and company officers shall be appointed by the governor of the States in which their respective organizations are raised: *Provided further*, That when the members of any company, troop, battery, battalion, or regiment of the organized militia of any State shall enlist in the Volunteer Army in a body, as such company, troop, battery, battalion, or regiment, the regimental company, troop, battery, and battalion officers in service with the militia organization thus enlisting may be appointed by the governors of the States and Territories, and shall when so appointed be officers of corresponding grades in the same organization when it shall have been received into the service of the United States as a part of the Volunteer Army: *Provided further*, That the President may authorize the Secretary of War to organize companies, troops, battalions, or regiments possessing special qualifications, from the nation at large, not to exceed 3,000 men, under such rules and regulations, including the appointment of the officers therefor, as may be prescribed by the Secretary of War.

SEC. 7. That all organizations of the Volunteer Army shall be so recruited from time to time as to maintain them as near to their maximum strength as the President may deem necessary, and no new organization shall be accepted into service from any State unless the organizations already in service from such State are as near to their maximum strength of officers and enlisted men as the President may deem necessary.

SEC. 8. That all returns and muster rolls of organizations of the Volunteer Army and of militia organizations while in the service of the United States shall be rendered to the Adjutant-General of the Army, and upon the disbandment of such organizations the records pertaining to them shall be transferred to and filed in the Record and Pension Office of the War Department. And regimental and all other medical officers serving with volunteer troops in the field or elsewhere shall keep a daily record of all soldiers reported sick or wounded, as shown by the morning calls or reports, and shall deposit such reports, with other reports provided for in this section, with the Record and Pension Office as provided herein, for other reports, returns, and muster rolls.

SEC. 9. That in time of war, or when war is imminent, the troops in the service of the United States, whether belonging to the Regular or Volunteer Army or to the milita, shall be organized, as far as practicable, into divisions of three brigades, each brigade to be composed of three or more regiments; and whenever three or more divisions are assembled in the same army the President is authorized to organize them into army corps, each corps to consist of not more than three divisions.

SEC. 10. That the staff of the commander of an army corps shall consist of 1 assistant adjutant-general, 1 chief engineer, 1 inspector-general, 1 chief quartermaster, 1 chief commissary of subsistence, 1 judge-advocate, and 1 chief surgeon, who shall have, respectively, the rank of lieutenant-colonel; and 1 assistant adjutant-general, who shall have the rank of captain, and the aids-de-camp authorized by law. The staff of the commander of a division shall consist of 1 assistant adjutant-general, 1 engineer officer, 1 inspector-general, 1 chief quartermaster, 1 chief commissary of subsistence, and 1 chief surgeon, who shall have, respectively, the rank of major, and the aids-de-camp authorized by law. The staff of a commander of a brigade shall consist of 1 assistant adjutant-general, 1 assistant quartermaster, and 1 commissary of subsistence, each with the rank of captain, 1 surgeon, and the aids-de-camp authorized by law.

The staff officers herein authorized for the corps, division, and brigade commanders may be appointed by the President, by and with the advice and consent of the Senate, as officers of the Volunteer Army, or may be assigned by him, in his discretion, from officers of the Regular Army or the Volunteer Army, or of the militia in the service of the United States: *Provided*, That when relieved from such staff service said appointments or assignments shall terminate.

SEC. 11. That the President is hereby authorized to appoint in the Volunteer Army, by and with the advice and consent of the Senate, not exceeding one major-general for each organized army corps and division, and one brigadier-general for each brigade, and any officer so selected and appointed from the Regular Army shall be entitled to retain his rank therein: *Provided*, That each general officer of the Volunteer Army shall be entitled to the number of aids-de-camp authorized for an officer of like grade in the Regular Army.

SEC. 12. That all officers and enlisted men of the Volunteer Army, and of the militia of the States when in the service of the United States, shall be in all respects on the same footing as to pay, allowances, and pensions as that of officers and enlisted men of corresponding grades in the Regular Army.

SEC. 13. That the governor of any State or Territory may, with the consent of the President, appoint officers of the Regular Army in the grades of field officers in organizations of the Volunteer Army, and officers thus appointed shall be entitled to retain their rank in the Regular Army: *Provided*, That not more than one officer of the Regular Army shall hold a commission in any one regiment of the Volunteer Army at the same time.

SEC. 14. That the general commanding a separate department or a detached army is authorized to appoint from time to time military boards of not less than three nor more than five volunteer officers of the Volunteer Army to examine into the capacity, qualifications, conduct, and efficiency of any commissioned officer of said army within his command: *Provided*, That each member of the board shall be superior in rank to the officer whose qualifications are to be inquired into: *And provided further*, That if the report of such a board is adverse to the continuance of any officer, and the report be approved by the President, such officer shall be discharged from service in the Volunteer Army, at the discretion of the President, with one month's pay and allowances.

SEC. 15. That all acts and parts of acts inconsistent with the provisions hereof be, and the same are hereby, repealed.

SEC. 26. That sections 1625 to 1660, both included, of title 16 of the Revised Statutes, and section 232 thereof, relating to the militia, are hereby repealed.

SEC. 27. That this act shall take effect upon the date of its approval.

Congress has never yet exercised, in time of peace, its constitutional authority to organize, equip, and discipline the militia. The time now seems ripe for such action. Public sentiment demands some efficient and modern legislation on the subject. The Executive is interested and friendly. The War Department is anxious to assist in improving the condition of the country's militia.

The bill, in the final form in which it is presented, has the approval of the Secretary of War, as appears from his letter. It has the support of the organized militia of the country, as expressed in numerous letters received by many members of Congress, and its provisions, so far as then agreed upon, were approved by the Interstate National Guard Association at its last meeting in this city. Furthermore, it is the unanimous report of the Committee on Militia.

Our first line of defense will always consist of the Regular Army, a small, compact, and highly disciplined body of officers and men, ready at any moment for service of all kinds. There has always been in this country, and always will be, a strong prejudice against a large standing army, and while that prejudice is unfounded and while there never need be any fear that our standing army will be used as an engine of oppression or as a means to overturn the Republic and establish a military despotism, yet it should always be the policy of the country to restrict the size of the standing army to the smallest limits compatible with our actual necessities. Our present standing army is considerably below the maximum of men authorized by law, and only recently the President has directed a further reduction in the force of over 10,000 men. When that reduction is accomplished the Regular Army will consist, in round numbers, of 60,000 men. This force is scattered from the Atlantic to the Pacific, and from the Canadian frontier to the Rio Grande. A large proportion will always be engaged in manning the coast defenses of the nation and can not be diverted for any other purpose. At least one-third of the Army is engaged in the Philippines, and that condition of affairs may continue for some time to come.

The Indian problem has been solved and conditions in our outlying possessions are rapidly growing better, so that there is no prospect of any further increase in the standing army, certainly not for years to come. If we could count on conditions of perpetual and universal peace, if that millennium had arrived of which the poet sang, then it would be unnecessary to make any other provision for national defense. Despite peace conferences, however, and talk of arbitration, human nature remains the same. Wars are certain to occur again, and the nation would be very derelict if it made no further provision for self-protection. The best way to secure peace is to be prepared for war. The surest way to prevent other nations from infringing upon our rights and interests and transgressing upon our territory is to be so prepared that we can take immediate and effective steps to punish any violation of our national interests.

The consideration of prime importance in maintaining a high degree of military efficiency is a state of preparation which will admit of striking immediate blows at an enemy, of being prepared on very brief notice for manning our frontiers with a strong and effective force. Modern wars are short, sharp, and decisive. They are not often preceded by formal declaration of war; nor is there time after war has once begun to arm, equip, discipline, and perfect a large force. A statement before me shows that from 1700 to 1871, a period of one hundred and seventy-one years, there are 107 cases recorded in which hostilities were begun in Europe and the United States without previous declaration of war. In the same period there are less than 10 instances in which declaration of war preceded the firing of the first hostile shot.

Wars are now generally decided in a shorter space of time than was necessary to prepare our volunteer forces for effective service during the war with Spain. In the war between France and Austria in 1859, the battle of Solferino decided the contest in fifty-two days. In the war between Germany and Denmark in 1864, the contest was practically over in ninety-three days. The battle of Sadowa determined the result of the Austro-Prussian war in 1866 in seventeen days after hostilities began. The conflict between Austria and Italy in 1866 was settled by the battle at Lissa in thirty days after the outbreak of hostilities. The Franco-Prussian war saw its decisive contest at Sedan, which fell in forty-nine days. The war with Spain was practically over in one hundred days. These instances show conclusively that to wage war successfully a nation must be prepared immediately to take the field with a force adequate for the first emergency. Our contest with Spain was not a fair test of the conditions of modern war. Spain was a third-rate power, without a large standing army, and afforded practically no test of what our experience would be should we ever unfortunately become engaged with a first-class military power.

The military resources of this country are practically unlimited. Its reserve powers are tremendous, perhaps the largest in the world. It may safely be said that within the boundaries of the United States there are between ten and twelve millions of men able to perform military service. Our financial resources exceed those of any other nation. No other nation can turn out as many arms and accouterments, uniforms, and other equipment, in the

same length of time as the United States. We are safe in saying that no nation could hope to overrun the United States and subdue the entire country, but of what avail are all these magnificent resources of men and material unless they are ready for immediate use in time for the supreme crisis? If a hostile army could land on our shores and capture even a few of our seaboard cities, the damage caused would be much greater than the expense of maintaining an adequate second line of defense.

The safety of the country in time of danger must depend upon the volunteer soldiers. It is the volunteer soldier who has fought the great battles of the country, and our reliance must ever be on that branch of the service. In the days of our forefathers, when every man was a good rifle shot, when the danger of Indian uprisings forced every man to be an expert in the use of firearms, when there were no telegraph lines and no cables, when means of communication were slow, and the length of a trip across the Atlantic Ocean was counted by weeks instead of days, there was not the necessity for maintaining our volunteer forces in a high degree of efficiency. Modern conditions have changed all this. Comparatively few men are trained to-day in the use of the rifle.

The United States and Europe are in closer contact to-day than were Washington and Philadelphia one hundred years ago, and a foreign army could be mobilized and transported across the Atlantic in a few weeks. The various States and Territories maintain their own local military organizations, but they are national in name only, and the process of converting them into national forces is slow and tedious. Their armament and equipment vary. Scarcely any two of them have the same organization. Some State troops go into camps of instruction every year; some every other year; some do not go at all. The States which give adequate instruction in rifle practice are very few. Before the war with Spain it was very generally taken for granted that in most of the States the National Guard was fully armed and equipped and ready for active service. Not only did the public generally believe this, but many Army officers of high rank testified to the same effect. How utterly mistaken were all these flattering opinions our war with Spain quickly exposed.

During every generation since our Government was established the country has been engaged in war. Every such war has given most valuable information, based upon the teachings of stern experience, but not yet has the country been wise enough to take advantage of the education thus acquired and make provision for the future. During the first year of his Administration as President of the United States, General Washington, in a message to the Senate, referred to the militia as follows:

"Along with this object (the preservation of peace and tranquillity on the frontiers) I am induced to suggest another, with the national importance and necessity of which I am deeply impressed. I mean some uniform and effective system for the militia of the United States. * * * I am particularly anxious it should receive as early attention as circumstances will admit, because it is now in our power to avail ourselves of the military knowledge disseminated throughout the several States by means of many well-instructed officers and soldiers of the late war, a resource which is daily diminishing by death and other causes. To suffer this peculiar advantage to pass away unimproved would be to neglect an opportunity.

In 1792 a militia law was finally adopted, and the same law is still on the statute books, but has long since been obsolete and inoperative. So primitive and out of date are the weapons referred to in that law that some of them could not be found to-day outside of the walls of museums of military antiquities. This law was largely a failure because it required the enrollment of all persons fitted for military duty between the ages of 18 and 45. The law left practically everything to the States, and gave Congress no authority over the matter. All that Congress has done or could do for the militia has been to make annual appropriations, which have gradually been increased from $200,000 a year to $1,000,000, which is the amount that has been appropriated since 1900. This annual appropriation has been used for the issuing of arms, quartermaster stores, and camp equipage, but the United States has had practically no control or supervision over the expenditure. The experience of two wars with England and of the Mexican war has taught the country little of the necessity for better preparation for hostilities.

When the civil war broke out, had President Lincoln had a regular army of 40,000 men which he could have put into the field at once, it is quite likely the war would have been ended in a very brief space of time. Both sides in that gigantic contest were forced to rely upon volunteer soldiers, who required so much time to be made fit for the field that the contest was thereby unduly prolonged, and the country since then has been paying for the consequences in the way of unnecessary millions of public debt. General Miles testified after the war with Spain that if the country had had an effective force of 60,000 men at the outbreak of that trouble, we could have saved the expense of calling out nearly 225,000 men, the size of the volunteer army, and all the trouble and enormous expense we had in equipping an irregular and unprepared force, which had not been to war at all, but remained in camp. The volunteer forces called out during the late war were hardly ready to take the field under conditions of actual conflict until after the war was practically over.

There is no reason why the country should not have a well-organized, equipped, and disciplined volunteer army which could be mobilized ready for action within forty-eight hours after it was called for by the President. The war with Spain showed for the fourth or fifth time the weakness of the country in the matter of its volunteer forces. The last time we gained this experience it was during a conflict with a weak power. The next time the country is called upon to manifest its military strength it may have a foeman much more worthy of our power. It is not likely when that event occurs that we will be given one hundred days in which to prepare our volunteer forces for the field.

It has been stated upon good authority that the small but highly disciplined force from the Regular Army which went to Cuba under command of General Shafter was an army of marksmen, if not sharpshooters. This means that at ranges from 200 to 1,000 yards every soldier could hit an enemy once out of every two or three shots. On the other hand, of the men composing the volunteer forces organized for that war it is not likely that one-half of them had ever fired a military rifle. President Roosevelt in his first message to Congress declared:

Nowadays the most valuable fighting man and the most difficult to perfect is the rifleman.

The soldier may be perfect in discipline and drill, able to care for himself in all emergencies, but if upon the field of battle he is unable to maintain an effective fire, his services are worse than useless. A perfect soldier must be a perfect marksman. Modern battles are no longer covered by a pall of smoke. In the combats of two recent wars just ended the firing lines became duels between individuals.

The only way to bring our National Guard up to a high state of efficiency is to pass a Federal law which will make them in fact as well as in name a national guard, and which will insure their uniform equipment and drill. They should be armed and equipped just as the Regular Army is armed and equipped, and they should have the same discipline and instruction, so far as possible, in the limited time that can be given for that purpose. State troops should go to camp under conditions as nearly as possible approximating those of actual war. State troops and regular troops should be camped together, so that the former may have the benefit of the experience and skill of the latter.

The volunteer should bunk as the regular bunks, should live on the same ration, and should prepare his meals just as the regular prepares them under service conditions. Volunteer soldiers should be trained in carrying the same accouterments that they would carry in actual warfare. The Government should make liberal appropriations for target practice. Aiming and pointing drills should be given to all volunteers, and they should all be given an opportunity every year of firing on the ranges. Depots should be established for reserves of arms and equipments, and these should be so distributed throughout the country that there need be no delay in equipping a volunteer force when called for duty.

This subject has been considered of sufficient importance to have the attention of nearly every President from Washington to Roosevelt. A great many of them have referred to it in their annual messages, but the country has gone on in fancied security, indifferent to the lessons of experience.

This measure, which has passed the House and is now pending in the Senate, it is believed will correct this evil. It has the approval of the President and the Secretary of War, and of the National Guard of the different States and Territories. It will add very little to the present expense, but will within a short time give us a highly trained and efficient volunteer force, ready to take the field at once. It will be directly subject to the call of the President, but will be officered as now by the governors of the States. The men will be physically examined before admission to the ranks, thus insuring sound bodies, a condition which has not prevailed heretofore.

Officers will be examined as to physical and mental qualifications, and the standard will be uniform throughout the country. Those not fit to serve will not retain their commissions. Inefficient officers will be weeded out. Those who are ambitious and fit to make good officers will be afforded opportunities for improvement and making themselves qualified to serve by being permitted to go to Regular Army schools for instruction, and while there their expenses will be paid.

Annual inspections by officers of the Regular Army will test the efficiency of the guard, and the pro rata allotment due each State from the annual appropriations of Congress will be given to those States whose national guard is sufficiently armed, uniformed, and equipped for active duty in the field.

The present National Guard of the States and Territories aggregates about 115,000 officers and men. With liberal appropriations by Congress, and a system of Federal control and instruction, the

States also will be induced to accord more liberal treatment, and this force will in a short time doubtless reach 200,000. Of this number it is believed at least 150,000 would respond to a call for duty. This would be amply sufficient under all contingencies which may reasonably be expected for the second line of defense, and would give the country breathing time within which to organize and equip its vast unorganized military resources.

With a volunteer force of this number, so equipped and disciplined that it could take the field at once, it would be possible to even further reduce the size of our Regular Army. It would be a body which would inspire the respect of other nations and make them hesitate to wantonly attack us. The country would be far better prepared for war, while at a minimum of expense we would be able to secure to the country a maximum of our military strength in times of great emergency.

The country has awaited such a measure for years. It seems to have been left to the Fifty-seventh Congress to accomplish what President Washington urged in 1794, when he said, "The devising and establishing of a well-regulated militia would be a genuine source of legislative honor and a perfect title to public gratitude."

The Efficiency of the Militia.

SPEECH

OF

HON. HENRY BRISTOW,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1902,

On the bill (H. R. 11654) to promote the efficiency of the militia, and for other purposes.

Mr. BRISTOW said:

Mr. SPEAKER: The chairman of the Committee on Militia, who, I desire to say, deserves great credit for the complete manner in which he has covered the subject under discussion, and who has explained very thoroughly and in detail the merits of the bill and the necessity for its passage, leaves but little for me to add to what has already been said by him and others in your hearing. Requests favoring the passage of the bill have been so numerous from my city, from persons thoroughly competent to judge of its merits, that I am impelled to say a few words in its favor.

One of the objects provided for in this bill is to give the organized militia in the various States a military standing, which has been impossible for it to attain in the past. By the provisions of this act it would become an organization thoroughly effective in cases of great emergency. The effect would be to make general the discipline which in the past has only existed in isolated regiments in the National Guards, whose members have assumed voluntarily the cost of modern arms and equipments in uniformity with the Regular Army.

History records many instances where thoroughly equipped militia regiments have rendered incalculable service on occasions of great emergencies. I will cite only one instance, based on personal experience. On the morning of April 21, 1861, in response to the President's first call for troops, the members of the Seventh New York National Guard received orders to report at their armory in the afternoon prepared for any service. At 4 o'clock the same day the regiment left New York for the nation's capital with 1,000 men in its ranks. In consequence of the riots in Baltimore the regiment was compelled to go to Annapolis by water, and from there by forced marches to Washington, and within three days from time of departure occupied this very Chamber as barracks.

I recall vividly the face and form of our martyred President, Abraham Lincoln, as he, from the Speaker's desk, extended the nations thanks to the regiments who so promptly responded to the call, and thus saving the nation's capital. This regiment was only a militia regiment, but one which maintained, as a matter of pride, and voluntarily assumed strict military duties in time of peace in order to be prepared for war, or any duty which they might be called upon to perform.

As a result of this self-assumed strict military training and discipline, between seven and eight hundred of its members served as officers during the civil war, and all of them acquitted themselves with distinction, some of whom made national reputations. Many incidents of this character have emphasized the urgency of this measure in the minds of those interested in the effort to make the militia more effective, as provided for in the various sections of this bill. You will notice that the bill provides for a uniformity in arms and equipments; also that provision is made for practice in field and coast defense, and that in other and various ways provision is made to bring the organized militia to a high standard of efficiency.

FORT GREENE MONUMENT.

The people of New York, from the old city of Brooklyn, which I have the honor to represent in part, are especially gratified by the action of Congress in making an appropriation to build a monument at Fort Greene to the memory of the Revolutionary martyrs who sacrificed their lives in the British prison ships. This matter has been before Congress for many years, advocated year after year by our late lamented member and patriotic citizen, Hon. Amos Cummings. This meritorious request Congress has granted and it is a matter of regret that he, the most eloquent of its advocates, should have died before this appropriation was granted. But the people of Brooklyn appreciate the passage of the act by Congress and feel gratified that this epoch in the history of the Revolutionary war is at last to be marked by a monument which will inspire the patriotism of all future generations.

BUILDING SHIPS IN NAVY-YARDS.

Before exhausting the short time at my disposal, I desire to express my personal gratification at the victory obtained by the conference committee of the House in influencing the Senate to withdraw its opposition, and accept the House proposition to build at least one battle ship in one of our Government yards. This is to be a test as to whether the United States Government can build ships as well and as cheaply as by private contract. To the honorable Secretary of the Navy is left the selection of the yard. Naturally, I feel that he should select the yard located at Brooklyn, N. Y. It must be conceded that it is the best equipped yard in the country. It not only possesses every facility, but it has already demonstrated its ability in the past. It will be a source of deep regret to the people of the city of New York if they should be deprived of the honor of building one of our great war ships in that city.

Civil Government for the Philippine Islands.

SPEECH

OF

HON. EDWARD W. CARMACK,

OF TENNESSEE,

IN THE SENATE OF THE UNITED STATES,

Saturday, May 31, 1902.

The Senate having under consideration the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. CARMACK said:

Mr. PRESIDENT: It is not my intention to-night to traverse again the field of this debate. It has been a long debate, and practically every aspect of the question has been considered. It may seem to some that there has been a great waste of time in prolonging a debate whose conclusion was foregone, whose end was foreknown and predetermined from the beginning, and where the body whose judgment was invoked was as unyielding as adamant to any force of fact or argument that could be thrown against it.

For myself, it was not until within the closing days of the debate that I yielded the hope that some of the worst provisions of this bill would be purged away. I have surrendered that hope, but I do not regret the length of this debate. I believe that it has been an instructive and informing debate to the American people, who at last must decide this question. It may have been without influence or effect so far as this Senate or this Congress is concerned; but this is a vast country, Mr. President, with 75,000,000 people, and the great and enduring purpose of the nation, transmitted from generation to generation, can not be defeated by anything that may be done by a body of men, however great and distinguished, under one roof, in one room.

I believe I speak the sentiments and feelings of my Democratic associates when I say that we feel more confident of the strength and righteousness and of the ultimate triumph of the principles for which we contend at the close than we did at the beginning of this debate.

As I have indicated, it is not my purpose to attempt to-night a systematic discussion of the questions involved in this bill, and my remarks, addressed as they are to various arguments and objections that have been presented upon the other side, must necessarily be somewhat lacking in cohesiveness.

I have listened with great interest, as I always do, to the brilliant speech of the Senator from Wisconsin [Mr. SPOONER], who divides with the Senator from Ohio [Mr. FORAKER] the honor of playing the part of devil's advocate in this debate—a part for which they are as well fitted in intellect as they are ill suited in

character. Let me say here that I regard it as a great and significant concession to a growing body of public sentiment that these two Senators, both of whom cling to the hope that the Republican party may yet be brought to the Democratic position on this question, have been put forward to bear the brunt of the debate upon the other side of the Chamber.

It is a significant concession to public opinion that we no longer hear the argument of greed and avarice and the hunger for other men's possessions openly and defiantly proclaimed. It is a fact of some consequence that certain Senators, members of the very committee that drafted this bill, who used to cry from the house tops their argument for war and conquest, have been required to hold their peace in this debate. I can not help thinking that something has been yielded and something gained when the President of the United States no longer talks of seizing "points of vantage" and no longer defends our Philippine venture by glorifying England's despotic rule over subject races and her bloody march to empire across the bodies and through the blood of slaughtered people. It may not signify any change of heart or of purpose, but it shows a realization of the fact that the public conscience is awake, and it shows that the authors of this policy begin to understand that they can not justify "criminal aggression" by pointing to the profits of the crime. It is a cheering sign that the sober second thought has come, that the better nature of the American people is again in the ascendant, when the party responsible for a buccaneering war is compelled to veil the grossness of its designs.

It has been said that hypocrisy is the homage which vice pays to virtue. I would not apply that maxim to the speech or the conduct of any Senator on this floor, and least of all to the Senator from Wisconsin [Mr. SPOONER], who I believe is acting as conscientiously as any man can who feels that he is compelled to support his party for his country's sake, even when his party is opposed to the welfare of his country. I would not say of the Senator from Wisconsin [Mr. SPOONER] that he "to party gave up what was meant for mankind," though in doing so I should place him in very distinguished company. But, sir, the maxim I have quoted has occurred to me again and again when I have heard Senators prostituting the language of liberty to the ends of tyranny, the sentiments of humanity misapplied to deeds of slaughter, and a vulgar expedition of blood and plunder exalted as a mission of Christian civilization.

The Senator from Wisconsin [Mr. SPOONER] took me sharply to task when, in answer to his question, I expressed my opinion that our war of aggression in the Philippines was inspired by no higher motive than the motive of gain; that it was a war for the purpose of seizing the lands and possessing the property of another people. He insisted that only benevolent and altruistic motives have governed the conduct of the Administration and the party in power in their dealings with the Philippines. Mr. President, if I have mistaken the object of those who launched the country upon this policy it is because the chief actors in the bloody business have mistaken their own. The cry that went up from the newspapers after the battle of Manila Bay for the annexation of the Philippines was, with a few exceptions, simply the voice of greed. If humanity was not absolutely silent in this business, its voice was drowned in the general clamor of political and commercial freebooters.

It has been claimed that the Philippines were suddenly and unexpectedly thrust upon us; that they came to us as one of the accidents of war, and that we were compelled to assume a burden and responsibility we did not seek. It is one of the advantages of a government prosecuting a war that it controls in large measure the sources of information, and this pretense for a long time could not be successfully denied. We now know that there was no accident in this business. The late Secretary of War, General Alger, in his book, declares that the determination to send an army of occupation to the Philippines was made before Dewey's victory in Manila Bay.

A few days after that battle General Merritt, who had been appointed commander of the forces in the Philippines, demanded an increase of his force in order to conquer the Philippine Islands on the express ground that we should have to encounter the "intense hatred" of the natives. Thus, sir, at the very time when the Philippine army was waging successful war against Spain and fighting our battles against our enemies we were planning a war of conquest against the Filipinos themselves. General Merritt, at least, did not seem to have any illusions upon this question. He knew that the seizure of the Philippines involved a bloody and destructive war against the Filipinos, and he so informed his Government. At that time the Filipinos themselves did not dream of a conflict with the United States. The fact stands out, sir, from this record that the Government of the United States from the very first had determined upon a conquest of the Philippine Islands and a war with the Filipino people.

I have heretofore called attention to the telegram sent from the War Department by direction of the President to Admiral Dewey inquiring about the resources of the various islands and asking which was the best for us to take from a commercial and strategic point of view. There was not one word of inquiry with respect to the wishes, the feelings, the aspirations, or the character of the people. There was not one word to indicate the slightest interest in their welfare. The original plan, as shown in that telegram and as was notorious at the time, was to seize one of the islands—the best one, whichever that might be—and leave all the others to the bloody mercy of Spain.

How much altruistic sentiment, how much unselfishness, how much love for the Filipino was there in that? And when it was afterwards decided to take all of the islands instead of one, I beg leave to doubt whether any higher motives had come into play. Sir, it is a significant fact that before we had come into the possession of the city of Manila an expert geologist and mineralogist was sent there by our Government with General Otis to report on the natural resources of the country. Senators want it understood that the only question that vexed the mind of the Administration was whether the dictates of mercy and humanity demanded that we should take unto ourselves the Philippine Islands. Upon that question it desired the opinion of an expert mineralogist.

Mr. President, from the very beginning of this Philippine business the only thought was to drive a profitable, hard bargain with Spain, without any thought for the welfare of the Filipinos; and while other sentiments, foolish and mistaken, yet having a higher inspiration, have since come into play, the motive of greed has been the dominant incentive throughout. Take that away, and all the support of this policy would crumble in an hour. It is crumbling now, because many of its advocates have begun to realize that it is a profligate and unprofitable venture. The American people are not squandering their blood and treasure in order to force their civilization upon an unwilling people 7,000 miles from our shores. No American statesman would have had the hardihood to advocate such a venture upon such grounds alone.

The distinguished Senator from Maine [Mr. FRYE] who presides over this body was one of the commissioners who negotiated the treaty of annexation. It may be that no selfish thought or purpose was in his mind when he drove that bargain with Spain, but he certainly came home filled with visions and dreams of the vast wealth we should gain by the acquisition of the Philippine Archipelago. He may have negotiated the treaty on the ground that it would be a good thing for the Filipinos, but he defended the subjugation of that people upon the ground that it would be money in our own pockets.

Mr. Denby, a member of Mr. McKinley's first Philippine Commission, openly declared that the only question was whether or not it would be a profitable business for us, and if it would not they might cut each other's throats, for all we cared. I am glad that he has since seen another and a purer light, and is now in favor of independence for the Philippines. I have already referred to similar expressions used by Republican Senators on the floor of this Chamber when the treaty was in debate. I have quoted at length from the campaign book of the Republican party of 1900, defending the general policy of conquest and colonial empire, and I referred to the speeches of President Roosevelt on the same line. I will not characterize the altruistic professions now made by Senators on the other side of the Chamber, but I remember that a distinguished ex-Senator from Colorado, Mr. Wolcott, who presided over the national Republican convention of 1900, said before that body: "We make no hypocritical pretense of being interested in the Philippines solely for the welfare of the Filipinos."

Mr. Shaw, the distinguished Secretary of the Treasury, said in a recent speech that we went to the Philippines because "we were masters of our own markets and were reaching out for new ones." Mr. Shaw has not been long enough in Washington to acquire the art of clothing imperialistic designs in republican or humanitarian garb. He speaks his thoughts with the reckless candor of the prairies. He scoffs and jeers and jibes at the suggestions that we are doing all this for unselfish reasons. "We are killing these Filipinos because there is money in the business"—this in plain words is the meaning of Mr. Shaw's confession. If he had been longer in contact with the Administration he probably would not have said it.

I repeat it, sir; it means something that such expressions have become so rare. It means something that the voice of greed has been shamed or awed into silence and that the very opponents of imperialism on the other side have been put forward to defend and excuse the acts of imperialism.

Mr. President, this debate has been prolific in virtuous reasons for a wicked policy. When men have determined to do a wrong thing, when they have committed themselves to a course of unrighteousness, they must find some excuse that will serve as a fig leaf to hide the vulgar nakedness of their misdeeds. Good men sometimes persuade even their own consciences with plausible

sophistries that it is right to do wrong. How can you justify a war to destroy the liberties of a people who but lately were your friends and your allies in war?

Why, says the Senator from Alabama [Mr. MORGAN], these people are not really fighting for liberty; they are simply the savage tools of a lot of wicked conspirators in Hongkong. I have no doubt that the Senator from Alabama has persuaded himself of the truth of his statement, and yet, Mr. President, that is the time-worn and time-dishonored plea of despotism. It has been the excuse for conquest and subjugation and robbery and murder the wide world over. When George III entered upon his war with the American colonies he said that his real object was to secure to the Americans their liberty, which they had exchanged for anarchy and the arbitrary tyranny of their chiefs. Whenever a nation or a government or a party has undertaken to destroy the liberties of another people it has always begun by defaming the character of its victims.

The people of the Philippines are not fighting for liberty, says the Senator from Alabama. What are they fighting for? The testimony of the leading supporters of this Administration is to the effect that the whole people are united in their enthusiasm for independence. General MacArthur says that the people of the entire archipelago, not simply the Tagalos, not simply the Visayans, but all the people of all the islands, except the handful of Mohammedan Moros, are united against us, and that the perfect cooperation they give to the insurgents can only be accounted for upon the theory that they are united in sympathy. The testimony of Otis, of Chaffee, of Smith, and of Bell is all to the same effect.

The Federal party, comprising all the Filipinos friendly to the United States, in a statement which the Philippine Commission embodies in its report, bore witness to the fact of the absolute unity of sentiment among the Filipinos for independence until that sentiment was modified by the promise of statehood in the Union. According to the statement of these friendly Filipinos, now holding office under the United States, the people there prefer death itself to being governed as a colonial dependency—to the kind of government provided in this bill. Perhaps the Senator from Alabama has sources of knowledge denied to all of these witnesses, but if so he has neglected to reveal them.

These people, sir, have endured calamities almost unparalleled in the history of modern warfare. Fire and sword and famine and torture have united to make their land a howling wilderness, has swept them by the thousands and tens of thousands and hundreds of thousands from the face of the earth. The Senator from Alabama can not see in this any evidence that the people are devoted to the cause of liberty; he can not see in it any evidence that they long for freedom. It only seems to him that the people are suffering all these horrors and perishing by the hundreds of thousands because a junta in Hongkong has commanded them to suffer and to perish. That may appear reasonable to the Senator from Alabama, but I believe that the opinions of MacArthur and Otis and Chaffee and Bell and of the native members of the Philippine Commission are better grounded in knowledge, as well as more consistent with reason and the fundamental facts of human nature than the unsupported opinion of the Senator from Alabama.

The Senator from Wisconsin [Mr. SPOONER] finds another excuse for our course in the plea that the people are not fit for freedom; and he descants at length upon the diversity of languages and the multiplicity of tribes. Mr. President, there has been an immense amount of exaggeration in this matter. I will here state, upon excellent authority, what I believe to be the real truth.

About 90 per cent, or from 90 to 95 per cent, of the population of the entire archipelago are of a common racial origin. They are the inhabitants of Luzon, Masbate, the Visayan Islands, and the coasts of Mindanao. They have not only a common racical descent, but they have a common religion, and it is the Christian religion. The great multiplicity of languages of which we have heard amounts to seven dialects, six of them being modifications of the Tagal and very similar to it. Professor Marre, in his "Tagalog Grammar," a work of great authority, says that there are no important differences in the various idioms spoken in the Philippines. That fact is shown in a statement by Sixto Lopez, giving a list of words common in the Tagal and Visayan dialects, which are the most widely spoken in the islands.

Mr. President, such arguments as these may serve as excuses, but they can not serve as reasons. The little Republic of Switzerland to-day contains three distinct races, speaking three distinct languages, but all united in a common love of liberty and of the Republic. Mexico is peaceful and prosperous, yet her people speak many languages. The close of the Revolutionary war found far less cohesion among the people of the thirteen independent sovereignties than there is among the people of the Philippine Islands.

When the Senator says that the Filipinos are not one people I call his attention to the statement of General MacArthur, in his annual report of 1900, in which he discusses the absolute unity of the Filipinos in their opposition to the United States. He says that the success of their system of war depends upon "almost complete unity of action of the entire native population;" and, he adds, "that such unity is a fact is too obvious to admit of discussion." He tells us furthermore that intimidation can not account for the "united and apparently spontaneous action of several millions of people."

So entirely does the Filipino organization depend upon the unity of the people that "one traitor in each town would effectually destroy such a complex organization." "These remarks," he says, "apply with equal force to the entire archipelago," except to the little group of Mohammedan Moros and the inhabitants of the Jolo Archipelago. Now, sir, here is the fact stated by the military governor in the Philippines that the entire people of the entire archipelago are absolutely united in sympathy and sentiment—so closely united and so perfect in their cooperation that they can successfully maintain an organization which would be utterly destroyed by a single traitor in each town. How is such an organization maintained? How are we to account for this "complete unity" of action and sentiment? General MacArthur tells us that "the adhesive principle comes from ethnological homogeneity."

What does it take to make "one people" if complete unity of sentiment having its origin in racial sympathy does not? General MacArthur tells us that the whole people of all the islands, without any regard whatever for tribal differences and distinctions, are banded together by the consciousness of a common blood and a common race. Sir, Senators may make the most of the trifling dialectal differences among the Filipinos, but this is one people, inspired by a common love of liberty, a common desire for independence. General MacArthur in his testimony before the committee told us that the spirit of liberty had long since penetrated the archipelago and had been stirring the minds and hearts of the people. That spirit is strong enough to unify a people far more diverse than the people of the Philippine Islands, and this war, if it has done nothing else that is good, has obliterated all hatreds and prejudices in a common struggle for liberty and independence.

The Senator from Wisconsin asks us to believe that his party will deal generously with the Filipinos. That the Senator himself would be both just and generous to the Filipinos, if he could have his way, I have no doubt; but it does not seem to me, sir, that it is at all impertinent or unreasonable to ask for some authoritative statement with respect to our future dealings with the Philippine Islands.

The Senator from Wisconsin says that he himself has not changed his opinion—he is as much opposed as he ever was to the permanent retention of the Philippine Islands. That is what the Senator says, but he is careful to add that he only speaks for himself. Who now will speak for the Administration? Who will speak for the Republican party? Who will speak for the Government of the United States? The President of the United States said the other day, in classic and felicitous phrase, that the flag had been "put" and that it should "stay put."

The junior Senator from Ohio [Mr. HANNA] a short time since assembled in convention and adopted a platform in which he declared that the flag had been raised in the Philippine Islands and that it should remain there. What is the true Republican doctrine? Is it the principle laid down by the Senator from Wisconsin [Mr. SPOONER] and the senior Senator from Ohio [Mr. FORAKER], or is it the principle laid down by the President of the United States and the junior Senator from Ohio [Mr. HANNA]? You say that we are criticising you. You say that we are embarrassing you. You say that we are putting obstacles in your path. We are simply demanding of you that you shall take the American people into your confidence and tell them what you intend to do.

The Senator from Wisconsin [Mr. SPOONER] said at one time that he would give no answer to a man who held a revolver at his breast. Like Falstaff of old, he would render no reason upon compulsion, and I suspect that he was like Falstaff in another respect—that he found it easier to frame an excuse than to give a reason.

It has always seemed to me that it smacked a little of the mock heroic for this mighty nation to draw itself up to its full height and call the nations of the earth to witness that it would not be coerced or intimidated by Aguinaldo and his bolomen. If we had been dealing with a great and powerful nation, we might have stood upon our dignity; but if there is any nation upon earth that could afford to be patient and magnanimous with even the faults and follies of a puny adversary, that nation is the United States of America. Magnanimity is the privilege of greatness.

Happy indeed is the nation whose power is so manifest and so preeminent that it may be patient and considerate without seeming to be weak. It was not necessary for us to proclaim to the world that we were not afraid of Aguinaldo, and we could well have afforded to put aside such silly and contemptible pride if we

could have saved thereby all this effusion of blood and destruction of human life. That, sir, we could have done. The Senator argues that the Filipinos were bent upon war. I said in a former speech that if the Vest amendment or the Bacon resolution had been adopted there would have been no war. The Senator insists that Aguinaldo and his people were so puffed up with vanity and insolence that they would have driven us into war anyhow.

Mr. President, this is simply incredible. As General Otis and General Hughes have testified, the Filipinos begged "for some tangible concession from the United States Government—one which they could present to the people and which might serve to allay the excitement." General Otis said that nothing could be done, because he could make no sacrifice of any of the attributes of sovereignty by the United States. So far from being truculent and insolent they were begging and pleading for some assurance upon which they could base a promise to their people.

They could get nothing but vague promises that went hand in hand with a demand for submission to the absolute, uncontrolled, and despotic power of the United States. The war began with a battle which General Otis himself admits to have been accidentally provoked and not to have been intended by the Filipino leaders. The evidence of General Otis at the time was to this effect, and also that Aguinaldo sought even then to stop the war, but that Otis declined. The Senator now denies that any such thing occurred, but General Otis himself at the time reported: "Aguinaldo applies for cessation of hostilities and conference. Have declined to answer."

But, sir, it is not worth while to talk of the actual outbreak of hostilities. The war began long before the 4th of February. The proclamation of President McKinley assuming to extend the sovereignty of the United States over the entire archipelago and declaring his purpose to compel the submission of the people by force of arms, if need be, was a declaration of war for the destruction of the liberty and independence of the people of the Philippine Islands. Assuming that the people had a right to fight for their independence, they had a right to begin hostilities the moment that proclamation was issued.

It used to be regarded as a matter of some importance and the question was seriously discussed as to who fired the first shot at the battle of Lexington. History has simply decided that the question is not worth deciding. The war began when George III and the British Parliament began their aggressions upon the liberties of the American people. The war in the Philippines began when we definitely proclaimed to a people in arms for independence that they should be the serfs and vassals of the American Government.

It seems to me that if it had not been predetermined to subjugate the Filipinos we should never have had the revolver "leveled at our breast," and would not have had this excuse for doing what we had already determined to do.

But, Mr. President, whatever plausibility there may once have been in the Senator's plea it has passed and gone forever. Our triumph is complete.

Surely we have slaughtered enough and burned enough and "pacified" enough to satisfy our dignity. We can afford now without any sacrifice of that dignity to tell the American people and the Filipinos alike what we intend to do.

The Senator from Wisconsin will not yield to compulsion. He will make no answer to the man who comes at him with a drawn pistol. But, Mr. President, the people whose memorial lies upon the table of this Senate, the people whose humble petition is before you begging you to make known your intentions, have not come with a loaded pistol. They are not the enemies of your Government. Three of them are members of your Philippine Commission. They are your recognized friends, the avowed supporters of your sovereignty in the Philippine Islands. If the Senator will make no answer to the man with the drawn pistol, I ask if his pride will sufficiently unbend to take note of the man who presents his petition humbly and on bended knee?

What answer will you make to your sworn and faithful friends in the Philippine Islands? The men there who have stood by you, who have helped to fight your battles, and who, as Governor Taft testifies, have done more to pacify the country than all your officers and all your soldiers have done—these men are here begging you to tell them what is to be their fate and what is to be the attitude of this Government toward their country and their people. Do they deserve an answer? They tell you that if you shall determine to hold their country simply as a colonial dependency, as a conquered province, it means endless war for the United States and chaos and ruin for the Philippine Islands. Knowing the sentiments and feelings and aspirations of their own people, they give you this warning and make this appeal. It is not a loaded pistol in the hands of an enemy, but an humble petition in the hands of a friend, that is leveled at the heart of the Senator from Wisconsin. I yet hope that it will not miss its mark.
